Superintendent, Rear-Adm. A. H. Scales, U.S. Navy.

THE LEGISLATURE.

The Legislative power is vested in two Houses, the Senate and the House of Representatives, the President having a *veto* power, which may be overcome by a two-thirds vote of each House. The Senate is composed of two Senators from each State, elected by the people thereof for the term of six years, and each Senator has one vote; and Representatives are chosen in each State, by popular vote, for two years. The number of Representatives for each State is allotted in proportion to its population—at present 1 for 211,877. The *Senate* consists of 96 members. The salary of a Senator is $7,500 per annum, with mileage at 20 cents per mile, coming and returning, for each regular session. The *House of Representatives* consists of 435 representatives and territorial delegates. The salary of a Representative is $7,500 per annum, with mileage as for Senators.

THE SIXTY-FIFTH CONGRESS.

President of the Senate, Thomas R. Marshall, *Ind.* $12,000
President (pro tempore), Albert B. Cummins, *Iowa* .....
Speaker of the House of Representatives, Frederick H. Gillett, *Mass.* 12,000

THE JUDICATURE.

The *Federal Judiciary* consists of three sets of Federal Courts: (1) The *Supreme Court* at Washington, D.C., consisting of a Chief Justice and eight Puisne Judges, with original jurisdiction in cases affecting Ambassadors, &c., or where a State is a party to the suit, and with appellate jurisdiction from inferior Federal Courts. (2) The *Circuit Courts of Appeal*, dealing with appeals from District Courts, and consisting of the Justice of the Supreme Court for the Circuit and all the Circuit and District Judges within the circuit. (3) The *District Courts*, eighty-seven in number, served by a District Court Judge.

THE SUPREME COURT.

(The Capitol, Washington, D.C.)

Chief Justice, Edward D. White, *La.*, *born* 1845, *appld.* 1910 ..... $15,000

Associate Justices (each $14,500.)

Name.	Born.	Apptd.
Joseph McKenna, *Cal.*	1843	1898
Oliver W. Holmes, *Mass.*	1841	1902
William R. Day, *Ohio*	1849	1903
Willis Van Devanter, *Wyo.* ...	1859	1910
Mahlon Pitney, *N.J.*	1858	1912
James C. McReynolds, *Tenn.*	1862	1914
Louis D. Brandeis, *Mass.*	1856	1916
John H. Clarke, *Ohio*	1857	1916

Supreme Court Officers.

Clerk, James D. Maher, *D.C.* $6,000
Marshal, Frank K Green, *D.C.* 4,500
Reporter, Ernest Knaebel, *Colo.* 4,500

DEFENCE.

The President is Commander-in-Chief of both Navy and Army, the former being controlled by a Secretary of the Navy, and the latter by a Secretary of War.

PRINCIPAL WARS OF THE U.S.

Name of War.	Troops Engaged.
War of Independence, 1775-1783	309,792
North Western Indian, 1790-1795.....	8,983
War with France, 1798-1800	4,593
War with Tripoli, 1801-1805	3,330
War with Britain, 1812-1815	576,622
Creek Indian, 1813-1814	13,781
Seminole Indian, 1817-1818	6,911
Black Hawk Indian, 1832	6,465
Cherokee Indian, 1833-1839	9,494
Seminole Indian, 1835-1842.....	41,122
Creek Indian, 1836-1837	13,418
War with Mexico, 1846-1848	112,230
Texas Indian, 1849-1856	6,465
Oregon Indian, 1851-1856	7,229
Civil War, 1861-1866	2,778,304
Confederate Troops	750,000
Spanish American, 1898-1899.....	312,523
Philippine Rebellion, 1899 1902	140,038
Relief of Chinese Legations, 1900-1901	6,913
World War, 1917-1918	4,237,348

THE ARMY OF THE U.S.

Under the provisions of the Act of Congress, approved June 4, 1920, the enlisted strength of the Regular Army, including the Philippine Scouts, must not exceed 280,000, except in time of war or similar emergency, when the public safety demands it. By the same Act the commissioned strength of the Army is limited to 17,717 officers. The actual strength of the Army of the U.S. on Aug. 31, 1920, included 14,538 officers and 194,480 enlisted men, of whom 888 officers and 14,495 enlisted men were on duty in Europe.

U.S. WAR PENSIONS, 1880-1920.

Year	Number of Pensioners on Roll			Total Payments.
	Invalids.	Widows, &c	Total.	
				$
1880	145,410	105,392	250,802	56,689,229
1890	415,654	122,290	537,944	106,093,850
1900	752,510	241,019	993,529	138,462,130
1905	727,761	280,680	998,441	141,142,861
1910	602,180	318,903	921,083	159,974,056
1915	437,448	310,699	748,147	165,518,266
1916	403,120	306,452	709,572	159,155,090
1917	369,936	303,175	673,111	160,895,054
1918	340,318	306,582	646,895	179,835,329
1919	313,140	311,287	624,427	222,159,292
1920	285,110	307,080	592,190	213,295,314

The total disbursement in pensions since the War of Independence is $5,830,815,714, of which $5,502,445,815 has been paid on account of the Civil War. The cost of maintenance and expenses of administration in 1920 amounted to $1,395,014.

Disbursements in claims arising out of service in the World War subsequent to Oct. 6, 1917, are not included in the above totals, as such claims are adjudicated in the Bureau of the War Risk Insurance, Treasury Department, which has jurisdiction over such matters.

