Hissár	Sirsa	* 318	Kharif 1853	Rabi 1880	27	1,25,279	Kharif 1881	Rabi 1901 .	20	1,37,896	1,40,694	Government of India, Department of Revenue and Agriculture, No. 622—121 R., dated 24th March 1891.	No estimate can be framed at present.	*Includes 31 villages under the fluctuating system of assessment and excludes 7 jágír villages. A term of 20 years has been sanctioned. Part of the tahsíl was put under fluctuating assessment at the recent settlement. The fixed assessment of this part was estimated by the Settlement Officer at Rs. 30,000. The average income from fluctuating assessment has been Rs. 29,526, including khálsa and júgír revenue.
Rohtak		514	At various dates.	Rabi 1879	•	8,83,077	Kharíf 1879	Rabi 1909	30	9,31,126	9,27,562	Government of India, Revenue and Agriculture Department, No. 476, dated 1st September 1882.	Ditto	The demand in the first year of the new settlement was Rs. 9,31,126, but reductions were subsequently given in a certain number of villages. These were in part temporary, and Rs. 5,167 were re-imposed from Kharif 1889. Moreover, since settlement 12 estates have been removed from the fixed to the fluctuating system of assessment. The present assessment is exclusive of owner's rate estimated by the Settlement Officer to amount to Rs. 1,17,179.
Gurgáon	Part of	1,264	About 1842 Kharif 1864	Rabi 1877	35	10,86,113	Kharíf 1877	Rabi 1907	30	10,87,922	11,71,281	Government of India, Revenue and Agricultural Department, No.139—66—2, dated 29th April 1890.	Ditto	The former settlement was made at different dates for different parts of the district. The settlement introduced in 1877 raised the khálsa demand to Rs. 12,28,535, but the assessment of a large number of estates was revised in 1882-83 and reductions partly permanent and partly for a period of seven years ending Rabi 1889 were given. That period having expired the assessments were again considered and Rs. 79,000 were added to the demand for Kharif 1889.

FINANCIAL COMMISSIONER'S OFFICE:

Dated Lahore, the 26th February 1894.

. FROM

M. W. FENTON, ESQUIRE, C. S.,

Senior Secretary to Financial Commissioners, Punjab,

To

J. M. DOUIE, ESQUIRE, C. S.,
Offg. Revenue Secretary to Government, Punjab.

SIR,

I am directed to forward for the information of Government the Director' of Land Records' Progress Report of the Department of Land Records and Agriculture, Punjab, for the year 1892-93, and to convey the following remarks of the Financial Commissioner.

- 2. Mr. Francis held charge of the Office of Director during 10½ months of the year under report, and discharged his duties very efficiently.
- 3. With reference to the remarks in para. 3, of the Report, the Financial Commissioner quite agrees with Mr. Francis as to the importance of the Director testing occasionally Patwarís' papers in the field.
- 4. The Financial Commissioner also concurs in the remarks in para. 4 as to the necessity for Deputy Commissioners being careful to select only really efficient Patwaris as Kanungo candidates.
- 5. The Financial Commissioner is in correspondence with Government in regard to strengthening the agency for attesting mutations in districts where such work is exceptionally heavy.
- . 6. Orders have lately been passed whereby only a single mutation fee will be taken in inheritance cases although several holdings may be involved, and only a nominal fee in partition cases when partition is effected through a Revenue Officer under Chapter IX, Land Revenue Act.
- 7. Mr. Francis' remarks on the shortcomings he noticed in various districts during his inspection tours should receive the careful attention of the District Officers concerned. The Deputy Commissioner of Gurdáspur has been called on for a report in connection with Mr. Francis' unfavourable comments on the District Kánúngo of that district.
- 8. The Patwari and Kanungo establishments are, the Financial Commissioner thinks, undoubtedly increasing in efficiency throughout the Province generally, and the village records are becoming more accurate and reliable year by year.

I have, &c.,

M. W. FENTON, Senior Secy, to Finl. Commrs., Punjab,

INDEX.

FROM

F. A. ROBERTSON, ESQUIRE, C.S.:

Director of Land Records and Agriculture, Punjab,

To

M. W. FENTON, ESQUIRE, C.S.,

Senior Secretary to Financial Commissioner, Punjab.

Dated LAHORE, 5th February 1894.

SIR,

I have the honor to submit the Annual Progress Report of the Department of Land Records and Agriculture, Punjab, for the year 1892-93. The report was written by Mr. E. B. Francis before making over charge to me, and wherever the first person singular is used in paras. 2 to 35 inclusive, it must be understood that it is Mr. Francis who is speaking and not Mr. Robertson.

