STATEMENT No. XV.

STATEMENT SHOWING THE NEW AGRICULTURAL IMPLEMENTS AND MACHINES INTRODUCED IN THE PUNJAB DURING THE YEAR 1891-92 AND THE OPINION FORMED OF THEIR VALUE AFTER EXPERIMENT.

1	2	3	4	5	6	7	8	9	10
DISTRICT.	Designation of implements.	Used.	Special advantages or instructions.	Price.	Where procurable.	Name and designation of official reporting.	Opinion.	Extent to which used by native agriculturists.	Remarks by official reporting.
Hoshiarpur	1. Beheea shallow pan.	Boiling sugar-cane.	Less fuel is consumed than in the deep pan in the evaporating process and manufacture of gur.	Rs. 25.	Beheea in the Shahabad district in Bengal from the firm of Messrs. Thomson and Mylne, Beheea.	Banna Singh, Zaildar of Sirhala, Tahsil Garhsbankar.	Not favourable, preference being given to the ordinary deep pan.	Not used at all except for the purpose of experiment.	A large quantity of juice cannot be poured at once in this pan for boiling. The juice is poured slowly and in small quantities, and thus much time is unnecessarily spent. In emptying the contents of the pan when gur is ready, much time is again spent. The delay thus caused alters the natural colour of gur by keeping it too long in the boiling pan. This is not the case in the ordinary deep pan, the contents of which, when ready, are emptied at once and the gur retains its natural colour. If it is at any time necessary to take the pan off the fire while the process of boiling is going on, some of the contents are liable to be spilled.
D. I. KHAN	2 Mowers 1 Rake 1 Feeding Machine 1 Elevator	For use in grass operations.		Not known Do. £ s. d. 12 7 6 Not known	Walterwood and Co., New York.	L. W. King, Esquire, C. S., Deputy Commissioner.	These machines have not been utilized as yet as no one knows how to work them. They seem unsuited for the rakhs of this district. They were sent to this district by the Forage Officer, Rawalpindi, for use in the Miran rakhs.	...

STATEMENT No. XV A.

