viii. Tradition ascertains the existence of a thing on the evidence of unvarying rumour; for instance, I know that such a being as a goblin exists, because it is universally reported that a goblin haunts a certain banyan tree.

Of these eight modes of proof the Charakists acknowledge only one, that from experience: the Buddhists, and the Veisëshikists add inference to it, and so acknowledge two of them: the Sankhyists acknowledge three, adding the proof from testimony to the above two the Jemists, and some Ny yists add to these the proof from comparison, and so acknowledge four: the Prabhikists add reason to these, and so admit five: the Pattists and the Vedantists acknowledge six, adding negation, while the Purinists admit probability also, and tradition, and so receive all eight modes of proof.

NANASTVAVATHAKKATTALEI:

OR THE ELEMENTS OF THE CONTROVERSY RESPECTING THE PLURALITY OF SOULS,

BY

SESHATTRISIVATESIKAR.

I. The Deity.

1 BRAHM AND SAKET.

There is an inseparable energy, or Sakti, in Omniscient pure Brahm, just as there is heat in fire

When this Sakti is concealed in that unassociated Brahm it is called Absolute Brahm,

When this Sakti becomes visible, and envelopes Absolute Brahm, Brahm in that state is called Supreme Brahm, because it exists within that universal envelope

2. THE ATERIBUTES OF SARTI.

Just as love is excited in woman by the presence of man, so the three unchangeable attributes, Satwam, Ra'as, and Tamas, are induced in the hitherto attributeless Sakti by the presence of Brahm.

1 Sitta Bahm

- ² Para Brahm
- 8 Goodness, Passion, Malignity:
 - Or, Composure, Excitement, Depression:
 - Or, Normal state, Over-activity, In-activity.

Satwam when pure and uninfluenced by the other attributes is called the Joy-enformed Sakta.

Pure Rajas is called the Knowledge-enformed Sakti. Pure Tamas is called the Existence-enformed Sakti.

8 BRAIN AND AU. ALL BULDS OF SAK I

Supreme Brahm, when united to the Joy-enformed Sakti, and being in the protound sleep of pertect bliss,4 is called the All-enjoying One.5

This All en'oying One, when united to the Know-ledge-enforned Sakti, and being in the state of dreamy sleep called Universal light, loses the name All-enjoying One, and is called the All-pervading One.

This All pervading One, when united to the Existence-enformed Sakti, and being in the state of wakefulness called the Universal envelope, loses the name All-privading One, and is called The Supreme.

II. Naturo.

L. THE DEVELOPEMENT OF NATURE

Just as there is an appen inco of silvery brightness in the pearl-oyster shell, so in that pertect, all pervading, existence knowledge-and-joy-possessing Brahm a Sakti is produced called Original-passivenature 10

- 3 Ana uni "pungka

II TIE TAMAS-ALLRIBLIE OF NAITRE.

In the Tamus attribute of Original Nature there two Saktis the power of concealment, and the power of disclosure.2

(1.) THE CONCLAITING SARIL

Of these two the concealing Sakti conceals the difference between the three kinds of bodies, the Knowledge-destroyers, and the Omnipresent deity, from all living beings except the Possessors of the knowledge of the elementary substances and The lord.

Wherefore the man from whom these things are concealed is puffed up with the idea that the twentynine substances constitute his self-hood. This pulling When Satwam-in-Rajas preponderates, the Know- is called The chaplet of self-consciousness, and Family-bondage 4

> To put away this concealing Sakti through the gracious assistance of one's spiritual instructor, and to know that the twenty-nine substances do not constitute one's self-hood,—this is the final beatitude of true freedom.

These are the operations of the concoaling Sakti.

THE REVEATING SAKE

In the Revealing Sakti Ether makes its appearance which is the indiment of sound.

- r Avvanam
- * Samsara-puntant.
- V ksepam _____
- ⁶ Mukt.
- 3 Akankara-kranti

In Lither, Air makes its appearance, which is the rudi nent of Sensation.