- 2. Mr. F. A. Robertson held charge of the office up to 13th November 1892 on which date he proceeded on furlough, and I officiated for him for the remainder of the revenue year.
- During the month of October and part of November, Mr. Robertson 3. spent 32 days on tour, visiting one district head-quarters and six tabsils as per margin. The distance travelled by him was 539 miles by rail and 153 miles by road. I was Director's tour. Shahpur district office. Shahpur tahsil. Shahpur tahsil.
 Khusháb ,,,
 Kullu ,,
 Pálampur ,,
 Kángra ,, not able to do so much regular camping in the year under report as Mr. Robertson performed in the preceding year, the reason being that the districts to be visited this year Núrpur included all the western frontier where the distances from one tahsil to another are so great that I found it would consume an undue length of time to proceed by marches. The alternative was to make use of the railway and stage carts, by which means most of the tabsils are now accessible. Consequently less inspection of field work than usual has been done by me, but somewhat over the usual number of tahsil offices have been inspected. I visited the head-quarters of 15 districts and 40 tahsils travelling 3,468 miles by rail and 976 miles by road. During the progress of the autumn and spring field crop inspection (girdáwari) I examined the work of two or three patwáris daily in the field and saw something of the work of individual patwaris at other seasons when time permitted.; Though the Director can never have sufficient leisure to test any considerable number of village papers in the field, I think it is desirable that he should, if possible, always do a little of this sort of inspection work. It affords one of the best means of ascertaining the real effectiveness of the checks applied by the lower supervising agency and of looking into the real state of the revenue agency, and it is important that the head of a department should always keep up his familiarity with the manner in which work is actually done and new orders carried out by the average patwari. If the statistics for each village are not correct, it is, of course, impossible by any amount of tahsil inspections to obtain correct statistics for the larger units.
- 4. Examinations of kanungos and candidates for the office of kanungo were held at the head-quarters of 14 districts during the year. The number of examinees was 108 of whom 59 passed. The proportion of success was somewhat larger than in the preceding year when out of 60 men examined 29 passed. Care has been taken to maintain an uniform standard of examination questions. The candidates sent up for the examination are either men who have passed the Entrance Examination and are learning survey and record work practically by carrying on patwari's duties,

or are men selected from the first and second grade patwaris. I am constrained to say that the men of the latter class did not always, by the way they acquitted themselves in the examination, justify their selection, and I doubt whether some of them could be good even as patwaris.

- 5. The number of unpassed kanungos is 17, i. e., the same as last year.

 So many candidates having passed the examination during the year, there ought to be no further difficulty in avoiding the appointment of unpassed men.
- The patwari establishment usually comes under revision at the conclusion of the settlement of a district when the amount Patwári establishment. of the income of the patwari cess is altered, and the experience gained during settlement has shown what are the real requirements for the maintenance of the record. Such revisions were made during the year 1892-93, in the districts of Gujránwála, Amritsar and Lahore; and shortly afterwards in Shahpur also. A large increase of patwári establishment was also allowed in the Fázilka tahsíl of the Ferozepore district, which was settled in 1880 as a part of the old Sirsa district, the funds derived from other parts of Ferozepore now permitting this improvement which the recent development of canal irrigation in Fázilka had rendered necessary. In the Hissár district the low grade of Rs. 8 has been abolished and the pay of the other grades has been raised from 1st April 1893. For the Peshawar district, now under settlement, a temporary increase of 30 assistant patwaris was allowed to be absorbed when the establishment is reorganized at the end of settlement operations. Other small temporary increases were allowed for special work in Mooltan and Jhang. Two additional patwaris were sanctioned for the Mourni ilaka in the Umballa district. Patwaris' circles were redistributed in Muzaffargarh and also in Siálkot.
- 7. No further change of system has taken place in the year under report. The possibility of paying patwars monthly by means of money orders depends upon the patwars consenting to bear the cost of the orders and the question is still pending. Only those patwars who live at a considerable distance from the tahsil will care to pay the post office commission.
- 8. The separation of records of rights from other papers in the district record offices, has now been effected in the districts of Bannu, Ferozepore, Gujrát, Gurdáspur, Umballa and Lahore, and is being made in Pesháwar.

The recent orders of the Financial Commissioner directing B. files of papers to be kept apart in separate shelves by months, have, for want of space, been carried out in only a few districts as yet.