LIST OF IMPLEMENTS AND MACHINES ALREADY REPORTED AS HAVING MET WITH SUCCESS IN THE YEARS 1882-83 TO 1891-92.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
HISSAR ...	Nil.	Nil.	The following ordinary hand implements are made and are in general use in this district :— 1. <i>Kassi</i> (hoe). Made of country iron called "Chandi." 2. <i>Gandāsa</i>. Made of "Kheri" iron. 3. Axe. Made of country iron with "Kheri" edge. 4. <i>Phāli</i> (pickaxe). Made of country iron called "Chandi." 5. <i>Kasola</i>. Made of country iron called "Chandi." 6. <i>Darānti</i> (sickle). Made of "Kheri" iron. Iron is obtained from Delhi. Steel is not at all used. Villagers do not use implements of English manufacture, hence no remarks for comparison can be given.
ROHTAK...	Sugar Mill, Beheen.	Driving old <i>Kohlū</i> out of use; has following advantages :— (1) Saving in cost of oxen, owing to smaller power needed. (2) No wood needed. (3) Less labour of men required. (4) Juice is cleaner. (5) Skilled labour not needed. The following are the disadvantages :— (1) Village artizans ignorant of construction. (2) Less juice yielded, as people are afraid to set it properly for fear of breakage and difficulty of repairs. The new mill is rapidly expelling the <i>Kohlū</i>. It is in almost general use now.	The agricultural hand implements in common use are the following : (1) <i>Gandāsa</i> or chopper, (2) <i>darānti</i> or sickle, (3) <i>kohāri</i> or hatchet, (4) <i>khurpa</i> or trowel, (5) <i>gandāsi</i> or thorn-cutter, (6) <i>kasi</i> or shovel, (7) <i>kusola</i> or hoe, and (8) <i>kuddāli</i> or pick. None of these are imported. They are all made by the village artizans; the iron being supplied by the person needing the implement. None of them are said to be tipped with steel (<i>fulāā</i>); but the <i>gandāsa</i>, <i>darānti</i>, <i>kohāri</i>, <i>khurpa</i>, and <i>gandāsi</i> are tipped with a hard iron called "Kheri." It is possible this may be a kind of steel. The iron used comes from Ferozepore. The new mill is rapidly expelling the <i>Kohlū</i>. It is in almost general use now. Its use is continuing. As to advantage (4) there is some doubt. The new mill is said to yield less sugar than the old with the same quality of juice, and the reason given is that the oil required to keep the mill in order gets into the juice and acts injuriously on crystallization.
GURGAON ...	Nil.	Nil.	The agricultural implements of the district are mostly made in the district by the <i>lohārs</i> of the villages. The iron and steel are obtained from the nearest marts, either from Rewāri, Delhi, or Kosi. Steel is used for hardening the edge. The breadth of such steel edge varies according to the description of the instrument. Native implements are of inferior make as compared with those of English manufacture. An attempt will be made to introduce some of the simpler kinds in the way indicated in para. 5 of the Circular 66 of 1885.
DELHI ...	Nil.	Nil.	1. <i>Phāli</i> (plough-share).—It is made of Silhit iron. The point continues sharp by constant use. When it becomes blunt, about $\frac{1}{4}$ sér of iron is required for its repair. The plough-share weighs about $2\frac{1}{2}$ sérs, and its price is about 8 annas. Red-hot iron is beaten out to make the point. The iron is brought from Bombay and Calcutta. 2. <i>Phaora</i> (spade).—It is made of Silhit or Harsiron. It cannot be repaired when broken or otherwise made useless. Its price is rupee 1-4-0, and weight about 3 or 4 sérs. A piece of red-hot iron is beaten into a flat plate with a sharp edge. The iron is brought from Bombay and Calcutta. 3. <i>Kasola</i> (pickaxe).—Same as above. Its weight is about 2 sérs, and price 12 annas. 4. <i>Khurpa</i> (hoe).—It is made of "Kheri" iron. When its edge becomes blunt, it can be repaired by hammering out when made red-hot. Sometimes a small quantity of iron is added in the process of repairing. Its weight is $\frac{1}{4}$ sér, and price 5 annas. The edge is made of either "Kheri" or Silhit iron. The implement is used for weeding purposes. "Kheri" iron is brought from Gwalior. 5. <i>Darānti</i> (sickle).—It is made of "Kheri" iron by hammering when red-hot in a strong fire. Its teeth are ground with a file. Its price is 5 annas and weight $\frac{1}{4}$ of sér. 6. <i>Gandāsi</i>.—Do. do. do. 7. <i>Gandāsi II</i>.—It is made of "Kheri" iron. When blunt it can be repaired by beating and hammering the edge. It weighs $\frac{1}{4}$ sér, and its price is 8 annas. 8. <i>Kulhāri</i> (axe).—Its lower part is of "Kheri" iron, and upper part of Silhit iron. One-third of the whole quantity consists of "Kheri" iron. Its price is 5 annas and weight $\frac{1}{4}$ sér.

STATEMENT No. XV A—continued.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
DELHI—concl'd....	Nil.	Nil.	<i>General Remarks.</i>—The implements, Nos. 1 to 3 are made of Silhit iron, which is brought from Bombay and Calcutta. The iron is beaten out when red-hot to manufacture these implements. The edge is made of the same material as the rest of the implements. Nos. 4 to 7 are made of "Kheri" iron, which is brought from Gwalior. The edge of the implement No. 8 only is made of "Kheri" iron, which is about one-third of the whole. The "Kheri" iron or steel is not required for hardening the edge of the other implement. The implements of country manufacture are preferred, as those of European make are not so strong and durable.
KARNAL ...	Nil.	Nil.	...
UMBALLA ...	Nil.	Nil.	The implements commonly used in Umballa are of the ordinary class. The iron roller sugar-mills are rather losing than gaining ground in popular estimate. They are used exclusively in the south and east of the district.
SIMLA ...	Nil.	Nil.	1. The <i>dāchi</i> (sickle) is used for cutting grass and reaping. 2. The <i>dāch</i> (large) for cutting wood, such as small branches of trees, &c. 3. <i>Kuddali</i> for digging in the fields and hillsides; a small hand implement. 4. <i>Khilna</i>, much the same as the <i>kuddali</i>, is used in the same manner and for similar purposes. The edge of the former is broad, and of the latter pointed. All these implements are made of iron of the description known as Poonree, which is obtained from the interior, principally from a place named Pooner. This iron is bought at about 7 to 8 sers per rupee in the Simla market. The entire implements are made of the one kind of iron. Steel edges are not given. These are the only implements used in these hills, and have been used for years. They are found to answer all the purposes of the people. No English-made implements have been tried, nor do the people appear to desire any change in what they are well practised in and satisfied with.
KANGRA ...	Nil.	Nil.	...
HOSHIARPUR ...	Self-emptying charas or bucket.	With this the water can be raised from wells for irrigation with facility by two men, instead of three generally employed in the ordinary charas used in the Punjab. This implement is in general use in Bengal, North-Western Provinces, Central Provinces, and Bombay. It was used in the late experimental farm at Hoshiarpur, and admitted to be superior to the indigenous implement.	These implements are not in general use at present. They were reported in April 1883 as being in use at the late Hoshiarpur Experimental Farm. In no other years were any new implements introduced in this district. Beheea cane mill is in use in Tahsils Hoshiarpur, Dasúya, and Garhshankar, and its advantages are thoroughly appreciated.
	Baheea Cane Mill ...	As a labour saving machine for crushing sugar-cane and extracting clear juice from it, the implement affords great facility, and is considered far superior to the ordinary country roller. It was also tried in the late experimental farm. It is worked with one man or a boy with two bullocks, whereas the ordinary native method requires six men and six bullocks.	
	Improved Punjab Plough, 1883.	For ploughing and sowing light soil, the implement possesses peculiar efficient quality. Being procurable for Rs. 3, cheapness must also be said to be its chief recommendation.	