THE NAVY OF THE U S

The three year building programme initiated in the Act of August 29 1916, provided for the following construction —

	1916	1917	1918	Totals
Battleships	4	3	3	10
Battle Cruisers	4	1	1	6
Scout Cruisers	4	3	3	10
Destroyers	20	15	15	50
Fleet Submarines	—	—	9	9
Coast Submarines	30	18	10	58
Fuel Ships	1	—	2	3
Repair ship	—	—	1	1
Transport	—	—	1	1
Hospital ship	1	—	—	1
Destroyer Tenders	—	1	1	2
Submarine Tender	—	1	—	1
Ammunition ships	1	—	1	2
Gunboats	1	—	1	2

With the exception of 12 destroyers six of the fleet submarines and the transport all of the above are under construction and a large percentage of the destroyers and submarines together with one gunboat and several of the Auxiliaries are already in service

In addition to the vessels listed 20 coast submarines were specifically authorised in March 1917 and under emergency appropriations made at that time supplemented by later Acts six more submarines were purchased in knock down condition, and orders were placed for 235 35 knot destroyers (six of which were later cancelled) 112 *Eagle* patrol vessels undertaken by the Ford Motor Co (12 for the Italian Government, which were cancelled together with 40 for the Navy), 448 sub chasers (100 being for France and seven others never completed) 25 fleet tugs (six cancelled), 54 minesweepers (five cancelled) and 56 harbour and motor tugs

There were also built 12 large tankers on Emergency Fleet contracts intended for naval use, five of which have been retained in the naval service together with some 20 auxiliary vessels acquired by purchase or seizure during the war Of the 341 sub chasers built for the Navy all but 115 have been sold, scheduled for sale or otherwise disposed of

All information as to characteristics costs &c, available for publication concerning naval vessels may be found in the Ship Data Book for any comparisons desired

No further new construction has been authorised since 1918 the only appropriations made being applied to the building programme already in progress with the exception of funds provided for the conversion of the collier *Jupiter* into an aircraft carrier, which has been renamed *Langley* in memory of a pioneer in flying machine construction the conversion of two merchant vessels into aircraft tenders, one of which to be named the *Wright* in memory of Wilbur Wright, the first successful aviator, is now in hand and the conversion of the old battleship *Kearsarge* into a powerful 250 ton crane ship

EDUCATION

State School Systems, 1917–1918

In 1917–18 the total number of children in the United States 5 to 18 years of age was 27,686,476, of whom 20,833,526 (10 349 466 boys and 10,504,850 girls) were enrolled in public elementary and secondary schools, and 1,915,125 were estimated to be enrolled in private elementary and secondary schools The average daily attendance in the public schools was 15 548,914, the average length of school term was 160 7 days and the average number of days attended by each pupil enrolled was 119 8 days In 1917 18, 650 709 teachers (105 194 men and 545 515 women) were employed the average annual salary of all teachers being $635 The total number of buildings used as school houses was 276 827 and the estimated value of all public school property was $1 983 508 818

The total money received for school purposes excluding balances on hand and proceeds of bond sales was $802 613 168. Of this amount $17 678 572 was received from permanent school funds and from the rent of school lands $124 625 159 from State taxes or State appropriation $414 799 893 from local taxation or appropriation and $31 794 505 from all other sources State and local The total payments excluding payments of bonds was $640 717 053. This amount includes expenditures for general professional and business control aggregating $85 179 311 salaries of teachers supervisors and principals $421 084 254 text books and other instruction supplies, $23 053 792 miscellaneous current expenses $175 277 788 composed of operation of school plant $112 011 558 maintenance of school plant $20 946 848 auxiliary agencies $21 463 281 fixed charges $5 701,516, interest on indebtedness $15 154 585 and outlays—sites, new buildings and equipment $119 082 944

Compulsory Attendance Laws 1917 18

Every State in the Union has a compulsory school attendance law In general children are obliged to attend school from 7 to 14 years of age and from 14 to 16 must attend school or secure employment certificates The required attendance each year varies from forty days in one State to the full term in twenty eight States Nearly all States have officers charged with enforcing the compulsory attendance law known in the majority of States as the truant or attendance officer

Colleges Universities and Technological Schools 1917 18

Of the 554 colleges universities and technological schools 111 are public institutions and 443 are under private control or management The public institutions enrolled 106 181 undergraduate and graduate students (62 162 men and 44 019 women) The private schools enrolled 147 742 undergraduate and graduate students (80 436 men and 67 306 women) Of the 554 institutions 124 were for men 100 for women and 330 were co educational

The total number of instructors in public and private universities colleges and technological schools was 36,522 (29 509 men and 7 013 women) In general engineering 7 203 students were enrolled in chemical engineering 4 548 in civil engineering 5,108, in electrical engineering 5 683, in technical engineering 5 944 and in mining engineering 1 298.