General results of Director's inspections.

9. The general results of my inspection of tahsíl and district offices during the year were as follows:—

District record rooms.—District record rooms are generally kept in good order. At Montgomery the great want of accommodation prevents work being done as regularly as could be wished. At Jullundur much space could be gained by destroying the old jamabandis prior to 1885. In American more room is wanted for the new settlement record. This is being arranged for. The sub-divisional record room at Miánwáli is dark and crowded, but alterations are under consideration. Mooltan and Ludhiána, were the best record rooms which I saw this year.

District kánúngos' office.—At Kohát the district kánúngo has no room for his office. At Ludhiána too he is insufficiently accommodated.

Agricultural statistics at district offices.—The agricultural statistics at district head-quarters are usually in charge of the district kánúngos' assistants. There are some discrepancies between the vernacular statements and the English books. The former are copies of the returns submitted to the Director for compilation of provincial statistics, the latter are counterparts of the books kept up at the tahsils. It generally happens that after the despatch of the English statements, corrections are found necessary at the tahsil; the kánúngo

Carries these into his vernacular books, but the English books are not altered. Therefore, when using these statistics for administrative purposes, the vernacular books should be preferred as more correct than the English. In Delhi, Rohtak, Amritsar, Gurdáspur, Dera Gházi Khan and Bannu, the English registers are faulty; in Ludhiána, Jhang and Pesháwar they were good, and in other districts fair.

Standing records and annual records.—Some of these were examined at each district and tahsil, and when time permitted, the statistics abstracted by patwaris were checked from the original annual records. At Fázilka, Muktsar, Dipálpur and Montgomery, the result was to show some errors; at Gugera the abstracting seemed to have been very defective. There were also some bad errors noticed at Leiah; Ferozepore, Palwal, Muzaffargarh and Dera Gházi Khan gave fair results. At Sinawán, Bhakkar, Jhajjar, Delhi, Sonepat and the three tahsils of the Ludhiána district, the annual records were noticeably good. The hand-writing of the records was not always distinct enough.

Tahsíl kánűngos' offices.—The kánúngos' office rooms at tahsíls are generally very well arranged and neatly kept. The present rule requiring very few jamabandís to be kept at tahsíls has relieved these offices at the expense of district record rooms. Delhi, Sámpla, Rohtak, Jhajjar, Fázilka, Bhakkar, Samrála, may be mentioned as particularly good and well kept rooms.

Miscellaneous registers kept at tahsils.—These are generally well kept. The patwari stationery account was in confusion at Gurdaspur, Palwal, Ludhiana and Balabgarh. At Ludhiana all the work was in an unsatisfactory state. This tahsil has two office kanungos, but the arrangement has not worked well; responsibility is divided, and much of the work is left to patwaris or candidates. Sanghar, Isakhel, Hangu and Palwal were below the mark. Ferozepore, Mooltan, Leiah, Dera Ismail Khan, Bannu, Sampla, all the tahsils of the Jullundur district, Sonepat and Samrala came out well.

Patwar, Fund accounts.—These accounts are not often absolutely wrong, but are very often kept in such irregular and incomplete forms that it is difficult to prove them to be correct. The collection statements do not readily tally with the revenue accountant's figures. This was noticeably the case with the Mooltan district accounts (though the tahsils of that district with the exception of Lodhrán had their accounts in good order), also with the Gurdáspur and Montgomery district accounts. The Bannu and Jhang districts too were defective throughout. At Bannu, Gurdáspur and Jullundur the system of paying patwárís was found contrary to orders.

Village and circle note-books.—Much attention was given to the system on which these books are kept. There are still a few failures to comply with the rules, though in this respect much improvement is taking place. It must be admitted that changes in the rules and forms have rendered it difficult for the kánúngos and patwárís to learn and remember exactly what they ought to do. The worst sets of books seen were those of the Isákhel and Pathánkot tahsíls. At Delhi, Sámpla, Samrála, Chiníot, Montgomery and Lodhrán, the system of work deserved commendation, but at Balabgarh, Kohát, Hangu, Palwal, Gugera, Sinawán and Lahore, it was hardly up to standard.