STATEMENT No. XV A—continued.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
HOSHIARPUR— <i>concl'd.</i>	Iron Sugar-cane Roller	This roller is used for extracting juice from sugar-cane, and is worked with two men and two bullocks, whereas the ordinary native method required six men and six bullocks. By its use the necessity for cutting canes into pieces is also obviated.	This implement is in use in certain villages of Tahsils Hoshiarpur, Dasuya, and Garhsankar, and an agency for its sale has been opened at Hoshiarpur. It has many advantages over the ordinary mill, but is not as popular in this district as in Gurdaspur. Native agriculturists complain that the mill destroys the cane fibre which is used for ropes and that the oil from machine taints the cane juice. The first complaint has some foundation. The second is due to carelessness. In Gurdaspur the absence of risk to the workers and the saving of labour expected by the mill have made it very popular in many places; and there is no doubt it will push its way in Hoshiarpur also. <i>Kohara</i> (axe); <i>Tesha</i> (bill-hook).—In these hand implements ordinary iron obtained from Karachi is used, but their edges are made of steel obtained also from Karachi. The steel used for hardening the edge is about a fourth portion of each implement. In the case of other small hand implements, it is said that some of them are made entirely of steel; and in the manufacture of others iron is entirely used. The English-made implements are better and more polished than those made in this country; but in durability the country-made implements are said to be superior.
JULLUNDUR ...	Beheea Sugar-Mill...	Twenty-four of these mills were sold to zamindars in the years 1883-84. They do not appear to have found favour in this district, as the machine is more costly than the ordinary native <i>belna</i> ; and the people also complain that it cannot be repaired by the village smith, and that it completely destroys the canes, which in this district are largely used after the juice has been pressed out, for making mats, ropes, &c.	The axe is made in this district of iron obtained from Bombay, and half a ser of steel is used for hardening its edge. English-made axes are not used in this district. The sickle <i>datri</i> is made of pure steel. English-made sickle not in use. <i>Ramba</i> (an instrument for cutting-grass) is made of steel. English-made <i>khurpa</i> not in use. <i>Gandala</i> (an instrument for digging holes), do. <i>Beguri</i> (an instrument for hoeing sugar), do. <i>Gandara</i> pole, &c. do. <i>Kassi</i> (hoe) is made of iron. English-made hoe not in use. Bill-hook not used or known in this district.
LUDHIANA ...	<i>Nil.</i>	<i>Nil.</i>	Agricultural implements in use in this district are the (1) <i>kassi</i>, (2) <i>phoura</i>, (3) <i>daranti</i>, (4) <i>ramba</i>, (5) <i>kohari</i>, (6) <i>gandasa</i>, (7) <i>gandala</i>. About 15 or 20 years back these were made from Gwalior iron, but at present from iron received from a place called Putti via Karachi, which is easier wrought and is more lasting and less expensive. The <i>kohari</i> and <i>gandasa</i> are edged with steel. Carpenters in this district use <i>tesha</i>, <i>dri</i>, <i>barma</i>, <i>nihani</i>, <i>reti</i>, <i>hatouri</i>, and <i>ghun</i>. The <i>dri</i> and <i>reti</i> are made of steel; the <i>hatouri</i> and <i>ghun</i> tipped with steel; the rest are made of soft iron.
FEROZEPORE ...	Kaisar Plough ...	Four ploughs were introduced during the year 1881 in the district. Of these three were tried, both in Mamdot and Ferozepore Municipal Gardens, while the fourth has not as yet been used by Dharm Singhwala Sardar. The experiment showed that the implements are in reality useful and valuable. These turn and break the soil easily, and with a very little trouble to the bullocks.	
	Beheea Cane Mill ...	The two mills asked for from the Agent of Messrs. Thomson & Co. were received in the district but very late, when the cane season was about to be over; besides they were received incomplete; therefore they were not experimented with. Nevertheless the zamindars of Ilaka Zira have seen a similar mill working satisfactorily in their neighbourhood, and so the people will certainly appreciate it very much, and it is the stinginess of the vulgar class of the district that these valuable implements are not largely introduced.	These implements have not been tried again.

