PREFACE,

BY THE ENGLISH EDITOR.

SINCE the annexation of Louisiana to the United States of America, in the year 1803, the government of the latter country has turned its attention on several successive occasions to obtain an accurate knowledge of the new territory, with a yiew to ultimate objects of colonization and commerce. and the judicious measures it has pursued, besides answering the purposes to which they were more immediately directed, have resulted in geographical discoveries of preat importance.

In 1805, a party under the command of Lieutenant Pike, a young officer of bold and enterprising spirit, was ordered to explore the Upper Mississippi, by ascending along the whole of its channel from its confluence with the Missouri to its source. This expedition sailed from St. Louis on the 9th of August, 1805, and returned to the same place on the 30th of April, 1806, after successfully accomplishing the design of its appointment.

In the course of the same year, Lieutenant Pike was chosen to

the command of another expedition destined to explore the interior districts of Louisiana, lying to the southward of the Missouri. He was instructed to ascend the Great Osage River to its source; then to proceed towards the Arkansay; here he was to detach a party, under • the command of Lieutenant Wilkinson, to descend this river as far ... as the Mississippi; while himself, with the rest of his men, ascended to.its source. After visiting its head waters, he was directed to seek the source of the Red River, and to follow that stream to Natchitoches. The former part of this plan he executed agreeably to his orders: but being bewildered in the snowy regions at the head of the Arkansaw, he advanced too far to the westward, and struck the great River del Norte, within the Spanish boundary. He was here arrested by a detachment of Spanish troops, and carried prisoner to the capital of New Mexico ; whence, after a detention of a few months, he was conveyed by a circuitous route along the shores of the Gulph of Mexico towards the boundary of the province, on the road to Natchitoches. Lieutenant Pike departed from St. Louis on this expedition, July 15, 1806, and returned July 1, 1807.

The interesting narrative of these two journies was published in England, in the year 1811, by the present Editor, who had been furnished with an authorized copy of the original manuscript. Mr. Pike's Travels were of considerable importance in a geographical view. The sources of the Mississippi were before known, and their geographical position accurately ascertained from preceding observations; but its progress down to its junction with the Missouri, had never been examined, except at a few places which had been casually visited by Indian traders. Mr. Pike explored the whole of this portion of its channel, and laid it down from actual survey; and by correcting his admeasurements by astronomical observations, was enabled on his return to form a correct Map of its course, which has been given on a reduced scale with his printed Journal. By pursuing the same laborious plan, of surveying his route, in his second Tour, he has been able to furnish the first satisfactory account of the Great

VII

A. HARAK

290 Peres

Osage River, and of the upper portion of the Arkansaw, from about latitude 35° north, to its source, about latitude 42°; and also of the general course of the Rio del Norte of New Mexico. He visited likewise a part of the river Kansas, and discovered the head waters of the Platte, another large stream which flow's into the Missouri. The lower portion of the A kansaw, from the point whence Mr. Pike ascended, was explored during this expedition by Lieutenant Wilkinson, whose Journal is printed in Mr. Pike's Work. TYTUNE SHY

The countries traversed by Mr. Pike, especially during his last Tour, were almost as little known to the world as the interior of Africa. French traders had, it is true, penetrated through a considerable portion of them; but as in almost every instance their objects were merely commercial, their knowledge was carefully kept to themselves, and perished with them. An exception ought indeed to be made in the case of Du Pratz, whose work on Louisiana displays considerable talent for observation, and whose statements, as to its geographical features, have in general been corroborated by subsequent surveys. After all, however, the courses of the great rivers were but very partially ascertained, and all the maps of this district were in consequence grossly erroneous. These defects have been in a great degree rectified by Mr. Pike's Charts, which have supplied materials for an excellent Map of this portion of the American Continent.*

The sources of the Missisolphi wave before known, and Besides these great undertakings, other expeditions on a smaller scale were directed to the examination of particular districts. Among

ALL PRESENTED INTERVINCE OF EDIS

the property set

* It is greatly to be lamented, that this enterprising traveller, whose humane attentions to the men under his command, during his several journies, were as conspicuous as his fortitude and resolution, in surmounting the difficulties he had every-where to encounter, should have fallen a sacrifice in the present unhappy contest between this country and America. Being rewarded for his services with the rank of General, he was appointed to a command in the army destined to act against Canada, and lost his life by an accidental explosion, which blew up a fort in which he was stationed. nood sad out count of the Great 1. 5

these may be menuoned, a Journey performed in the latter part of the year 1804, by Mr. Dunbar and Dr. Hunter, with a party under their direction, who ascended the Washita River, an interesting stream flowing from the north-west, and emptying its waters into the Red River of Louisiana, a few miles above the confluence of the latter with the Mississippi. It was intended that the examination of the Red River itself should be entrusted to Mr. Pike, who, after completing his survey of the upper part of the province, was to descend along its channel on his return. But, previously to this period, some account of it had been drawn up by Dr. Sibley, of Natchitoches, who had himself explored it for a considerable distance, and obtained his information respecting the upper part of its course from a respectable native trader, who had passed his life in the neighbourhood. This account, together with Mr. Dunbar and Br. Hunter's description of the Washita, were transmitted to the President of the United States, and by him communicated to Congress in the year 1806. They were afterwards published by the government with some other official Documents of a similar kind.

But the most important expedition of discovery fitted out by the government of the United States was that entrusted to the command of Captains Lewis and Clarke*; who were directed to explore the

The following Message on the Subject of this Expedition was delivered to Congress by the President of the United States, in the Year 1806.

TO THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES.

In pursuance of a measure proposed to Congress by a message of January 18th, one thousand eight hundred and three, and sanctioned by their appropriation. for carrying it into execution, Captain Meriwether Lewis, of the first regiment of infantry, was appointed, with a party of men, to explore the river Missouri, from its mouth to its source, and crossing the highlands by the shortest portage, to seek the best water communication thence to the Pacific Ocean; and Lieutenant Clarke was appointed second in command. They were to enter into conference with the Indian nations on their route, with a view to the establishment of commerce with them. They entered the Missouri May 14th, one thoutand eight hundred and four, and on the 1st of November took up their winter quarters near

river Missouri from its confluence with the Mississippi to its sourcato proceed thence across the mountains, by the shortest route, to the

the Mandan towns, 1609 miles above the mouth of the river, in latitude 47° 21' 47 north, and longitude 99° 24' 45" west from Greenwich. On the 8th of April, one thousand eight hundred and five, they proceeded up the river in pursuance of the objects prescribed to them. A letter of the preceding day, April 7th, from Captain Lewis, is herewith communicated. During his stay among the Mandans, he had been able to lay down the Missouri, according to courses and distances taken on his passage up it, corrected by frequent observations of longitude and latitude; and to add to the actual surveyof this portion of the river, a general map of the country between the Mississippi and Pacific, from the thirty-fourth to the fifty-fourth degrees of latitude. These additions are from information collected from Indians with whom he had opportunities of communicating, during his journey and residence with them. Copies of this map are now presented to both houses of Congress. With these I communicate also a statistical view, procured and forwarded by him, of the Indian nations inhabiting the territory of Louisiana, and the countries adjacent to its northern and western borders; of their commerce, and of other interesting circumstances respecting them.

In order to render the statement as complete as may be, of the Indians inhabiting the country west of the Mississippi, I add Dr. Sibley's account of those residing in and adjacent to the territory of Orleans.

I communicate also, from the same person, an account of the Red river, according to the best information he had been able to collect.

Having been disappointed, after considerable preparation, in the purpose of sending an exploring party up that river, in the summer of one thousand eight hundred and four, it was thought best to employ the autumn of that year in procuring a knowledge of an interesting branch of the river called the Washita. This was undertaken under the direction of Mr. Dunbar, of Natchez, a citizen of distinguished science, who had aided, and continues to aid us, with his disinterested and valuable services in the prosecution of these enterprises. He ascended the river to the remarkable hot springs near it, in latitude 34° 31° 4″. 16, longitude 92° 50° 45″ west from Greenwich, taking its courses and distances, and correcting them by frequent celestial observations. Extracts from his observations, and copies of his map of the river, from its mouth to the hot springs, make part of the present communications. "The examination of the Red river itself is but now commencing.

TH. JEFFERSON.

February 19, 1806.

first navigable water on the western side, which they were to follow as far as the shores of the Pacific Ocean. This party entered the Mis-

Extract of a Letter from Captain Meriwether Lewis, to the President of the United States, dated

DBAR SIR

Fort Mandan, April 17th, 1805.

Herewith enclosed you will receive an invoice of certain articles which I have forwarded to you from this place. Among other articles, you will observe, by reference to the invoice, 67 specimens of earths, salts, and minerals, and 60 specimens of plants, these are accompanied by their respective labels, expressing the days on which obtained, places where found, and also their virtues and properties, when known. By means of these labels, reference may be made to the chart of the Missouri, forwarded to the Secretary of War, on which the encampment of each day has been carefully marked: thus the places at which these specimens have been obtained, may be easily pointed out, or again found, should any of them prove valuable to the community on further investigation.

You will also receive herewith enclosed, a part of Captain Clarke's private journal; the other part you will find enclosed in a separate tin box. This journal will serve to give you the daily details of our progress and transactions.

I shall despatch a cance with three, perhaps four, persons from the extreme navigable point of the Missouri, or the portage between this river and the Columbia river, as either may first happen. By the return of this cance, I shall send you my journal, and some one or two of the best of those kept by my men. I have sent a journal kept by one of the sergeants, to Captain Stoddard, my agent at St. Louis, in order, as much as possible, to multiply the chances of saving something. We have encouraged our men to keep journals, and seven of them do, to whom, in this respect, we give every assistance in our power.

I have transmitted to the Secretary at War, every information relative to the geography of the country which we possess, together with a view of the Indian nations, containing information relative to them, on those points with which I conceived it important that the government should be informed.

By reference to the muster rolls forwarded to the war department, you will see the state of the party; in addition to which, we have two interpreters, one negro man, servant to Captain Clarke; one Indian woman, wife to one of the interpreters, and a Mandan man, whom we take with a view to restore peace between the Snake Indians, and those in this neighbourhood, amounting, in total with ourselves, to thirty-three per-

¥

souri on the fourteenth of May 1804, and took up their winter quarters on the first of the ensuing November in the country of the Mandan

sons. By means of the interpreters and Indians, we shall be enabled to converse with all the Indians that we shall probably meet with on the Missouri.

I have forwarded to the Secretary at War my public accounts, rendered up to the present day. They have been much longer delayed than I had any idea they would have been, when we departed from the Illinois: but this delay, under the circumstances in which I was compelled to act, has been unavoidable. The provision perioque and her crew, could not have been dismissed in time to have returned to St. Louis last fall, without evidently, in my opinion, hazarding the fate of the enterprise in which I am engaged; and I therefore did not hesitate to prefer the censure that I may have incurred by the detention of these papers, to that of risking, in any degree, the success of the expedition. To me, the detention of these papers has formed a serious source of disquiet and anxiety; and the recollection of your particular charge to me on this subject, has made it still more poignant. I am fully aware of the inconvenience which must have arisen to the war department, from the want of these vouchers, previous to the last session of congress, but how to avert it was out of my power to devise.

From this place we shall send the barge and crew early to-morrow morning, with orders to proceed as expeditiously as possible to St. Louis; by her we send our despatches, which I trust will get safe to hand. Her crew consists of ten able bodied men, well armed, and provided with a sufficient stock of provision to last them to St. Louis. I have but little doubt but they will be fired on by the Sioux; but they have pledged themselves to us that they will not yield while there is a man of them living. Our baggage is all embarked on hoard six small canoes, and two perioques; we shall set out at the same moment that we despatch the barge. One, or perhaps both of these perioques, we shall leave at the Falls of the Missouri, from whence we intend continuing our voyage in the canoes, and a perioque of skins, the frame of which was prepared at Harper's ferry. This perioque is now in a situation which will enable hs to prepare it in the course of a few hours. As our vessels are now small, and the current of the river much more moderate, we calculate upon travelling at the rate of 20 or 25 miles per day, as far as the Falls of the Missouri. Beyond this point, or the first range of rocky mountains, situated about 100 miles further, any calculation with respect 'to our daily progress, can be little more than bare conjecture. The circumstance of the Shake Indians possessing large quantities of horses, is much in our favour, as by means of horses the transportation of our baggage will be reudered easy and expeditious over land, from the Missouri to the Columbia river. Should this river not prove navigable where we first meet with it, our present intention is, to continue our march by land down the river, until it be-

Indians, having by computation proceeded 1609 miles. They resumed their voyage on the seventh of April 1805; and on the eighteenth

comes so; or to the Pacific ocean. The map, which has been forwarded to the Secretary of War, will give you the idea we entertain of the connexion of these rivers, which has been formed from the corresponding testimony of a number of Indians, who have visited that country, and who have been separately and carefully examined on that subject, and we therefore think it entitled to some degree of confidence. Since our arrival at this place, we have subsisted principally on meat, with which our guns have supplied us amply, and have thus been enabled to reserve the parched meal, portable soup, and a considerable proportion of pork and flour, which we had intended for the more difficult parts of our voyage. If Indian information can be credited, the vast quantity of game with which the country abounds through which we are to pass, leaves us but little to apprehend from the want of food.

We do not calculate on completing our voyage within the present year, but expect to reach the Pacific ocean, and return as far as the head of the Missouri, or perhaps to this place, before winter. You may therefore expect me to meet you at Montachello in September, 1806. On our return we shall probably pass down the Yellow Stone river, which, from Indian information, waters one of the fairest portions of this continent.

I can see no material or probable obstruction to our progress, and entertain, therefore, the most sanguine hopes of complete success. As to myself, individually, I never enjoyed a more perfect state of good health than I have since we commenced our voyage. My inestimable friend and companion, captain Clarke, has also enjoyed good health generally. At this moment every individual of the party is in good health and excellent spirits, zealously attached to the enterprise, and anxious to proceed; not a whisper of discontent or murmur is to be heard among them; but all in unison act with the most perfect harmony. With such men I have every thing to hope, and but little to fear.

Be so good as to present my most affectionate regard to all my friends, and be assured of the sincere and unalterable attachment of

Your most obedient servant,

MERIWETHER LEWIS, Captain of the 1st U. S. Regiment of Infantry.

TH. JEFFERSON, President of the United States.

of August reached the extreme navigable point of the Missouri, upwards of 3000 miles from its mouth. They here procured horses, and crossed the dividing chain of mountains for a distance of more than sixty miles, and having reached a navigable stream, descended in canoes to the mouth of the great Columbia River, which they reached on the fifteenth of November. They passed the winter among the Indians on the coast of the Pacific. On the 27th March, 1806, they set out on their return, and reached St. Louis on the 23d of September following, after having travelled in all, by computation, nearly 9000 miles!

The work which is here given to the public, contains the official Journal of this extraordinary and interesting Journey; the importance of which, to geographical science, will readily be estimated by those who are acquainted with the glaring imperfections of the best Maps inthertopublished of the countries that are here described. As every reader will have the opportunity of judging for himself, it were superfluous to say any thing in this place as to the admirable address, the discretion, perseverance, and intrepidity, which were on all oceasions evinced

See a Pamphlet, intituled "Message from the President of the United States, communicating Discoveries made in exploring the Missouri, Red River, and Washita, by Captains Lewis and Clarke, Doctor Sibley, and Mr. Dunbar; with a Statistical Account of the Countries adjacent. Read in Congress, February 19, 1806." New York, printed, 1806.

The principal part of Captain Lewis's Statistical View of the Indian Nations of Louisiana, together with Dr. Sibley's Account of the Indians on the Arkansaw, &c. and Mr. Dunbor and Dr. Hunter's Account of the Washita River, all referred to in the above communication, were published in Eugland, in an Octavo Volume, intifuled "The Travels of Captains Lexis and Clarke, from St. Louis, by way of the Missouri and Columbia Rivers, to the Pacific Ocean; performed in the Trace 1804, 1805, and 1806, by Order of the Gotenness of the United States; containing Delineations of the Manners, Customs, Religion, &c. of the Indians, compiled from various authentic Sources, and original Documents, and a Summary of the Statistical View of the Indian Nations, from the official Communication of Merimether Lewis." London, 1809.

by the commanding officers throughout the whole of their long, hazardous, and fatiguing route, during which they proved themselves eminently qualified for the important trust which had been committed to them in charge:

The Tour which is here detailed, was terminated in "the autumi of 1806; but the Journal, though repeatedly announced, was not published before this year". Part of the delay was probably occasioned by the death of Captain Lewis, in consequence of which the whole labour of preparing the manuscript for the press devolved on his intelligent associate, Captain Clarke. The present edition is printed nearly verbatim from the original; the sheets of which were forwarded to this country by the American Proprietors: the only liberty that has been taken with the language, has been merely the correction of a few inadvertent grammatical or typographical errors. The American Copy contained an Appendix drawn up by Captain Lewis on the State of the Indian Nations; with hints for their future government, and for the regulation of the commercial intercourse between them and the United States; but as the subject is altogether of a local nature, and the observations possess little interest for the British reader, it has been omitted.

THOMAS REES.

Barnard's Inn, April 30, 1814.

As far as relates to Lewis and Clarke's Travels, this work is not, however, what it pretends to be, for it contains no farther account of them than was given in the above message, and some private letters of Captain Clarke, addressed to his friends before and after his return. But, in other respects, it is of considerable value, the other documents inserted in it being curious, and contained in no other English publication.

* In the year 1908, an account of this expedition was published in an octavo volume by Patrick Gass, a sergeant attached to the exploring party. The officers had encouraged the men to keep journals, in order to multiply the chances of communicating information of their progress to the government, in case of accident. This work is founded on one of these private journals. It exhibits a plain statement of the transactions of each day; with occasional remarks on the country and the inhabitants, which are in general sensible and judicious. Its interest is not wholly superseded by the publication of the official Narrative, as it contains some particulars not noticed in that, and serves at the same time to authenticate its details.

Start Start & And a start of the start of the start and the

On the acquisition of Louisiana, in the year 1803, the attention of the government of the United States, was early directed towards exploring and improving the new territory. Accordingly, in the summer of the same year, an expedition was planned by the president for the purpose of discovering the course, and sources of the Missouri, and the most convenient water communication thence to the Pacific Ocean. His private secretary, Captain Meriwether Lewis, and Captain William Clarke, both officers of the army of the United States, were associated in the command of this enterprize. After receiving the requisite instructions, Captain Lewis left the seat of government, and being joined by Captain Clarke at Louisville, in Kentucky, proceeded to St. Louis, where they arrived in the month of December. Their original intention was to pass the winter at La Charrette, the highest settlement on the Missouri. But the Spanish commandant of the province, not having received

an official account of itq.transfer to the United States, was obliged, by the general policy of his government, to prevent strangers from passing through the Spanish territory. They therefore encamped at the mouth of Wood river, on the eastern side of the Mississippi, out of his jurisdiction, where they passed the winter in disciplining the men, and making the necessary preparations for setting out early in the Spring, before which the cession was officially annonnced. The party consisted of nine young men from Kentucky, fourteen soldiers of the United States army who volunteered their services, two French watermen, an interpreter and hunter, and a black servant belonging to Captain Clarke-all these, except the last, were enlisted to serve as privates during the expedition, and three sergeants were appointed from amongst them by the captains. In addition to these were engaged a corporal and six soldiers, and nine watermen to accompany the expedition as far as the Mandan nation, in order to assist in carrying the stores, or repelling an attack, which was most to be apprehended between Wood river and that tribe. The necessary stores were subdivided into seven bales, and one box, containing a small portion of each article in case of accident. They consisted of a great variety of clothing, working utensils, locks, flints, powder, ball, and articles of the greatest use. To these were added fourteen bales and one box of Indian presents, distributed in the same manner, and composed of richly laced coats and other articles of dress, medals, flags, knives, and tomahawks for the chiefs-ornaments of different kinds, particularly beads, looking-glasses, handkerchiefs, paints, and generally such articles as were deemed best calculated for the taste of the Indians. The party was to embark on board of three boats; the first was a keel boat fifty-five feet long, drawing three feet water, carrying one large square sail and twenty-two cars, a deck of ten feet in the how and stern formed a forecastle and cabin, while the middle was covered by lockers, which might be raised so as to form a breast-work in case of attack. This was accompanied by two perioques or open boats, one of six and the other of seven oars, Two horses were at the same time to be led along the banks of the river for the' purpose of bringing home game, or hunting in case of scarcity.

Of the proceedings of this expedition, the following is a succinct and circumstantial narrative.

All the preparations being completed, we left our encampment on Monday, May 14th, 1804. This spot is at the mouth of Wood river, a small stream which empties itself into the Mississippi, opposite to the entrance of the Missouri. It is situated in latitude 38° 55′ 19″4 north, and longitude from Greenwich, 89° 57′ 45″. On both sides of the Mississippi the land for two, or three miles is rich and level, but gradually swells into a high pleasant country, with less timber on the western than on the eastern side, but all susceptible of cultivation. The point which separates the two rivers on the north, extends for fifteen or twenty miles, the greater part of which is an open level plain, in which the people of the neighbourhood cultivate what little grain they raise. Not being able to set sail before four o'clock P. M., we did not make more than four miles, and encamped on the first island opposite a small creek called Cold Water.

May 15. The rain, which had continued yesterday and last night, ceased this morning. We then proceeded, and after passing two small islands about ten miles further, stopped for the night at Piper's landing, opposite another island. The water is here very rapid and the banks falling in. We found that our boat was too heavily laden in the stern, in consequence of which she ran on logs three times to day. It became necessary to throw the greatest weight on the bow of the boat, a precaution very necessary in ascending both the Missouri and Mississippi rivers, in the beds of which there lie great quantities of concealed timber.

The next morning we set sail at five o'clock. At the distance of a few miles, we passed a remarkable large coal hill on the north side, called by the French La Charbonniere, and arrived at the town of St. Charles. Here we remained a few days.