The total number of baccalaureate degrees conferred in 1917 18 was 28,052 (14 320 men and 13,332 women) altogether 3 480 graduate degrees were conferred (2,320 men and 1,160 women). 736 honorary degrees were conferred

The total receipts for all universities, colleges and technological schools in 1917-18 aggregated $152,802,955. The total receipts, exclusive of additional to endowments, were $137,055,415 The number of volumes in the libraries of these institutions was 23,025,736. It was estimated that the value of libraries, scientific apparatus, machinery, and furniture was $89,766,793 value of grounds, $104,069,481, value of buildings, including dormitories, $329,987 558, the value of dormitories, $55,143,845, and the value of productive funds, $481,085,852 During the year the total benefactions received was $10,704,805

Normal Schools 1917 18

In 1917-18, 308 normal schools reported These schools are chiefly concerned with the training of elementary teachers Of this number 172 are State institutions, 34 city normal schools, 45 county normal schools and 57 private normal schools The total number of instructors in all these schools is 8,552 Of this number 4,949 are engaged in instructing pupils in normal courses The total number of students enrolled is 138 174 (21,287 men and 116,887 women) Of this total enrolment, 110 c students are in normal training courses I number of graduates from the normal training courses was 2 170 men and 22 331 women making a total of 24 501 Practice or model schools are usually operated in connexion with these normal schools, or the public schools are used for this purpose The total enrolment in these model schools was 83,602 The total receipts for normal schools were $22 728 203 The total number of volumes in the libraries was 2 172 627 The statistics show that the number of State normal schools has gradually increased, while the number of private normal schools has rapidly decreased The city and county normal schools are new institutions The total number of such schools throughout the United States is not represented in the report inasmuch as many of these schools have been organised very recently The average cost per week per student in attendance for maintaining a State normal school is $6 43 cents

Summer Schools, 1918.

In 1918, 480 summer schools were maintained Of this number 358 schools were conducted by colleges universities and normal schools 104 universities and 109 colleges are included in the total The total number of instructors employed in these summer schools was 11 960 (7,472 men and 4 488 women) In addition to the instructors 1 762 lecturers were reported The total number of students enrolled in these summer schools was 160 422 (33,445 men and 126,977 women) The average cost of conducting summer schools per student enrolled in 1918 was $24.14 The corresponding cost for 1916 was $17 85

One hundred and fifty eight colleges, universities and normal schools maintained a 6-weeks course, 44 an 8-weeks course, 20 a 9-weeks course and 37 an 12-weeks course There appears to be a tendency for institutions of this type to offer an 8, 9, 10 or 11 weeks course. Altogether 272 institutions offered work accredited for degrees. The greater number of these summer schools have a small enrolment Fifty per cent of the schools enroll only 10 per cent. of the student body One school has an enrolment of over 6,000 students

Professional Schools, 1917-18.

2,369 graduates, schools of medicine enrolled 13,802 students and reported 2,423 graduates, schools of dentistry enrolled 8 314 students and reported 2 634 graduates, schools of pharmacy enrolled 4,053 students and reported 1,134 graduates and schools of veterinary medicine enrolled 1 250 students and reported 475 graduates

Nurse Training Schools, 1917-18.

The number of nurse training schools has increased very rapidly since 1893 At that time only 47 schools were in existence In 1918 the number of such schools was 1 776 The number of pupils enrolled in these schools in 1918 was 55,251, and the number graduating 13 751 These nurse training schools are of two types 1 Those schools which are more or less general in nature, or which are highly specialised, which treat physical rather than mental disorders 2. Schools in hospitals for insane patients The general training schools number 1 680 while the number of schools connected with hospitals for the insane is 86 The figures relate only to hospitals which maintain nurse training departments The capacity of the hospitals in which these schools are located is 303,193 beds, and the average daily number of patients is 225,899 In the general hospitals there are ordinarily from one to three patients to each nurse pupil in training In the hospitals for the insane, the corresponding number usually exceeds ten The nurse training schools in general hospitals are usually small About half of them do not enroll more than twenty nurse pupils Within the last seven years the age requirement for admission has been lowered about two years In 1911 most schools required either a minimum of 20 or 21 years for admission In 1918 a large majority of schools required a minimum of only 18 or 19 years In general hospitals the greatest number of schools require ten hours of duty daily, 689 schools having this requirement, 434 schools require nine hours of duty and 232 schools eight hours of duty In hospitals for the insane, the number of hours of duty required is usually ten or more 18 schools require 12 hours of duty, 8 require 13 and 6 require 14

The remuneration granted to pupils in general hospitals is usually less than two hundred dollars ($200) In the first year 84 per cent of the schools pay under $100 in the second year 65 per cent of the schools pay under $100 in the third year of the course 54 per cent pay under $100 In schools in hospitals for the insane the remuneration usually exceeds $200 In the first year of the course, half the schools pay from $300 to $400, in the second year of the course, 45 per cent of the schools pay from $300 to $400, and 40 per cent pay over $400 in the third year of the course over half the schools pay over $400, and about 40 per cent pay from $300 to $400

Almost 90 per cent of all nurse training schools in general hospitals offer a three year course. About 10 per cent offer a two year or two-and-one-half year course Within the last few years practically all nurse training schools have

lengthened their course to three years and usually require attendance for 50 weeks during the year In hospitals for the insane, about 60 per cent. of the schools offer a three year course, and about 40 per cent offer a two year course Forty three per cent of the general nurse training schools require one year of high school work for admission, 17 per cent require two years of high school work for admission 28 per cent require a full high school course and 12 per cent require only the completion of the elementary grades for admission Within the past few years the tendency has been to require either one or two years of high school work for admission The statistics indicate a difficulty in securing nurse pupils within the last few years, on account of the lengthening of the course, and that it has been necessary to increase the remuneration, and to lower entrance requirements

In all 27 universities and colleges offer nurse training courses Each of them offers the course to nurse pupils registered in a nurse training school of a hospital affiliated with the college or university By this co operation an excellent opportunity is afforded to the training school to secure for their pupils a high type of instruction in technical and academic subjects