STATEMENT No. XV A—continued.

DISTRICT.	Name of implements.	Summary of previous Report.	REMARKS.
FEROZEPORE— concl'd.	...	...	Only country-made ordinary hand implements (such as axes, bill-hooks, &c.) are in use in this district. These are made of iron. Steel is not used for hardening the edge, nor do the blacksmiths of this country know how to do it. People like the English-made scythe and saw more than country ones. No use of it has as yet been made by agriculturists or other persons.
	Boring Apparatus...	It has been tried in experiment, both in Ferozepore and Muktsar, and has proved satisfactory.	This mill was not tried again.
	Double Sugar-cane Mill, patented in 1888 by Rái Bahádúr Thákúr Dás, Assistant Surgeon.	It was exhibited at Amritsar Baisákhi fair along with Beheea (Thomson and Mylne) and Rodger's mills, and this was found superior. It was twice exhibited at Ferozepore with the same result. This mill competed with other mills now used in this district, and had won the first prize awarded by Special Committee composed of Major Campbell, R.E., President, and two native gentlemen as members.	
MOOLTAN ...	Kaisar Plough ...	Thirty-five Kaisar ploughs were obtained in 1882 by the District Committee, of which seven were distributed to the influential zamíndárs, who, after trial, reported that they were not suited.	Not tried again.
	Beheea Cane Mills (Sugar Mills).	Two Beheea mills were obtained by the District Committee in 1883, which were given to two influential zamíndárs in the Shujábad Tahsil. They were very much appreciated by the people of that tahsil for their simplicity and effective working.	Only one used in 1887-88, but not with success. Again used in 1889, but without success. Not tried again.
	Náhan Sugar-cane Mills.	Three were bought by the zamíndárs, and the fourth one was let out on hire in 1884. All the mills, with the exception of one, were used and the people appreciated them.	Used without success. Not tried in 1890.
			Hand implements, such as axes, mattocks, sickle, &c., used by the agriculturists in this district are made of iron and steel obtained from Bombay. The steel (about $\frac{1}{4}$) is generally used for hardening the edge. They are made as follows:—The iron is first put into a furnace, when it gets hot and red, it is well beaten till it gets cool, the process being repeated several times till the desired shape is obtained. When the implement is nearly ready, the edge is hardened by steel and dipped into water. The native-made implements, though rough, are considered better suited and more durable than those of English make.
JHANG ...	NIL.	NIL.	No improvement has been made in the ordinary hand implements.
MONTGOMERY ...	Kaisri Ploughs ...	These ploughs were distributed to each tahsil as follow:— Montgomery, 5. Gugera, 5. Dipálpur, 4. Pákpattan, 4. By experiment it was found that by one plough 2 kanáls and 15 marlās of land were ploughed, in which one maund and 17 sers of grain were produced. By a native plough the produce was usually from 60 to 80 sers in the same area. The zamíndárs do not like the Kaisri plough. The bullocks in this district are small and unable to work them. These implements were not tried again. The zamíndárs do not like them. They have weak bullocks, which are only suited to the native ploughs. The furrows made by the Kaisri plough are of course deeper than those made by the native ploughs; but they require strong bullocks to pull them, which zamíndárs of the district do not possess.	Sickle.—This implement is used in cutting crops and grass. It is a $\frac{1}{4}$ sér in weight, and is made of ordinary iron. It is made in the shape of a bow, with teeth like those in a saw, and has a wooden handle. Ramba.—This implement is used in loosening the earth about the roots of plants and in taking up grass. It is $\frac{1}{4}$ sér in weight, and is made of iron. It is about 6 inches long, and has a wooden handle with a sharp edge. Aze.—This is of the usual pattern with a steel cutting edge welded to the iron head, and varies in weight from 1 to 2 sér. Toka.—This implement is used in chopping fodder for cattle. Its weight is about 3 sers and it is made of good iron. It has an oblong shape and a wooden handle at the top. Its edge is hardened like a hatchet. Hoe.—This implement is used in digging earth. It is made of ordinary iron, and is from 1 to 3 sers in weight. It is similar in principle to the English hoe, but a shorter handle.