St. Charles is a small town on the north bank of the Missouri, about twentyone miles from its confluence with the Mississippi. It is situated in a narrow plain, sufficiently high to protect it from the annual risings of the river in the month of June, and at the foot of a range of small hills, which have occasioned its being called Petite Coté, a name by which it is more known to the French than by that of St. Charles. One principal street, about a mile in length and running parallel with the river, divides the town, which is composed of nearly one hundred small wooden houses, besides a chapel. The inhabitants, about four hundred and fifty in number, are chiefly descendants from the French of Canada; and, in their manners, they unite all the careless gaiety, and the amiable hospitality of the best times of France : yet, like most of their countrymen in America, they are but ill qualified for the rude life of a frontier: not that they are without talent, for they possess much natural.genius and vivacity; nor that they are destitute of enterprize, for their hunting excursions are long, laborious, and hazardous: but their exertions are all desultory; their industry is without system, and without perseverance. The surrounding country, therefore, though rich, is not, in general, well cultivated; the inhabitants chiefly

subsisting by hunting and trade with the Indians, and confine their culture to gardening, in which they excel.

Being joined by Captain Lewis, who had been detained by business at St. Louis, we again set sail on Monday, May 21st, in the afternoon, but were prevented by wind and rain from going more than about three miles, when we encamped on the upper point of an island, nearly opposite a creek which falls in on the south side.

On the 22d we made about eighteen miles, passing several small farms on the bank of the river, a number of islands, and a large creek on the south side, called Bonhomme, or Goodman's river. A small number of emigraphs from the United States have settled on the sides of this creek, which are very fertile. We also passed some high lands, and encamped, on the north side, near a small creek. Here we met with a camp of Kickapoo Indians who had left us at St. Charles, with a promise of procuring us some provisions by the time we overtook them. They now made us a present of four deer, and we gave them in return two quarts of whiskey. This tribe reside on the heads of the Kaskaskia and Illinois river, on the other side of the Mississippi, but occasionally hunt on the Missouri.

May 23. Two miles from our camp of last night, we reached a river emptying itself on the north side, called Osage Woman river. It is about thirty yards wide, and has now a settlement of thirty or forty families from the United States. About a mile and a half beyond this is a large cave, on the south side at the foot of cliffs, nearly three hundred feet high, overhanging the water, which becomes very swift at this place. The cave is one hundred and twenty feet wide, forty feet deep, and twenty high; it is known by the name of the 'Tavern among the traders, who have written their names on the south. About a mile further we passed a small creek called Tavern creek, and encamped on the south side of the river, having gone nine miles.

Early the next morning we ascended a very difficult rapid, called the Devil's Race Ground, where the current sets for half a mile against some projecting rocks on the south side. We were less fortunate in attempting a second place of equal difficulty. Passing near the southern shore, the bank fell in so fast as to oblige us to cross, the river instantly, between the northern side and a sandbar, which is constantly moving and banking with the violence of the current. The boat struck on it, and would have upset immediately, if the men had not jumped into the water and held her, till the sand washed from under her. We encamped on the south side, having ascended ten miles; and the next day, May 25, passed on the south side the mouth of Wood river, on the north, two small creeks and several islands, and stopped for the night at the entrance of a creek on the north side, called by the French La Charrette, ten miles from our last encampment, and a little above a small village of the same name. It consists of seven small houses, and as many poor families who have fixed themselves here for the convenience of trade, and form the last establishment of whites on the Missouri. It rained last night, yet we found this morning that the river had fallen several inches.

May 26. The wind being favourable we made eighteen miles to-day. We passed, in the morning several islands, the largest of which is Buffaloe island, separated from the southern side by a small channel which receives the waters of Buffaloe creek. On the same side is Shepherd's creek, a little beyond which we encamped on the northern side. The next day we sailed along a large island called Otter island, on the northern side, extending nearly ten miles in length, narrow but high in its situation, and one of the most fertile in the whole river. Between it and the northern shore, three small creeks, one of which has the same name with the island, empty themselves. On the southern shore is a creek twenty yards wide, called Ash creek. In the course of the day we met two canoes loaded with furs, which had been two months on their route from the Mahar nation, residing more than seven hundred miles up the river-one large raft from the Pawnees on the river Platte, and three others from the Grand Osage river. At the distance of fifteen miles we encamped on a willow island, at the entrance of the river Gasconade. This river falls into the Missouri from the south, one hundred miles from the Mississippi. Its length is about one hundred and fifty miles in a course generally north-east through a hilly country. On its banks are a number of saltpetre caves, and it is believed some mines of lead in the vicinity. Its width at the mouth is one hundred and fifty-seven yards, and its depth nineteen feet.

Here we halted for the purpose of hunting and drying our provisions, and • making the necessary celestial observations. This being completed, we set sail on the 20th at four o'clock, and at four miles distance encamped on the south side, above a small creek, called Deer creek. The next day, 30th, we set out early, and at two miles distant reached a large cave, on the north, called Montbran's tavern, after a French trader of that name, just above a creek called after the same person. Beyond this is a large island, and at the distance of four miles, Rush creek coming in from the south, at eleven, Big-muddy river on the north, about fifty yards wide; three miles further, is Little-muddy river on the same aide, opposite to which we encamped at the mouth of Grindstone creek.

The rain which began last night continued through the day, accompanied with high wind and some hail. The river has been rising fast for two days, and the country around appears full of water. Along the sides of the river to day we observe much timber, the cotton wood, the sycamore, hickory, white walnut, some grapevines, and rushes-the high west wind and rain compelled us to remain all the next day, May 31. In the afternoon a boat came down from the Grand Osage river, bringing a letter from a person sent to the Osage nation on the Arkansaw river, which mentioned that the letter announcing the cession of Louisiana was committed to the flames-that the Indians would not believe that the Americans were owners of that country, and disregarded St. Louis and its The party was occupied in hunting, in the course of which they supplies. caught in the woods several very large rats. We set sail early the next morning, June 1st, and at six miles distant passed Bear creek, a stream of about twentyfive yards width : but the wind being ashead and the current rapid, we were unable to make more than thirteen miles to the mouth of the Osage river; where we encamped and remained the following day, for the purpose of making celestial observations. The Osage river empties itself into the Missouri, at one hundred and thirty-three miles distance from the mouth of the latter river. Its general course is west and west southwest through a rich and level country. At the junction the Missouri is about eight hundred and seventy-five yards wide, and the Osage three hundred and ninety-seven. The low point of junction is in latitude 38° 31' 16", and at a short distance from it is a high commanding position, whence we enjoyed a delightful prospect of the country.

The Osage river gives or owes its name to a nation inhabiting its banks at a considerable distance from this place. Their present name however, seems to have originated from the French traders, for both among themselves and their neighbours they are called the Wasbashas. Their number is between twelve and thirteen hundred warriors, and consist of three tribes: the Great Osages of about five hundred warriors, living in a village on the south bank of the river the Little Osages, of nearly half that number, residing at the distance of six miles from them—and the Arkansaw band, a colony of Osages, of six hundred warriors, who left them some years ago, under the command of a chief called the Bigfoot, and settled on the Vermillion river, a branch of the Arkansaw. In person the Osages are among the largest and best formed Indians, and are said to possess fine military capacities ; but residing as they do invillages, and having made considerable advance in agriculture, they seem less addicted to war than their northern neighbours, to whom the use of rifles gives a great superiority. Among the peculiarities of this people, there is nothing more remarkable than

the tradition relative to their origin. According to universal belief, the founder of the nation was a snail passing a quiet existence along the banks of the Osage, till a high flood swept him down to the Missouri, and left him exposed on the shore. The heat of the sun at length ripened him into a man, but with the change of his nature, he had not forgotten his native scats on the Osage, towards which, he immediately bent his way. He was however soon overtaken by hunger and fatigue, when happily the Great Spirit appeared, and giving him a bow and arrow, showed him how to kill and cook deer, and cover himself with the skin. He then proceeded to his original residence, but as he approached the river, he was met by a beaver, who inquired haughtily who he was, and by what authority he came to disturb his possession. The Osage answered that the river was his own, for he had once lived on its borders. As they stood disputing, the daughter of the beaver came, and having by her entreaties reconciled her father to this young stranger, it was proposed that the Osage should marry the young beaver, and share with her family the enjoyment of the river. The Osage readily consented, and from this happy union there soon came the village and the nation of the Wasbasha, or Osages, who have ever since preserved a pious reverence for their ancestors, abstaining from the chace of the beaver, because in killing that animal, they killed a brother of the Osage. Of late years, however, since the trade with the whites has rendered beaver skins more valuable, the sanctity of these maternal relatives has visibly diminished, and the poor animals have nearly lost all the privileges of kindred.

On the afternoon of June 3, we proceeded, and at three miles distance. reached a creek called Cupboard creek, from a rock of that appearance near its entrance. Two miles further we encamped at Moreau creek, a stream of twenty yards width, on the southern side. The next morning, we passed at an early hour, Cedar island on the north, so called from the abundance of the tree of that name; near which is a small creek, named Nightingale creek, from a bird of that species, who sang for us during the night. Beyond Cedar island. are some others of a smaller extent, and at seven miles distance a creek fifteen or twenty yards wide, entering from the north, and known by the name of Cedar creek. At seven and a half miles further, we passed on the south side another creek, which we called Mast creek, from the circumstance of our mast being broken by running under a concealed tree; a little above is another creek on the left, one mile beyond which we encamped on the southern shore under high projecting cliffs. The French had reported that lead ore was to be found in this place, but on examining the hills, we could discern no appearance of that mineral. Along the river on the south, is a low land covered with rushes, and

high nettles, and near the mouths of the creeks, supplied with oak, ash, and walnut timber. On the north the land is rich and well situated. We made seventeen and a half miles this day. The river is falling slowly. We continued our route the next morning early : a small creek called Lead creek, on the south ; another on the north, known to the French by the name of Little Good Woman's creek, and again Big Rock creek on the south were the only streams we passed this morning. At eleven o'clock we met a raft made of two canoes joined together, in which two French traders were descending, from eighty leagues up the river Kanzas, where they had wintered, and caught great quantities of beaver, but had lost much of their game by fires from the prairies. They told us that the Kanzas nation is now hunting buffaloe in the plains, having passed the last winter in this river. Two miles further, we reached on the south Little Manitou creek, which takes its name from a strange figure resembling the bust of a man, with the horns of a stag, painted on a projecting rock, which may represent some spirit or deity. Near this is a sandbar extending several miles, which renders the navigation difficult, and a small creek called Sand creek on the south, where we stopped for dinner, and gathered wild cresses and tongue grass from the sandhar. The rapidity of the currents, added to our having broken our mast, prevented our going more than twelve and a half miles. The scouts and hunters whom we always kept out, report that they have seen fresh tracks of Indians. The next morning we left our camp, which was on the south side, opposite to a large island in the middle of the river, and at five miles reached a creek on the north side, of about twenty yards wide, called Split Rock creek, from a fissure in the point of a neighbouring rock. Three miles beyond this, on the south, is Saline river; it is about thirty yards wide, and has its name from the number of salt licks and springs, which render its water brackish; the river is very rapid, and the banks are falling in. After leaving Saline creek, we passed one large island and several smaller ones, having made fourteen miles. The water rose a foot during the last night.

The next day, June 7, we passed at four and a half miles Big Manitou creek, near which is a limestone rock inlaid with flint of various colours, and embellished, or at least covered, with uncouth paintings of animals and inscriptions. We landed to examine it, but found the place occupied by a nest of rattlesnakes, of which we killed three. We also examined some licks and springs of salt water, two or three miles up this creek. We then proceeded by some small willow islands, and encamped at the mouth of Good Woman river on the north. It is about thirty-five yards wide, and said to be navigable for boats several leagues. The hunters, who had higherto given us only deer, brought in this evening three bears, and had seen some indication of buffaloe. We had come fourteen miles.

June 8, we saw several small willow islands, and a creek on the south, near which are a number of deer licks; at nine miles distance we came to Mine river. This river, which falls into the Missouri from the south, is said to be navigable for boats eighty or ninety miles, and is about seventy yards wide at its mouth. It forks about five or six leagues from the Missouri, and at the point of junction are some very rich salt springs; the west branch in particular, is so much impregnated, that, for twenty miles, the water is not palatable : several branches of the Manitou and Good Woman are equally affected. The French report also, that lead ore has been found on different parts of the river. We made several excursions near the river through the low rich country on its banks, and after dinner went on to the island of Mills, where we encamped. We met with a party of three hunters from the Sioux river; they had been out for twelve months, and collected about nine hundred dollars worth of peltries and furs. We ascended this river twelve miles.

On the 9th, we set out early, and reached a cliff of rocks, called the Arrow Rock, near to which is a prairie called the Prairies of Arrows, and Arrow creek, a small stream about eight yards wide, whose source is in the adjoining prairies on the south. At this cliff the Missouriis confined within a bed of two hundred yards; about four miles to the south east is a large lick and salt spring of great strength. About three miles further is Blackbird creek on the north side, opposite to which, is an island and a prairie enclosing a small lake. Five miles beyond this we encamped on the south side, after making, in the course of the day, thirteen miles. The land on the north is a high rich plain. On the south it is also even, of a good quality, and rising from fifty to one hundred feet.

On the next morning, 10th, we passed Deer creek, and at the distance of five miles, the two rivers called by the French the two Charatons, a corruption of Thieraton, the first of which is thirty, the second seventy yards wide, and enter the Missouri together. They are both navigable for boats: the country through which they pass is broken, rich, and thickly covered with timber. The Ayauway nation, consisting of three hundred men, have a village near its headwaters on the river Des Moines. Farther on we passed a large island called *Chicot* or Stump Island, and encamped on the south, after making ten miles. A head wind forced-us to remain there all the next day, during which we dried the meat we had killed, and examined, the surrounding country, which consists of good land, well watered, and supplied with timber: the prairies also differ from those eastward of the Mississippi, inasmuch as the latter are generally without any covering except grass, whilst the former abound with hazel, grapes and other fruits, among which is the Osage pluma of a superior size and quality.

On the morning of the 12th, we passed through difficult places in the river, and reached Plum creek on the south side. At one o'clock, we met two rafts loaded, the one with furs, the other with the tallow of buffaloe; they were from the Sioux nation, and on their way to St. Louis; but we were fortunate enough to englige one of the party, a Mr. Durion, who had lived with that nation more than twenty years, and was high in their confidence, to accompany us thither. We made nine miles. On the 13th, we passed at between four and five miles, a bend of the river, and two creeks on the north, called the Round Bend creeks. Between these two creeks is the prairie, in which once stood the ancient village of the Missouris. Of this village there remains no vestige, nor is there any thing to recall this great and numerous nation, except a feeble remnant of about thirty families. They were driven from their original seats by the invasions of the Sauks and other Indians from the Mississippi, who destroyed at this village two hundred of them in one contest; the rest sought refuge near the Little Osage, on the other side of the river. The encroachment of the same enemies forced, about thirty years since, both these nations from the banks of the Missouri. A few retired with the Osage, and the remainder found an asylum on the river Platte, among the Ottoes, who are themselves declining. Opposite the plain there was an island and a French fort, but there is now no appearance of either, the successive inundations having probably washed them away, as the willow island which is in the situation described by Du Pratz, is small and of recent formation. Five miles from this place is the mouth of Grand River, where we encamped. This river follows a course nearly south, or south east, and is between eighty and a hundred yards wide where it eaters the Missouri, near a delightful and rich plain. A racoon, a bear, and some deer were obtained to day. We proceeded at six o'clock the next morning. The current was so rapid and the banks on the north falling in so constantly, that we were obliged to approach the sandbars on the south. These were moving continually, and formed the worst passage we had seen, and which we surmounted with much difficulty. We met a trading raft from the Pawnee nation on the river Platte, and attempted unsuccessfully to engage one of their party to return with us. At the distance of eight miles, we came to some high cliffs, called the Snake bluffs, from the number of that animal in the neighbourhood, and immediately above these bluffs, Snake creek, about eighteen yards wide, on which we encamped. One of our hunters, a half Indian, brought no

an account of his having to day passed a small lake, near which a number of deer were feeding, and in the pond he heard a snake making a guttural noise like a turkey. He fired his gun, but the noise became louder. He adds, that he has heard the Indians mention this species of snake, and this story is confirmed by a Frenchman of our party.

All the next day, the river being very high, the sandbars were so rolling and numerous, and the current so strong, that we were unable to stem it even with oars added to our sails; this obliged us to go nearer the banks, which were falling in, so that we could not make, though the boat was occasionally towed, more than fourteen miles. We passed several islands and one creek on the south side, and encamped on the north opposite a beautiful plain, which extends as far back as the Osage river, and some miles up the Missouri. In front of our encampment are the remains of an old village of the Little Osage, situated at some distance from the river, and at the foot of a small hill. About three miles above them, in view of our camp is the situation of the old village of the Missouris after they fled from the Sanks. The inroads of the same tribe compelled the Little Osage to retire from the Missouri a few years ago, and establish themselves near the Great Osages. The river which is here about one mile wide, had risen in the morning, but fell towards evening. Early this morning, June 16th, we joined the camp of our hunters, who had provided two deer and two bears, and then passing an island and a prairie on the north covered with a species of timothy, made our way through bad sandbars and a swift current, to an encampment for the evening, on the north side, at ten miles distance. The timber which we examined to day was not sufficiently strong for oars; the musquitoes and ticks are exceedingly troublesome. On the 17th, we set out early, and having come to a convenient place at one mile distance, for procuring timber and making ears, we occupied ourselves in that way on this and the following day. The country on the north of the river is rich and covered with timber; among which we procured the ash for cars. At two miles it changes into extensive prairies, and at Seven or eight miles distance becomes higher and waving. The prairie and high lands on the south commence more immediately on the river; the whole is well watered and provided with game, such as deer, elk, and bear. The hunters brought in a fat horse which was probably lost by some war party-this being the crossing place for the Soules, Ayauways, and Siouk, in their excursions against the Osage.

June 19, the cars being finished, we proceeded under a gentle breeze by twolange and some smaller islands. The sandbass are numerous and so bad, that at one place we were forced to clear away the driftwood in order to pass: the water was so rapid that we were under the necessity of towing the boat for half a mile round a point of rocks on the south side. We passed two creeks, one called Tiger creek on the north, twenty-five yards wide at the extremity of a large island called Panther Island : the other Tabo creek on the south, fifteen vards wide. Along the shores are gooseberries and raspberries in great abundance. At the distance of seventeen and a half miles we encamped on the south, near a lake about two miles from the river, and several in circumference; and much frequented by deer and all kinds of fowls. On the north the land is higher and better calculated for farms than that on the south, which ascends more gradually, but is still rich and pleasant. The musquitoes and other animals are so troublesome that musquitoe biers or nets were distributed to the party. The next morning we passed a large island, opposite to which on the north is a large and beautiful prairie, called Sauk prairie, the land being fine and well timbered on both sides the river. Pelicans were seen to day. We made six and three quarter miles, and encamped at the lower point of a small island, along the north side of which we proceeded the next day, June 21st, but not without danger in consequence of the sands and the rapidity of the water which rose three inches last night. Behind another island come in from the south two creeks, called Eau Beau, or Clear Water creeks: on the porth is a very remarkable bend, where the high lands approach the river, and form an acute angle at the head of a large island produced by a narrow channel through the point of the hend. We passed several other islands, and encamped at seven and a half miles on the south.

22d. The river rose during the night four inches. The water is very, rapid and crowded with concealed timber. We passed two large islands and an extensive prairie on the south, beginning with a rich low land, and rising to the distance of seventy or eighty feet of rolling clear country. The thermometer at three o'clock P. M. was at 87°. After coming ten and a half miles we encamped on the south, opposite a large creek called Fine Prairie river.

23d. The wind was against us this morning, and became so violent that we made only three and a half miles, and were obliged to lie to during the day at a small island. This is separated from the northern side by a narrow channel which cannot be passed by boats, being choked by trees and drifted wood. Directly opposite on the south, is a high commanding position, more than seventy feet above high water mark, and overlooking the river, which is here of but little width; this spot has many advantages for **g** fort, and trading house with the Indians.* The river fell eight inches last night.

The next day, 24th, we passed at eight miles distance, Hay Cabin creek coming in from the south, about twenty yards wide, and so called from camps of straw built on it; to the north are some rocks projecting into the river, and a little beyond them a creek on the same side, called Charaton Scarty: that is, Charaton like the Otter. We halted, after having made eleven and a half miles, the country on both sides being fine and interspersed with prairies, in which we now see numerous herds of deer, pasturing in the plains or feeding on the young willows of the river.

25th. A thick fog detained us till eight o'clock, when we set sail, and at three miles reached a bank of stone coal on the north, which appeared to be very abundant: just below it is a creek called after the bank La Charbonniere. Four miles further, and on the southern side, comes in a small creck, called La Benite. The prairies here approach the river and contain many fruits, such as plums, raspberries, wild apples, and nearer the river vast quantities of mulber-Our encampment was thirteen miles distance on an island to the north, ries. opposite some hills higher than usual, and almost one hundred and sixty or one hundred and eighty feet. 26th. At one mile we passed at the end of a small island. Blue Water creek, which is about thirty yards wide at its entrance from the south.⁺ Here the Missouri is confined within a narrow bed, and the current still more so by counter currents or whirls on one side and a high bank on the other. We passed a small island and a sandbar, where our tow rope broke twice, and we rowed round with great exertions. We saw a number of paroquets, and killed some deer; after nine and three quarter miles we encamped at the upper point of the mouth of the river Kanzas : here we remained two days, during which we made the necessary observations, recruited the party, and repaired the boat. The river Kanzas takes its rise in the plains between the Arkansaw and Platte rivers, and pursues a course generally east till its junction with The Missouri, which is in latitude 38° 31' 13"; here it is three hundred and forty and a quarter yards wide, though it is wider a short distance above the mouth. The Missouri isself is about five hundred yards in width; the point of union is low and subject to inundations for two bundred and fifty yards, it then rises a

^{*} The United States built in September, 1808, a factory and fort at this spot, which is very convegient for trading with the Osages, Ayauways, and Kanzas.