Totalling of statistics.—I gave considerable time to testing the accuracy of the office kánúngo's work in adding up the figures taken from the village statements to form circle and tahsíl totals. At each tahsíl and district office I and my personal assistant added up several columns of the entries in village and circle books and compared the totals with those shown by kánúngos in the note books of larger areas. The results of this check were decidedly unsatisfactory especially in regard to statements which are compiled quadrennially. The kánúngos have made up their totals of the quadrennial statements by unsound methods and consequently their results in these statements are incorrect. Unusually large errors were very often found in the Pesháwar district, the Mooltan district, the Montgomery district and at the Sanghar, Jámpur, Ludhiána and Pathánkot tahsíls. The annual statements on the other hand were generally correctly totalled. This shows that the kánúngos errors are caused mainly by defective methods, and I hope that in future they will get the

quadrennial statements also into order. The tahsils which had fewest mistakes found in their adding up were Sampla, Chiniot, Muktsar, Dipalpur, all the tahsils of the Dera Ismail Khan district, Bannu, Jhajjar, Rohtak, Ballabgarli and Kasúr.

Tahsildárs' remarks in village note books.—I fear that the tahsildárs do not generally know what sort of observations to make in the last page of the village note books and leave this work to the field kánúngos who supply merely some formal and needless comments on the statistics. I cannot remember any conspicuous exceptions to this observation. It is however only fair to say that the number of books I was able to examine was not large, and that those in which the tahsildárs had recorded thoughtful and useful notes may not have happened to come to the top. Such notes cannot be expected for every village in a tahsil, and only the local officers can tell which villages ought to have been specially noted upon.

Mutations in records of rights.—The mutation work in this Province is naturally so heavy that, if every transfer were invariably written up according to the Act and Rules, it would be practically impossible, in perhaps half the tahsils, for the Revenue Officers to cope with it. Applications have been made to Government for special officers to help in this duty. The merits of the work done by the tahsíldárs and their náibs cannot well be determined by a mere inspection of the papers. To do this it would be necessary to collect all the right-holders in selected villages and go through the record and mutation register, holding by holding. This is the process which the Director can seldom find time to adopt, though District Officers should, I think, try it repeatedly. When it is thoroughly done, as at the commencement of settlement operations, or as by Bhái Arjan Singh in Dera Gházi Khan in anticipation of settlement, the resulte are apt to be startling. It is not uncommon to find as many unrecorded mutations as there are holdings in the village. As to the orders passed by Revenue Officers in disputed cases the prevailing tendencies are two-either to uniformly refuse the mutation when there is much contention and the facts are doubtful, or else to make a sort of judicial enquiry into the legal aspects of the dispute. Of the two, I prefer the former policy as safest and wisest on the whole, excluding, of course, those rare cases which fall under Section 36 (2) of the Act and are only determinable by a superior officer. But mutations should not be rejected as they are by some officers merely on such grounds as that some of the parties are minors. In certain cases I particularly examined the mutations throughout in order to see what proportion of them are really disputed cases. The proportion was found to be extremely small, seldom over three per cent. If, therefore, the Revenue Officer confines himself to plain facts there is no difficulty in his deciding very large number of cases at a sitting, except the difficulty of obtaining the attendance of parties, and this is the direction in which we should give them every facility that we I think that for one thing permission should invariably be accorded to take up cases at patwaris' head-quarters. The mutation registers are still not written so well as they should be. A reference is pending with the Financial Commissioner as to the proper mode of reckoning fees in a large class of cases in which a single transfer involves many holdings in the record.

10. The following note upon inspections of Revenue Officers by district Inspection of land recofficials is added under the orders of Covernment. With cords by district officials. the approval of the Financial Commissioners it is confined to those tahsils which I have inspected during the year. The General Rule Revenue Circular No. 23, para. 3, requiring tahsil offices to be inspected twice in the year by either the Deputy Commissioner of the Revenue Assistant is on the whole well observed. The only noticeable exceptions observed were that the Revenue Assistant, Ludhiána district, had inspected no tahsils-during the year, and that the Gujránwála tahsil appeared according to the minute book to have been inspected only twice in the last twelve years by the Deputy Commissioner or his Assistants, though it had been inspected ten times in that period by the Commissioner of the Division. The Lahore tahsil too had not been regularly inspected. In the Jullundur district inspecting work had been very well done, and in Dera Ismail Khan the Deputy Commissioner had given sustained

attention to this work with excellent effect. The tahsil offices in that district being found in unusually good order. The work of the field kánúngos, however, in this district is not so good as that of the offices and they need the attention of the Revenue Assistant. The tahsils of the Mooltan district were very thoroughly inspected by the Deputy Commissioner last year. In Ferozepore district one Revenue Assistant had spoiled the effect of his inspections of patwaris by requiring a minuteness of working which cannot be attained in a genuine way and should not be demanded. In Montgomery the Revenue Assistant had not inspected well. In Gurdáspur more regular inspections by the Revenue Assistant would have been desirable.