STATEMENT No. XV A—continued.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
LAHORE ...	Kaisri Ploughs ...	These ploughs were received from Cawnpore and distributed to zamindars. By these the land is better ploughed than those locally made. Many zamindars in the Chunán tahsil have got ploughs made of this pattern. This plough is very useful for soft soil; but, generally, the plough has not been adopted.	Some three or four years ago ploughs of this description were received and distributed to certain zamindars in the Chunán tahsil. They have been made use of and it is acknowledged that they are better than the country plough; two ploughings being equal to some six ploughings with the country plough. But the cultivators have not adopted it for the reason that they find that with the country plough they can use ordinary bullocks which do not cost a large sum, while the Kaisri plough requires strong oxen of a much higher price.
	Beheca Sugar Machine	It is not known whether any report was previously made or not. This machine is very extensively used. It requires a little labour. Only one pair of bullocks and two men are required to work it, while the country <i>belna</i> requires two pairs of bullocks and six men. Besides it is dangerous to the life of the men who put sugar-canes into the <i>belna</i> . The cost of the machine is also far less than <i>belna</i> . Mr. J. Robson, Engineer of Lahore, has improved the machine by fixing a screw on the top, through which oil is given; but the oil does not get mixed with the sugar juice.	These mills continue to be used and are liked.
	Water-lift (iron Persian wheel).	A lift of this kind was obtained for the Shālamār Gardens from Messrs. J. Fleming and Co., Bombay, for Rs. 400. The well is worked without bullocks, and gives as much water as can be raised from a well by two bullocks working a country-made wooden Persian wheel. The lift is most useful; but as the price is high, it is beyond the means of ordinary zamindars.	The well gear is costly, and ordinary zamindars cannot afford to purchase. The one great drawback is that should any portion be broken, it would be difficult to find a qualified blacksmith to repair or replace it. Ordinary Persian wheels can be easily repaired by the agricultural carpenter, and agriculturists do not experience any difficulty in repairing such. This lift has been removed from the Shālamār to the Shahdara Garden, where it is now worked by one bullock. The Tahsildār of Lahore reports that the <i>mālis</i> complain that it does not work easily, and requires 3 pies of oil daily; and when any of this gear breaks it is difficult to get it repaired, and besides, costs a good deal. It is useful for gardens only as it does not lift sufficient water for irrigation.
	Wheat-husking Machine. Indian corn-husking Machine.	These machines were obtained from the Manager, Alliance Bank, Lahore, for Rs. 200 and Rs. 60 respectively. They are good for separating grain, but good chaff is not made. The machines were exhibited at the last Shālamār fair. The wheat-husking machine was not generally approved, as it did not produce thin <i>bhusa</i> and is too costly for zamindars. The Indian corn-husking machine was much liked. In this district Indian corn, however, is not extensively cultivated, and husking machines are not required.	The machine was not tried again. Agriculturists have not taken to it.
	English Scythes ...	Two scythes were obtained from Messrs. Jessop and Co., Calcutta, for Rs. 15. They are good for cutting and dressing grass. They are only suitable for ornamental gardens in dressing long grass.	There is one in Shālamār Garden, and it continues to give satisfaction. They are useful for gardens. 1. <i>Axe</i> .—This is made of hard iron. Steel is not used for danger of being broken. 2. <i>Scythe</i> .—This is also made of iron, and steel is used in about $\frac{1}{4}$ of its size. 3. <i>Ramba</i> Ditto ditto ditto. 4. <i>Toka</i> Ditto ditto ditto. 5. <i>Tesa, Kohdra, Sathra</i> ,— Ditto ditto. 6. The saw is made of steel. English-made is generally preferred, but the teeth are cut in the opposite direction to those cut in England.
AMRITSAR ...	<i>Nil.</i>	<i>Nil.</i>	...
GURDASPUR ...	Improved water-lift on the lever system.	Has not been worked sufficiently to warrant an opinion on its merits.	Has been working since its invention; but it has not as yet become a favorite with the people.