[†] A few miles up the Blue Water Creek are quarries of plaster of Paris, since worked and brought down to St. Louis.

lutle above high water mark, and continues so as far back as the hills. On the south of the Kanzas the hills or highlands come within one mile and a half of the river; on the north of the Missouri they do not approach nearer than several miles; but on all sides the country is fine. The comparative specific gravities of the two rivers is, for the Missouri seventy-eight, the Kanzas seventytwo degrees; the waters of the latter have a very disagreeable taste : the former has risen during vesterday and to day about two feet. On the banks of the Kanzas, reside the Indians of the same name, consisting of two villages, one at about twenty, the other forty leagues from its mouth, and amounting to about three hundred men. They once lived twenty-four leagues higher than the Kanzas, on the south bank of the Missouri, and were then more numerous but they have been reduced and banished by the Sauks and Ayauways, who being better supplied with arms have an advantage over the Kanzas, though the latter are not less fierce or warlike than themselves. This nation is now hunting in the plains for the buffalse, which our hunters have seen for the first time.

On the 29th, we set out late in the afternoon, and having passed a sandbar. near which the boat was almost lost, and a large island on the north, we encamped at seven and a quarter miles on the same side in the low lands, where the rushes are so thick that it is troublesome to walk through them. Early the next morning, 30th, we reached, at five miles distance, the mouth of a river coming in from the north, and called by the French, Petite Riviere Platte, or Little Shallow river; it is about sixty yards wide at its mouth. A few of the party who ascended informed us, that the lands on both sides are good, and that there are several falls well calculated for mills; the wind was from the south-west, and the weather oppressively warm, the thermometer standing at One mile beyond this is a small creek on 96° above 0 at three o'clock P. M. the south, at five miles from which we encamped on the same side, opposite the lower point of an island called Duamond island. The land on the north between the Little Shallow river, and the Missouri is not good, and subject to overflowon the south it is higher and better timbered.

July 1st. We proceeded along the north side of Diamond island, where is small creek called Biscuit creek empties itself. One and a half miles above the island is a large sandbar in the middle of the river, beyond which we stopped to refresh the men, who suffered very much from the heat. Here we observed great quantities of grapes and raspberries. Between one and two miles further are three islands and a creek on the south known by the French name of Remore. The main current which is now on the south side of the the first set of the three islands, ran three years, as we were told on the north, and there was then no appearance of the two smaller islands. At the distance of four and a half miles we reached the lower point of a cluster of small islands, two large and two small, called Isles des Parcs or Field Islands. Paccam trees were this day seen, and large quantities of deer and turkies on the banks. We had advanced twelve miles.

July 2d. We left our encampment, opposite to which is a high and beautiful prairie on the southern side, and passed up the south of the islands, which are high meadows, and a creek on the north called Parc creek. Here for half an hour the river became covered with drift wood, which rendered the navigation dangerous, and was probably caused by the giving way of some sandbar, which had detained the wood. After making five miles we passed a stream on the south called Turky creek, near a sandbar, where we could scarcely stem the current with twenty oars, and all the poles we had. On the north at about two miles forther is a large island called by the Indians, Wau-car-da-war-card-da, or the Bear Medicine island. Here we landed and replaced our mast, which had been broken three days ago, by running against a tree, overhanging the river. Thence we proceeded, and after night stopped on the north side, above the island, having come eleven and a half miles. Opposite our camp is a valley, in which was situated an old village of the Kanzas, between two high points of land, and on the bank of the river. About a mile in the rear of the village was a small fort, built by the French on an elevation. There are now no traces of the village, but the situation of the fort may be recognized by some remains of chimnies, and the general outline of the fortification, as well as by the fine spring which supplied it with water. The party, who were stationed here, were probably cut off by the Indians, as there are no accounts of them.

July 3d. A gentle breeze from the south carried us eleven and a quarter miles this day; past two islands, one a small willow island, the other large, and called by the French, Isle des Vaches, or Cow island. At the head of this island, on the northern shore, is a large pond containing beaver, and fewls of different kinds. After passing a bad sandbar, we stopped on the south side at an old trading house, which is now deserted, and half a mile beyond it encamped on the south. The land is fine along the rivers, and some distance back. We observed the black walnut and oak, among the timber; and the honey-suckle and the buck's-eye, with the nuts on them.

The morning of the 4th July was announced by the discharge of our gun. At one mile we reached the mouth of a bayeau or creek, coming from a large lake on the north side, which appears as if it had once been the bed of the river, to which it runs parallel for several niles. The water of it is clear, and supplied by a small creek and several springs, and the number of goslins which we saw on it, induced us to call it the Goslin lake. It is about three quarters of a mile wide, and seven or eight miles long. One of our men was bitten by a snake, but a poultice of bark and gunpowder was sufficient to cure the wound. At ten and a quarter miles we reached a creek on the south about twelve yards wide, and coming from an extensive prairie, which approached the borders of the river. To this creek, which had no name, we gave that of Fourth of July creek; above it is a high mound, where three Indian paths centre, and from which is a very extensive prospect. After fifteen miles sail we came to on the north a little above a creek on the southern side, about thirty yards wide, which we called Independence creek, in honour of the day, which we could celebrate only by an evening gun, and an additional gill of whisky to the men.

The next day, 5th, we crossed over to the south and came along the bank of an extensive and beautiful prairie, interspersed with copses of timber, and watered by Independence creek. On this bank formerly stood the second village of the Kanzas; from the remains it must have been once a large town. We passed several bad sandbars, and a small creek to the south, which we called Yellow Ochre creek, from a bank of that mineral a little above it. The river continues to fall. On the shores are great quantities of summer and fall grapes, berries and wild roses. Deer is not so abundant as usual, but there are numerous tracks of elk around us. We encamped at ten miles distance on the south side under a high bank, opposite to which was a low land covered with tall rushes, and some timber.

July 6. We set sail, and at one mile passed a sandbar, three miles further an island, a prairie to the north, at the distance of four miles called Reevey's prairie, after a man who was killed there; at which place the river is confined to a very narrow channel, and by a sandbar from the south. Four miles beyond is another sandbar terminated by a small willow island, and forming a very considerable bend in the river towards the north. The sand of the bar is light, interfaced with small pebbles and some pit coal. The river falls slowly, and, owing either to, the muddiness of its water, or the extreme heat of the weather, the men perspire profusely. We encamped on the south, having made twelve miles. The bird called whip-poor-will sat on the boat for some time.

In the morning, July 7th, the rapidity of the water obliged us to draw the boat along with ropes. At six and three quarter miles, we came to a sandbar, at a point opposite a fine rich prairie on the north, called St. Michael's. The prairies of this neighbourhood have the appearance of distinct farms. divided by narrow strips of woodland, which follow the borders of the small runa leading to the river. Above this, about a mile, is a cliff of yellow clay on the north. At four o'clock we passed a narrow part of the channel, where the water is confined within a bed of two handred yards wide, the current running directly against the southern bank, with no sand on the north to confine it or break its force. We made fourteen miles, and halted on the north, after which we had a violent gust about seven o'clock. One of the hunters saw in a pond to the north, which we passed yesterday, a number of young swans. We saw a large rat, and killed a wolf. Another of our men had a stroke of the sun; be was bled, and took a preparation of nitre which relieved him considerably.

July 8. We set out early, and soon passed a small creek on the north, which we called Ordway's creek, from our sergeant of that name who had been sent on shore with the horses, and went up it. On the same side are three small islands, one of which is the Little Nodawa, and a large island called the Great Nowada extending more than five miles, and containing seven or eight thousand acres of high good land, rarely overflowed, and one of the largest islands of the Missouri. It is separated from the northern shore by a small channel of from forty-five to eighty yards wide, up which we passed, and found near the western extremity of the island, the mouth of the river Nodawa. This river pursues nearly a southern course, is navigable for boats to some distance. and about seventy yards wide above the mouth, though not so wide immediately there, as the mud from the Missouri contracts its channel. At twelve and a quarter miles, we encamped on the north side, near the head of Nodawa island. and opposite a smaller one in the middle of the river. Five of the men were this day sick with violent headachs. The river continues to fall.

July 9th. We passed the island opposite to which we last night encamped. and saw near the head of it a creek falling in from a pond on the north, to which we gave the name of Pike pond, from the numbers of that animal which same of our party saw from the shore. The wind changed at eight from N. E. to S. W. and brought rain. At six miles we passed the month of Momer's oreck on the south, and two miles above a few cabins, where one of our party had encamped with some Frenchmen about two years ago. 'Further on we passed an island on the north, opposite some cliffs on the south side, near which Loup or Wolf river falls into the Missouri. This river is about sixty yards wide, it heads near the same sources as the Kanzas, and is navigable for bows, at some distance up. At fourteen miles we encamped on the south side.

Tuesday 10th. We proceeded on by a prairie on the upper side of Wolf river, and of fur miles passed a freek fifteen yards wide on the south, called Pape's creek after a Spannard of that name, who killed himself there. At six miles we dined on an island called by the French IIe de Salomon, or Solomon's island, opposite to which on the south is a beautiful plain covered with grass, infermixed with wild rye and a kind of wild potatoe. After making ten miles we stopped for the night on the northern side, opposite a cliff of yellow clay. The river has neither risen nor fallen to day. On the north the low land is very extensive, and covered with vines; on the south, the hills approach nearer the river, and back of them commence the plains. There are a great many goslins along the banks.

Wednesday 11th. After three miles sailing we came to a willow island on the north side, behind which enters a creek called by the Indians Tarkio. Above this creek on the north the low lands are subject to overflow, and further back the undergrowth of vines particularly, is so abundant that they can scarcely be passed. Three miles from the Tarkio we encamped on a large sand island on the north, immediately opposite the Fiver Nemahaw.

Thursday 12th. We remained here to day for the purpose of refreshing the party, and making lunar observations. The Nemahaw empties itself into the Missouri from the south, and is eighty yards wide at the confinence, which is in lat. 39° 55' 56": Captain Clarke ascended it in the perioque about two miles to the mouth of a small creek on the lower side. On going ashore he found in the level plain several artificial mounds or graves, and on the adjoining hills others of a larger size. This appearance indicates sufficiently the former population of this country, the mounds being certainly intended as tombs; the Indians of the Missouri still preserving the custom of interring the dead on high ground. From the top of the highest mound a delightful prospect presented itself-the level and extensive meadows watered by the Nemahaw, and enlivened by the few trees and shrubs skirting the borders of the river and its tributary streamst the lowland of the Missouri covered with undulating grass, nearly five feet which, gradually rising into a second plain, where rich weeds and flowers dre motorspensed with copses of the Osage plum; further back are seen ismall groves top trees; an abundance of grapes ; the wild cherry of the Missouri, resembling our own, but larger, and growing on a small bush ; and the chokecherry, which we observed for the first time. Some of the grapes gathered to-day are nearly their On the south of the Nemahaw, and about a quarter of a mile from its months is a sliff of freestone, in which are various inscriptions and masks made by the Ins dians. The sand island where we are encamped, is covered with the two species of willow, broad and narrow leaf.

July 13th. We proceeded at sunrise with a fair wind from the south, and at

two miles, passed the month of a small river on the north, called Big Tarkio, A channel from the bed of the Missouri once ran into this river, and formed an island called St. Joseph's, but the channel is now filled up, and the island is added to the northern shore. Further on to the south, is situated an extensive plain, covered with a grass resembling timothy, in its general appearance, except the seed which is like flaxseed, and also a number of grape-vines. At twelve miles, we passed an island on the north, above which is a large sandbar covered with willows: and at twenty and a half miles, stopped on a large sandbar, in the middle of the river opposite a high handsome prairie, which extends up the hills four or five miles distant, though near the bank the land is low, and subject to be overflowed. This day was exceedingly fine and pleasant, a storm of wind and rain from north-northeast, last night, having cooled the air.

July 14. We had some hard showers of rain before seven o'clock, when we set out. We had just reached the end of the sand island, and seen the opposite banks falling in, and so lined with timber that we could not approach it without danger, when a sudden squall, from the northeast, struck the boat on the starboard quarter, and would have certainly dashed her to pieces on the sand island, if the party had not leaped into the river, and with the aid of the anchor and cable kept her off: the waves dashing over her for the space of forty minutes; after which the river became almost instantaneously calm and smooth. The two perioques were ahead, in a situation nearly similar, but fortunately no da-, mage was done to the boats or the loading. The wind having shifted to the southeast, we came at the distance of two miles, to an island on the north, where we dined. One mile above, on the same side of the river, is a small fac $_{\tau}$ tory, where a merchant of St Louis traded with the Ottoes and Pawnees two years ago. Near this is an extensive lowland, part of which is overflowed occasionally, the rest is rich and well timbered. The wind again changed to northwest by north. At seven and a half miles, we reached the lower point of a large island, on the north side. A small distance above this point, is a river. called by the Maha Indians, Nishnahbatona. This is a considerable creek, nearly as large as the Mine river, and runs parallel to the Missouri the greater part of its course, being fifty yards wide at the mouth. In the prairies or glades, we saw wild-timothy, lambsquarter, cuckleberries, and on the edges of the river, summer-grapes, plums, and gooseberries. We also saw to-day, for the first time, some elk, at which some of the party shot, but at too great a distance, "We encamped on the north side of the island, a little above Nishnahbatona, having made nine miles. The river fell a little.

- July 15. A thick fog prevented our leaving the encampment before seven.

At about four inites, we reached the extremity of the large island, and crossing to the south, at the distance of seven miles, arrived at the Little Nemaha, a small river from the south, forty yards wide a little above its month, but contracting, as do almost all the waters emptying into the Missouri, at its confinence. At nine and three quarters miles, we encamped on a woody point, on the south. Along the southern bank, is a rich lowland covered with peavine, and rich weeds, and watered by small streams rising in the adjoining prairies. They too, are rich, and though with abundance of grass, have no timber except what grows near the water : interspersed through both are grapevines, plums of two kinds, two species of wild cherries, hazlenuts and gooseberries. On the south there is one unbroken plain; on the north the river is skirted with some timber, behind which the plain extends four or five miles to the hills, which seem to have little wood.

July 16. We continued our route between a large island opposite to our last night's encampment, and an extensive prairie on the south. About six miles, we came to another large island, called Fairsun island, on the same side; above which is a spot, where about twenty acres of the hill have fallen into the river. Near this, is a cliff of sandstone for two miles, which is much frequented by birds. At this place the river is about one mile wide, but not deep; as the timber, or sawyers, may be seen, scattered across the whole of its bottom. At twenty miles distance, we saw on the south, an island called by the French. I'lle Chauve, or Bald island, opposite to a large prairie, which we called Baldpated praîrie from a ridge of naked hills which bound it, running parallel with the river as far as we could see, and from three to six miles distant. To the south the hills touch the river. We encamped a quarter of a mile beyond this, in a point of woods on the north side. The river continues to fall.

Thesday, July 17. We remained here this day, in order to make obsertions and correct the chronometer, which ran down on Sunday. The hathude we found to be 40° 27' 5''⁺. The observation of the time proved out chronometer too slow, by 6' $51^{\frac{n+1}{10}}$. The highlands bear from our camp; north 25' west, up the river. Captain Lewis rode up the country, and saw the Nishmähbatona, about ten or twelve miles from its mouth, at a place not more thad three hundred yards from the Missouri, and a little above our camp. It then 'pusses near the foot of the Baldhills, and is at least six feet below the level of the Missouri. On its banks are the oak, walnut, and mulberry. The common current of the Missouri, taken with the log, is 50 fathoms in 40'', at some places, and even 20''.

Wednesday, July 18. "The morning was fair, and a genile wind from with-

east by south, carried us along between the prairie on the north, and Buld island to the south : opposite the middle of which, the Nishnahbatona approaches the nearest to the Missouri. The current here ran fifty fathoms in 41" . At thirteen and a half miles, we reached an island on the north, near to which the banks overflow; while on the south, the hills project over the river and form high cliffs. At one point a part of the cliff, nearly three quarters of a mile in length, and about two hundred feet in height, has fallen into the river. It is composed chiefly of sandstone intermixed with an iron ore of bad quality ; near the bottom is a soft slatestone with pebbles. We passed several bad sandbars in the course of the day, and made eighteen miles, and encamped on the south, opposite to the lower point of the Oven islands. The country around is generally divided into prairies, with little timber, except on low points, islands, and near creeks, and that consisting of cottonwood, mulberry, elm, and sycamore. The river falis fast. An Indian dog came to the bank; he appeared to have been lost and was nearly starved : we gave him some food, but he would not follow us.

Thursday, July 19. The Oven islands are small, and two in number; one near the south shore, the other in the middle of the river. Opposite to them is the prairie, called Terrien's Oven, from a trader of that name. At four and a half miles, we reached some high cliffs of a yellow earth, on the south, near which are two beautiful runs of water, rising in the adjacent prairies, and one of them with a deerlick, about two hundred yards from its mouth. In this neighbourhood we observed some iron ore in the bank. At two and a half miles above the runs, a large portion of the hill, for nearly three quarters of a mile, has fallen into the river. We encamped on the western extremity of an island, in the middle of the river, having made ten and three quarter miles. The river falls a little. The sandbars which we passed to-day, are more numerous, and she rolling sands more frequent and dangerous than any we have seen; these obstacles increasing as we approach the river Platte. The Missouri here is wider also than below, where the timber on the banks resists the current ; while here the prairies which approach, are more easily washed and undermined. The hunters have brought for the last few days, no quadruped, but deer : great quantities of young geese are seen to-day; one of them brought calamus. which he had gathered opposite our encampment, and a large quantity of sweeting.

Friday, July 20. There was a heavy dew last night, and this morning was foggy and cool. We passed at about three miles distance, a small willow island to the north, and a creek on the south, about twenty-five yards wide, called by the French, L'eau qui Pleure, or the Weeping Water, and emptying itself just above a cliff of brown clay. Thence we made two and a half, sniles to another island; three niles further to a third; six miles beyond which is a fourth island; at the head of which we encamped on the southern shere; in all The party who walked on the shore to-day, found the plains eighteen miles. to the south, rich, but much parched with frequent fires, and with no timber, except the scattering trees about the sources of the runs, which are numerous and fine. On the north, is a similar prairie country. The river continues to fall. A large yellow wolf was this day killed. For a month past the party have been troubled with biles, and occasionally with the dysentery, These. biles were large tumours which broke out under the arms. on the legs, and, generally, in the parts most exposed to action, which sometimes became too painful to permit the men to work. After remaining some days, they disappeared without any assistance, except a poultice of the bark of the elm, or of This disorder, which we ascribe to the muddiness of the river Indian meal. water, has not affected the general health of the party, which is quite as good. if not better, than that of the same number of men .u any other situation.

Saturday, July 21. We had a breeze from the south-east, by the aid of which we passed, at about ten miles, a willow island on the south, near high lands covered with timber, at the bank, and formed of limestone with cemented shells: on the opposite side is a bad sandbar, and the land near it is cut though at high water, by small channels forming a number of Islands. The wind lulled at seven o'clock, and we reached, in the rain, the mouth of the great river Platte, at the distance of fourteen miles. The highlands which had accompanied us on the south, for the last eight or ten miles, stopped at about three guarters of a mile from the entrance of the Platte. Captains Lewis and Clarke ascended the river in a perioque, for about one mile, and found the current very rapid; rolling over sands, and divided into a number of channels; none of which are deeper than five or six feet. One of our Frenchmen, who spent two winters on it, says that it spreads much more at some distance from the mouth; that its depth is generally not more than five or six feet; that there are many small islands scattered through it, and that from its rapidity and the quantity of its sand, it cannot be navigated by boats or perioques, though the That the Saline or Salt Indians pass it in small flat canoes made of hides. river, which in some seasons is too brackish to be drank, falls into it from the south about thirty miles up, and a little above it Elkhorn river from the north, running nearly parallel with the Missouri. The river is, in fact, much more rapid than the Missouri, the bed of which it fills with moving sands, and drives the current on the northern shore, on which it is constantly encroaching. At its junction the Platte is about six hundred yards wide, and the same number of miles from the Mississippi. With much difficulty we worked round the sandbars near the mouth, and came to above the point, having made fifteen miles. A number of wolves were seen and heard around us in the evening.

July 22. The next morning we set sail, and having found at the distance of ten miles from the Platte, a high and shaded situation on the north, we encamped there, intending to make the requisite observations, and to send for the neighbouring tribes, for the purpose of making known the recent change in the government, and the wish of the United States to cultivate their friendship.

CHAP, II.

SUME ACCOUNT OF THE PAWNEE INDIANS-COUNCIL HELD WITH THE OFTO AND MISSOURI INDIANS-COUNCIL HELD WITH ANOTHER PARTY OF THE OTTOES-DEATH OF SERGEANT FLOYD-THE PARTY ENCAMP NEAR THE MOUTH OF WHITESTONE RIVER-THE CHARACTER OF THE MISSOURI, WITH THE RIVERS THAT ENTER IT-THE SURROUNDING COUNTRY-THE VARIOUS ISLANDS, BAYS, CREEKS, &C. GIVEN IN THE COURSE OF THE EXPEDITION.