In getting tabsíl offices into order and keeping them so, very much depends upon the efficiency of the district kánúngo. By Patwári Rule 134 he is required to be on tour for not less than 15 days in each month from October to April inclusive, and in each of the other months to inspect at least one tahsíl kánúngo's office.

11. In Jhang, Pesháwar, Rohtak, Mooltan, Jullundur and Ludhiána the district Kánúngo has worked well and is efficient. In Muzaffargarh he has failed to check the statistics. This man is very old and will soon be retired. In the Delhi district kánúngo's inspections were not searching enough. In Dera Gházi Khan the district kánúngo has been lazy and inefficient, but is now being reformed by the energetic Revenue Assistant. The district kánúngo of Gurdáspur has been extremely indolent and has done practically no inspection work in the district. District kánúngos, as, a rule, know their work well and can do it if the Revenue Assistant looks after them.

Deputy Commissioners and their Assistants have, in 15,251 cases, personally checked the village-records and the mutation work of their subordinates.

- Quarterly statements of progress in the maintenance of village Quarterly business records are scrutinized by the Director before submission to the Financial Commissioner. By this means the progress of mutation business, the punctuality with which crop returns and annual records are filed, the extent to which tahsildars and naib-tahsildars have carried out the orders requiring them to spend half the month on tour and the degree to which superior officers have supervised this branch of their revenue work, with several other matters are constantly kept in view. The great burthen of mutation work has, as was remarked last year, necessitated the submission of proposals for special agency to relieve the tahsil officers. These proposals are under the consideration of Government.
- 13. These continue to be as described in last year's and previous reports, and the position of the Director is, as it has always been in this Province, in exact accord with the principles of the recent Circular of the Government of India, Revenue and Agriculture No. $\frac{15}{342}$, dated 26th October 1893.
- 14. A separate report on the Agri-Horticultural garden is prepared.

 The management of Mr. Hein, the Superintendent, continues to deserve commendation for efficiency and good economy.
- 15. The Agri-Horticultural gardens afford very limited space for agricultural experiments. The Government having approved of an attempt being made to enlarge the scale on which new agricultural seeds are grown. I have tried to hire more land in proximity to the gardens, but have failed. Arrangements have therefore been made to grow seed by contract on the Mamdot estate in the Ferozepore district where abundance of land is available.

Maize.—Various kinds of American maize have now been successfully established in the gardens and have been proved to produce both here and in outstations, with due care, a much higher yield, than the common country maize, besides being superior in quality. The country maize very seldom bears more than one cob to a stalk, whereas the American kinds bear two to six cobs. In

the Bannu district, as well as in Lahore, yields as high as 48 maunds per acre have been obtained. In Hoshiarpur, Hazara, Kangra, Mooltan, Simla, Gurdaspur and Sialkot, this maize is appreciated. The number of varieties grown will now be restricted to a few sorts which have proved most successful either in the hills or in the plains, and these will be grown on a larger scale for distribution.

Sorgham.—A similar course will be taken with sorgham of which several kinds are in stock in the gardens. The attempt to produce crystallisable sugar from sorgham juice has failed, but some varieties produce large quantities of excellent sweet fodder and heavy crops of seed, as each stalk produces several ears in succession. The reports from Siálkot and Shahpur praise the sorgham for fodder purposes. Its greatest disadvantage perhaps is, that it is more readily injured than the country jowár by extremes of wet or drought.

Cotton.—Garo hills country is a success in many districts and always does well in the gardens. The managers of two cotton mills at Delhi were asked to value some samples of this cotton and estimated it at Re. 1 per maund above common Delhi cotton. Far superior to this, however, seem to be some varieties of Egyptian cotton introduced into the gardens this year. The plants are 8 or more feet high and bear great numbers of pods full of a long fibred and silky cotton. When picking is completed, the yield will probably be found to be unusually high. An advantage of this cotton is, that the fibre quits the seed readily, leaving the seed quite smooth. It should be grown on a much larger scale in succeeding years. Some Egyptian cotton seed was tried also by Mr. Gladstone in the Umballa district with the result that the experiment proved a failure. This was partly due to excessive rain and partly attributed to the climate being too severe.