In Air, I'mo makes its appearance, which is the radiment of Porm

In Ties, Water becomes manifest, which is the indiment of Taste.

In Water, Parth makes its appearance, which sthe radiment of Smell.

And since these three compound attributes, namely Satwam-m-Tamas, Rajas in-Tamas, and Tamas-in-Tamas, are possessed by this Revealing Sakti, which is the originating cause of those ive atomic elements, it follows that the results of that cause, namely, those five elements themselves, are also possessed of those three attributes when they make the rappearance.

These we elements are called The radiments, The indivisible five elements, and The atomic elements.

In these atomic elements The atomic bodies and The expanded elements make their appearance in the following manner.—

(a) Tub Sy was rivision.

THE DEVILOR MENT OF ALOMIC RODES.

(1.) In the Satwa division of the five elements the sum-total of the rudiments of those elements

3 Sakshma-pata u.

when united together into one substance, forms
The internal organization.

The evidence of the unity of the Ether division with this internal organization is this, that, like the ether, the internal organization affords room for every kind of sound, while it is itself motionless. This motionless organization is called The internal capacity 2

The evidence of the unity of the Air division with the Internal Organization is this, that, like the air, the Internal Organization also has a fluctuating motion. This fluctuating organization is called The intellect?

The evidence of the unity of the Fire division with the Internal Organization is this, that, like fire, it sheds its light upon objects, and shows the difference between them. This enlightening organization is called The judgment.

The evidence of the unity of the Water division with the Internal Organization is this, that like water and other fluids, it flows forth. This flow-ing Organization is called The reason.

The evidence of the unity of the Earth division with the Internal Organization is this, that, like the earth, it stands firmly self-collected, and boasts itself that it is the self-hood. This organization is called Self-consciousness.

- 1 Antakeranam •
- e nu M
- r Sittam.

- ⁸ Ullam.
- · Putti.
- Akankaruri.

(2) In the Satwa division of those five exments the different rudin ents of each element in their separate condition become the different Organs of knowledge.¹

The extelous so the That divisor, and therefore it perceives only the attribute of other, namely, Sound.

The human skin belongs to the Air division; and therefore it perceives only the attribute of a r, namely, Sensation

The eye belongs to the Fire division; and therefore it percoves only the attribute of fire, namely, lorn.

Moreover, the tongue belongs to the Water dr-vision; and therefore it perceives only the attribute of water, namely, Taste.

And, lastly, the nose belongs to the Earth division; and therefore it perceives only the at ubute of earth, namely, Sholl.

Thus, since these different organs of encodedge do not unite together, but always continue separate from each other, no one of them is capable of perceiving the proper attribute of any other.

Since also the sum of the whole five radiments of the five elements constitutes the Internal Organization, this Internal Organization perceives the five kinds of objects of sense by uniting itself to those five organs of knowledge.

1 Comanenti yam.

The five-fold Internal Organization, together with the five organs of knowledge, making a total of ten, and forming the Satwa division constitute the Instrument of knowledge.

(b) Int Rajas division

(1) In the Rajas division of the five elements the union of the different rudiments of each element produces the five Vitil-winds of the human body

Of these the Universal wind belongs to the Ether division; and, like other, it is diffused throughout the whole body.

The Life wind belongs to the An division, and like air, it fluctuates between the chest and the nostrils.

The Lower-wind belongs to the The division, and, like fire, it produces the internal heat of the human body; and, settling itself in the abdonen, it assimilates man's food

The Central-wind belongs to the Water division, and from its proper position in the unbiheal region of the body, it flows, like water, through all the vens, driving through them the man's solid and liquid nourshment.

The Upper-wind belongs to the Laith division,

r (r na-sa nam.

viyana voya.

[·] Apmay ju.

s Semárery r

³ Prana-vivu. 6 Utima v yu.

and it stands firmly self-collected, like the earth, in the region of man's throat.

