NOTE.—In this table, the variations in the prices of gold (measured in silver) are arrived at by multiplying the price of bar silver in London in 1873 (59 $\frac{1}{2}$ d.) by 100 and dividing the product by the price of bar silver in the particular year.

Example—

Price of silver in 1899 = 27 $\frac{1}{2}$ d. (table No. 10); price of silver in 1873 = 59 $\frac{1}{2}$ d.; price of gold in 1873 = 100. The variation in the price of gold in 1899 is then worked out thus—27 $\frac{1}{2}$: 59 $\frac{1}{2}$:: 100 : 215

The variations in the prices of the other articles in this table are calculated thus: As the variation in the price of gold in table No. 11 is to the variation in the price of gold in this table, so is the variation in the price of the article in table No. 11 to the variation required.

Example—

Variation in the price of gold in table No. 11 = 100; variation in the price of gold (measured in silver) in 1899 in this table = 215, variation in the price of copper (measured in gold) in 1899 = 86 (table No. 11). Therefore—100 : 215 :: 86 : 185