Canadian cereals.—These seeds, wheat, barley and oats were obtained in 1890 in return for some Punjab seeds supplied to the Canadian Government. The oats have succeeded in Hoshiárpur and Ráwalpindi and in Kángra at a height of 11,000 feet, but have not done well in Ferozepore, Jullundur or Amritsar. The barley and wheat have given satisfactory results at Gujrát, but elsewhere, perhaps from insufficient care, have failed.

Huskless barley.—Huskless barley of several kinds, white, blue and chocolate, has established itself in several districts, to which the seed has been supplied from the gardens, as a real addition to the ordinary crops of the Province.

Rye.—Some of this cereal was grown experimentally in several districts, as there is a demand at the Gunpowder Factory, Ishápur, for charcoal made from rye straw. The crop can be grown without difficulty, but as only the straw is wanted, a high price would have to be paid to render the cultivation profitable.

English potatoes.—In January 1893 fifteen tubers, each of seven kinds of Sutton's potatoes, were supplied from the Saháranpur gardens, and were issued for experiment to the Ráwalpindi, Kángra, Hazára and Simla districts. A further supply of 104 tubers were sent by Government of India to the Annandale gardens at Simla. The results have been very good at Annandale and at Mahásu near Simla—128fbs. of tubers being in one case obtained from 33fbs. of sets, but near Murree (Ráwalpindi district) the yield was small and the experiment made at Dharmsála (Kángra district) was not conclusive. The Deputy Commissioner of Kángra complained of the smallness of the quantity of seed supplied and reports that he has ordered half a ton for further experiment. The Superintendent of the Annandale gardens suggests that in the places where the potatoes were not successful, they may have been sown too early or in too cold a situation. He recommends further experiments being made with the most successful kinds which are those named Masterpiece, Magnum-bonum, and Windsor Castle.

Petutre disease.—Some specimens of diseased potatoes from Batála in the plain portion of the Gurdáspur district were sent to Dr. Cunningham for examination. No disease is reported from the hill stations, and about Simla it is stated definitely to have died out some years ago.

American sweet potatoes.—A supply of this vegetable which is similar to the native yam called shakar kandi (batatas edulis) has been ordered from Virginia.

American vines.—The purchase of these vines was mentioned last year. A few of the cuttings have struck successfully at Siálkot, Montgomery, Gujránwála, Jhang and Mooltan. It has now been established by a scientific enquiry made at the Medical College, Lahore, that the disease affecting the vines in Bashahr is not phylloxera, but a fungoid parasite, a kind of saccharomycetic.

Swietenia Macrophylla.—Plants of this tree, the mahogany, are thriving at Umballa and at Delhi, but have failed at Jullundur. It can probably be grown at most places with reasonable care.

Inga dulcis mimoseæ, the seed of which was imported from Madras in 1891 is reported to have done well in Delhi and Hissár, and to be growing luxuriantly in Dera Gházi Khan and Mooltan.

Date palm.—The importation and distribution of Egyptian and Arabian date palm seed and offsets has been continued and encouraging results have been obtained in several districts. It will be more possible to judge of the results later on.

Spanish chestnut.—This fruit is important inasmuch as it is said to bear a good crop in a year of drought and thereby to supplement the food supply in hill districts. Its cultivation, however, proceeds slowly as it is necessary first to raise seedlings from imported seed and afterwards to graft them. The tree takes many years to bear freely and it is difficult to get native cultivators to take interest in so remote a prospect of gain.

- Supply of fruit trees orchards to this department for distribution was 2,100. Though this is a slight improvement on last year it falls far below what was expected. The proposal of the Conference mentioned in last year's report to appoint an inspector of orchards for the purpose of promoting fruit culture among the landholders in hill districts have not been accepted by Government. An apprentice sent by this department to be taught at Annandale and Mahásu is now reported to have learnt the arts of grafting, budding, &c., and is available for employment elsewhere.
- 17. For want of ground very few experiments can be tried by this department. The reports of Thomson and Mylne's shallow sugar evaporating pan are the same as were noted last year. In the Meerut district of the N.-W. Provinces it is said that the sugar boilers are getting used to the shallow-pan and have overcome its difficulties.

The sand pump and boring apparatus which was on trial in the Ferozepore district has been sold to the Kalsia State which will experiment further with it.

The Arbis flour mill (wrongly written Albis in previous report) has been transferred to the N.-W. Provinces. The cream separator has not again been tried. A dairy under European management was tried at Lahore by a private firm, but failed for want of support.

Neither Sullivan's nor Taylor's water lift has made any further progress in popular favor.