OUR camp is by observation in latitude 41° 3' 11". Immediately behind it is a plain about five miles wide, one half covered with wood, the other dry and elevated. The low grounds on the south near the junction of the two rivers, are rich, but subject to be overflowed. Farther up, the banks are higher, and opposite our camp the first hills approach the river, and are covered with timber, such as oak, walnut, and elm. The intermediate country is watered by the Papillon, or Butterfly creek, of about eighteen yards wide, and three miles from the Platte; on the north are high open plains and prairies, and at nine miles from the Platte, the Musquitoe creek, and two or three small willow islands. We stayed here several days, during which we dried our provisions, made new oars. and prepared our despatches and maps of the country we had passed, for the president of the United States, to whom we intend to send them by a perioque from this place. The hunters have found game scarce in this neighbourhood : they have seen deer, turkies, and grouse; we have also an abundance of rine 'grapes; and one of our men caught a white catfish, the eyes of which were small, and its tail resembling that of a dolphin. The present season is that in which the Indians go out into the prairies to hunt the buffaloe; but as we discovered some hunters' tracks, and observed the plains on fire in the direction of their villages, we hoped that they might have returned to gather the green Indian corn, and therefore despatched two men to the Ottoes or Pawnee villages with a present of tobacco, and an invitation to the chiefs to visit us. Thev. returned after two days absence. Their first course was through an open

prairie to the south, in which they crossed Butterfly creek. They then reached a small beautiul river, called Corne de Cerf, or Elkhorn river, about one hundred yards wide, with clear water and a gravelly channel. It empties a little below the Ottoe village into the Platte, which they crossed, and arrived at the town about forty-five miles from our camp. They found no Indians there, though they saw some fresh tracks of a small party. The Ottoes were once a powerful nation, and lived about twenty miles above the Platte, on the southern bank of Being reduced, they migrated to the neighbourhood of the the Missouri. Pawnces, under whose protection they now live. Their village is on the south side of the Platte, about thirty miles from its month; and their number is two hundred men, including about thirty families of Missouri Indians, who are incorporated with them. Five leagues above them, on the same side of the river, resides the nation of the Pawnees. This people were among the most numerous of the Missouri Indians, but have gradually been dispersed and broken, and even since the year 1797, have undergone some sensible changes. They now consist of four bands; the first is the one just mentioned, of about five hundred men, to whom of late years have been added the second band, who are called republican Pawnees, from their having lived on the republican branch of the river Kanzas, whence they emigrated to join the principal band of Pawnees: the republican Pawnees amount to nearly two hundred and fifty men. The third, are the Pawnees Loups, or Wolf Pawnees, who reside on the Wolf fork of the Platte, about ninety miles from the principal Pawnees, and number two hundred and eighty men. The fourth band originally resided on the Kanzas and Arkansaw, but in their wars with the Osages, they were so often defeated, that they at last retired to their present position on the Red river, where they form a tribe of four hundred men. All these tribes live in villages, and raise corn ; but during the intervals of culture rove in the plains in quest of buffaloe.

Beyond them on the river, and westward of the Black mountains, are the Kaninaviesch, consisting of about four hundred men. They are supposed to have emigrated originally from the Pawnees nation; but they have degenerated from the improvements of the parent tribe, and no longer live in villages, but rove through the plains.

Still forther to the westward, are several tribes, who wander and hunt on the sources of the river Platte, and thence to Rock Mountain. These tribes, of which little more is known than the names and the population, are first, the Staittin, or Kite Indians, a small tribe of one hundred men. They have acquired the name of Kites, from their flying ; that is, their being always on horseback ; and the small mess of their numbers is to be attributed to their extreme ferocity ; they are the most warlike of all the western Indians; they never yield in battle; they never spare their enemies; and the retaliation of this barbarity has almost extinguished the nation. Then come the Wetapahato, and Kiawa tribes, associated together, and amounting to two hundred men; the Castahama, of three hundred men, to which are to be added the Cataka of seventy-five men, and the Dotami. These wandering tribes, are conjectured to be, the remnants of the Great Padouca nation, who occupied the country between the upper parts of the river Platte, and the river Kanzas. They were visited by Bourgemont, in 1724, and then lived on the Kanzas river. 'The seats, which he describes as their residence, are now occupied by the Kanzas nation; and of the Padoucas, there does not now exist even the name.

July 27. Having completed the object of our stay, we set sail, with a pleasant breeze from the N. W. The two horses swam over to the southern shore, along which we went, passing by an island, at three and a half miles, formed by a pond, fed by springs: three miles further is a large sand island, in the middle of the river; the land on the south being high, and covered with timber; that on the north, a high prairie. At ten and a half miles from our encampment, we saw and examined a curious collection of graves or mounds, on the south side of the river. Not far from a low piece of land and a pond, is a tract of about two hundred acres in extent, which is covered with mounds of different heights, shapes, and sizes : some of sand, and some of both earth and sand; the largest being nearest the river. These mounds indicate the position of the ancient village of the Ottoes, before they retired to the protection of the Pawnees. After making fifteen miles, we encamped on the south, on the bank of a high handsome prairie, with lofty cottonwood in groves, near the river.

July 28. At one mile, this morning we reached a bluff, on the north, being the first highlands which approach the river on that side, since we left the Nadawa. Above this, is an island and a creek, about fifteen yards wide, which, as it has no name, we called Indian Knob creek, from a number of round knobs bare of timber, on the highlands, to the north. A little below the bluff, on the north, is the spot where the Ayauway Indians formerly lived. They were a branch of the Ottoes, and emigrated from this place to the river Desmoines. At ten and three quarter miles, we encamped on the north, opposite an island, in the middle of the fiver. The land, generally, on the north, consists of high prairie and bills, with timber; on the south, low and covered with cottonwood. Our hunter brought to us in the evening, a Missouri Indian, whom he had found; with two others, dressing an elk; they were perfectly friendly, gave him some of the meat, and one of them agreed to accompany him to the boat. He is one of the few remaining Missonris, who live with the Ottoes: he belongs to a small party, whose camp is four miles from the river; and he says, that the body of the nation is now hunting buffaloe in the plains: he appeared quite sprightly, and his language resembled that of the Osage, particularly in his calling a chief, inca. We sent him back with one of our party next morning,

Sunday, July 29, with an invitation to the Indians, to meet us above on the river, and then proceeded. We soon came to a northern bend in the river, which runs within twenty yards of Indian Knob creek, the water of which is five feet higher than that of the Missouri. In less than two miles, we passed Boyer's creek on the north, of twenty-five yards width. We stopped to dine under a shade, near the highland on the south, and caught several large catfish, one of them nearly white, and all very fat. Above this highland, we observed the traces of a great hurricane, which passed the river obliquely from N. W. to S. E. and tore up large trees, some of which perfectly sound, and four feet in diameter, were snapped off near the ground. We made ten miles to a wood on the north, where we encamped. The Missouri is much more crooked, since we passed the river Platte, though generally speaking, not so rapid; more of prairie, with less timber, and cottonwood in the low grounds, and oak, black walnut, hickory, and elm.

July 30. We went early in the morning, three and a quarter miles, and encamped on the south, in order to wait for the Ottoes. The land here consists of a plain, above the highwater level, the soil of which is fertile, and covered with a grass from five to eight feet high, interspersed with copses of large plums, and a currant, like those of the United States. It also furnishes two species of honeysuckle; one growing to a kind of shrub, common about Harrodsburgh (Kentucky), the other is not so high: the flowers grow in clusters, are short, and of a light pink colour; the leaves too, are distinct, and do not surround the stalk, as do those of the common honeysuckle of the United States. Back of this plain, is a woody ridge about seventy feet above it, at the end of which we formed our camp. This ridge separates the lower from a higher prairie, of a good quality, with grass, of ten or twelve inches in height, and extending back about a mile, to another elevation of eighty or ninety feet, beyond which is one continued plain. Near our camp, we enjoy from the bluffs a most beautiful view of the river, and the adjoining country. At a distance, varying from four to ten miles, and of a height between seventy and three hundred feet, two parallel ranges of highland afford a passage to the Missouri, which enriches the ow grounds between them. In its winding course, it nourishes the willow

islands, the scattered cottonwood, elm, sycamore, lynn, and ash, and the groves are interspersed with hickory, walnut, coffeenut, and oak.

July 31. The meridian altitude of this day made the latitude of our camp 41° 18' $1\frac{6}{16}$ ''. The hunters supplied us with deer, turkies, geese, and beaver; one of the last was caught alive, and in a very short time was perfectly tamed. Catfish are very abundant in the river, and we have also seen a buffaloefish. One of our men brought in yesterday an animal called, by the Pawnees, chocartoosh, and, by the French, blaircau, or badger. The evening is cool, yet the musquitoes are still very troublesome.

We waited with much anxiety the return of our messenger to the Ottoes. The men whom we despatched to our last encampment, returned without having seen any appearance of its having been visited. Our horses too had strayed; but we were so fortunate as to recover them at the distance of twelve miles. Our apprehensions were at length relieved by the arrival of a party of about fourteen Ottoe and Missouri Indians, who came at sunset, on the second of August, accompanied by a Frenchman, who resided among them, and interpreted for us. Captains Lewis and Clarke went out to meet them, and told them that we would hold a council in the morning. In the mean time we sent them some roasted meat, pork, flour, and meal; in return for which they made us a present of watermelons. We learned that our man Liberte had set out from their camp a day before them : we were in hopes that he had fatigued his horse, or lost himself in the woods, and would soon return; but we never saw him again.

August 3. The next morning the Indians, with their six chiefs, were all assembled under an awning, formed with the mainsail, in presence of all our party, paraded for the occasion. A speech was then made, announcing to them the change in the government, our promises of protection, and advice as to their future conduct. All the six chiefs replied to our speech, each in his turn, according to rank : they expressed their joy at the change in the government; their hopes that we would recommend them to their great father (the president), that they might obtain trade and necessaries; they wanted arms as well for hunting as for defence, and asked our mediation between them and the Mahas, with whom they are now at war. We promised to do so, and wished some of them to accompany us to that nation, which they declined, for fear of being killed by them. We then proceeded to distribute our presents. The grand chief of the nation not being of the party, we sent him a flag, a medal, and some ornaments for clothing. To the six chiefs who were present, we gave a medal of the second grade to one Ottoe chief, and one Missouri chief; a medal of the third grade to two inferior chiefs of each nation : the customary mode of recogmizing a chief, being to place a medal round his neck, which is considered among his tribe as a proof of his consideration abroad. Each of these medals was accompanied by a present of paint, garters, and cloth ornaments of dress ; and to this we added a cannister of powder, a bottle of whiskey, and a few presents to the whole, which appeared to make them perfectly satisfied. The airgun too was fired, and astonished them greatly. The absent grand chief was an Ottoe, named Weahrushhah, which, in English, degenerates into Little Thief. The two principal chieftains present were, Shongotongo, or Big Horse; and Wethea, or Hospitality; also Shosguscan, or White Horse, an Ottoe: the first an Ottoe, the second a Missouri. The incidents just related, induced us to give to this place the name of the Council-bluff; the situation of it is exceedingly favourable for a fort and trading factory, as the soil is well calculated for bricks, and there is an abundance of wood in the neighbourhood, and the air being pure and healthy. It is also central to the chief resorts of the Indians : one day's journey to the Ottoes; one and a half to the great Pawnees; two days from the Mahas; two and a quarter from the Pawnees Loups village; convenient to the hunting grounds of the Sioux; and twenty-five days journey to Santa Fé.

The ceremonies of the council being concluded, we set sail in the afternoon, and encamped at the distance of five miles, on the south side, where we found the musquitoes very troublesome.

August 4. A violent wind, accompanied by rain, purified and cooled the atmosphere last night; we proceeded early, and reached a very narrow part of the river, where the channel is confined within a space of two hundred yards, by a sand point on the north, and a bend on the south; the banks in the neighbourhood washing away, the trees falling in, and the channel filled with buried logs. Above this is a trading house, on the south, where one of our party passed two years, trading with the Mahas. At nearly four miles, is a creek on the south, emptying opposite a large island of sand; between this creek and our last night's encampment, the river has changed its bod, and encroached on the southern shore. About two miles further, is another creck on the south, which, like the former, is the outlet of three ponds, communicating with each other, and forming a small lake, which is fed by streams from the highlands. At fifteen miles, we encamped on the south. The hills on both sides of the river are nearhyperve or fifteen miles from each other; those of the north containing some timber, while the hills of the south are without any covering, except some scattering wood in the ravines, and near where the creeks pass into the hills; rich plains and prairies accupying the intermediate space, and partially covered, near the water, with cottonwood. There has been a great deal of pumice stone on the shore to-day.

August 5. We set out early, and, by means of our oars, made twenty and a half miles, though the river was crowded with sandbars. On both sides the prairies extend along the river; the banks being covered with great quantities of grapes, of which three different species are now ripe; one large and resembling the purple grape. We had some rain this morning, attended by high wind; but generally speaking, have remarked that thunder storms are less frequent than in the Atlantic states, at this season. Snakes too are less frequent, though we killed one to-day of the shape and size of the rattlesnake, but of # lighter colour. We fixed our camp on the north side. In the evening, Captain Clarke, in pursuing some game, in an eastern direction, found himself at the distance of three hundred and seventy yards from the camp, at a point of the river whence we had some twelve miles. When the water is high, this peninsula is overflowed, and judging from the customary and notorious changes in the river, a few years will be sufficient to force the main current of the river across, and leave the great bend dry. The whole lowland between the parallel range of hills seems formed of mud or coze of the river, at some former period, mixed with sand and clay. The sand of the neighbouring banks accumulates with the aid of that brought down the stream, and forms sandbars, projecting into the river; these drive the channel to the opposite banks, the loose texture of which it undermines, and at length deserts its ancient bed for a new and shorter passage; it is thus that the banks of the Missouri are constantly falling, and the river changing its bed.

August 6. In the morning, after a violent storm of wind and rain from N. W. we passed a large island to the north. In the channel separating it from the shore, a creek called Soldier's river enters; the island kept it from our view, but one of our men who had seen it, represents it as about forty yards wide as its mouth. At five miles, we caffe to a bend of the river towards the north, a sandbar, running in from the south, had turned its course so as to leave the old channel quite dry. We again saw the same appearance at our encampment, twenty and a half miles distant on the north side. Here the channel of the river had encroached south, and the old bed was without water, except a few ponds. The sandbars are still very numerous.

August 7. We had another storm from the N. W? in the course of the last evening; in the morning we proceeded, having the wind from the north, and encamped on the northern shore, having rowed seventeen miles. The rivel is We despatched four men back to the Ottoes village in quest of our man, Liberte, and to apprehend one of the soldiers, who left us on the 4th, under pretence of recovering a knife which he had dropped a short distance behind, and who we fear has deserted. We also sent small presents to the Ottoes and Missouris, and requested that they would join us at the Maha village, where a peace might be concluded between them.

August 8. At two miles distance, this morning we came to a part of the river, where there was concealed timber difficult to pass. The wind was from the N. W. and we proceeded in safety. At six miles, a river empties on the northern side, called by the Sioux Indians, Eaneahwadepon, or Stone river; and by the French, Petite Riviere des Sioux, or Little Sioux river. At its confluence it is eighty yards wide. Our interpreter, Mr. Durion, who has been to the sources of it, and knows the adjoining country, says that it rises within about nine miles of the river Desmoines; that within fifteen leagues of that river it passes through a large lake nearly sixty miles in circumference, and divided into two parts by rocks which approach each other very closely : its width is various : it contains many islands, and is known by the name of the Lac d'Esprit: it is near the Dogplains, and within four days march of the Mahas. The country watered by it, is open and undulating, and may be visited in boats up the river for some distance. The Desmoines, he adds, is about eighty yards wide where the Little Sionx river approaches it: it is shoaly, and one of the principal branches is called Cat river. Two miles beyond this river is a long island which we called Pelican island, from the numbers of that animal which were feeding on it: one of these being killed, we poured into his bag five gallons of water. An elk, too, was shot, and we had again to remark that snakes are rare in this part of the Missouri. A meridian altitude near the Little Sioux river made the latitude 41° 42' 34". We encamped on the north, having come sixteen miles.

August 9. A thick fog detained us until past seven o'clock, after which we proceeded with a gentle breeze from the south-east. After passing two sandbars we reached, at seven and a half miles, a point of high land on the left, near which the river has forced itself a channel across a peninsula, leaving on the right a circuit of twolve or eighteen miles, which is now recognised by the ponds and islands it contains. At seventeen and a half miles, we reached a **point on the north, where we encamped.** The hills are at a great distance from the river for the last several days; the land on both sides low, and covered with cottopwood and abilindance of grape vines. An elk was seen to-day, a furkey also shot, and near our camp is a beaver den: the musquitoes have been more troublesome than ever for the two last days.

August 10. At two and a half miles, we came to a place called Coupee a Jacques, where the river has found a new bed, and abridged a circuit of several miles: at twelve and a half miles, a chiff of yellow stone on the left. This is the first high land near the river above the Council-bluff. After passing a number of sand-bars we reached a willow island at the distance of twenty-two and a half miles, which we were enabled to do with our oars and a wind from the S. W. and encamped on the north side.

August 11. After a violent wind from the N. W. attended with ram, we sailed along the right of the island. At nearly five units, we halted on the south side for the purpose of examining a spot where one of the great chiefs of the Mahas, named Blackbird, who died about four years ago of the smallpox, A hill of yellow soft sand-stone rises from the river in bluffs of was buried. various heights, till it ends in a knoll about three hundred feet above the water; on the top of this a mound, of twelve feet diameter at the base, and six feet high, is raised over the body of the deceased king; a pole of about eight feet high is fixed in the centre; on which we placed a white flag, bordered with red, blug, The Blackbird seems to have been a personage of great considerand white. ation, for ever since his death he is supplied with provisions, from time to time, by the superstitions regard of the Mahas. We descended to the river and passed a small creek on the south, called, by the Mahas, Waucandipeeche, (Great Spirit is bad.) Near this creck and the adjoining hills the Mahas had a village, and lost four hundred of their nation by the dreadful malady which destroyed the Blackbird. The meridian altitude made the latitude 42° 1' $3_{10}^{*''}$ north. We encamped, at so; enteen miles distance, on the north side in a bend of the river. During our day's course it has been crooked; we observed a number of places in it where the old channel is filled up, or gradually becoming covered with willow and cottonwood; great numbers of herons are observed to-day, and the musquitoes annoy us very much.

August 12. A gentle breeze from the south, carried us along about ten miles, when we stopped to take a meridian altitude, and sent a man across to our place of observation yesterday: he stepped nine hundred and seventy-four yards, and the distance we had come round, was eighteen miles and three quarters. The river is wider and shallower than usual. Four miles beyond this bend a blaff begins, and continues several miles; on the south it rises from the water at different heights, from twenty to one hundred and fifty feet, and higher as it recedes on the river: it consists of yellow and brown clary with soft sandstone imbedded in it, and is covered with timber, among which may be observed some red cedar: the lands on the opposite side are low and subject to inundation, but contain willows, cottonwood, and many grapes. A prairie-wolf came near the bank and barked at us; we attempted unsuccessfully to take him. This part of the river abounds in beaver. We encamped on a sand island in a bend to the north, having made twenty miles and a quarter.

August 13. Set out at daylight with a breeze from the south-east, and passed several sandbars. Between ten and eleven miles, we came to a spot on the south, where a Mr. Mackay had a trading establishment in the years 1795 and 1796, which he called Fort Charles. At fourteen miles, we reached a creek on the south, on which the Mahas reside, and at seventeen miles and a quarter, formed a camp on a sandbar, to the south side of the river, opposite the lower point of a large island. From this place Sergeant Ordway and four men were detached to the Maha village with a flag and a present, in order to induce them to come and hold a council with us. They returned at twelve o'clock the next day, August 14. After crossing a prairie covered with high grass, they reached the Maha creek, along which they proceeded to its three forks, which join near the village : they crossed the north branch and went along the south ; the walk was very fatiguing, as they were forced to break their way through grass, sunflowers, and thistles, all above ten feet high, and interspersed with wild pea. Five miles from our camp they reached the position of the ancient Maha village : it had once consisted of three hundred cabins, but was burnt about fong years ago, soon after the smallpox had destroyed four hundred men, and a proportion of women and children. On a hill, in the rear of the village, are the graves of the nation ; to the south of which runs the fork of the Maha creek ; this they crossed where it was about ten yards wide, and followed its course to the Missouri, passing along a ridge of hill for one and a half mile, and a long pond between that and the Missouri: they then recrossed the Maha creek, and arrived at the camp, having seen no tracks of Indians nor any sign of recent coltivation.

In the moraing 15th, some men were sent to examine the cause of a large smoke from the north-cast, and which seemed to indicate that some Indians were near; but they found that a small party, who had lately passed that way, had left some trees barning, and that the wind from that quarter blow the smoke directly towards us: Our camp lies about three miles north-cast from the old Mana village, and is in latitude 42° 13' 41". The accounts we have had of the effects of the smallpox on that nation are most distressing; it is not known in what way it was first communicated to them, though probably by some war party. They had been a military and powerful people; but when these warriors saw their strength wasting before a malady which they could not resist, their phrensy was extreme; they burnt their village, and many of them put to death their wives and children, to save them from so cruel an affliction, and that all might go together to some better country.

On the 16th, we still waited for the Indians : a party had gone out yesterday to the Maha creek, which was dammed up by the beaver between the camp and the village : 'a second went to-day. They made a kind of drag with small willows' and bark, and swept the creek : the first company brought three hundred and eighteen, the second upwards of eight hundred, consisting of pike, bass, fish resembling salmon, trout, redhorse, buffaloe, one rockfish, one flatback, perch, catfish, a small species of perch called, on the Ohio, silverfish, a shrimp of the same size, shape and flavour of those about New Orleans, and the lower part of the Mississippi. We also found uery fat muscles; and on the river as well as the creek, are different kinds of ducks and plover. The wind, which in the morning had been from the north-west, shifted round in the evening to the southeast, and as usual we had a breeze, which cooled the air and relieved us from the musquitoes, who generally give us great trouble.

Friday 17. The wind continued from the south-east, and the morning was fair. We observe about us a grass resembling wheat, except that the grain is like rye, also some similar to both rye and barley, and a kind of tumothy, the meed of which branches from the main stock, and is more like a flax-seed than a timothy. In the evening, one of the party sent to the Ottoes, returned with the information that the rest were coming on with the deserter : they had also canght Liberte, but, by a trick, he made his escape : they were bringing three of the chiefs in order to engage our assistance in making peace with the Mahas. This nation having left their village, that desirable purpose cannot be effected ; but in order to bring in any neighbouring tribes, we set the surrounding prairies on fire. This is the customary signal made by traders to apprize the Indians of their arrival : it is also used between different nations as an indication of any event which they have previously agreed to announce in that way ; and as soon as it is seen collects the neighbouring tribes, unless they apprehend that it is made by their enemies.