Public High Schools 1917 18

In 1917 18, 13 951 public high schools reported The total number of instructors in these secondary schools was 84 822 (28 781 men and 56 041 women) The total number of secondary students enrolled in these schools was 1 735 619 (747 778 boys and 987 841 girls) The total number of coloured students included in the preceding figures is 21 [illegible] Altogether 1 246 523 students were enrolled in academic courses 278 275 in commercial courses 96 833 in technical or manual training courses 26 675 in teacher training courses 38 728 in agricultural courses, and 101 987 in home economics courses In the first year of the course 654 935 students were enrolled in the second year 441 868 in the third year 309 208 and in the fourth year 239 160 students Altogether 1,865 schools reported military drill in which 106 986 boys and 1 252 girls were enrolled The number of graduates reported was 224 367 (86,911 boys and 137 456 girls)

Of the 13 951 public high schools 6 866 are fully accredited for admission to college In these fully accredited high schools there are 66 919 teachers and 1 463 775 students (637 611 boys and 826 464 girls) There were 10 638 high schools that reported a four year curriculum In these four year high schools there are 79 083 teachers and 1 654 600 pupils enrolled (714 696 boys and 939 904 girls)

Altogether 12,631 public high schools reported school libraries with an aggregate of 8 716 863 volumes

These statistics on public high schools are in the section on State School Systems By deducting these figures from the totals given in that section the statistics of elementary schools may be secured

Private High Schools and Academies 1917–18

The number of pupils in private high schools and academies, in general, has increased slowly but steadily The increase has been about proportional to the increase in population In 1900 the number of students enrolled in these schools was 110,797 In 1917 18 the number enrolled was 158 745 The number of schools reporting in 1900 was 1,976, and the number reporting in 1918 was 2,058 The total number of instructors in these private high schools in 1918 was 14 199 (4 11 men and 8,788 women) In this group of schools more than any other, there is a tendency for the schools to be either for boys or girls exclusively rather than co-educational Of the 2 058 schools reporting in 1918, 390 were for boys only 732 were for girls only, and 936 were co educational The number of boys schools has not increased materially since 1902 while the number of schools for girls has increased almost 50 per cent There has been a decrease in the number of co educational schools Many of the schools for boys as well as some of the co educational schools offer military drill Altogether, about one fourth of the schools had military drill in 1918 enrolling 31 532 students Of this number 2 639 were girls In 1916 the number of boys taking this work was 10 324 Within the past two years the enrolment in military drill in these schools has been tripled The number of coloured students enrolled in these schools in 1918 was 9 107 The total number of graduates from these institutions was 23 832 The average size of the faculty was 6 9 per cent The average number of students to a school was 71 1 per cent The average number of students to a teacher 11 3 per cent

The number of students enrolled in the first year of these private high schools was 36 6 per cent of the total number in the second year 25 7 per cent in the third year 19 5 per cent and in the fourth year, 18 2 per cent

Altogether 2 019 schools offered an academic course 872 commercial, 194, technical or manual training 281, teacher training, 152 agricultural 411 home economics, and 118 a trade training course

580 of these private schools were non sectarian and 1 478 were denominational (940 Roman Catholic)

Of the total number of students enrolled 45 5 per cent were boys and 54 5 per cent were girls

The number of Negro girls enrolled in these schools was about twice as many as the number of Negro boys there being 6,021 coloured girls and 3 086 coloured boys

Private Commercial Schools 1917 18

In 1918 reports were received from 890 private commercial and business schools These schools are of two types first those which are non sectarian and which are run on a commercial basis second those which are maintained by certain denominations and by Young Men's Christian Associations The private non denominational schools reporting number 780, the denominational and Young Men's Christian Association schools number 110 The total number of instructors in these 890 schools is 5 240 (2 310 men and 2 930 women) The number of students enrolled is 289 579 (96,449 men and 193 130 women) The average daily attendance in these schools is 122 688 Altogether 841 schools report 182,614 students enrolled in day courses In night courses 106,165 students are enrolled in the 316 schools maintaining such courses In the commercial or bookkeeping course 69,532 students are enrolled; stenographic, 152 402 combined course, 48,482; telegraphic

(wire), 4,985, (wireless) 3 020 accountancy, 3,366, secretarial, 13,837, and in the salesmanship course, 3,992 Two hundred and forty eight schools have an enrolment less than 100 227 schools have an enrolment between 100 and 200 One half of the commercial schools enrol about 25 per cent of the students

The average number of students per instructor varies considerably in the different schools The largest group of schools have from 16 to 25 students per instructor

The average length of the daily session likewise varies considerably in the different schools Three hundred and fifty five schools are in session 5 hours per day, 253 schools are in session 6 hours per day

The usual tuition fee per month in the day course in the majority of schools varies from $10 to $15 for any course The tuition fee for the night course per month is generally $5 or $6 The usual tuition fee charged for the entire commercial or bookkeeping course or for the entire stenographic course varies from $60 to $80 The time usually required to complete the course is six months The tuition fee for the combined commercial and stenographic courses usually varies from $80 to $140 The tuition fee usually charged for a course in telegraphy (wire) is $60 to $80

The majority of these private commercial schools teach only one system of shorthand 547 schools falling in this class Two hundred and two schools teach two systems of shorthand Forty eight of the 76 schools having an enrolment of 500 students or more teach the Gregg system of shorthand Forty of these schools teach some Pitmanic system Altogether 64 4 per cent of the schools offer the Gregg system of shorthand and 44 per cent offer some Pitmanic system

Industrial Schools for Delinquents 1917 18

In 1918 135 industrial schools for delinquents reported to the Bureau of Education Most of these schools are State institutions Eleven are supported by counties and five by cities while two are supported jointly by a city and a county Thirty one of them are private institutions. In these reformatory institutions 1 137 teachers are employed (655 women and 482 men) In addition to the teachers 3 525 assistants caring for inmates are employed