Besides these five winds some writers speak of five others added to then, making in all ten. these additional winds are the following: -- The Vomiter, which produces vouiting at the mouth. The Tortorse, which causes the twinkling of the eye: The Sneezer," which produces a tickling of the nostrils: God's Lift, which causes yawning; and The Enricher, *which enlarges the size of the body. But these latter ino are to be regarded as mere functions of the Life-wind.

(2) In the Rajas division of the five elements the several germ-particles of each element in their un-united state become respectively The organs of action,

Of these, The mouth belongs to the Piler division, and utters Speech. The Hard belongs to the Air division, and gives and receives. The Post belongs to the Lie division, and walks. The Bowel belongs to the Water division, and rejects the excrements. The Organs of generation belong to the Lath division, and are the sent of pleasure.

These five, existing in permanent separation from each other, cannot perform each other's functions, The live winds, inasmuch as they are united

¹ Nakan

⁹ Kumun.

d levalition.

⁶ Kmu et frynm.

to the several germ-particles of the above elements, perform their five functions by joining hemselves to tie five organs of action.

These five winds and five organs of action, in all ten, belonging to the Raias division, constitute The instrument of action.

These twenty primitive substances are called The atomic body 3

By me us of these twenty substances The lord* reflected in The Illusion's creates a distinct atomic body for each of the souls reflected in The Irra tio rds."

Thus the Satwam and Rajas divisions of the five elements are exhausted. The Tamas division remains.

Those are the insulates of The atomic body.

MOIS ARD SAILE, ILL (1)

In this Tunus division so remaining to be considered The expanded elements and The expanded bodies make their appearance from the five atomic clements in the following manner:

(I) THE 'XPANDLD CLIMITIS

Pach of these five elements belonging to the Tunus division is divided into two parts. The first half of these sections of each of the five elements is

1 Kryts (anam

a May to

Ulher,	da.	Luc	Watar.	Luth		

The fire-fold combinations :---

taste, and smell, are covered over, and are therefore invisible: and its causative attribute, sound, together with its own proper attribute, touch, appear visibly.

In their l'ire division, the two attributes taste and smell, are covered over, and are therefore invisible: but its causative attributes, sound and touch, together with its own proper attribute, form, appear visibly.

In their Water division, the attribute shell is covered over, and is therefore invisible while its causative attributes, sound, touch, and form, together with its own proper attribute, taste, appear visibly.

In their Earth division, the causative attributes of earth, sound, touch, form, and taste, together with its own proper attribute, smell, all appear visibly.

(2) Expanded Bodins.

Just as the atomic body in a court appearance from the atomic element, so also from the expanded element the expanded body in ikes its appearance, having is six primitive-substances, its four kinds of birth-appearances, and its three distinct classes.

Those six substances are the following

Skin,
Blood,
Tiesh,
Nerves, and Veins,
Bones,
Marrow.

¹ Talwam.

The four kinds of generator ac the lolowing, --Womb bon, '_{oo} bor i, Perspiration-bort, Seed born.

The three classes are the following,---

The high class, nuncly man, who is possessed of the two kinds of wisdom, carth-wisdom, and heaven-wisdom.

The middle cass, manely beasts and bads, distinguished by their crooked course, he without heaven wis lon, and possess crith-wisdon

Trees, &c, which are possessed of neither the one wisdom nor the other, constitute the low class.

These three classes which exist in the pruntive substance earth, exist also in the world of departedspirits, the world of gods, the world of charisters, and the world of sages.4 Prose worlds no tre results respectively of the primitive substances, water, fire, and mid effect in these we is become the Moon and other area, the Sun and a er gods, the charisters, the proplets we, been ging to the high class, the cow of porty," Indic's clock ant, & Vishin's kito," &c., belonging to the miceleschess, and the celeb ited tree o' India's paird se, ' &c, belonging to the low-class.

Income some comment

Of the five receptacles, The food-receptacle, The I to receptacle, The mind-receptacle The knowledge-receptacle and The pleasure-receptacle, the expanded body constitutes I is food-receptacle.

