PART III

WAGES

NOTE

The statistics of wages presented in table No. 28, and its subsidiary tables Nos. 29 and 30, are compiled from half-yearly returns, received from District officers, purporting to show for each district the average for the preceding six months of the wages per month of certain labourers and artisans. By far the most important class of labour is agricultural, and the record obtained entirely fails to give a reliable indication of the remuneration of the labourers. This result is due to the inherent difficulties of the problem, and the practical impossibility of getting the untrained reporting agency to make the necessary allowances for the varying conditions of employment. Payment in kind is commonly practised, either for the entire wage, or as a supplement to cash wages, and the supplements vary according to the season and the nature of the employment. The regularity of employment also varies greatly, and employment is practically nowhere continuous throughout the year. The most common expedient for avoiding these, and other difficulties, is to return cash wages for labourers employed in towns or their neighbourhood, which are in no way typical of the rates prevailing throughout the district. The same difficulties are also encountered in collecting information as to the wages earned by village artisans, and the results are further vitiated by assuming that masons, carpenters, and blacksmiths necessarily earn the same wages. The wages of horse-keepers are recorded with the least inaccuracy, but even if they are taken as typical of the wages of domestic service generally, the class represented is unimportant.

The selection of the districts, for which figures are published in the tables, is also faulty, as the districts are not typical of tracts having similar economic conditions, but are those originally selected according to their climatic character and rainfall for making returns of the prices of food-grains.

Measures are now being taken to replace the present faulty returns by more scientific methods of investigation, whose object will be to ascertain the standard rates of wages in each district or homogeneous tract, and to observe permanent changes in those standard rates as distinct from short period fluctuations. The most important feature of the new method is a regular wage census to be conducted once in five years, the first of which will be taken in 1911.

Tables Nos. 31 and 32 are the record of wages paid in certain State Railways and Government Establishments as well as in some Industrial Establishments in various parts of the country.

The figures in table No. 31 are reported annually by the Director General of Post Office, the Agent to the East Indian Railway, the Manager of the North Western Railway, the Irrigation Department of the Government of Bengal, the Public Works Department of the Government of the United Provinces and the Accountant General, Military Department; and those in table No. 32 are supplied by the owners or managers of the different industrial concerns.