In these schools 63 762 inmates were enrolled during the year (49 660 boys and 14 102 girls) In so far as reported there were 51 786 white children and 8,479 coloured children Seventy nine schools have an enrolment less than 300 the other schools vary in size from 300 to 2 500

The valuation of property per child in average attendance in industrial schools for delinquents in the United States is $1 645 This varies from $292 in the State having the lowest average to $5,069 in the State having the highest per capita valuation of property The amount spent annually in the United States for keeping an inmate in one of these institutions is $287 for current expenses, and $39 for permanent improvements

Schools for the Deaf, 1917-18

In 1917 18 reports were received from 155 schools for the deaf Of this number 68 schools are State institutions, 69 schools are maintained as a part of the city public school system, and 18 schools are under private control The total number of instructors in the three types of schools is 1 822 (1,421 women and 410 men teachers) The total number of pupils enrolled is 14,442 This total includes 11,316 pupils enrolled in State institutions 2,482 pupils in city day school classes, and 644 pupils in private schools The number of graduates from secondary schools in State institutions is 206, from secondary schools of city day school classes for the deaf 5 from private institutions 3 The average expenditure per pupil for current expenses in State institutions is $358 and in private institutions $238.

Schools for the Blind 1917-18

In 1918 62 schools for the blind reported a total enrolment of 5 386 pupils (2 867 boys and 2 519 girls) The number of instructors in these schools is 728 (527 women and 201 men) Fourteen States provide for the education of their deaf and blind in dual institutions that is, both deaf and blind pupils are educated in the same schools Altogether there are 15 such dual schools in the United States Ten of the schools for the blind included above are operated as a part of the city public school system Four schools are under private control The others are State schools or serve as State institutions The average annual cost per student in schools for the blind is $428

Schools for Feeble minded and Sub Normal Children 1917 18

Nearly all States provide schools for feeble minded children 43 schools of this type reported in 1918, 32 private schools also submitted a report Altogether 131 cities have organised classes for the teaching of sub normal and backward children The children in these schools are not usually feeble minded, but are retarded in their school work The number of instructors in State institutions was 425 in private institutions 121 and in public day school classes of city schools 1 134 The total number of inmates in State institutions was 35 968 (18 353 boys and 17 615 girls) in private institutions 983 (467 boys and 516 girls) in public day school classes of city schools, 18,133 (11 937 boys and 6 196 girls)

In State institutions 11 per cent of the pupils take music 26 per cent home economics 19 per cent manual training 11 per cent agriculture, and 13 per cent trade training courses In city day school classes 90 per cent of the pupils take music 27 per cent home economics 86 per cent manual training, 10 per cent. agriculture, and 12 per cent trade training courses In private schools 43 per cent take music, 24 per cent home economics 34 per cent manual training, 14 per cent agricultural courses and 4 per cent. trade training courses

FINANCE

The *ordinary* revenue and expenditure of the U S for the five years ended June 30 1920, are stated below (At *par* $4 867 = £1 sterling)

Year	Revenue	Expenditure.

* Prices Sept. 15; California not included in Peaches. † Price per pound.

100 acres, and about 1,500,000 between 20 and 50 acres. The total value of the farm produce of the United States in 1918 (preliminary figures) was estimated at $24,982,000,000—the greatest value ever yet reached, and an increase over 1918 of $2,503,000,000. Crops in 1919 were valued at $16,025,000,000, and animals and animal products at $8,957,000,000.

Wool.—The total number of fleeces in 1919 was [illegible] illed

produced in 1919 was estimated at $1,372,770,000 (pig iron, $809,246,000; copper, $243,761,000; gold, $58,488,000), and of non-metallic minerals the total value was $3,275,630,000 (bituminous coal (1918). $1,491,809,940; Pennsylvania anthracite (1918), $336,480,347; petroleum, $775,000,000; clay products, $260,790,000; stone, $115,000,000; natural gas, $159,650,000; cement, $145,058,000; and mineral paints, $24,600,900, exclusive of sublimated lead, value for which is included in total value of non-metallic products).

Manufactures.—The manufacturing establishments enumerated at the five-year Census of 1914 numbered 275,791, the value of their products being $24,246,435,000, as compared with a value in 1909 of $20,672,052,000. The leading manufacturing States are New York, Pennsylvania, Illinois, Ohio, and Massachusetts. The principal industrial centres are New York (clothing, printing and publishing, copper smelting and refining, slaughtering and meat packing, foundry and machine-shop products, petroleum refining, tobacco, sugar-refining, textiles); Chicago (meat, clothing, iron and steel); Philadelphia (textiles, foundry products and machinery, clothing, printing and publishing); Boston (boots and shoes, rubber, meat, printing and publishing); Pittsburg (iron and steel); Detroit (automobiles); St. Louis (meat, tobacco, shoes); Cleveland (iron and steel, automobiles, clothing); Baltimore (clothing, copper); Cincinnati (foundry products and machinery, meat, clothing); Buffalo (iron and steel, meat, flour); Minneapolis (flour mills, lumber, printing); San Francisco (meat, printing).

FEDERAL EMPLOYMENT BUREAUS.