August 18. In the afternoon the party arrived with the Indians, consisting of the Little Thief and the Big Horse, whom we had seen on the third, together with six other chiefs, and a French interpreter. We met them under a shade, and after they had finished a repast with which we supplied them, we inquired into the origin of the war between them and the Mahas, which they related with great frankness. It seems that two of the Missouris went to the Mahas to steal horses, but were detected and killed; the Ottoes and Missourio thought themselves bound to avenge their companions, and the whole nations were at last obliged to share in the dispute; they are also in fear of a war from the Pawnees, whose village they entered this summer, while the inhabitants were hunting, and stole their corn. This ingenuous confession did not make us the less desirous of negociating a peace for them; but no Indians have as yet been attracted by our fire. The evening was closed by a dance; and the next day,

August 19, the chiefs and warriors being assembled at ten o'clock, we explained the speech we had already sent from the Council-bluffs, and renewed our advice. They all replied in turn, and the presents were then distributed : we exchanged the small medal we had formerly given to the Big Horse for one of the same size with that of Little Thief: we also gave a small medal to a third chief, and a kind of certificate or letter of acknowledgment to five of the warriors, expressive of our favour and their good intentions : one of them dissatisfied, returned us the certificate; but the chief, fearful of our being offended, begged that it might be restored to him; this we declined, and rebuked them severely for having in view mere traffic instead of peace with their neighbours. This displeased them at first; but they at length all petitioned that it should be given to the warrior, who then came forward and made an apology to us; we then delivered it to the chief to be given to the most worthy, and he bestowed it on the same warrior, whose name was Great Blue Eyes. After a more substantial present of small articles and tobacco, the council was ended with a dram to the In the evening we exhibited different objects of curiosity, and parti-Indians. cularly the airgun, which gave them great surprise. Those people are almost naked, having no covering, except a sort of breechcloth round the middle, with a loose blanket or buffaloe robe painted, thrown over them. The names of these warriors, besides those already mentioned were Karkapaha, (or Crow's head) and Nenasawa (or Black Cat) Missouris; and Sananona (or Iron Eyes) Neswaunja (or Big Ox) Stageaunja (or Big Blue Eyes) and Wasashaco (or Brave Man) all Ottoes. These two tribes speak very nearly the same language : they all begged us to give them whiskey.

The next morning, August 20, the Indians mounted their horses and left us, having received a cannister of whiskey at parting. We then set sail, and after passing two islands on the north, came to on that side under some bluffs; the first near the river since we left the Ayauwa village. Here we had the misfortune to lose one of our sergeants, Charles Floyd. He was yesterday seized with a bilious choic, and all our care and attention were ineffectual to relieve him : a little before his death, he said to Captain Clarke, " I am going to leave you;" his strength failed him as he added " I want you to write me a letter;" but he died with a composure which justified the high opinion we had formed of his firmness and good conduct. He was buried on the top of the bluff with the honours due to a brave soldier; and the place of his interment marked by a cedar post, on which his name and the day of his death were inscribed. About a mile beyond this place, to which we gave his name, is a small river about thirty yards wide, on the north, which we called Floyd's river, where we encamped. We had a breeze from the south-east, and made thirteen miles.

August 21. The same breeze from the south-east carried us by a small willow creek on the north, about one mile and a half above Floyd's river. Here began a range of bluffs which continued till near the mouth of the great Sioux river, three miles beyond Floyd's. This river comes in from the north, and is about one hundred and ten yards wide. Mr. Durion, our Sioux interpreter, who is well acquainted with it, says that it is navigable upwards of two hundred miles to the Falls, and even beyond them; that its sources are near those of the St. Peter's. He also says, that below the Falls a creek falls in from the eastward, after passing through cliffs of red rock : of this the Indians make their pipes ; and the necessity of procuring that article, has introduced a sort of law of nations, by which the banks of the creek are sacred, and even tribes at war meet without hostility at these quarries, which possess a right of asylum. Thus we find even among savages certain principles deemed sacred, by which the rigours of their merciless system of warfare are mitigated. A sense of common danger, where stronger ties are wanting, gives all the binding force of more solemn obligations. The importance of preserving the known and settled rules of warfare among civilized nations, in all their integrity, becomes strikingly evident; since even savages, with their few precarious wants, cannot exist in a state of peace or war where this faith is once violated. The wind became southerly, and blew with such violence that we took a reef in our sail : it also blew the sand from the bars in such quantities, that we could not see the channel at any distance ahead. At four and a quarter miles, we came to two willow islands, beyond which are several sandbars; and at twelve miles, a spot where the Mahas once had a village, now no longer existing. We again passed a number of sandbars; and encamped on the south; having come twenty-four and three quarter miles. The country through which we passed has the same uniform appearance ever since we left the river Platte : rich low-grounds near the river, succeeded by undulating prairies, with timber near the waters. Some wolves were seen to37

day on the sandbeaches to the south; we also procured an excellent fruit, resembling a red currant, growing on a shrub like the privy, and about the height of a wild plum.

August 22. About three miles distant, we joined the men who had been sent from the Maha village with our horses, and who brought us two deer. The bluffs or hills which reach the river at this place, on the south, contain alum, copperas, cobalt which had the appearance of soft isinglass, pyrites, and sandstone, the two first very pure. Above this bluff comes in a small creek on the south, which we call Rologe creek. Seven miles above is another cliff, on the same side, of alum rock, of a dark brown colour, containing in its crevices great quantities of cobalt, cemented shells, and red earth. From this the river bends to the eastward, and approaches the Sioux river within three or four miles. We sailed the greater part of the day, and made nineteen miles to our camp on the north side. The sandbars are as usual numerous: there are also considerable traces of elk; but none are yet seen. Captain Lowis in proving the quality of some of the substances in the first cliff, was considerably injured by the fumes and taste of the cobalt, and took some strong medicine to relieve him from its effects. The appearance of these mineral substances enables us to account for disorders of the stomach, with which the party had been affected since they left the river Sioux. We had been in the habit of dipping up the water of the river inadvertently and making use of it, till, on examination, the sickness was thought to proceed from a scum covering the surface of the water along the southern shore, and which, as we now discovered, proceeded from these bluffs. The men had been ordered, before we reached the bluffs, to agitate the water, so as to disperse the scum, and take the water, not at the surface, but at some depth. 'The consequence was, that these disorders ceased: the biles too which had afflicted the men, were not observed beyond the Sioux river. In order to supply the place of Serjeant Floyd, we permitted the men to name three persons, and Patrick Gass having the greatest number of votes was made a sergeant.

August 23. We set out early, and at four miles came to a small run between cliffs of yellow and blue earth: the wind, however, soon changed, and blew so hard from the west, that we proceeded very slowly; the fine sand from the bar being driven in such clouds, that we could scarcely see. Three and a quarter miles beyond this run, we came to a willow island, and a sand island opposite, and encamped on the south side, at ten and a quarter miles. On the north side is an extensive and delightful prairie, which we called Buffaloe prairie, from our having here killed the first buffaloe. Two elks swam the river to-day and were fired at, but escaped: a deer was killed from the boat; one beaver was killed; and several prairie wolves were seen.

August 24. It began to rain last night, and continued this morning: we proceeded, however, two and a quarter miles, to the commencement of a bluff of blue clay, about one hundred and eighty, or one hundred and ninety feet on the south side: it seems to have been lately on fire; and even now the ground is so warm that we cannot keep our hands in it at any depth: there are strong appearances of coal, and also great quantities of cobalt, or a crystalized substance resembling it. There is a fruit now ripe which looks like a currant, except that it is double the size, and grows on a bush like a privy, the size of a damson, and of a delicious flavour; its Indian name means rabbit-berries. We then passed, at the distance of about seven miles, the mouth of a creek on the north side, called by an Indian name, meaning Whitestone river. The beautiful prairie of yesterday, has changed into one of greater height, and very smooth and extensive. We encamped on the south side, at ten and a quarter miles, and found ourselves much annoyed by the musquitoes.

AUGUST 25. Captains Lewis and Clarke, with ten men, went to see an object deemed very extraordinary among all the neighbouring Indians. They dropped down to the mouth of Whitestone river, about thirty yards wide, where they left the boat, and at the distance of two hundred yards, ascended a rising ground from which a plain extended itself as far as the eye could discern. After walking four miles, they crossed the creek where it is twenty-three yards wide, and waters an extensive valley. The heat was so oppressive that we were obliged to send back our dog to the creek, as he was unable to bear the fatigue; and it was not till after four hours march that we reached the object of our vist. This was a large mound in the midst of the plain about N. 20° W. from the mouth of Whitestone river, from which it is nine miles distant. The base of the mound is a regular parallelogram, the longest side being about three hundred yards, the shorter sixty or seventy: from the longest side it rises with a steep ascent from the north and south to the height of sixty-five or seventy feet, leaving on the top a level plain of twelve feet in breadth and ninety in length. The north and south extremities are connected by two oval borders which serve as new bases, and divide the whole side into three steep but regular gradations from the plain. The only thing characteristic in this hill is its extreme symmetry, and this, together with its being totally detached from the other hills which are at the distance of eight or nine miles, would induce a belief that it was artificial; but, as the earth and the loose pebbles which compose it, are arranged exactly like the steep grounds on the borders of the creek, we concluded from this similarity of texture

that it might be natural. But the Indians have made it a great article of their superstition: it is called the mountain of Little Pcople, or Little Spirits, and they believe that it is the abode of little devils, in the human form, of about eighteen inches high, and with remarkably large heads; they are armed with sharp arrows, with which they are very skilful, and are always on the watch to kill those who should have the hardihood to approach their residence. The tradition is, that many have suffered from these little evil spirits, and among others, three Maha Indians fell z sacrifice to them a few years since. This has inspired all the neighbouring nations, Sioux, Mahas, and Ottoes, with such terror, that no consideration could tempt them to visit the hill.

We saw none of these wicked little spirits, nor any place for them, except some small holes scattered over the top: we were happy enough to escape their vengeance, though we remained some time on the mound to enjoy the delightful prospect of the plain, which spreads itself out till the eye rests upon the N. W. hills at a great distance, and those of the N. E. still farther off, enlivened by large herds of buffaloe feeding at a distance. The soil of these plains is exceedingly fine ; there is, however, no timber except on the Missouri : all the wood of the Whitestone river not being sufficient to cover thickly one hundred acres. The plain country which surrounds this mound has contributed not a little to its bad reputation : the wind driving from every direction over the level ground obliges the insects to seek shelter on its leeward side, or be driven against us by the wind. The small birds, whose food they are, resort of course in great numbers in quest of subsistence; and the Indians always seem to discover an unusual assemblage of birds as produced by some supernatural cause : among them we observed the brown martin employed in looking for insects, and so gentle that they did not fly until we got within a few feet of them. We have also distinguished among the numerous birds of the plain, the blackbird, the wren og prairie bird, and a species of lark about the size of a partridge, with a short tail. The excessive heat and thirst forced us from the hill, about one o'clock, to the nearest water, which we found in the creek, at three miles distance, and remained an hour and a half. We then went down the creek, through a lowlend about one mile in width, and crossed it three times, to the spot where we first reached it in the morning. Here we gathered some delicitms plums, grapes and blug currants, and afterwards arrived at the month of the river about sunset. To this place the course from the mound is S. twenty miles, E. nine miles; we there resonned our perioque, and on reaching our encampment of last night set the prairies on five, to warn the Sioax of our approach. In the mosn time, the bont under Sergeant Pryor had proceeded in the afternoon one make, tam bliff of

blue elay on the south, and after passing a sandbar and two sand islands fixed their camp at the distance of six miles on the south. In the evening some rain fell. We had killed a duck and several birds : in the boat, they had caught some large catfish.

Sunday, August 26. We rejoined the boat at 9 o'clock before she set out, and then passing by an island, and under a cliff on the south, nearly two miles in extent and composed of white and blue earth, encamped at nine miles distance, on a sandbar towards the north. Opposite to this, on the south, is a small creek called Petit Arc or Little Bow, and a short distance above it, an old village of the same name. This village, of which nothing remains but the mound of earth about four feet high surrounding it, was built by a Maha chief named Little Bow, who being displeased with Blackbird, the late king, seceded with two hundred followers and settled at this spot, which is now abandoned, as the two villages have reunited since the death of Blackbird. We have great quantities of grapes, and plums of three kinds; two of a yellow colour, and distinguished by one of the species being longer than the other; and a third round and red: all have an excellent flavour, particularly those of the yellow kind.

August 27. The morning star appeared much larger than usual. A gentle breeze from the south-east carried us by some large sandbars, on both sides and in the middle of the river, to a bluff, on the south side, seven and a half miles distant: this bluff is of white clay or chalk, under which is much stone, like lime, incrusted with a clear substance, supposed to be cobalt, and some dark ore. Above this bluff we set the prairie on fire, to invite the Sioux. After twelve and a half miles, we had passed several other sandbars, and now reached the mouth of a river called by the French Jacques (James river) or Yankton, from the tribe which inhabits its banks. It is about ninety yards wide at the confluence: the country which it waters is rich prairie, with little timber: it becomes deeper and wider above its mouth, and may be navigated a great distance; as its sources rise near those of St. Peter's, of the Mississippi, and the red river of lake Winnipeg. As we came to the mouth of the river, an Indian swam to the boat: and, on our landing, we were met by two others, who informed us that a harge body of Sioux were encamped near us: they accompanied three of our men, with an invitation to meet us at a spot above the river : the third Indian remained with us : he is a Maha boy, and says that his nation have gone to the Pawaces to make peace with them. At fourteen miles, we encamped on a sandbar to the north. The air was cool, the evening pleasant, the wind from the south-cast, and light. The river has fallen gradually, and is now low ...

Tuesday 29th. We passed, with a stiff breeze from the south, several sand-

bars. On the south is a prairie which rises gradually from the water to the height of a bluff, which is, at four miles distance, of a whitish colour, and about seventy or eighty feet high. Further on is another bluff, of a brownish colour, on the north side; and at the distance of eight and a half miles is the beginning of Calumet bluff, on the south side, under which we formed our camp, in a beautiful plain, to wait the arrival of the Sioux. At the first bluff the young Indian left us and joined their camp. Before reaching Calumet bluff, one of the perioques ran upon a log in the river, and was rendered unfit for service; so that all our loading was put into the second perioque. On both sides of the river are fine prairies, with cottonwood; and near the bluff there is more timber in the points and valleys than we have been accustomed to sec.

Wednesday, 20th. We had a violent storm of wind and rain last evening ; and were engaged during the day in repairing the perioque, and other necessary occupations; when, at four o'clock in the afternoon, Sergeant Pryor and his party arrived on the opposite side, attended by five chiefs, and about seventy men and boys. We sent a boat for them, and they joined us, as did also Mr. Durion, the son of our interpreter, who happened to be trading with the Sioux at this time. He returned with Sergcant Pryor to the Indians, with a present of tobacco, corn, and a few kettles; and told them that we would speak to their chiefs in the morning. Sergeant Pryor reported, that on reaching their village. which is at twelve miles distance from our camp, he was met by a party with a buffaloe robe, on which they desired to carry their visitors : an honour which they declined, informing the Indians that they were not the commanders of the boats : as a great mark of respect, they were then presented with a fat dog, already cooked, of which they partook heartily, and found it well flavoured. The camps of the Sioux are of a conical form, covered with buffaloe robes, painted with various figures and colours, with an aperture in the top for the smoke to pass through. The lodges contain from ten to fifteen persons, and the interior arrangement is compact and handsome, each lodge having a place for cooking detached from it.

August 30th. Thursday. The fog was so thick that we could not see the Indian camp on the opposite side, but it cleared off about eight o'clock. We prepared a speech, and some presents, and then sent for the chiefs and warriers, whom we received, at twelve o'clock, under a large oak tree, near to which the flag of the United States was flying. Captain Lewis delivered a speech, with the usual advice and counsel for their future conduct. We then acknowledged their chiefs, by giving to the grand chief a flag, a medal, a certificate, with a string of wampum; to which we added a chief's coat; that is, a rickly daoed uniform of the United States artillery corps, and a cocked hat, and red feather. One second chief and three inferior ones were made or recognised by medals, and a suitable present of tobacco, and articles of clothing. We then smoked the pipe of peace, and the chiefs retired to a bower, formed of bushes, by their young men, where they divided among each other the presents, and smoked and ate, and held a council on the answer which they were to make us to-morrow. The young people exercised their bows and arrows in shooting at marks for beads, which we distributed to the best marksmen; and in the evening the whole party danced until a late hour, and in the course of their amusement we threw among them some knives, tobacco, bells, tape, and binding, with which they were much pleased. Their musical instruments were the drum, and a sort of little bag made of buffaloe hide, dressed white, with small shot or pebbles in it, and a bunch of hair tied to it. This produces a sort of rattling music, with which the party was annoved by four musicians during the council this morning.

August 31. In the morning, after breakfast, the chiefs met, and sat down in a row, with pipes of peace, highly ornamented, and all pointed towards the seats intended for captains Lewis and Clarke. When they arrived and were seated, the grand chief, whose Indian name, Weucha, is, in English Shake Hand, and, in French, is called Le Liberateur (the deliverer) rose, and spoke at some length, approving what we had said, and promising to follow our advice:

"I see before me," said he, "my great father's two sons. You see me, and the rest of our chiefs and warriors. We are very poor; we have neither powder nor ball, nor knives; and our women and children at the village have no clothes. I wish that as my brothers have given me a flag and a medal, they would give something to those poor people, or let them stop and trade with the first boat which comes up the river. I will bring chiefs of the Pawnees and Mahas together, and make peace between them; but it is better that I should do it than my great father's sons for they will listen to me more readily. I will also take some chiefs to your country in the spring; but before that time I cannot leave home. I went formerly to the English, and they gave me a medal and some clothes; when I went to the Spanish they gave me a medal, but nothing to keep it from my skin; but now you give me medal and clothes. But still we are poor; and I wish brothers, you would give us something for our squaws."

When he sat down, Mahtaree, or White Crane, rose:

"I have listened," said here "to what our father's words were yesterday; and I am, to-day, glad to see how you have dressed our old chief: I am, a young man, and do not wish to talk much: my fathers have made me a chief: Lhad much sense before, but now I think I have more than ever. What the old chief has declared I will confirm, and do whatever he and you please; but I wish that you would take pity on us, for we are very poor."

Another chief, called Pawnawneahpabbe, then said :

"I am a young man, and know but little: I cannot speak well; but I have listened to what you have told the old chief, and will do whatever you agree."

The same sentiments were then repeated by Aweawechache.

We were surprised at finding that the first of these titles means "Struck by the Pawnee," and was occasioned by some blow which the chief had received in battle, from one of the Pawnee tribe. 'The second is, in English, "Half Man," which seems a singular name for a warrior, till it was explained to have its origin. probably, in the modesty of the chief; who, on being told of his exploits, would say, "I am no warrior: I am only half a man." The other chiefs spoke very little; but after they had finished, one of the warriors delivered a speech, in which he declared he would support them. They promised to make peace with the Ottoes and Missouris, the only nations with whom they are at war. All these harangues concluded by describing the distress of the nation; they begged us to have pity on them; to send them traders; that they wanted powder and ball; and seemed anxious that we should supply them with some of their great father's milk, the name by which they distinguish ardent spirits. We then gave some tobacco to each of the chiefs, and a certificate to two of the warriors who attended the chief. We prevailed on Mr. Durion to remain here, and accompany as many of the Sioux chiefs as he could collect, down to the seat of government. We also gave his son a flag, some clothes, and provisions, with directions to bring about a peace between the surrounding tribes, and to convey some of their chiefs to see the president. In the evening they left us, and encamped on the opposite bank, accompanied by the two Durions. During the evening and night we had much rain, and observed that the river rises a little. The Indians, who have just left us, are the Yanktons, a tribe of the great nation of Sioux. These Yanktons are about two hundred men in number; and inhabit the Jacques, Desmoines, and Sioux rivers. In person they are stout, well proportioned, and have a certain air of dignity and boldness. In their dress they differ nothing from the other bands of the nation whom we saw, and will describe afterwards: they are fead of decorations, and use paint, and porcupine quills, and feathers. Some of them wore a kind of necklace of white bear's claws, three inches long, and closely strung together round their necks. They have only a few fowling-pieces, being generally armed with 'bows' and arrows, in which, however, they do not appear as expert as the more northern Indians. What struck us most was an institution,

peculiar to them, and to the Kite Indians, further to the westward, from whom it is said to have been copied. It is an association of the most active and brave young men, who are bound to each other by attachment, secured by a vow, never to retreat before any danger, or give way to their enemies. In war they go forward without sheltering themselves behind trees, or aiding their natural valour by any artifice. This punctilious determination, not to be turned from their course, became heroic, or ridiculous, a short time since, when the Yanktons were crossing the Missouri on the ice. A hole lay immediately in their course, which might easily have been avoided, by going round. This the foremost of the band disdained to do; but went straight forward, and was lost. The others would have followed his example, but were forcibly prevented by the rest of the tribe. These young men sit, and encamp, and dance together, distinct from therest of the nation: they are generally about thirty or thirty-five years old; and such is the deference paid to courage, that their seats in council are superior to those of the chiefs, and their persons more respected. But, as may be supposed, such indiscreet bravery will soon diminish the numbers of those who practise it; so that the band is now reduced to four warriors, who were among our visitors. These were the remains of twenty-two, who composed the society not long ago; but, in a battle with the Kite Indians, of the Black Mountains, eighteen of them were killed, and these four were dragged from the field by their companions.

Whilst these Indians remained with us we made very minute inquiries relative to their situation and numbers, and trade, and manners. This we did very satisfactorily, by means of two different interpreters; and from their accounts, joined to our interviews with other bands of the same nation, and much intelligence acquired since, we were enabled to understand, with some accuracy, the condition of the Sioux hitherto so little known.

