PREFACE.

RETAIL Prices are expressed in India generally in terms of the number of sers (one ser=2'057 lbs) per rupee and were so published in tables Nos. 1 to 13 up to the 24th (1907) issue of this Volume. For convenience of comparison with wholesale prices, retail prices have since been shewn in terms of rupees and decimals of a rupee per maund (82'286 lbs).

The tables have been limited to the last twenty-five years, together with the base year 1873 or any later year in which prices were first quoted.

NOTE ON VARIATIONS IN PRICES OF FOOD GRAINS AND SALT

REASON FOR FLUCTUATIONS IN PRICES IN EACH QUINQUENNium.

A general rise of prices took place about 1860. With the suppression of the Mutiny and the transfer of the administration to the Crown, there commenced a new era of commercial and industrial activity. The resources of the country were developed by the construction of roads and railways, the improvement of harbours, and the extension of irrigation. The cotton famine caused by the American War of Secession (1861—65) gave a great impetus to the cultivation of cotton in India, which, while the war lasted, brought large profits to the cultivator and the merchant. The influx of the precious metals which had begun about the time of the Mutiny was thus further stimulated, and from about the second year of the war a great rise of prices took place throughout the cotton-growing districts of Western and Central India, as also in a smaller degree in other parts of the country. Prices were also raised by the famine of 1861 in the Upper Doab of the province of Agra and the neighbouring districts of the Panjab and Rajputana and by the scarcity in Cutch.

On the collapse of the inflation caused by the American war, prices would have fallen but for the great famine of 1866 in Orissa, which extended into Bengal proper, Bihar, Madras, and the eastern part of the Central Provinces. Another notable famine—that of 1869—affected Western Rajputana and parts of Northern India, and the extension of scarcity, towards the west and south, produced a rise of prices in Bombay, the Central Provinces, and Hyderabad.

During 1871—75 prices were not seriously disturbed by any calamity except the scarcity in Bihar of 1874, and although large purchases of grain were then made by the Government and scarcity prevailed in the adjoining districts of the United Provinces, the disturbance of prices was not widely felt. The export trade in rice expanded greatly in 1872-73, and was on a large scale throughout the decade 1871—80. It showed greater contraction in 1874, the year of the Bihar famine, than in the Deccan famine three years later.

In this quinquennium occurred the great famine of 1877-78, which affected an enormous tract in Western and Southern India and extended with diminished intensity into the north, causing a general rise of prices of food-grains all over India. The export trade in wheat, which had begun in a small way after the opening of the Suez Canal in 1870, received a check in the years 1878—80.

Speaking generally, all crops except rice were good or abundant during these years, though there was scarcity in a portion of the Panjab in 1884 and distress in parts of Bengal and Madras in 1885. The rice crop was bad between 1883 and 1885 owing to drought and floods, but wheat was plentiful, and the average price for all grains was low.

It is difficult to find adequate reasons for the great rise in prices which took place during these five years, for the 1889 famine in Ganjam (accompanied by distress in Orissa and scarcity in Bihar) was only of local importance, and prices had already reached their highest point in 1888. The export trade in food-grains was not larger than in the preceding quinquennium.

The high prices ruling during 1886—90 were still further raised in 1891-92 by prolonged drought, causing scarcity and distress in Madras, Bombay, the Deccan, Bihar, and Upper Burma. A strong Indian demand for rice was coupled with large exports, and at the same time there was an unprecedented exportation of wheat owing to the failure of crops in Europe, so that Indian prices rose almost to famine levels. With better seasons prices fell, but the lowest point reached in 1891—95 was still above the average level of the previous quinquennium; and, as in that period, the importation of silver for coinage continued on a large scale until the closure of the mints in June 1893.

The year 1896-97 was one of intense and widespread famine. The climatic conditions in the autumn were generally most unfavourable, and it was certain by the end of November that famine must supervene over a great extent of the country. It was most severe in the North-West Provinces and Oudh, and in the Central Provinces, where the calamity was seriously aggravated by the fact that in these territories there had been two previous years of short harvest. The winter rains, however, did good to the greater part of Madras, Bengal, Western India, and Rajputana, and also the greater part of the Panjab. The prices of food had been higher than usual in Northern and Central India before the failure of the autumn rains; but they had been moderate in Bengal, Madras, and Bombay up to September 1896. In September 1896 prices rose suddenly and in October famine prices were reached in Northern and Central India, though in Bengal, Madras, and Bombay the highest level was not reached till some months later.