18. Some seed of the soja pea (called bhat in the hills) was supplied at Supply of seeds, &c., to his request to the Consul for Sweden and Norway at other Provinces. Bombay. A set of samples of Punjab cereals was supplied to Sir T. McIlvraith of new South Wales.

Specimens of sugarcane and sugar manufactured in this Province, together with information regarding the manufacture of sugar, were collected and sent to the Reporter on Economic Products to the Government of India, Calcutta, for the Imperial Institute, London.

19. There has fortunately been no plague of locusts during the year under report.

- 20. Some specimens of alkaline soil (kalar, reh or usar) from the Lahore gardens were submitted for analysis to the Agricultural. Chemist to the Government of India. The salts were found to consist mainly of sulphate of soda with some chloride and carbonate of soda. The best remedy for the sterility produced by these salts was discussed and Dr. Leather made a visit to Lahore to see the soils in question. An experiment on the reclamation of some of the salt land by the mechanical expedient of removing a foot of the top soil and replacing it with canal silt and similar material has been made at the expense of the agricultural grant and promises well. Some experiments to ascertain the rate of growth of kankar nodules in the soil of the gardens are being made at Dr. Leather's suggestions.
- 21. A report on the district analysis of fuel and fodder reserves was submitted to Government during the year. The gist of it was that, although under certain circumstances it might possibly be profitable to grow grass for hay, it could hardly pay to grow bushes for fodder, and that the gain derived from bringing waste lands under cultivation is so considerable as compared with the price of ordinary cattle, that it would hardly be good economy, on the part of the peasantry, to leave land uncultivated even on the chance of thereby saving the lives of some of their cattle in a famine year. The Financial Commissioners and the Government having agreed in these conclusions, it is now sunnecessary to proceed further with the scheme of district analysis.

I have, during this rainy season, in accordance with the orders of Government, visited some of the cantonment grass farms and made myself acquainted with their system of producing hay. It appears that where there is a large demand for hay at high rates and where European supervision is available, there is a considerable margin of profit, but that hay making would not pay in rural tracts, except close to a railway where after being compressed and baled, the hay might be sold to the Commissariat or Transport Departments. Ensilage, it is generally agreed, is not a system adapted to the climate of the Punjab.

- 22. Some interesting experiments made by Mr. C. E. Gladstone, Deputy

 Commissioner, Umballa, in the reclamation of sides and beds of torrents by planting the large grass saccharum, cerale have been reported upon by Mr. Duthie, Director of Botanical Department, Northern India, to the Government of India.
- 23. Several specimens of insect pests have been sent by this office during the year to Dr. E. A. Cotes of the Indian Museum, Calcutta, for identification among them some small moths identified as gelechia cerealella found infesting samples of rice in this office received from the Pesháwar and Kángra districts, also some white beetles found to be of the genus curculionidæ and some other pests found on imported Egyptian cotton in the Lahore gardens. The Superintendent of the gardens has taken interest in this subject which, if pursued regularly, may yield results important to the cultivator.
 - 24. According to the Government of India's No. 2243, dated 18th August 1893, no report on the condition of Trigonometrical Survey Stations in the Punjab is now required.
 - 25. A separate report on this farm is attached. Owing to favorable water-supply the year has been a very successful one (Appendix A).
- Public garden in Lahore and Delhi districts.

 The receipts cover, on the whole, more than three-fourths of the expenditure which, as large parts of the gardens are purely ornamental, is satisfactory.

27. No discoveries of the archæological remains have been made during the year.

Archæelogy.

- 28. This subject will, in future, be dealt with in the Veterinary Report (vide Government of India's Circular, (Revenue and Agriculture Department) No. 42/5, dated 28th October 1893).
- 29. This subject has been disposed of in the paragraphs supplied to the Government Administration Report, but will be further mentioned, if necessary, in the Veterinary Report.
- 30. This subject also will be transferred to the Veterinary Report.