Something like four years ago the Federal Government launched a comprehensive scheme for the purpose of bringing the jobless man and the manless job together. Authority for this undertaking was found in the Immigration Act of 1907, which created, as an adjunct to the Federal Bureau of Immigration, a Division of Information, the duty of which was to furnish information concerning opportunities for employment to aliens and other persons within the United States. With this as a nucleus, the Federal Department of Labour has established a nation-wide system of employment offices, which is achieving noteworthy success in its efforts towards effecting a solution of the problem of unemployment. The following figures show the work done by the Federal Employment Bureaus during the past four fiscal years ending June 30:—

	Number of applications for help.	Number of persons applied for	Number of applicants for places	Number referred to employment.	Number actually employed
1917	189,491	418,810	413,649	363,189	283,799
1918	750,472	2,993,798	2,381,392	2,112,139	1,890,593
1919	...	10,701,447	6,166,447	5,646,353	4,267,813
1920	...	3,165,559	2,589,145	2,458,809	2,018,858

PUBLIC ROADS

In 1917 the total length of public roads was 2,455,761 miles, the cost of their upkeep in 1914 being $174,921,157, or $71 05 per mile, or $1 70 per head of the inhabitants of the U.S.

SHIPPING.—On June 30, 1916, the mercantile marine of the U.S. consisted of 10 383 sailing vessels of 2,399,586 gross tons, 6 824 steam vessels of 5,895,095 gross tons a total of 26 444 vessels of 8,469 6 9 tons, and gas vessels of 9,237, of 174,968 gross tons. In the year ended June 30, 1918, sailing and steam vessels of 45 456,037 net tons entered at the various ports of the U.S., of this total 19 283,530 tons were American and 26,172,507 tons foreign. The numbers cleared from the various seaports were 2 916 267 tons sailing and 43,097,715 tons steam vessels, a total of 46,013,982 tons

POSTS AND TELEGRAPHS.—On June 30 1917, there were 55,418 post offices in the U.S. dealing with 18 567,445,160 "pieces of mail matter of all kinds (letters, postcards, newspapers packets, &c.) There were also 247 528 miles of telegraph line with 1,814,196 miles of wire

WEIGHTS, MEASURES, AND CURRENCY.

The *Weights and Measures* in common use are the same as those of the United Kingdom except that the old wine gallon (.8331 British gallon) and the Winchester bushel (.9694 British bushel) are retained. There is also a short ton of 2,000 lb., in addition to the long ton of 2,240 lb. The Metric System of Weights and Measures is permissive, but little used. The unit of *currency* is the *dollar* of 100 *cents*

In 1914 the value of the U.S. dollar was *d.* 49·32 (£1 = $4·867) in *English* currency; $1 = 5·1823 francs in *French* currency; and $1 = 4·2 marks in *German* currency. On Nov. 22, 1920, the *English* value of the U.S. dollar was *d.* 68·571 (£1 = $3·50).

Dependencies of the U S A

THE PHILIPPINE ISLANDS

are situated between 4° 40′ 21″ 10 N lat and 116° 40 126 34′ E. long, and are distant about 500 miles from the south east coast of the continent of Asia. Their total land area is 114 400 square miles, of which total 94 946 square miles are contained in the eight largest islands the 3 130 other islands having a combined area of 14,572 square miles

Population — At the Census of 1903 the population was ascertained to be 7 635 426 almost all of Malayan stock, of whom nearly 7 000 000 were Christians (Roman Catholics) about 275 000 were Muhammadans about 725 000 are pagans Of the foreign born residents about three quarters are Chinese, and of the white population over one half are from the U S A (8 200 in 1903) The population (Dec 31, 1918) was 10 350 640, of whom 9,495,272 were Christians

Government —The islands were discovered in 1521 by the Portuguese navigator Magellan, who was slain by the natives of Mactan. In 1542 Spain undertook the conquest of the islands, which were named "Filipinas," after the son of the King of Spain, and in 1571 the city of Manila was founded by the conquistador Legaspi, who subdued the inhabitants of almost all the islands, their conversion from barbarism and paganism being undertaken by the Augustinian friars in Legaspi's train In 1762 the capital of the Spanish colony was occupied by a British force but in 1764 the newly acquired territory was restored to Spain In the nineteenth century there were frequent disturbances in the islands and at the outbreak of the Spanish American War of 1898 a rebellion was at its height under Aguinaldo a native leader whose assistance was secured by Admiral Dewey the commander of the American Pacific fleet after the annihilation of the Spanish vessels in Manila Bay on May 1, 1898 Manila was captured by the American troops under General Wesley Merritt on Aug 13, 1898, and the Islands were ceded to the United States by the *Treaty of Paris* of Dec 10 1898

In 1920 the Philippine Scouts consisted of 234 officers and 8 360 enlisted men, there were also in the Islands on April 1, 1920, 538 officers and 13 223 enlisted men of the regular and emergency forces of the U S The Philippine constabulary consists of 374 officers and 6,352 enlisted men All the enlisted men in the scouts and constabulary (and almost all the officers) are natives of the Islands

Trade —The principal exports are hemp, cocoanut oil sugar, and tobacco, the imports being cotton manufactures, and iron and steel manufactures The total trade in 1919 was valued at $231,750,000

Towns —Capital, Manila, in the island of Luzon, population (Dec 31, 1918), 283,613. The next largest towns are Cebú 63,300), Albay

(53,105), and Iloilo (49,808), there are several others with populations from 25,000 to 40,000

Governor-General (Manila), Francis Burton Harrison.