For the years from 1897-98 onwards the chief reasons for the fluctuations in the prices of the principal food-grains are given in the tabular statement below :

1897-98

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)

Bengal	Season favourable. Outturn of autumn rice normal; of winter rice 110 per cent of normal.	Rainfall defective. Outturn 87 per cent of normal.	..	Season unfavourable for early sesamum but favourable for the late variety and spring oilseeds.	Season favourable for early cotton; late crop suffered from excessive rain in places.	Deficient winter rain affected sowing and heavy rain in August reduced outturn.
Eastern Bengal and Assam.	Season favourable. Outturn of autumn rice normal and winter rice 110 per cent of normal.	Winter rain deficient. Crop average.	..	Conditions generally fair.	Season fairly good at first, but latterly very unfavourable.	..
United Provinces	..	The rainfall was timely and beneficial. Hail and strong winds caused slight damage.	..	Season generally favourable. Outturn of sesamum 80 per cent, of linseed 95 per cent and of rape seed 80 per cent of the normal.	The rainy season was generally favourable, but scanty rain of September followed by high winds reduced outturn in places.	Season favourable in western and southern districts, but in the eastern districts crop was damaged by floods and insects.
Punjab	..	Conditions extremely favourable.	..	Condition of sesamum from good to average, of spring oilseeds very favourable.	Excessive rain at the end of August and early in September damaged the crop in places. Outturn per acre satisfactory on the whole.	Season favourable.

* The figures are estimates and refer to provinces where the crops in question are extensively cultivated.

Generally speaking, the fluctuations in the retail prices of salt are the direct consequence of changes in the duty levied by Government. From 1861 to 1878 there was no change in most provinces. In 1878 the duty was reduced from R3-4-0 a maund in Bengal to R2-14-0, and the duty on Rajputana salt from R3-0-0 to R2-8-0. This change reduced the retail prices of salt in Bengal, the North-West Provinces, the Panjab and Assam; but about the same time the duty levied on salt in Sind was raised from R0-8-0 to R2-8-0 and in Bombay from R1-13-0 to R2-8-0, so that prices rose very largely in Sind and considerably in Bombay. Since 1878 the retail prices of salt all over India except Burma have uniformly responded to changes in duty. In 1882 the rate of duty was reduced generally to R2 per maund which was raised again to R2-8-0 in 1888. The reductions to R2 again in 1903 and to R1-8-0 in 1905 had an immediate effect in bringing down retail prices. The salt tax was reduced with effect from the 20th March 1907 for the third year in succession to R1 a maund throughout the whole of India. Retail prices again fell in correspondence and the average in some provinces is now below R2 per maund. In Burma the salt revenue system is somewhat different. In the years 1888, 1889 and 1890 increases in the rates of composition duty were made with a view to raising the incidence of the tax to the same level as in India, and the prices rose considerably in those three years. Since 1890 there has been little change in the retail prices.

PART I

NOTE ON RETAIL PRICES OF FOOD-GRAINS AND SALT

Prior to 1873 prices of food-grains were officially recorded in different provinces, but the statistics were not collected on any uniform plan, nor brought together in an accessible form.

Records of prices

Under orders of the Government of India issued in 1872 a fortnightly return of retail prices in sers per rupee for the commoner food-grains and salt in each district was instituted, and these returns have been regularly published in the *Supplement* to the Gazette of India since 1873. In 1878 a small volume was published, giving yearly average prices of food-grains for the period 1861—1876 in certain districts which were selected as typical. In 1884 the figures in the earlier volumes were revised, prices for the period 1876—1883 were added, and a new volume was published. Since that date a statement of the average prices for each year beginning from 1861 has been published annually in the volume entitled *Prices and Wages in India*. Throughout the period from 1872 additions to the record have been made from time to time by increasing the number of stations from which reports regarding certain grains were required, and also by adding "Kangni" to the list. These tables are now limited to the last twenty-five years with the base year 1873.

Tables Nos. 1—11 shew the annual average prices of each of the ten commoner kinds of food-grains and of salt. The prices quoted are the averages of the half-monthly prices reported during the year. The districts in each province are grouped together with reference to their climatic character and rainfall, and averages are struck for each group as well as for each province.

Table No. 12 shews the annual average prices of the most important food-grains at twenty-three stations, which have been selected with a view to giving a fair indication of the general level of prices throughout each province.

Table No. 13 shews the variations of these prices, the prices of the year 1873 being taken as 100. The year 1873 marks the beginning of the great change in the relative values of gold and silver and the character of the seasons was in this year generally normal.