The atomic body is constituted of the three receptacles, the life-receptacle, the mind-receptacle, and the knowledge receptacle. These are as follows.—

The life wind and the organ of action united for nother life-receptable. The intellect and the organ of action united form the mind-receptable. The independent and the organ of knowledge united form the knowledge-receptable.

Ine causative body constitutes the pleasurereceptacle.

' HI D SERENDED NOT THE THE A CHECKNOY OF THE NORTH NO

The printive-substances of the atomic body exist in the expuded body, which is itself co speed of six primitive substances, in the following manner,—

Specch, which is one of the organs of action, and the tengue, which is one of the organs of knowledge, we in the mouth. I emper wind is in the throat. The life wind and the incoment are in the thes. The central-wind and the reason are in

A na may te tos ma.

P mar ray tekos ma.

Ma om tya ko a na

A anta'n yr vos un

b Viggna na ny t-kostm.

the umbilical region. The lower-wind and the bowel are at the extremity of the body. The universal-wind and the skin, which is one of the organs of knowledge, together also with the self-conscious iess, are distributed throughout all the members of the body.

The following organs exist separately from each other in positions above the neck, namely, the mental-capacity in the head; the organ of sight in the tip of the pupil of the eye, the organ of he ming within the cavity of the ear, and the organ of sight at the tip of the mose. Below the neck the following organs exist in a separate state, namely, the hand, the foot, and the bowel.

Thus because the six primitive substances of the expanded body, and the twenty primitive substances of the atomic body which have entered into them, and that uses, are the poducts of the five elements, these expended and atomic be resultative body?

THE UNION OF FILE SOLE WITH FUSE BOOTES

When the Knowledge-destroyer,' which is reflected in the Irrationits," is joined to these twenty six primitive substances, and exists in the state of wake-

a Brahm m

⁷ Value

^{*} Isuai u-suk ma sirrir m

ments of bodies is called The causative body of The lord, and The in changeable one. The lord when united with this his causative body, and being in the state of profound sleep, is called The in-dweller. And the supreme deity, when inarbiting this in dweller, is called The weeping one.

These are the three bodies and the three states of The lord.

BRAHM THE SOUL OF THE UNIVERSA

Just as the soul in its three states continues united to the twenty-seven primitive substances which constitute its three bodies, and self-consciously exclaims, 'It is I;' so also The lord in his three states is united to the thirty-two primitive substances which constitute his three bodies.

Nevertheless the knowledge-destroying soul is united to its own proper body alone: where is The lord is united to all bodies whatsoever, for smuch as they constitute his own proper body, and also to all worlds

The divine Brahm is not only present in both of these, but also fills all bodies and all worlds, and besides this extends beyond them so as to be absolutely illumitable.

2 THE SUBSTDINCL OF NATURE

•The mode of the subsidence of the primitive substances is as follows.

The expanded bodies which belong to all living souls will be dissolved in the expanded elements which form their base; and upon this subsidence those clements alone will remain.

Then these expanded elements themselves will lose

1 Intriyam.

their five-fold division, and remain in the form of the rudimental elements of the attribute Tamas.

This state of things is that which is called The golden womb of the universe.1

The twenty primitive substances of the atomic body will be dissolved, and subside into the remaining two attributes of these elements, namely, Satwam and Rajas. This will take place in the following manner - -

The self-consciousness, the organ of smell, the upper wind, and the organs of generation, in every animated being will subside into the earth.

The thought, the tengue, the central wind, and the bowel will subside into water.

The judgment, the eye, the lower wind, and the foot, will subside into fire.

The mind, the skin, the life-wind, and the hand, will subside into air.

The internal capacity, the ear, the universal wind, and the mouth, will subside into ether.

Then the atomic clements alone will remain, possessing the three original attributes, as in the beginning.

Of these atomic elements carth will be dissolved and subside into water.

Water will be drunk up, and subside into five,

1 Ranyakar ppävastei.

The will be extinguished as a candle, and subside into air.