STATEMENT No. XV A—continued.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
SIALKOT ...	Nil.	Nil.	The following agricultural implements are most familiar, and brought into ordinary daily use :— 1, <i>Kulhāra</i> (hatchet); 2, <i>Khurpa</i> (scraper); 3, <i>Haikaphal</i> (ploughshare); 4, <i>Pharwah</i> (spade); 5, <i>Toka</i> (chopper); 6, <i>Dātri</i> (sickle). These are made up in the following manner—the iron is heated, beaten out and dipped in water, this process being repeated until the iron is sufficiently hardened for the purposes of manufacturing the implements. 2. Iron and steel are imported from Amritsar. 3. About 4 chitāks of <i>ispāth</i> (steel of a tough kind) to every sér of iron is used for the purposes of hardening the edges of such implements as are mentioned under Nos. 1 to 5. The <i>ddtri</i> is invariably made entirely of <i>ispāth</i>. <i>Fulād</i> of good steel is seldom used on agricultural implements. 4. The implements made for general use in this district, and which are somewhat roughly made, cannot be compared with those of English manufacture, but, if specially ordered, it is believed that some good implements can be turned out.
GUJRAT ...	Nil.	Nil.	...
GUJRANWALA ...	Sugar-cane Mill ...	<i>Sugar-cane Mill</i>.—Experiments have been made with this implement in some of the villages in the Gujranwāla and Wazirabad tahsils. As compared with a country sugar-cane machine, it produces four times the quantity of juice during the same space or time, and can be worked with a single ox instead of four at the country machine. The quantity of <i>gur</i> produced by this machine exceeds the quantity produced by the country machine from the same bulk of sugar-cane. The canes, after extracting the juice, crumble into pieces, and are therefore unfit for the purpose of making ropes used in working wells. If this defect could be remedied, the machine may, it is hoped, be universally accepted and adopted with alacrity. This is not a very large sugar-producing district, and during the year under report a great part of the sugar-cane grown was used as fodder for cattle.	This machine has not been used during the year owing to— 1. The pressed stalk is broken through, and is not useful for rope making for which the people require it. 2. The raw sugar made turns out black and does not sell so well as the <i>gur</i> extracted by the old wooden presses.
SHAHPUR ...	Nil.	Nil.	Agricultural implements are generally made by village blacksmiths from strips of iron (<i>patti</i>) mostly imported from Karāchi, and purchased by the peasants themselves in the quantity required at the time. The iron is hardened by dipping it in cold water while red-hot, and sometimes edged with steel (<i>dānda</i>), also imported from Karāchi. The implements are generally inferior to those of European manufacture, but are of shapes to which the people are accustomed and cost them less; the labour of the blacksmith being paid for in grain at harvest times. The machine is kept in full work and gains large quantities of cotton belonging to its owner and to other traders who pay for its use.
	Cotton Gin...	Not patronized by agricultural population. Traders in cotton bring in great quantities of it for ginning.	
JHELUM ...	Nil.	Nil.	Axes are manufactured, both of iron and steel. For instance, an axe weighing 1 sér consists of three-quarters of a sér of iron, and a quarter of steel used for the edge. <i>Khurpa</i> (or hoe) is made of steel only. <i>Sickle</i>.—This instrument is also made of steel. <i>Phal</i> (ploughshare) is made either of iron or steel. The iron and steel used in the manufacture of such implements are obtained for local consumption from Calcutta or Bombay. The native made implements are equal to those of English manufacture, as far as wear and tear is concerned.