The Sioux, or Dacorta Indians, originally settled on the Mississippi, and called by Carver, Madowesians, are now subdivided into tribes, as follow:

First, The Yanktons: this tribe inhabits the Sioux, Desmoines, and Jacques rivers, and number about two hundred warriors.

Second, The Tetons of the burnt woods. This tribe numbers about three hundred men, who rove on both sides of the Missouri, the White, and Teton rivers.

Third, The Tetons Okandandas, a tribe consisting of about one hundred and fifty men, who inhabit both sides of the Missouri below the Chayenne river.

Fourth, Tetons Minnakenozzo, a nation inhabiting both sides of the Missouri, above the Chayenne river, and containing about two hundred and fifty men.

Fifth, Tetons Saone; these inhabit both sides of the Missouri below the War-

Sixth, Yanktons of the Plains, or Big Devils; who rove on the heads of the Sioux, Jacques, and Red river; the most numerous of all the tribes, and number about five hundred men.

Seventh, Wahpatone; a nation residing on the St. Peter's, just above the mouth of that river, and numbering two hundred men.

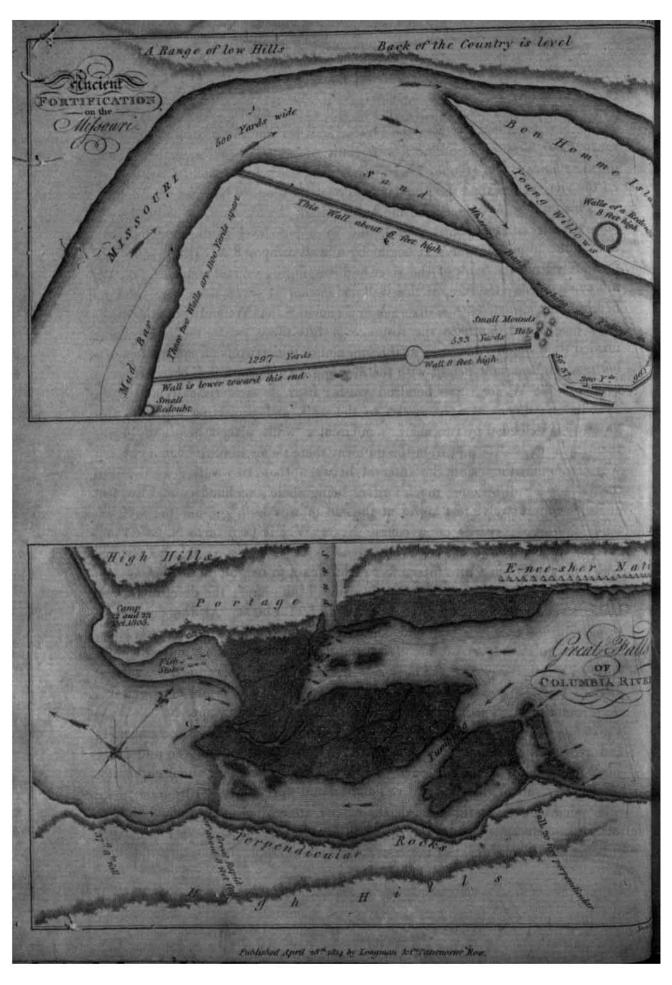

Eighth, Mindawarcarton, or proper Dacorta or Sioux Indians. These possess the original seat of the Sioux, and are properly so denominated. They rove on both sides of the Mississippi, about the Falls of St. Anthony, and consist of three hundred men.

Ninth, The Wahpatoota, or Leaf Beds. This nation inhabits both sides of the river St. Peter's, below Yellow wood river, amounting to about one hundred and fifty men.

Tenth, Sistasoone: this nation numbers two hundred men, and reside at the head of the St. Peter's. Of these several tribes, more particular notice will be taken hereafter.

Saturday, September 1, 1804. We proceeded this morning under a light southern breeze, and passed the Calumet bluffs; these are composed of a yellowish red, and brownish clay as hard as chalk, which it much resembles, and are one hundred and seventy, or one hundred and eighty feet high. At this place the hills on each side come to the verge of the river, those on the south being higher than on the north. Opposite the bluffs is a large island covered with timber; above which the highlands form a cliff over the river on the north side, called White Bear cliff; an animal of that kind being killed in one of the holes in it, which are numerous and apparently deep. At six miles we came to a large sand island covered with cottonwood; the wind was high, and the weather rainy and cloudy during the day. We made fifteen miles to a place on the north side, at the lower point of a large island called Bonhomme, or Goodman's island. The country on both sides has the same character of prairies, with no timber; with occasional lowlands covered with cottonwood, elm and oak: our hunters had killed an elk and a beaver: the catfish too are in great abundance.

September 2. It rained last night, and this morning we had a high wind from the N. W. We went three miles to the lower part of an ancient fortification on the south side, and passed the head of Bonhomme island, which is large and well timbered : after this the wind became so violent, attended by a cold rain, that we were compelled to land at four miles on the northern side, under a high bluff of yellow clay, about one hundred and ten feet in height. Our hunters supplied us with four elks; and we had grapes and planes on the banks : we

also saw the beargrass and rue, on the side of the bluffs. At this place there are highlands on both sides of the river which become more level at some distance back, and contain but few streams of water. On the southern bank, during this day, the grounds have not been so elevated. Captain Clarke crossed the river to examine the remains of the fortification we had just passed.

This interesting object is on the south side of the Missouri, opposite the upper extremity of Bonhomme island, and in a low level plain, the hills being three miles from the river. It begins by a wall composed of earth, rising immediately from the bank of the river and running in a direct course S. 76°, W. ninety-six yards; the base of this wall or mound is seventy-five feet, and its height about eight. It then diverges in a course S. 84° W. and continues at the same height and depth to the distance of fifty-three yards, the angle being formed by a sloping descent ; at the junction of these two is an appearance of a hornwork of the same height with the first angle : the same wall then pursues a course N. 69° W. for three hundred yards : near its western extremity is an opening or gateway at right angles to the wall, and projecting inwards; this gateway is defended by two nearly semicircular walls placed before it, lower than the large walls; and from the gateway there seems to have been a covered way communicating with the interval between these two walls : westward of the gate, the wall becomes much larger, being about one hundred and five feet at its base, and twelve feet high : at the end of this high ground the wall extends for fifty-six yards on a course N. 32° W.; it then turns N. 23° W. for seventy-three yards : these two walls seems to have had a double or covered way; they are from ten to fifteen feet eight inches in height, and from seventyfive to one hundred and five feet in width at the base; the descent inwards being steep, whilst outwards it forms a sort of glacis. At the distance of seventy-three yards, the wall ends abruptly at a large hollow place much lower than the general level of the plain, and from which is some indication of a covered way to the water. The space between them is occupied by several mounds scattered promischously through the gorge, in the centre of which is a deep round hole. From the extremity of the last wall, in a course N. 32° W. is a distance of ninety-six yards over the low ground, where the wall recommences and crosses the plain in a course N. 81° W. for eighteen hundred and thirty yards to the bank of the Missouri. In this course its height is about eight feet, till it enters, at the distance of five hundred and thirty-three yards, a deep circular pond of seventy-three yards diameter ; after which it is gradually lower, towards the river : it touches the river at a muddy bar, which bears every mark of being an encroachment of the water, for a considerable distance ; and a little

above the junction, is a small circular redoubt. Along the bank of the river, and at eleven hundred yards distance, in a straight line from this wall, is a second, about six feet high, and of considerable width : it rises abruptly from the bank of the Missouri, at a point where the river bends, and goes straight forward, forming an acute angle with the last wall, till it enters the river again, not far from the mounds just described, towards which it is obviously tending. At the bend the Missouri is five hundred yards wide ; the ground on the opposite side highlands, or low hills on the bank; and where the river passes between this fort and Bonhomme island, all the distance from the bend, it is constantly washing the banks into the stream, a large sandbank being already taken from the shore near the wall. During the whole course of this wall, or glacis, it is covered with trees, among which are many large cotton trees, two or three Immediately opposite the citadel, or the part most strongly feet in diameter. fortified, on Bonhomme island, is a small work in a circular form, with a wall surrounding it, about six feet in height. The young willows along the water, joined to the general appearance of the two shores, induce a belief that the bank of the island is encroaching, and the Missouri indemnifies itself by washing away the base of the fortification. The citadel contains about twenty acres, but the parts between the long walls must embrace nearly five hundred acres.

These are the first remains of the kind which we have had an opportunity of examining; but our French interpreters assure us, that there are great numbers of them on the Platte, the Kanzas, the Jacques, &c. and some of our party say, that they observed two of those fortresses on the upper side of the Petit Aro creek, not far from its mouth; that the wall was about six feet high, and the sides of the angles one hundred yards in length.

September 3. The morning was cold, and the wind from the north-west. We passed at sunrise three large sandbars, and at the distance of ten miles reached a small creek, about twelve yards wide, coming in from the north, above a white bluff: this creek has obtained the name of Plum creek, from the number of that fruit which are in the neighbourhood, and of a delightful quality. Five miles further, we encamped on the south near the edge of a plain; the river is wide, and covered with sandbars to-day: the banks are high and of a whitish colour; the timber scarce, but an abundance of grapes. Beaver houses too have been observed in great numbers on the river, but none of the animals themselves.

September 4.. We set out early, with a very cold wind from S. S. E., and at one mile and a half, reached a small creek, called Whitelime creek, on the south side. Just above this is a cliff, covered with cedar trees, and at three miles a creek, called Whitepaint creek, of about thirty yards wide: on the same side, and at four and a half miles distance from the Whitepaint creek, is the Rapid tiver, or, as it is called by the French, la Riviere qui Court; this river empties into the Missouri, in a course S. W. by W., and is one hundred and fifty-two yards wide, and four feet deep at the confluence. It rises in the Black mountains, and passes through a hilly country, with a poor soil. Captain Clarke ascended three miles to a beautiful plain, on the upper side, where the Pawnees once had a village: he found that the river widened above its mouth, and was much divided by sands and islands, which, joined to the great rapidity of the current, makes the navigation very difficult, even for small boats. Like the Platte its waters were of a light colour; like that river too it throws out into the Missouri, great quantities of sand, coarser even than that of the Platte, which form sandbars and shoals near its mouth.

We encamped just above it, on the south, having made only eight miles, as the wind shifted to the south, and blew so hard that in the course of the day we broke our mast: we saw some deer, a number of geese, and shot a turkey and a duck: the place in which we halted is a fine low-ground, with much timber, such as red cedar, honeylocust, oak, arrowwood, elm and coffeenut.

September 5, Wednesday. The wind was again high from the south. At five miles, we came to a large island, called Pawnee island, in the middle of the river; and stopped to breakfast at a small creek on the north, which has the name of Goat creek, at eight and a half miles. Near the mouth of this creek the beaver had made a dam across so as to form a large pond, in which they built their houses. Above this island the river Poncara falls into the Missouri from the south, and is thirty yards wide at the entrance. Two men whom we despatched to the village of the same name, returned with information that they had found it on the lower side of the creek; but as this is the hunting season, the town was so completely deserted that they had killed a buf-This tribe of Poncaras, who are said to have faloe in the village itself. once numbered four hundred men, are now reduced to about fifty, aud have associated for mutual protection with the Mahas, who are about two hundred in number. These two nations are allied by a similarity of misfortune; they were once both numerous, both resided in villages, and cultivated Indian corn ; their common enemies, the Sioux and small-pox, drove them from their towns, which they visit only occasionally for the purposes of trade; and they. now wander over the plains on the sources of the Wolf and Quicurre rivers... Between the Pawnee island and Goat creek on the north, is a cliff of blue earth, under which are several mineral springs, impregnated with salts : near this we.

observed a number of goats, from which the creek derives its name. At three and a half miles from the creek, we came to a large island on the south, along which we passed to the head of it, and encamped about four o'clock. Here we replaced the mast we had lost, with a new one of cedar: some bucks and an elk were procured to-day, and a black tailed deer was seen near the Poncara's village.

Thursday, September 6. There was a storm this morning from the N. W., and though it moderated, the wind was still high, and the weather very cold; the number of sandbars too, added to the rapidity of the current, obliged us to have recourse to the towline: with all our exertions we did not make more than eight and a half miles, and encamped on the north, after passing high cliffs of soft, blue, and red coloured stone, on the southern shore. We saw some goats, and great numbers of buffaloe, in addition to which the hunters furnished us with elk, deer, turkies, geese, and one beaver: a large catfish too was caught in the evening. The ground near the camp; was a low prairie, without timber, though just below is a grove of cottonwood.

Friday, September 7. The morning was very cold and the wind south-east. At five and a half miles, we reached and encamped at the foot of a round mountain, on the south, having passed two small islands. This mountain, which is about three hundred feet at the base, forms a cone at the top, resembling a dome at a distance, and seventy feet or more above the surrounding highlands. As we descended from this dome, we arrived at a spot, on the gradual descent of the hill, nearly four acres in extent, and covered with small holes: these are the residence of a little animal, called by the French, petit chien (little dog) who sit erect near the mouth, and make a whistling noise, but when alarmed take refuge in their holes. In order to bring them out, we poured into one of the holes five barrels of water without filling it, but we dislodged and caught the owner. After digging down another of the holes for six feet, we found, on running a pole into it, that we had not yet dug half way to the bottom : we discovered, however, two frogs in the hole, and near it we killed a dark rattlesnake, which had swallowed a small prairie dog : we were also informed, though we never wrinessed the fact, that a sort of lizard, and a snake, live habitually with these animals. The petit chien are justly named, as they resemble a small dog in some particulars, though they have also some points of similarity to the squirrel. The head resembles the squirrel in every respect, except that the ear is shorter, the tail like that of the ground-squirrel, the toe-nails are long. the fur is fine, and the long hair is gray.

Saturday, September 8. The wind still continued from the south-east, but

moderately. At seven miles we reached a house on the north side, called the Pawnee house, where a trader, named Trudeau, wintered in the year 1796-7: behind this, hills, much higher than usual, appear to the north, about eight miles off. Before reaching this house, we came by three small islands, on the north side, and a small creek on the south; and after leaving it, reached, another, at the end of seventeen miles, on which we encamped, and called it Boat island: we here saw herds of buffaloe, and some elk, deer, turkies; beaver, a squarel, and a prairie dog. The party on the north represent the country through which they passed, as poor, rugged, and hilly, with the appearance of having been lately burnt by the Indians; the broken hills, indeed, approach the river on both sides, though each is bordered by a strip of woodland near the water.

Sunday, September 9. We coasted along the island on which we had encamped, and then passed three sand and willow islands, and a number of smaller sendbars. The river is shallow, and joined by two small creeks from the north, and one from the south. In the plains, to the south, are great numbers of buffaloe, in herds of nearly five hundred; all the copses of tember appear to contain elk or deer. We encamped on a sandbar, on the southern shore, at the distance of fourteen and a quarter miles.

September 10, Monday. The next day we made twenty miles. The morning was cloudy and dark, but a light breeze from the south-east carried as pust two small islands on the south, and one on the north; till, at the distance of ten and a half miles, we reached an island, extending for two miles in the middle of the river, covered with red cedar, from which it derives its name of Cedar island. Just below this island, on a hill to the south, is the backbone of a fish, forty-live feet long, tapering towards the tail, and in a perfect state of petrifaction, fragments of which were collected and sent to Washington. On both sides of the river are high dark-coloured bluffs. About a mile and a half from the island, on the southern shore, the party on that side discovered a large and very strongly impregnated spring of water; and another, not so strongly impregnated, half a mile up the hill. Three miles beyond Cedar island is a large island on the north, and a number of sondbars. After which is another, about a mile in length, lying in the middle of the river, and separated by a small channel, at its extremity, from another above it, on which we encamped. These two islands are called Mud islands. The river is shallow during this day's course, and is falling a little. The elk and buffaloe are in great abundance, but the deer have become scarce.

September 11, Tuesday. At six and a half miles we passed the upper extreminy of an idead on the south; four miles beyond which is another on the same side of the river; and about a quarter of a mile distant we visited a large village of the barking-squirrel. It was situated on a gentle declivity, and covered a space of nine hundred and seventy yards long, and eight hundred yards wide; we killed four of them. We then resumed our course, and during five and a half miles passed two islands on the north, and then encamped at the distance of sixteen miles, on the south side of the river, and just above a small run. The morning had been cloudy, but in the afternoon it began raining, with a high north-west wind, which continued during the greater part of the night. The country seen to-day consists of narrow strips of lowland, rising into uneven grounds, which are succeeded, at the distance of three miles, by rich and level plains, but without any timber. The river itself is wide, and crowded with sandbars. Elk, deer, squirrels, a pelican, and a very large porcupine, were our game this day; some foxes too were seen, but not caught.

In the morning we observed a man riding on horseback down towards the boat, and we were much pleased to find that it was George Shannon, one of our party, for whose safety we had been very uneasy. Our two horses having strayed from us on the 26th of August, he was sent to search for them. After he had found them he attempted to rejoin us, but seeing some other tracks, which must have been those of Indians, and which he mistook for our own, he concluded that we were a-head, and had been for sixteen days following the bank of the river above us. During the first four days he exhausted his bullets, and was then nearly starved, being obliged to subsist, for twelve days, on a few grapes, and a rabbit which he killed by making use of a hard piece of stick for a ball. One of his horses gave out, and was left behind; the other he kept as a last resource for food. Despairing of overtaking us, he was returning down the river, in hopes of meeting some other boat; and was on the point of killing his horse, when he was so fortunate as to join us.

Wednesday, September 12. The day was dark and cloudy; the wind from the north-west. At a short distance we reached an island in the middle of the river, which is covered with timber, a rare object now. We with great difficulty were enabled to struggle through the sandbars, the water being very rapid and shallow, so that we were several hours in making a mile. Several times the boat wheeled on the bar, and the men were obliged to jump out and prevent her from upsetting; at others, after making a way up one channel, the shoalness of the water forced us back to seek the deep channel. We advanced only four miles in the whole day, and encamped on the south. Along both sides of the river are high grounds; on the southern side particularly, they form dark bluffs, in which may be observed slate and coal intermixed. We saw also several villages of barking-squirrels; great numbers of growse, and three foxes. which of the several village of barking squirrels and the several village o

September 13, Thursday. We made twelve miles to-day through a number of sandbars, which make it difficult to find the proper channel. The hills on each side are high, and separated from the river by a narrow plain on its borders. On the north, these lowlands are covered in part with timber, and great quantities of grapes, which are now ripe: on the south we found plenty of plums, but they are not yet ripe; and near the dark bluffs, a run tainted with alum and copperas; the southern side being more strongly impregnated with minerals than the northern. Last night four beaver were caught in the traps; a porcupine was shot as it was upon a cottontree, feeding on its leaves and branches. We encamped on the north side, opposite to a small willow island. At night the musquitoes were very troublesome, though the weather was cold and rainy, and the wind from the north-west.

Friday, September 14. At two miles we reached a round island on the northern side; at about five, a run on the south; two and a half miles further, a small creek; and at nine miles encamped near the mouth of a creek, on the same side. The sandbars are very numerous, and render the river wide and shallow, and obliged the crew to get into the water and drag the boat over the bars several times. During the whole day we searched along the southern shore, and at some distance into the interior, to find an ancient volcano which we heard at St. Charles was somewhere in this neighbourhood; but we could not discern the slightest appearance of any thing volcanic. In the course of their search the party shot a buck-goat and a hare. The hills, particularly on the south, continue high, but the timber is confined to the islands and banks of the river. We had occasion here to observe the rapid undermining of these hills by the Missouri : the first attacks seem to be on the hills which overhang the river; as soon as the violence of the current destroys the grass at the foot of them, the whole texture appears loosened, and the ground dissolves and mixes with the water: the muddy mixture is then forced over the low-grounds, which it covers sometimes to the depth of three inches, and gradually destroys the herbage ; after which it can offer no resistance to the water, and becomes at last covered with sand, any by alda any which had part base had get an fielded and out

Saturday, September 15. We passed, at an early hour, the creek near our last night's encampment; and at two miles distance reached the mouth of White river, coming in from the south. We ascended a short distance, and sent a sergeant and another man to examine it higher up. This river has a bed of about three hundred yards, though the water is confined to one hundred and fifty : in the mouth are a sand island, and several sandbars. The current is regular and swift, with sandbars projecting from the points. It differs very much from the Platte, and Quicurre, in throwing out, comparatively, little sand, but its general character is like that of the Missouri. This resemblance was confirmed by the sergeant, who ascended about twelve miles; at this distance it was about the same width as near the mouth, and the course, which was generally west, had been interrupted by islands and sandbars. The timber consisted chiefly of elm; they saw pine burrs, and sticks of birch were seen floating down the river; they had also met with goats, such as we have heretofore seen; great quantities of buffaloe, near to which were wolves, some deer, and villages of barking squirrels. At the confluence of White river with the Missouri is an excellent position for a town; the land rising by three gradual ascents, and the neighbourhood furnishing more timber than is usual in this country. After passing high dark bluffs on both sides, we reached the lower point of an island towards the south, at the distance of six miles. The island bears an abundance of grapes, and is covered with red cedar; it also contains a number of rabbits. At the end of this island, which is small, a narrow channel separates it from a large sand island, which we passed, and encamped, eight miles on the north, under a high point of land opposite a large creek to the south, on which we observe an unusual quantity of timber. The wind was from the north-west this afternoon, and high. The weather cold, and its dreariness increased by the howlings of a number of wolves around us.