 Hissar bulls and imported cattle.
- 91. In accordance with para. 4 of Government of India Circular No.
 Preparation of a conspectus of cattle disease. Veterinary Department, were asked to assist in collecting information for the compilation of a conspectus of cattle diseases by the Assistant to the Inspector-General. They have not, however, as yet been able to do anything in this direction, their whole time being taken up with duties connected with horse breeding.
- 32. During the year the appointments of Civil Veterinary Superintendents Civil Veterinary Depart. for North and South Punjab and for Biluchistán with the Deraját have all been filled up, but not in time for the Superintendents to affect anything before the hot weather, which season the Superintendents, North and South Punjab will, under present arrangements, pass outside the Province at the Bábúgarh Depôt near Meerut. In May both these officers were required to assist in suppressing a dangerous outbreak of glanders in Kashmír, and one of them was detained in that State until August.
- 33. The Lahore Veterinary School was left, on Veterinary Lieutenant Blenkinsop's departure in April 1893, without a second European Officer to assist the Principal, until after the close of the year under report. The year has consequently not been one in which any advance in Civil Veterinary affairs can be looked for. Arrangements have been introduced for the better professional supervision by the Civil Veterinary Superintendents of the Veterinary subordinates in employ of local bodies, but another year will be required to show their actual effect.
- Comparison of monthly receipts of the mutation and patwari fees account with the statement of treasury credits furnished by the Accountant-General has been regularly made with the results that the two accounts generally agree. Any disagreement is immediately noted and the cause enquired into.
 - 35. The agricultural grant for the year was Rs. 2,070 and the Budget and expenditure.

36. Lála Paira Rám has continued to fill this office and has aided the Personal Assistant to Director effectively in all matters made over to him.

Mr. Francis held charge of the office of the Director of Land Records and Agriculture at the close of the year, and this report has been written by him before making over charge to me, as noted above.

I have, &c.,

FRED. A. ROBERTSON,

Director of Land Records and Agriculture, Punjab.

APPENDIX A.

Report on the working of the Bruceabad Farm, including Paharpur, Patti Sirkari, Northern and Southern Jagir Pattis, Rakh Sonahra and Ghauspur, during the agricultural year 1892-93.

1. The establishment has remained the same as last year, but the pay of the Superintendent has been restored to the old rate, i.e., Rs. 40 per mensem since the 1st June 1893. The total monthly expenditure is now—

				Rs.	a.	p.	
1 Superintendent on				40	Ô	0	o .
1 Muharir on				 20	0	0	
5 Karáwas @ Rs. 3 each		*•		 15	0	0	
And miscellaneous	•••	•••		 3	3	4	
		Total	•••	 78	3	4	per mensem.

2. The income for the year under report both for kharif and rabi was the best since the farm was started, and this in spite of the fact that prices were lower than in the previous year. The figures are for kharif Rs. 1,856-2-5 as against Rs. 264-6-2 last year, and Rs. 680-4-3 the year before. From the rabi income some Rs. 470 will have to be deducted on account of a slight reduction made in the rate on account of undue proportion of barley having been mixed with the wheat. The increase is due to the fact that, owing to the construction of a new band, favourable river floods, good rain and good supply of water in the hill torrents, nearly twice as much land was cultivated as in the previous year, i. e., 46,204 kanáls as compared with 25,637. Some credit is also due to the Superintendent for careful supervision.

3. The condition of the tenants is good. All takávi advances have been recovered, nearly all of them have sufficient seed for next year; and for such of them as through poverty or improvidence have failed to keep a stock of seed, 50 maunds have been stored which will be issued instead of cash. The tenants are also all in possession of bullocks, which are in good condition. Rates of batái are the same as last year.

4. During the year under report two new wells have been taken in hand, one in Bruceabad, the other in Pahárpur; they will be completed shortly. They are being constructed entirely at the cost of the farm as the rate, of the batái will be higher than if they were constructed by tenants, and the latter will have no claim to right of occupancy. From some few tenants who have hitherto paid nothing as bich, a nominal amount is being demanded for the future, as there is great objection to occupancy rights being established under present arrangements, bad characters are at once turned out and the village is thus kept clear of crime. Though this year cattle theft has been very bad in the surrounding district, there has not been a single case in Bruceabad.

The principal crops grown are wheat in rabi and másh and til in kharif. In Rakhs Sonahra and Ghauspur the principal crop is sarson. Most of the produce is exported to Sukkur, a very small proportion of it is consumed in the district. It is to be regretted that the people will not attempt to grow sugarcane and they do not seem to care about growing gram. There is plenty of land on the farm that seems suitable for these crops, but when questioned about it the people generally answer that it is not the custom of the country or that the land is not suitable. This can be due only to ignorance, and I propose (subject to sanction) growing some sugarcane on behalf of the farm on some suitable piece of ground that is at present vacant, by which means I hope that the future income of the farm will be largely increased.

Annexed are statements showing demand, &c., for the last three years, areas of estate, and income from grazing fees.

A.—Statement showing gross income of the Bruceabad for three years.