STATEMENT No. XV A--continued.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.
RAWALPINDI ...	<i>Nil.</i>	<i>Nil.</i>	Hand implements are usually made by village <i>lohārs</i> . Iron is generally obtained from Rāwalpindi bazar. Steel is not in use here. No implements of English manufacture are used.
HAZARA ...	Messrs. Thomson and Mylne's 3-rollers Sugar-cane Mill from Beheea. Chaff-cutting Machine from Messrs. Thompson & Co., Calcutta.	Extract from Report, 1884-85. No new agricultural implements were obtained during the year under report. Those in the district are a chaff-cutting machine from Messrs. Thompson and Co., Calcutta, and a 3-roller sugar-cane mill from Messrs. Thomson and Mylne of Beheea. These are both approved of by the zamindārs; but they have not yet procured any for themselves, though they are considering the purchase of Beheea mills. The District Funds sugar-cane mill is lent to sugar-cane-growers to experiment with. Extract from Report, 1885-86. No new agricultural implements were obtained, but the zamindārs of Haripur are combining to procure Beheea sugar-cane presses, and expect to have 25 at work by next year. A rice-husking machine was received from the Director of Settlements and Revenue Records in September 1885, and is being tried in the district. It is not approved of, as its outturn is not more than one man can do with an "<i>ukli</i>." Moreover the local husking machines (<i>paikos</i>) worked by water-power on the Siran are powerful and good.	The agricultural implements might well be improved. In the more distant parts of the district wooden picks tipped with iron are still used. <i>Kohāri</i> (batchet or axe).—This is country-made. It is made of iron tipped with steel, and weighs from 1 to 2 sérs, i.e., in plains 1 sér, hills 2 sérs. <i>Dātri</i>.—Sickles of steel weigh from $\frac{1}{4}$ to $\frac{3}{4}$ of a sér each, and are country-made. <i>Kalatri</i> and <i>Hari</i> (saws and files) are made by hand, of steel, but the European articles are preferred. <i>Tesha</i> (adze) of steel or steel tipped are all country-made. <i>Kahi</i> or <i>pail</i> or <i>gudna</i> picks are of iron tipped with steel or of wood tipped with iron. The <i>pail</i> is lighter than <i>kahi</i> of lower Punjab. The <i>kahi</i> is only used in Tahsil Haripur, and the <i>gudna</i> or wooden pick is only used in distant parts of the district. <i>Chari</i>.—A spade with strings, used by two or three men, is made of iron tipped with steel or of wood tipped with iron. <i>Rambas</i> or <i>khurpas</i> are to a small extent used in the Haripur tahsil. Bill-hooks, &c., are not used. <i>Iron (crude)</i>.—Country iron formerly came from Bajaur; but none comes now. <i>Iron (wrought)</i>.—Flat wrought iron is obtained from Amritsar, Pind Dādan Khan, Lahore, Rāwalpindi, and other places; is chiefly English iron, and is very extensively used in the manufacture of agricultural implements. <i>Iron (cast)</i>.—English flat cast iron comes from Amritsar and is little used in the district. <i>Steel</i>.—English steel, flat and bar, is obtained for tipping instruments from the places mentioned above.
PESHAWAR ...	Rollers for extracting Sugar-cane juice.	This machine dispenses with a great deal of manual labour. The juice extracted by it is in much larger quantities, and also cleaner, than that extracted by others of its kind. It is not as yet universally used in this district, being possessed by only a few persons; but the use of it is likely to increase.	Large quantities of <i>gur</i> have been made this year, and the machine is extremely popular with the zamindārs of the district. List of ordinary hand implements in general use in this district:— (1) Shovel, (2) spade, (3) <i>chari</i>, (4) <i>ramba</i> (hoe), (5) sickle, (6) axe, (7) ploughshare, (8) adze. Shovel, <i>ramba</i>, and axe consist of wrought and common iron. Wrought iron is used in the fore part (edge), and common iron in the hinder part. Hitherto all the implements were made of Bajauri iron, but now bars of iron imported from England are used in making them. None of them is made of steel. The adze is not used for agricultural purposes. The mills have been successful and extensively brought into use by the agriculturists.
	Sugar-cane Mill manufactured at the Roorkee Workshops, N.W. Provinces.	This is a very useful mill, much labour is saved in its working, and turns out a large quantity of juice, which makes nice white sugar. Usefulness of this sugar-cane mill is being gradually appreciated in this district. New mills are mostly imported into the Hashtnagar, Mardān, and Doāba Daudzai tahsils. Peshāwar and Nowshera are gradually following suit. In Utman Bolāk where people are conservative these mills have not as yet been brought into use.	