September 16, Sunday. Early this morning, having reached a convenient spot on the south side, and at one mile and a quarter distance, we encamped just above a small creek, which we called Corvus, having killed an animal of that genus near it. Finding that we could not proceed over the sandbars, as fast as we desired, while the boat was so heavily loaded, we concluded not to send back, as we originally intended, our third perioque, but to detain the soldiers until spring, and in the mean time lighten the boat by loading the perioque : this operation, added to that of drying all our wet articles, detained us during the day. Our camp is in a beautiful plain, with timber thinly scattered for three quarters of a mile, and consisting chiefly of elm, cottonwood, some ash of an indifferent quality, and a considerable quantity of a small species of white oak : this tree seldom rises higher than thirty feet, and branches very much ; the bark is rough, thick and of a light colour; the leaves small, deeply indented, and of a pale green ; the cup which contains the acorn is fringed on the edges, and embraces it about one half : the acorn itself, which grows in great profusion, is of an excellent flavour, and has none of the roughness which most other acorns possess; they are now falling, and have probably attracted the number of deer which we saw on this place, as all the animals we have seen are fond of that food. The ground having been recently burnt by the Indians, is covered with young green grass, and in the neighbourhood are great quantities of fine plums. We killed a few deer for the sake of their skins, which we wanted to cover the perioques, the meat being too poor for food : the cold season coming on a flannel shirt was given to each man, and fresh powder to those who had exhausted their supply.

Monday, September 16. Whilst some of the party were engaged in the same way as yesterday, others were employed in examining the surrounding country. About a quarter of a mile behind our camp, and at an elevation of twenty feet above it, a plain extends nearly three miles parallel to the river, and about a mile back to the hills, towards which it gradually ascends. Here we saw a grove of plum-trees loaded with fruit, now ripe, and differing in nothing from those of the Atlantic states, except that the tree is smaller and more thickly set. The ground of the plain is occupied by the burrows of multitudes of barking squirrels, who entice hither the wolves of a small kind, hawks, and polecats, all of which animals we saw, and presumed that they fed on the squirrel. This plain is intersected nearly in its whole extent by deep ravines and steep irregular rising grounds, from one to two hundred feet. On ascending the range of hills which border the plain, we saw a second high level plain stretching to the south, as far as the eye could reach. To the westward, a high range of hills about twenty miles distant runs nearly north and south, but not to any great extent, as their rise and termination is embraced by one view, and they seem covered with a verdure similar to that of the plains. The same view extended over the irregular hills which border the northern side of the Missouri: all around the country had been recently burnt, and a young green grass, about four inches high, covered the ground, which was enlivened by herds of antelopes and buffaloe; the last of which were in such multitudes, that we cannot exaggerate in saving, that at a single glance, we saw three thousand of them before us.

Of all the animals we had seen the antelope seems to possess the most wonderful fleetness: shy and timorous they generally repose only on the ridges, which command a view of all the approaches of an enemy: the acuteness of their sight distinguishes the most distant danger, the delicate sensibility of their smell defeats the precautions of concealment, and when alarmed their rapid career seems more like the flight of birds than the movements of an earthly being. After many unsuccessful attempts, captain Lewis at last, by winding around the ridges, approached a party of seven, which were on an eminence, towards which the wind was unfortunately blowing. The only male of the party frequently encircled the summit of the hill, as if to announce any danger to the females, who formed a group at the top. Although they did not see captain Lewis, the smell alarmed them, and they fled when he was at the distance of two hundred yards: he immediately ran to the spot where they had been, a ravine concealed them from him, but the next moment they appeared on a second ridge, at the distance of three miles. He doubted whether it could be the same, but their number and the extreme rapidity with which they continued their course, convinced him that they must have gone with a speed equal to that of the most distinguished racehorse. Among our acquisitions to-day was a mule-deer, a magpie, the common deer, and buffaloe: captain Lewis also saw a hare, and killed a rattlesnake near the burrows of the barking squirrels.

Tuesday, September 18. Having every thing in readiness we proceeded, with the boat much lightened, but the wind being from the N. W. we made but little way. At one mile we reached an island in the middle of the river, nearly a mile in length, and covered with red cedar; at its extremity a small creek comes in from the north; we then met some sandbars, and the wind being very high and a-head, we encamped on the south having made only seven miles. In addition to the common deer, which were in great abundance, we saw goats, elk, buffaloe, the black tailed deer; the large wolves too are very numerous, and have long hair with coarse fur, and are of a light colour. A small species of wolf, about the size of a gray fox, was also killed, and proved to be the animal which we had hitherto mistaken for a fox: there are also many porcupines, rabbits, and barking squirrels in the neighbourhood.

September 19. We this day enjoyed a cool clear morning, and a wind from the south-east. We reached at three miles a bluff on the south, and four miles further, the lower point of Prospect island, about two and a half miles in length; opposite to this are high bluffs, about eighty feet above the water, beyond which are beautiful plains, gradually rising as they recede from the river: these are watered by three streams which empty near each other: the first is about thirtyfive yards wide, the ground on its sides high and rich, with some timber; the second about twelve yards wide, but with less timber; the third is nearly of the same size, and contains more water, but it scatters its waters over the large timbered plain, and empties itself into the river at three places. These rivers are called by the French Les trois rivieres des Sioux, the three Sioux rivers; and as the Sioux generally cross the Missouri at this place, it is called the Sioux pass of the three rivers. These streams have the same right of asylum, though in a less degree than Pipestone creek already mentioned.

Two miles from the island we passed a creek fifteen yards wide; eight miles further, another twenty yards wide; three miles beyond which, is a third of eighteen vards width, all on the south side: the second, which passes through a high plain, we called Elm creek; to the third we gave the name of Night creek. having reached it late at night. About a mile beyond this is a small island on the north side of the river, and is called Lower island, as it is situated at the commencement of what is known by the name of the Grand Detour, or Great Bend of the Missouri. Opposite is a creek on the south, about ten yards wide, which waters a plain where there are great numbers of the prickly pear, which name. we gave to the creek. We encamped on the south, opposite the upper extremity of the island, having made an excellent day's sail of twenty-six and a quarter miles. Our game this day consisted chiefly of deer, of these four were black tails, one a buck with two main prongs of horns on each side, and forked equally. Large herds of buffaloe, elk and goats, were also seen. Thursday, September 20. Finding we had reached the Big Bend, we despatched two men with our only horse across the neck, to hunt there and wait our arrival at the first creek beyond it. We then set out with fair weather and the wind from S. E. to make the circuit of the bend. Near the lower island the sandbars are numerous, and the river shallow. At nine and a half miles is a sand island, on the southern side. About ten miles beyond it is a small island on the south, opposite to a small creek on the north. This island, which is near the N.W. extremity of the bend, is called Solitary island. At about eleven miles further, we encamped on a sandbar, having made twenty-seven and a half miles. Captain Clarke, who early this morning had crossed the neck of the bend, joined us in the evening. At the narrowest part, the gorge is composed of high and irregular hills of about one hundred and eighty, or one hundred and ninety feet in elevation ; from this descends an unbroken plain over the whole bend, and the country is separated from it by this ridge. Great numbers of buffaloe, elk, and goats are wandering over these plains, accompanied by grouse and larks. Captain Clarke saw a hare also, on the Great Bend. Of the goats killed to-day, one is a female. differing from the male in being smaller in size; its horns too are smaller and straighter, having one short prong, and no black about the neck; none of these goats have any beard, but are delicately formed, and very beautiful. Friday, September 21. Between one and two o'clock the sergeant on guard alarmed us, by crying, that the sandbar on which we lay was sinking; we jamped

up, and found that both above and below our camp the sand was undermined, and falling in very fast: we had scarcely got into the boats and pushed off, when the bank under which they had been lying, fell in, and would certainly have sunk

L

the two perioques if they had remained there. By the time we reached the opposite shore the ground of our encampment sunk also. We formed a second camp for the rest of the night, and at daylight proceeded on to the gorge or throat of the Great Bend, where we breakfasted. A man, whom we had despatched to step off the distance across the bend, made it two thousand yards; the circuit is thirty miles. During the whole course, the land of the bend is low, with occasional bluffs; that on the opposite side, high prairie ground, and long ridges of dark bluffs. After breakfast, we passed through a high prairie on the north side, and a rich cedar lowland and cedar bluff on the south, till we reached a willow island below the mouth of a small creek. This creek, called Tyler's river, is about thirty-five yards wide, comes in on the south, and is at the distance of six miles from the neck of the Great Bend. Here we found a deer, and the skin of a white wolf, left us by our hunters a-head: large quantities of different kinds of plover and brants are in this neighbourhood, and seen collecting and moving towards the south: the catfish are small, and not in such plenty as we had found them below this place. We passed several sandbars, which make the river very shallow and about a mile in width, and encamped on the south, at the distance of eleven and a half miles. On each side the shore is lined with hard rough gulleystones, rolled from the hills and small brooks. The most common timber is the cedar, though, in the prairies, there are great quantities of the prickly pear. At the distance of eleven and a half miles, we encamped on the north at the lower point of an ancient island, which has since been connected with the main land by the filling up of the northern channel, and is now covered with cottonwood. We here saw some tracks of Indians, but they appeared three or four weeks old. This day was warm. September 22. A thick fog detained us until seven o'clock ; our course was through inclined prairies on each side of the river, crowded with buffaloe. We halted at a point on the north side, near a high bluff on the south, and took a meridian altitude, which gave us the latitude of 44° 11' 33". On renewing our course, we reached first a small island on the south, at the distance of four and a half miles, immediately above which is another island opposite to a creek fifteen yards wide. This creek, and the two islands, one of which is half a mile long, and the second three miles, are called the Three Sisters : a beautiful plain extending on both sides of the river. This is followed by an island on the north, called Cedar island, about one mile and a half in length, and the same distance in breadth, and deriving its name from the quality of the timber. On the south side of this island, is a fort and a large trading house, built by a Mr. Loisel, who wintered here during the last year, in order to trade with the Sioux, the remains of whose

1

camps are in great numbers about this place. The establishment is sixty or seventy feet square, built with red cedar and picketted in with the same materials. The hunters who had been sent a-head joined us here. They mention that the hills are washed in gullies, in passing over which, some mineral substances had rotted and destroyed their moccasins; they had killed two deer and a beaver. At sixteen miles distance we came to on the north side at the mouth of a small creek. The large stones which we saw yesterday on the shores are now some distance in the river, and render the navigation dangerous. The musquitoes are still numerous in the low grounds.

Sunday, September 23. We passed, with a light breeze from the southeast, a small island on the north, called Goat island ; above which is a small creek, called by the party Smoke creek, as we observed a great smoke to the south-west on approaching it. At ten miles we came to the lower point of a large island, having passed two small willow islands with sandbars projecting from them. This island, which we call Elk island, is about two and a half miles long, and three quarters of a mile wide, situated near the south, and covered with cotton wood, the red currant, and grapes. The river is here almost straight for a considerable distance, wide and shallow, with many sand-bars. small creek on the north, about sixteen yards wide, we called Reuben's creek; as Reuben Fields, one of our men, was the first of the party who reached it. At a short distance above this we encamped for the night, having made twenty miles. The country, generally, consists of low, rich, timbered ground on the north, and high barren lands on the south : on both sides great numbers of buffaloe are feeding. In the evening three boys of the Sioux nation swam across the river, and informed us that two parties of Sioux were encamped on the next river, one consisting of eighty, and the second of sixty lodges, at some distance above. After treating them kindly we sent them back, with a present of two carrots of tobacco to their chiefs, whom we invited to a conference in the morning. all all inde, which gave us the latitude of 44° 11' 334 "

Monday, September 24. The wind was from the east, and the day fair; we soon passed a handsome prairie on the north side, covered with ripe plums, and the mouth of a creek on the south, called Highwater creek, a little above our encampment. At about five miles we reached an island two and a half miles in length, and situated near the south. Here we were joined by one of our hunters, who procured four elk, but whilst he was in pursuit of the game the Indians had stolen his horse. We left the island, and soon overtook five Indians on the shore: we anchored, and told them from the boat we were friends and wished to continue so, but were not afraid of any Indians : that some of their young men had stolen the horse which their great father had sent for their great chief, and that we could not treat with them until he was restored. They said that they knew nothing of the horse, but if he had been taken he should be given up. We went on, and at eleven and a half miles, passed an island on the north, which we called Good-humoured island; it is about one and a half miles long, and abounds in elk. At thirteen and a half miles, we anchored one hundred yards off the mouth of a river on the south side, where we were joined by both the perioques and encamped ; two-thirds of the party remained on board, and the rest went as a guard on shore with the cooks and one perioque ; we have seen along the sides of the hills on the north a great deal of stone; besides the elk, we also observed a hare; the five Indians whom we had seen followed us, and slept with the guard on shore. Finding one of them was a chief we smoked with him, and made him a present of tobacco. This river is about seventy yards wide, and has a considerable current. As the tribe of the Sioux which inhabit it are called Teton, we gave it the name of Teton river. while some survey show a so-participation of the base of the

SEPTEMBER 25. THE morning was fine, and the wind continued from the south-east. We raised a flagstaff and an awning, under which we assembled at twelve o'clock, with all the party parading under arms. The chiefs and warriors from the camp two miles up the river, met us, about fifty or sixty in number, and after smoking delivered them a speech ; but as our Sioux interpreter, Mr. Durion, had been left with the Yanktons, we were obliged to make use of a Frenchman who could not speak fluently, and therefore we curtailed our harangue. After this we went through the ceremony of acknowledging the chiefs, by giving to the grand chief a medal, a flag of the United States, a laced. uniform coat, a cocked hat and feather: to the two other chiefs a medal and some small presents; and to two warriors of consideration certificates. The name of the great chief is Untongasabaw, or Black Buffaloe; the second Tortohonga, or the Partisan ; the third Tartongawaka, or Buffaloe Medicine : the name of one of the warriors was Wawzinggo; that of the second Matocoquepa, or Second Bear. We then invited the chiefs on board, and showed them the boat, the airgun, and such curiosities as we thought might amuse them : in this we succeeded too well ; for after giving them a quarter of a glass of whiskey, which they seemed to like very much, and sucked the bottle, it was with much difficulty that we could get rid of them. They at last accompanied Captain Clarke on shore in a perioque with five men; but it seems they had formed a design to stop us; for no sooner had the party landed than three of the Indians seized the cable of the perioque, and one of the soldiers of the chief put his arm round the mast : the second chief who affected intoxication, then said,

that we should not go on, that they had not received presents enough from us: Captain Clarke told him that he would not be prevented from going on; that we were not squaws, but warriors; that we were sent by our great father, who could in a moment exterminate them: the chief replied, that he too had warriors, and was proceeding to offer personal violence to Captain Clarke, who immediately drew his sword, and made a signal to the boat to prepare for action. The Indians who surrounded him, drew their arrows from their quivers and were bending their bows, when the swivel in the boat was instantly pointed towards them, and twelve of our most determined men jumped into the perioque and joined Captain Clarke. This movement made an impression on them, for the grand chief ordered the young men away from the perioque, and they withdrew and held a short council with the warriors. Being unwilling to irritate them. Captain Clarke then went forward and offered his hand to the first and second chiefs, who refused to take it. He then turned from them and got into the perioque, but had not gone more than ten paces when both the chiefs and two of the warriors waded in after him, and he brought them on board. We then proceeded on for a mile and anchored off a willow island, which from the circumstances which had just occurred, we called Badhumoured island.

Wednesday, September 26. Our conduct yesterday seemed to have inspired the Indians with fear of us, and as we were desirous of cultivating their acquaintance, we complied with their wish that we should give them an opportunity of treating us well, and also suffer their squaws and children to see us and our beat, which would be perfectly new to them. Accordingly, after passing at one and a half mile a small willow island and several sandbars, we came to on the south side, where a crowd of men, women and children were waiting to receive us. Captain Lewis went on shore and remained several hours, and observing that their disposition was friendly we resolved to remain during the night to a dance, which they were preparing for us. Captains Lewis and Clarke, who went on shore one after the other, were met on landing by ten well dressed young men, who took them up in a robe highly decorated and carried them to a large council house, where they were placed on a dressed buffaloe skin by the side of the grand chief. The hall or council-room was in the shape of three quarters of a circle, covered at the top and sides with skins well dressed and sewed together. Under this shelter sat about seventy men, forming a circle round the chief, before whom were placed a Spanish flag and the one we had given them yesterday. This left a vacant circle of about six feet diameter, in which the pipe of peace was raised on two forked sticks, about six or eight inches from the ground, and under it the down of the swan was scattered : a

large fire, in which they were cooking provisions, stood near, and in the centre about four hundred pounds of excellent buffaloe meat as a present for us. As soon as we were seated, an old man got up, and after approving what we had done, begged us to take pity on their unfortunate situation. To this we replied with assurances of protection. After he had ceased, the great chief rose and delivered an harangue to the same effect : then with great solemnity he took some of the most delicate parts of the dog, which was cooked for the festival. and held it to the flag by way of sacrifice: this done, he held up the pipe of peace, and first pointed it towards the heavens, then to the four quarters of the globe, and then to the earth, made a short speech, lighted the pipe, and presented it to us. We smoked, and he again harangued his people, after which the repast was served up to us. It consisted of the dog which they had just been cooking, this being a great dish among the Sioux, and used on all festivals; to this were added, pemitigon, a dish made of buffaloe meat, dried or jerked, and then pounded and mixed raw with grease and a kind of ground potatoe, dressed like the preparation of Indian corn called hominy, to which it is little inferior. Of all these luxuries which were placed before us in platters with horn spoons, we took the pemitigon and the potatoe, which we found good, but we could as yet partake but sparingly of the dog. We ate and smoked for an hour, when it became dark : every thing was then cleared away for the dance, a large fire being made in the centre of the house, giving at once light and warmth to the ball-room. The orchestra was composed of about ten men, who played on a sort of tambourin, formed of skin stretched across a hoop; and made a jingling noise with a long stick to which the hoofs of deer and goats were hung ; the third instrument was a small skin bag with pebbles in it : these, with five or six young men for the vocal part, made up the band. The women then came forward highly decorated; some with poles in their hands, on which were hung the scalps of their enemies; others with guns, spears or different trophies, taken in war by their husbands, brothers, or connexions. Having arranged themselves in two columns, one on each side of the fire, as soon as the music began they danced towards each other till they met in the centre, when the rattles were shaken, and they all shouted and returned back to their places. They have no step, but shuffle along the ground; nor does the music appear to be any thing more than a confusion of noises, distinguished only by hard or gentle blows upon the buffaloe skin: the song is perfectly extemporaneous. In the pauses of the dance, any man of the company comes forward and recites, in a sort of low guttural tone, some little story or incident, which is either martial or ludicrous; or, as was the case this evening, voluptuous and indecent; this is taken up by the orchestra

and an and

that we should not go on, that they had not received presents enough from us: Captain Clarke told him that he would not be prevented from going on; that we were not squaws, but warriors; that we were sent by our great father, who could in a moment exterminate them: the chief replied, that he too had warriors, and was proceeding to offer personal violence to Captain Clarke, who immediately drew his sword, and made a signal to the boat to prepare for action. The Indians who surrounded him, drew their arrows from their quivers and were bending their bows, when the swivel in the boat was instantly pointed towards them, and twelve of our most determined men jumped into the perioque and joined Captain Clarke. This movement made an impression on them, for the grand chief ordered the young men away from the perioque, and they withdrew and held a short council with the warriors. Being mwilling to irritate them. Captain Clarke then went forward and offered his hand to the first and second chiefs, who refused to take it. He then turned from them and got into the perioque, but had not gone more than ten paces when both the chiefs and two of the warriors waded in after him, and he brought them on board. We then proceeded on for a mile and anchored off a willow island, which from the circumstances which had just occurred, we called Badhumoured island.

Wednesday, September 26. Our conduct yesterday seemed to have inspired the Indians with fear of us, and as we were desirous of cultivating their acquaintance, we complied with their wish that we should give them an opportunity of treating us well, and also suffer their squaws and children to see us and our boat. which would be perfectly new to them. Accordingly, after passing at one and a half mile a small willow island and several sandbars, we came to on the south side, where a crowd of men, women and children were waiting to receive us. Captain Lewis went on shore and remained several hours, and observing that their dispesition was friendly we resolved to remain during the night to a dance, which they were preparing for us. Captains Lewis and Clarke, who went on shore one after the other, were met on landing by ten well dressed young men, who took them up in a robe highly decorated and carried them to a large council house, where they were placed on a dressed buffaloe skin by the side of the grand chief. The half or council-room was in the shape of three quarters of a circle, covered at the top and sides with skins well dressed and sewed together. Under this shelter ast about seventy meny forming a circle round the chief, before whom were placed a Spanish flag and the one we had given them yesterday. This left a vacant circle of about six fest diameter; in which the pipe of pence was raised on two forked sticks, about six or eight inches from the ground, and under it the down of the swan was scattered the

large fire, in which they were cooking provisions, stood near, and in the centre about four hundred pounds of excellent baffaloe meat as a present for us. As soon as we were seated, an old man got up, and after approving what we had done, begged us to take pity on their unfortunate situation. To this we replied with assurances of protection. After he had ceased, the great chief rose and delivered an harangue to the same effect : then with great solemnity he took some of the most delicate parts of the dog, which was cooked for the festival. and held it to the flag by way of sacrifice : this done, he held up the nipe of peace, and first pointed it towards the heavens, then to the four quarters of the globe, and then to the earth, made a short speech, lighted the pipe, and presented it to us. We smoked, and he again harangued his people, after which the repast was served up to us. It consisted of the dog which they had just been cooking, this being a great dish among the Sioux, and used on all festivals; to this were added, pemitigon, a dish made of buffaloe meat, dried or jerked, and then pounded and mixed raw with grease and a kind of ground potatoe, dressed like the preparation of Indian corn called hominy, to which it is little inferior. Of all these luxuries which were placed before us in platters with horn spoons, we took the pemitigon and the potatoe, which we found good, but we could as yet partake but sparingly of the dog. We ate and smoked for an hour, when it became dark : every thing was then cleared away for the dance, a large fire being made in the centre of the house, giving at once light and warmth to the ball-room. The orchestra was composed of about ten men, who played on a sort of tambourin, formed of skin stretched across a hoop; and made a jingling noise with a long stick to which the hoofs of deer and goats were hung; the third instrument was a small skin bag with pebbles in it : these, with five or six young men for the vocal part, made up the band. The women then came forward highly decorated; some with poles in their hands, on which were hung the scalps of their enemies; others with guns, spears or different trophies, taken m war by their husbands, brothers, or connexions. Having arranged themselves in two columns, one on each side of the fire, as soon as the music began they danced towards each other till they met in the centre, when the rattles were shaken, and they all shouted and returned back to their places. They have no step, but shuffle along the ground; nor does the music appear to be any thing more than a confusion of noises, distinguished only by hard or gentle blows upon the buffaloe skin: the song is perfectly extemporaneous. In the pauses of the dance, any man of the company comes forward and recites, in a sort of low guttural tone, some little, story or incident, which is either martial or ludicrous; or, as was the same this evening, voluptuous and indecent; this is taken up by the orchestra.

and the dancers, who repeat it in a higher strain and dance to it. Sometimes they alternate; the orchestra first performing, and when it ceases, the women raise their voices and make a music more agreeable, that is, less intolerable than that of the musicians. The dances of the men, which are always separate from the women, are conducted very nearly in the same way, except that the men jump up and down instead of shuffling; and in the war dances the recitations are all of a military cast. The harmony of the entertainment had nearly been disturbed by one of the musicians, who thinking he had not received a due share of the tobacco we had distributed during the evening, put himself into a passion; broke one of the drums, threw two of them into the fire, and left the band. They were taken out of the fire : a buffaloe robe held in one hand and beaten with the other, by several of the company, supplied the place of the lost drum or tambourin, and no notice was taken of the offensive conduct of the man. We staid till twelve o'clock at night, when we informed the chiefs that they must be fatigued with all these attempts to amuse us, and retired accompanied by four chiefs, two of whom spent the night with us on board.