Vice Governor General, Charles E Yeater

GUAM

Guam, the largest of the Ladrone or Marianne Islands in the North Pacific Ocean, lies in 13° 26 N lat and 144° 39′ E long, at a distance of about 1,506 miles east of Manila, the capital of the Philippine Islands, and forms a naval station between that dependency and the United States The area of the island is estimated at 225 square miles, with a population on July 1, 1919, of 14 635, of whom 13 623 are classed as native, 470 of the naval station and 542 other than native The natives are of Chamorro stock, mingled with Filipino and Spanish blood The language is a Malay dialect containing many Spanish words, but English is fast becoming the language of the island

CAPITAL, Agana Port of entry, Apra

Governor, Capt I C Wettengel, U S N

PUERTO RICO

Puerto Rico (Rich Harbour) is an island of the Greater Antilles group in the West Indies, and lies between 17° 50′–18° 30′ N lat and 65° 30′–67° 15′ W long, with a total area of 3 606 square miles and a population of 1,297,772 at the census of 1920 Almost all the inhabitants are Roman Catholics The island is about 100 miles from west to east, and 40 miles from north to south at the western end, narrowing towards the eastern extremity The capital is 1,400 miles distant from New York, and 982 miles from Key West Sugar is grown in the low lying districts, and tobacco and coffee on the slopes of the hills, fruits, cotton, maize, sweet potatoes, rice, and yams are also grown The trade is principally with the U S About 340 miles of railroad were in operation in 1919, and there are good harbours at San Juan and Ponce The capital, San Juan, had 70,707 inhabitants in 1920, other towns being Ponce (41,561), Mayaguez (19,069), Arecibo (10,039), Bayamon (10,411), and Caguas (12,154) The legislative functions are vested in a legislature which consists of 2 elective houses, the Senate, composed of 19 members (2 from each of the 9 senatorial districts and 5 senators at large), and the House of Representatives, composed of 39 members (1 from each of the 35 representative districts and 4 elected at large) The term of the Legislature is 4 years

Governor, Arthur Yager $10,000

TUTUILA

Under an agreement between Great Britain Germany,* and the U S, of Nov 14, 1899 the first named Power abandoned all claims to the islands of the Samoan Archipelago, which were divided by the remaining parties to the agreement, the islands east of 171° W. long being reserved to the U S The territory thus acquired consists of the island of Tutuila and Aunun, Ofu, Olosenga, Tau, and Rose Islands, with a total area of about 56 square miles and a population estimated at 7,250 in 1912.

Tutuila, the largest of the U.S group, has an area of about 40 square miles and a population of 5,250, and contains a magnificent harbour at Pago Pago, the capital and seat of government. The remaining islands have an area of about 16 square miles and a population of about 2,000, Rose Island being uninhabited. Copra and cocoa beans are exported.

Governor, Comdr. W. J Terhune, U S N.

WAKE AND JOHNSTON ISLANDS

The flag of the U S was hoisted on Wake Island in 1899, and three other islands in the Pacific have been annexed (Johnston, Palmyra, and Medway)

ALEUTIAN ISLANDS

The *Aleutian Islands*, or Catherine Archipelago (also known as the Santa Barbara group), lie westward of the district of Alaska, and consist of four groups of islands (Fox, Andreanof, Rat, and Near Islands) between 52°–53° N lat and 172° E –163° W long They have a population estimated at 2,000 The principal settlement is at Iliuliuk, on Unalaska Island The group forms a part of the district of Alaska, and was transferred to the U S by Russia in 1867

VIRGIN ISLANDS

The three islands, St Thomas, St John and St Croix, in the Virgin Island group West Indies, formerly the possessions of Denmark, were purchased by the United States from Denmark for the sum of $25,000,000, and proclaimed, January 25, 1917 The total area of the islands is 132 37 sq miles, with a population in 1911 of 27,086 *St Thomas* (18,080 acres) has a population of 10,191, mostly negroes, *St Croix*, or Santa Cruz (53,913 acres) has a population of 14,901, the capital being Christiansted (or Bassin); *St John* (959 acres) has a population of 960, the capital being Cruxbay St Croix exports sugar, rum, and cotton In St Thomas there are 8 public and 10 parochial schools, 1,705 pupils and 57 teachers, in St Croix, 7 public and 17 parochial schools, 1,906 pupils and 73 teachers, in St John, 5 public schools, 182 pupils and 9 teachers

The revenue is derived from customs, income tax, ground and building tax, trade tax, &c The estimated revenue for year ending June 30, 1920, Francs 859,405 The administration is under the Navy Department There is a regular fortnightly service from New York to St Thomas, which possesses a powerful wireless installation

CAPITAL, Charlotte Amalie (St Thomas) contains one of the finest harbours in the West Indies, accommodating vessels of large draught, and has a large coaling and oil refueling station

Governor, Rear-Adm Joseph W Oman, U S N

Secretary, Lieut C C Timmons U S N

THE PANAMA CANAL

The first suggestion for a canal across the Isthmus of Panama was made by a Spanish engineer in 1530, and surveys were actively engaged upon by various private companies between the years 1825 and 1890. In 1876 a concession for the construction of a canal was granted to a French promotion corporation, which conducted surveys during a period of two years, and reported to an international congress held at Paris in May, 1879, over which Ferdinand de Lesseps presided. This congress advised the construction of a canal at sea-level, and in 1881 the work was undertaken by the Universal Interoceanic Panama Canal Company, of which de Lesseps was nominal head. After two years of preparatory work, the first excavation was

* Under the *Treaty of Versailles*, 1919, the German Samoan Islands were allocated to New Zealand.

made on January 20, 1881. The amount of work to be accomplished proved to be greater than was estimated, and the conditions under which it was carried on more embarrassing. Sickness, interference of local officials, and mismanagement by the administration in Paris, resulted in the failure of the company, and a receiver was appointed in 1889. Under direction of the French courts a new company was formed to carry on the work, and, after a period of surveys, excavation was resumed in 1894. This was continued until May 4, 1904, when the United States Government took possession of the effects of the French company in Panama.