STATEMENT No. XV A—concluded.

DISTRICT.	Name of implement.	Summary of previous Report.	REMARKS.																												
KORAT ...	Nil.	Nine Kaiser ploughs were received at the end of the year 1883, and were experimented by the leading men in the district, but they failed. They have not been tried again.	Brief report of ordinary native-made hand implements of the Kohat District:— <table> <tr> <th colspan="2">NAMES.</th><th>Quantity of iron used in making the implement.</th><th>Quantity of steel used for hardening the edge.</th></tr> <tr> <th colspan="2">Punjabi, Pashto, English.</th><th></th><th></th></tr> <tr> <td>Kulhdri</td><td>Tabargai</td><td>Axe</td><td>S. C. 1 4</td></tr> <tr> <td>Bel</td><td>Bel</td><td>Spade</td><td>S. C. 1 8</td></tr> <tr> <td>Datri</td><td>Lo</td><td>Sickle</td><td>0 2</td></tr> <tr> <td>Phali</td><td>Pala</td><td>Ploughshare</td><td>1 4</td></tr> <tr> <td>Kai</td><td>Kai</td><td>Hoe or small mattock.</td><td>1 4</td></tr> </table> Iron and steel used in making these implements are imported chiefly from Kalabagh in the Bannu District and Sukkur in Sind, and to a small extent from Pind Dadan Khan in the Jhelum District. Although there is little difference between the English and native-made implements, the people in this district are not accustomed to use English-made implements, nor have the latter ever been introduced in this district. BANNU ...	Nil.	Nil.	...																												
DERA ISMAIL KHAN.	Nil.	Nil.	The hand implements in use here are of the common pattern universally used throughout the country. To give a minute description of each would require a long report.																												
DERA GHAZI KHAN.	Nil.	Nil.	- All agricultural implements are made by town and village blacksmiths. Those made in town are preferred being of superior manufacture. - The metals used are iron and steel, imported from Europe in bars, and obtained, as a rule, in this district from Sukkur. - Steel is always used for hardening the edge of axes, &c. - Implements of English manufacture have not been used, and consequently no comparison can be made between those of English and country manufacture.																												
MUZAFFARGARH	Jones' Sugar-cane Press. Avery's Hindustani Plough.	On the whole, Deputy Commissioner considers this preferable to the Beheea mill; but as the cultivators here are slow to move in such matters, especially where cash payments are needed, any progress towards introduction of this Nahan mill will be slow. This plough is superior to the native plough.	- Implements, such as axes, hoes, bill-hooks, sickles, ploughs, are made of iron here. - Iron and steel are got from Karachi through Mooltan. - For axes and bill-hooks, steel is generally used to sharpen the edges without altering the form of the implements, which are hand-made. English manufactured implements are preferred to native-made. The latter require constant sharpening.

(a). According to new measurement.

(b). Ditto ditto.

(c). The difference of 1,995 acres is due to the extension of the whole of Bir Santokh Majra and of 150 acres in Na Badalwa.

(d). The difference of 25 acres is explained in Financial Commissioner's letter No. 4144, dated 30th June 1892.

(e). The difference is due to the changes caused by alluvion and diluvion.

(f). Increase of 115 acres is due to re-measurement.

(g). Difference of 82,347 acres as compared with last year's statement is on account of the survey area of the Sandal Bar having now been entered. Formerly the area as measured by the patwáris was shown.

(h). The difference of 8 acres were leased during the year.

(i). The difference is due to revised measurement.

(k). The difference of 225 acres is due to the facts that—

9 acres have been transferred from Rakh to Mauzah Kanoban in the Kahúta Tahsil.

208 acres of Dholl Dost Muhammad Khan, which was originally pattidári, was through an oversight wrongly entered under head Rakhs has been transferred to its proper head in Statement XI.

8 acres to an error in last year's total.

Total ... 225

(l). Increase as compared with last year's figures is due to action of river.