While on shore we saw twenty-five squaws, and about the same number of children, who had been taken prisoners two weeks ago, in a battle with their countrymen the Mahas. In this engagement the Sioux destroyed forty ladges; killed seventy-five men, of which we saw many of the scalps, and took these prisoners; their appearance is wretched and dejected; the women too seem low in stature, coarse and ugly; though their present condition may diminish their beanty. We gave them a variety of small articles, such as awls and needles, and interceded for them with the chiefs, to whom we recommended to follow the advice of their great father, to restore the prisoners and lave in peace with the Mahas, which they promised to do.

The tribe which we this day saw, are a part of the great Sioux nation, and are known by the name of the Teton Okandandas: they are about two hundred men in number, and their chief residence is on both sides of the Missouri, between the Chayenne and Teton rivers. In their persons they are rather ngly and ill made, their legs and arms being too small, their checkbones high, and, their eyes projecting. The females, with the same character of form, are more handsome; and both sexes appear cheerful and sprightly; but in our intercourse, with them we discovered that they were cunning and wicions.

The men shave the hair off their heads, except a small tuft on the top, which, they suffer to grow and wear in plaits over the shoulders; to this they seem, much attached, as the loss of it is the usual sacrifice at the death of mear plations; In full dress, the men of consideration wear a hawk's feather, or calumet feather

worked with porcupine quills, and fastened to the top of the head, from which it The face and body are generally painted with a mixture of grease falls back. Over the shoulders is a loose robe or mantle of buffaloe skin dressed and coal. white, adorned with porcupine quills loosely fixed so as to make a jingling noise when in motion, and painted with various uncouth figures unintelligible to us, but to them emblematic of military exploits, or any other incident; the hair of the robe is worn next the skin in fair weather, but when it rains the hair is put outside, and the robe is either thrown over the arm, or wrapped round the body, all of which it may cover. Under this in the winter season they wear a kind of shirt resembling ours, and made either of skin or cloth, and covering the arms and body. Round the middle is fixed a girdle of cloth or procured dressed elk-skin, about an inch in width and closely tied to the body, to this is attached a piece of cloth or blanket or skin about a foot wide, which passes between the legs and is tucked under the girdle both before and behind; from the hip to the ancle he is covered by leggings of dressed antelope skins, with seams at the sides two inches in width, and ornamented by little tufts of hair, the produce of the scalps they have made in war, which are scattered down the leg. The winter moccasins are of dressed buffaloe-skin, the hair being worn inwards, and soaled with thick elk-skin parchment; those for summer are of deer or elk-skin, dressed without the hair, and with soals of elk-skin. On great occasions, or whenever they are in full dress, the young men drag after them the entire skin of a palecat fixed to the heel of the moccasin. Another skin of the same animal is either tucked into the girdle or carried in the hand, and serves as a pouch for their tobacco, or what the French traders call the bois roule : this is the inner bark of a species of red willow, which being dried in the sun or over the fire, is rubbed between the hands and broken into small pieces, and is used alone or mixed with tobacco. The pipe is generally of red earth, the stem made of ash, about three or four feet long, and highly decorated with feathers, hair and porcupine quills.

The hair of the women is suffered to grow long, and is parted from the forehead across the head, at the back of which it is either collected into a kind of bag, or hangs down over the shoulders. Their moccasins are like those of the men, is are also the leggings, which do not however reach beyond the knee, where it is met by a long loose shift of skin which reaches nearly to the ancles : this is fastened over the shoulders by a string and has no sleeves, but a few pieces of the skin hang a short distance down the arm. Sometimes a girdle fifthers this skin round the waist, and over all is thrown a robe like that worn by the men. They seem fond of dress. Their lodges are very neatly constructed, in the same form as those of the Yanktons; they consist of about one hundred cabins, made of white buffaloe hide dressed, with a larger one in the centre for holding councils and dances. They are built round with poles about fifteen or twenty feet high, covered with white skins; these lodges may be taken to pieces, packed up, and carried with the nation wherever they go, by dogs which bear great burdens. The women are chiefly employed in dressing buffaloe skins : they seem perfectly well disposed, but are addicted to stealing any thing which they can take without being observed. This nation, although it makes so many ravages among its neighbours, is hadly supplied with guns. The water which they carry with them is contained chiefly in the paunches of deer and other animals, and they make use of wooden bowls. Some had their heads shaved, which we found was a species of mourning for relations. Another usage, on these occasions, is to run arrows through the flesh both above and below the elbow.

While on shore to-day we witnessed a quarrel between two squaws, which appeared to be growing every moment more boisterous, when a man came forward, at whose approach every one seemed terrified and ran. He took the squaws, and without any ccremony whipped them severely; on inquiring into the nature of such summary justice, we learnt that this man was an officer well known to this and many other tribes. His duty is to keep the peace, and the whole interior police of the village is confided to two or three of these officers, who are named by the chief and remain in power some days, at least till the chief appoints a successor ; they seen to be a sort of constable or sentinel, since they are always on the watch to keep tranquillity during the day, and guarding the camp in the night. The short duration of their office is compensated by its authority: his power is supreme, and in the suppression of any riot or disturbance no resistance to him is suffered : his power is sacred, and if in the execution of his duty he strikes even a chief of the second class, he cannot be punished for this salutary insolence. In general they accompany the person of the chief, and when ordered to any duty, however dangerous, it is a point of honour rather to die than to refuse obedience. Thus, when they attempted to stop us yesterday, the chief ordered one of these men to take possession of the boat; he immediately put his arms round the mast, and, as we understood, no force except the command of the chief would have induced him to release his Like the other men their bodies are blackened, but their distinguishing hoid. mark is a collection of two or three raven skins fixed to the girdle behind the liack in such a way, that the tails stick out horizontally from the body. On his head too is a raven skin split into two parts, and tied so as to let the beak project from the forehead.

Thursday, September 27. We rose early, and the two chiefs took off, as a matter of course and according to their custom, the blanket on which they had slept. To this we added a peck of corn as a present to each. Captain Lewis and the chiefs went on shore to see a part of the nation that was expected, but did not come. He returned at two o'clock, with four of the chiefs and a warrior of distinction, called Wadrapa, (or on his guard); they examined the boat and admired whatever was strange, during half an hour, when they left it with great reluctance. Captain Clarke accompanied them to the lodge of the grand chief, who invited them to a dance, where, being joined by Captain Lewis, they remained till a late hour. The dance was very similar to that of yesterday. About twelve we left them, taking the second chief and one principal warrior on board : as we came near the boat the man who steered the perioque, by mistake, brought her broadside against the boat's cable, and broke it. We called up all hands to their oars; but our noise alarmed the two Indians: they called out to their companions, and immediately the whole camp crowded to the shore; but after half an hour they returned, leaving about sixty men near us. The alarm given by the chiefs was said to be that the Mahas had attacked us, and that they were desirous of assisting us to repel them; but we suspected that they were afraid we meant to set sail, and intended to prevent us from doing so; for in the night the Maha prisoners had told one of our men, who understood the language, that we were to be stopped. We therefore, without giving any indication of our suspicion, prepared every thing for an attack, as the loss of our anchor obliged us to come to near a falling bank, very unfavourable for defence, We were not mistaken in these opinions; for when in the morning,

Friday, September 28, after dragging unsuccessfully for the anchor, we wished to set sail, it was with great difficulty that we could make the chiefs leave the boat. At length we got rid of all except the great chief; when just as we were setting out, several of the chief's soldiers sat on the rope which held the boat on the shore. Irritated at this we got every thing ready to fire on them if they persisted, but the great chief said that these were his soldiers and only wanted some tobacco. We had already refused a flag and some tobacco to the second chief, who had demanded it with great importanity; but willing to leave them without going to extremities, we threw him a carrot of tobacco; saying to him, "You have told us that you were a great man, and have influence; now show your influence, by taking the rope from those men, and we will then go

without any further trouble." This appeal to his pride had the desired effect; he went out of the boat, gave the soldiers the tobacco, and pulling the rope out of their hands delivered it on board, and we then set sait under a breeze from the S. E. After sailing about two miles we observed the third chief beckoning to us: we took him on board, and he informed us that the rope had been held by the order of the second chief, who was a double-faced man. A little farther on we were joined by the son of the chief, who came on board to see his father. On his return we sent a speech to the nation, explaining what we had done, and advising them to peace; but if they persisted in their attempts to stop us, we were willing and able to defend ourselves. After making six miles, during which we passed a willow island on the south and one sandbar, we encamped on another in the middle of the river. The country on the south side was a low prairie, that on the north highland.

September 29. We set out early, but were again impeded by sandbars, which made the river shallow; the weather was however fair; the land on the north side low and covered with timber. contrasted with the bluffs to the south. At nine o'clock we saw the second chief and two women and three men on shore, who wished us to take two women offered by the second chief to make friends, which was refused; he then requested us to take them to the other band of their nation, who were on the river not far from us: this we declined; but in spite of our wishes they followed us along shore. The chief asked us to give them some tobacco; this we did, and gave more as a present for that part of the nation which we did not see. At seven and a half miles we came to a small creek, on the southern side, where we saw great numbers of elk, and which we called Notimber creek from its bare appearance. Above the mouth of this stream, a Ricara band of Pawnees had a village five years ago: but there are no remains of it except the mound which encircled the town. Here the second chief went on shore. We then proceeded, and at the distance of eleven miles encamped on the lower part of a willow island, in the middle of the river, being obliged to substitute large stones, in the place of the anchor which we lost.

September 30. The wind was this morning very high from the south-east, so that we were obliged to proceed under a double-reefed mainsail, through the rain. The country presented a large low prairie covered with timber on the north side; on the south, we first had high barren hills, but after some miles it became of the same character as that on the opposite side. We had not gone far when an Indian ran after us, and begged to be carried on board as far as the Ricaras, which we refused: soon after, we discovered on the hills at a distance, a great number of Indians, who came towards the river and encamped a-head of us.

We stopped at a sandbar, at about eleven miles, and after breakfasting proceeded on a short distance to their camp, which consisted of about four hundred souls. We anchored one hundred vards from the shore, and discovering that they were Tetons belonging to the band which we had just left, we told them that we took them by the hand, and would make each chief a present of tobacco; that we had been badly treated by some of their band, and that having waited for them two days below, we could not stop here, but referred them to Mr. Durion for our talk and an explanation of our views: they then apologized for what had past, assured us that they were friendly, and very desirous that we should land and eat with them: this we refused, but sent the perioque on shore with the tobacco, which was delivered to one of the soldiers of the chief, whom we had on board. Several of them now ran along the shore after us, but the chief threw them a twist of tobacco, and told them to go back and open their ears to our councils; on which they immediately returned to their lodges. We then proceeded past a continuation of the low prairie on the north, where we had large quantities of grapes. and on the south saw a small creek and an island. Six miles above this, two Indians came to the bank, looked at us about half an hour, and then went without speaking over the hills to the south-west. After some time, the wind rose still higher, and the boat struck a log, turned, and was very near taking in water. The chief became so much terrified at the danger, that he hid himself in the boat, and as soon as we landed got his gun and told us that he wanted to return, that we would now see no more Tetons, and that we might proceed unmolested: we repeated the advice we had already given, presented him with a blanket, a knife, some tobacco, and after smoking with him he set out. We then continued to a sandbar on the north side, where we encamped, having come twenty and a half miles. In the course of the day we saw a number of sandbars which impede. the navigation. The only animal which we observed was the white gull, then in great abundance.

October 1st, 1804. The weather was very cold and the wind high from the south-east during the night, and continued so this morning. At three miles distance, we had passed a large island in the middle of the river, opposite to the lower end of which the Ricaras once had a village on the south side of the river: there are, however, no remnants of it now, except a circular wall three or four feet in height, which encompassed the town. Two miles beyond this island is a river coming in from the south-west, about four hundred yards wide; the current gentle, and discharging not much water, and very little sand: it takes its rise in the second range of the Cote Noire or Black mountains, and its general course is nearly éast; this river has been occasionally called Dog river, under a mistaken opinion that its French name was Chien, but its true appellation is Chayenne, and it derives this title from the Chayenno Indians: their history is the short and melancholy relation of the calamities of almost all the Indians. They were a numerous people and lived on the Chayenne, a branch of the Red river of Lake Winnipeg. The invasion of the Sioux drove them westward; in their progress they halted on the southern side of the Missouri below the Warreconne, where their ancient fortifications still exist; but the same impulse again drove them to the heads of the Chayenne, where they now rove, and occasionally visit the Ricaras. They are now reduced, but still number three hundred men.

Although the river did not seem to throw out much sand, yet near and above its mouth we find a great many sandbars difficult to pass. On both sides of the Missouri, near the Chayenne, are rich thinly timbered lowlands, behind which are bare hills. As we proceeded, we found that the sandbars made the river so shallow, and the wind was so high, that we could scarcely find the channel, and at one place we were forced to drag the boat over a sandbar, the Missouri being very wide and falling a little. At seven and a half miles we came to at a point, and remained three hours, during which time the wind abated: we then passed within four miles, two creeks on the south, one of which we called Centinel creek, and the other Lookout creek. This part of the river has but little timber; the hills are not so high, as we have hitherto seen, and the number of sandbars extends the river to more than half a mile in breadth. We continued about four and a half miles further, to a sandbar in the middle of the river, where we spent the night, our progress being sixteen miles. On the opposite shore, we saw a house among the willows, and a boy, to whom we called, and brought him on board. He proved to be a young Frenchman in the employ of a Mr. Valle, a trader, who is now here pursuing his commerce with the Sioux.

Tuesday, October 2. There had been a violent wind from the S. E. during the night, which having moderated, we set sail with Mr. Valle, who visited us this morning and accompanied us for two miles. He is one of three French traders who have halted here, expecting the Sioux who are coming down from the Ricaras, where they now are, for the purposes of traffic. Mr. Valle tells us that he passed the last winter three hundred leagues up the Chayenne, under the Black mountains. That river he represents as very rapid, liable to sudden swells, the bed and shores formed of coarse gravel, and difficult of ascent even for cances. One hundred leagues from its mouth it divides into two branches, one coming from the south, the other at forty leagues from the junction enters the Black mountains. The land which it waters from the Missouri to the Black mountains, resembles the country on the Missouri, except that the former has even less tittber, and of that the greater proportion is cedar. The Chayennes reside chiefly on the heads of the river, and steal horses from the Spanish settlement, a plundering excursion which they perform in a month's time. The Black mountains, he observes, are very high, covered with great quantities of pine, and in some parts the snow remains during the summer. There are also great quantities of goats, white bear, prairie cocks, and a species of animal which from his description must resemble a small elk, with large circular horns.

At two and a half miles we had passed a willow island on the south, on the north side of the river were dark bluffs, and on the south low rich prairies. We took a meridian altitude on our arrival at the upper end of the isthmus of the bend, which we called the Lookout bend, and found the latitude to be 44° 19' 36". This bend is nearly twenty miles round, and not more than two miles across.

In the afternoon we heard a shot fired, and not long after observed some Indians on a hill : one of them came to the shore and wished us to land, as there were twenty lodges of Yanktons or Boisbrule there; we declined doing so, telling him that we had already seen his chiefs, and that they might learn from Mr. Durion the nature of the talk we had delivered to them. At mine miles we came to the lower point of a long island on the north, the banks of the south side of the river being high, those of the north forming a low rich prairie. We coasted along this island, which we called Caution island, and after passing a small creek on the south, encamped on a sandbar in the middle of the river, having made twelve miles. The wind changed to the north-west, and became very high and cold. The current of the river is less rapid, and the water though of the same colour contains less sediment than below the Chayenne, but its width continues the same. We were not able to hunt to-day; for as there are so many Indians in the neighbourhood, we were in constant expectation of being attacked, and were therefore forced to keep the party together and be on our guard.

Wednesday, October 3. The wind continued so high from the north-west, that we could not set out till after seven : we then proceeded till twelve o'clock, and landed on a bar towards the south, where we examined the perioques, and the forecastle of the boat, and found that the mice had cut several bags of corn, and spoiled some of our clothes : about one o'clock an Indian came running to the shore with a turkey on his back : several others soon joined him, but we had no intercourse with them. We then went on for three miles, but the ascent soon became so obstructed by sandbars and shoal water, that after attempting in vain several channels, we determined to rest for the night under some high bluffs on. the south, and send out to examine the best channel. We had made eight miles along high bluffs on each side. The birds we saw were the white gulls and the brant which were flying to the southward in large flocks.

Thursday, 4th. On examination we found that there was no outlet practicable for us in this channel, and that we must retread our steps. We therefore returned three miles, and attempted another channel, in which we were more fortunate. The Indians were in small numbers on the shore, and seemed willing had they been more numerous to molest us. They called to desire that we would land, and one of them gave three yells and fired a ball a-head of the boat : we however took no notice of it, but landed on the south to breakfast. One of these Indians swam across and begged for some powder; we gave him a piece of tobacco only. At eight and a half miles we had passed an island in the middle of the river, which we called Goodhope island. At one and a half mile we reached a creek on the south side about twelve yards wide, to which we gave the name of Teal creek. A little above this is an island on the north side of the current, about one and a half mile in length and three quarters of a mile in breadth. In the centre of this island is an old village of the Ricaras, called Lahoocat; it was surrounded by a circular wall, containing seventeen lodges. The Ricaras are known to have lived there in 1797, and the village seems to have been deserted about five years since; it does not contain much timber. We encamped on a sandbar making out from the upper end of this island; our journey to-day being twelve miles.

Friday, October 5. The weather was very cold : yesterday evening and this morning there was a white frost. We sailed along the highlands on the north side, passing a small creek on the south, between three and four miles. At seven o'clock we heard some yells and saw three Indians of the Teton hand, who asked us to come on shore and begged for some tobacco; to all which we gave the same answer as hitherto. At eight miles we reached a small creek on At fourteen we passed an island on the south, covered with wild rye. the north. and at the head a large creek comes in from the south, which we named Whitebrant creek, from seeing several white brants among flock's of dark-coloured ones. At the distance of twenty miles we came to on a sandbar towards the north side of the river, with a willow island opposite; the hills or blaffs come to the banks of the river on both sides, but are not so high as they are below ; the river itself however continues of the same width, and the sandbars are quite as numerous. The soil of the banks is dark coloored, and many of the bluffs have the appearance of being on fire. Our game this day was a deer, a prairie welf, and some goats out of a flock that was swimming across the river.

Saturday, October 6. The morning was still cold, the wind being from the north. At eight miles we came to a willow island on the north, opposite a point of timber, where there are many large stones near the middle of the river, which seem to have been washed from the hills and high plains on both sides, or driven front a distance down the stream. At twelve miles we halted for dinner at a village which we suppose to have belonged to the Ricaras: it is situated in a low plain on the river, and consists of about eighty lodges, of an octagon form, neatly covered with earth, placed as close to each other as possible, and picketed round. The skin canoes, mats, buckets, and articles of furniture found in the lodges, induce us to suppose that it had been left in the spring. We found three different sorts of squashes growing in the village; we also killed an elk near it, and saw two wolves. On leaving the village the river became shallow, and after searching a long time for the main channel, which was concealed among sandbars, we at last dragged the boat over one of them rather than go back three miles for the deepest channel. At fourteen and a half miles we stopped for the night on a sandbar, opposite a creek on the north, called Otter creek, twenty-two yards in width, and containing more water than is common for creeks of that size. The sides of the river during the day are variegated with high bluffs and low timbered grounds on the banks: the river is very much obstructed by sandbars. We saw geese, swans, brants and ducks of different kinds on the sandbars, and on shore numbers of the prairie hen; the magpie too is very common; but the gulls and plover, which we saw in such numbers below. are now quite rare.

Sunday, October 7. There was frost again last evening, and this morning was cloudy and attended with rain. At two miles we came to the mouth of a river; called by the Ricaras, Sawawkawna, or Pork river: the party who examined it for about three miles up, say that its current is gentle, and that it does not seein to throw out much sand. Its sources are the first range of the Black monitains, and though it has now only water of twenty yards width, yet when ull to occupies minety. Just below the mouth is another village or wintering ramp of the Ricaras, composed of about sixty lodges, built in the same form as those passed yesterday, with willow and straw mats, baskets and buffaloe-skin canoes reliabling entire in the camp. We proceeded under a gentle breeze from the south were what of the lodge of Tartongawaka, or Buffaloe Medicine, the Tetoh which we had seen on the twenty-fifth, that they were on the way to the Ricaras, and begged us for something to eat, which we of course' gave them. At seven and a balf miles is a willow island on the north, and