Air, deprived of motion, will subside into ether And ether itself will subside into the Revealing Sakti.

The Concealing and the Revealing Saktis will subside into The Illusion and the Irrationals, so as to become the attribute Rajis of Original Nature, just as a banyan tree subsides into its seed in order to become the germ of a new creature.

The Illusion also and the Inationals will then subside into the exceedingly small and atomic Original Nature.

Then this Original Nature itself will subside into its own proper place, namely, the divine Bight, just as the deceptive snake disappears and the real rope alone is seen; so that Brahm a ore may remain.

Ho who can this perceive all deceptively visible things to be the one only true substance, and can clearly comprehend that that same substance is his own proper form, and thus extinguish care, this man is a beatified soul.1

This is the manner of the subsidence of the primitive substances.

z Siva i-n ukt m

The primitive substances which thus subside are thirty-six in number, namely,

T w elements,	u
	6
I e pi mitive substances of the expanded body,	6
(c), comic hody	20
The reational and Rational which constitute the	. .
custive lody,	2
T e soul and The lord reflected in these,	2
Briter who envelopes all these,	1
	•

Total . 36

(1) Of these eight are possessed by all souls in common, namely,

The five	co mmon	element	s, .					ď
The Li	sion, .	•	•	,			_	1
Buchn,		•						1
						T	ot 1 .	. 8

But the remaining twenty-eight are possessed in a separate and independent form, as will be presently shown: since

If earth be destroyed there will remain no restmg place for the animated creation.

If there be no water left they will have no means of refreshing themselves, neither will there be any means of moistening the universal dryness.

If there be no fire left there can be no prepara-

If there be no air left there can be no possibility of motion

If there be no ether left then no existing thing can have an abiding-place.

If there be no Illusion, and no one reflected in that Illusion, then there would be no divinity for the different sects of religion to worship.

If Brahm be not left, then no being can possess knowledge.

Therefore these eight are common to all alike.

(2). The remaining twenty eight are possessed in a separate form in the following manner.—

When the expanded body of any single individual is destroyed, the expanded bodies of other persons are not affected by it, but continue undestroyed.

When the atomic body of any individual suffers the loss of any of its members, the atomic bodies of all living beings do not suffer that loss of members with it.

Although the sages Sukar and Vamatevar, and other beatified persons have conquered their ignorance and submerged their personality, the ignorance and personality of all other persons remain undisturbed.

Wherefore there can be no doubt that souls possess these twenty-eight primitive substances in their individual capacity.

(3). Of these thirty-six primitive substances one al-

ways assumes to itself the self-hood. seven always appear to be foreign to that self-hood, and twenty-eight belong to the self-hood and to that which is foreign to the self-hood indifferently.

That is to say, since divine Brahm, who is present in all the three states of existence, is self-manifest in all these states, and cannot, like the other primitive arbstances, be made manifest to himself from without, divine Brahm alone is the true self-hood.

Since a man can never contemplate the five divine operations, the ten incarnations, and such like things, which constitute the functions of The lord reflected in the illusion, of the illusion itself, and of the five elements, and think them to be his own finctions, those seven primitive substances are evidently foreign to himself.

Of the remaining twenty-eight, since the six which belong to the expanded body are spoken of on the one hand as constituting the self-hood, as for instance, 'I am a Brahmin,' 'I am a Kshatriyan,' 'I a Veisyan,' 'I am a Suttran,' 'I am a Bramasāri,' 'I am a Kakastan,' 'I am a Vānaprastan,' 'I am a Sannyāsi,' 'I am a male,' 'I am a female,' 'I am a dark-complexioned man,' 'I am a light-complexioned man,' 'I am a tall man,' 'I am a short man,' 'I have grown stout,' 'I have become thin,' and on the other hand objectively, as for instance, just as we say, 'My ox,' 'My calf,'

so exactly do we say also, 'My body has grown stout,' 'My body has become thin,' 'My hair has become gray," My body has been in existence for such and such a longth of time; since also the ·twenty primitive substances of the atomic body are sometimes spoken of subjectively, as for instance, 'I saw, heard, touchoc, gave and recoived, walkec, enjoyed, examined, decided,' 'I have survived this famine, and sometimes objectively, as for instance, just as we say, 'My house,' or 'My proporty,' so we say also, 'My eye,' 'My ear,' 'My nose,' 'My tongue,' 'My hand,' 'My foot,' 'My mind,' 'My judgment,' 'My self-consciousness,' 'My intellect,' 'My life:' since also the primitive substances of the causative body, namely Ignorance and the Knowledge-destroyer, are sometimes spoken of subjectively, as for instance 'I do not know,' 'I know,' and sometimes objectively, as for instance, 'My ignorance,' 'My soul':---it follows that these twenty-eight primitive substances are possessed both subjectively and objectively.

III. Conclusion.

The disciple, addressing the teacher who had taught him these dectrines, put to him the following question:—

"If these twenty-eight primitive substances constitute a man's self-hood it can only be necessary for him to exist in one condition alone, namely, in the form of The omniscient one; there can be

no necessity for an existence external to himself in the form of The lord, the Illusion, and the five elements: or else, on the other hand, if these twenty-eight primitive substances are in reality external to himself they must always continue external to him, and therefore they cannot constitute his self-hood. This doctrine, then, that they are at the same time the man's self-hood and also external to him is a self-contradiction, like the midnight sun of the fable."

To this objection the teacher replied as follows:—
"We speak of a man's self-hood in two distinct senses: in the one case we speak of that self-hood in the strict meaning of the word, but in the other merely by way of adaptation to circumstances. When we speak of The omniscient one being that self-hood, we speak in the strict sense, and without any admixture of metaphor. But when we speak of these twenty-eight external things being that self-hood, we speak under the influence of infimity, just as when we mistake a rubbing post on the read-side for a man, or a rope for a snake, in fact

Wherefore, he that comprehends the complex doctrine respecting those seven primitive substances which, while he was in a state of ignorance, he believed did not constitute his self-hood, and the remaining twenty-eight primitive substances which,

we do not speak the strict truth.

¹ Iswaian.

when he had attained that knowledge, he ascertified did not constitute his self-hood, namely the whole thirty-five primitive substances, together with their attributes and evidences; he that clearly understands the fact that, just as while he is in the act of contemplating this erranged truth he is himself distinct from it, so also is he equally distinct from those primitive substances when he is in the act of contemplating them,—that that very knowledge is the self-hood and constitutes in itself the thirty sixth primitive substance,—that that knowledge is itself the state of beatitude;—this man is a beaufied soul.

On the other hand, the ignorant man, who is unable to distinguish between these things, and to comprehend that the deity himself is his very self-hood, and that those thirty-five primitive substances are foreign to himself, is like the man who, through the bondage of self-conscious ies, fancies the anxieties of his wife and fairly to be his own personal anxieties, and who, foolistly esteening the functions of the twenty-eight primitive substances to be his own proper duty, becomes bound with the sinfill and meritorous deeds which those twenty-eight substances have accountled, and through this infatration becomes involved also, on account of those retributable things, in the world of births and deaths with all their accompanying evils.

1 Sivan-muktan

The wise man, who clearly perceives that the deity is his own self-hood, and that the thirty-five primitive substances are not so, is freed from the chains of self-consciousness; he is free also from his original infatuation, for sanuch as he knows for certain that the functions of the twenty eight substances are not his own functions, and that the things which are experienced by those twenty eight substances are not his own experiences; he is, moreover, free from all retribution, for smuch as he is delivered from the sinful and mentorious deeds which those twenty eight substances had accumulated; and therefore he is become a beatified ore, free from the world of biths and deaths, and such like evils, and is in fact the deity itself.

This man it is that the six shastrams call a beatified soul, a man of impregnable wisdom, one who has neither easte, nor relationships, nor human attributes, in short, a Brahmin."

May all who study these things attain to perfect bliss.