The interest of the United States in a canal across the Isthmus dates from 1825, and surveys under the auspices of that Government, or of companies organised in the United States, have been made at every available point between the Isthmus of Tehuantepec and the Atrato River. Actual construction, by an American company, of a canal across Nicaragua was begun in 1890, and abandoned in 1893, when the company failed for lack of funds. The failure of this company influenced the United States Government to take an active interest, and a commission was appointed in 1895 to make further studies and investigations. As a result of these investigations, the Congress of the United States authorised the President in 1902 to purchase the effects of the French company in Panama for $40,000,000. Meanwhile, a treaty was negotiated with the Government of Colombia for the cession, upon payment of $10,000,000, of the territory through which the canal was to be constructed. The failure of the Colombian Government to ratify this treaty led to the secession of Panama on November 3, 1903. The new Government was immediately recognised by the United States, and a treaty was signed on February 26, 1904, in which rights of sovereignty over a strip of land ten miles in width, extending across the Isthmus, were ceded to the United States. The canal is built through the centre of this territory.

Two years were spent by the United States Government in sanitation, the assembling of plant, and organisation and housing of a labour force; after which operations on a large scale were begun on all parts of the canal.

Including the purchase of rights, payments to Panama, and construction and operation of the canal and its adjuncts, the total appropriations by Congress to June 30, 1920, were $432,602,856.60. Tolls and other revenues, from its opening until July 30, 1920, amounted to $34,426,675 28. During the past two years they have averaged approximately $7,650,000 a year, or about $637,500 a month.

The canal is fifty statute miles long (43·84 nautical miles), and the channel is from 300 to 1,000 feet wide at bottom. The least width is in Culebra Cut, and the greatest in Gatun Lake, where the channel can be made much broader at any time by the cutting down of trees and a small amount of dredging. The water depth when the surface is at 85 feet above sea-level varies from 85 feet in some parts of Gatun Lake to 41 feet in the Atlantic entrance. The depth through Culebra Cut is 45 feet.

There are three essential parts: a lake formed by damming the Chagres River, and two channels leading from the Atlantic and Pacific Oceans to this lake. The surface of the lake is normally at 85 feet above sea-level, and the channels connecting it with the sea are at sea-level. Ships are lifted from the sea-level channels to the lake, or lowered from the lake to sea-level in locks. These locks have a usable length of 1,000 feet, width of 110 feet; least depth of water over the sills when lake is at normal level, 41½ feet. These dimensions limit the size of ships using the canal. The dam which forms the lake is situated at Gatun, about seven miles inland from the Atlantic. It is built of earth, with an impermeable core of fine sand and clay, and is 1½ miles long, half a mile wide at bottom, and 100 feet at the top, which is 105 feet above sea-level. The lake is known as Gatun Lake, and is 164 square miles in area. At its southern end is Culebra Cut, the channel through the continental divide. This is the most extensive excavation ever made. The French canal builders dug about 12,000,000 cubic yards out of this section of the canal, and the Americans have completed an excavation that amounts to over 100,000,000 yards. The total excavation for the whole canal is about 262,000,000 cubic yards, about 130,000,000 yards of which have been excavated in the dry and the balance by dredges. The amount of concrete used in the locks is 4,500,000 cubic yards.

The administrative organisation for the canal is known as "The Panama Canal," with the Governor of the Panama Canal (Brig. Gen. Chester Harding, U.S.A., retired) at its head. The Governor reports to the President, who has delegated the Secretary of War to have supervision over the canal for him. The Governor of the Panama Canal is President of the Panama Railroad.

In connexion with the construction and operation of the canal, extensive terminal and supply facilities have been constructed at both the Atlantic and Pacific entrances. These include marine and general repair shops, foundries, dry docks, five 1,000-foot steel and concrete piers, and a number of wharves, slaughter-houses, and cold storage plants, ice plants, laundries, hospitals, coaling plants, fuel oil tanks and delivery plants, waterworks, commissary stores, storehouses of spare materials and ships' chandlery stores, and other accessories of great modern ports. An extensive transfer of cargo goes on at the Atlantic terminus of the canal, between ships plying the Atlantic and the Caribbean and ships which pass through the canal to or from Pacific ports. The 1,000-foot dry dock, with adjacent repair shops, at Balboa is an important assistance to shipping throughout the American tropics as well as a base for repairs for vessels of the Navy.

Health conditions are excellent, while the scenery is varied and attractive, with ruins of old Spanish towns and fortifications. Gatun Lake is studded with islands and surrounded by mountains. Shooting and tarpon fishing are excellent. The U.S. Government operates hotels at Colon and Ancon.

The number of commercial vessels passing through the canal in both directions in the fiscal year ending June 30, 1920, was 2,478, with a cargo tonnage of 9,374,499 tons, of 2,240 pounds. The total of commercial ships passing through the canal in the first six years of its operation, from August 15, 1914, to August 15, 1920, was 10,573, of 34,542,266 net tons, Panama Canal measurement, carrying 40,313,629 tons of cargo.

THE following Articles have been revised under the direction of the various Governments or of the British Representatives at Foreign Courts, to whom the Editor desires to express his warmest thanks. The Editor is also greatly indebted to the Embassies and Legations in London for various corrections and additions.

* *The Salaries and Allowances of Officers of H M Diplomatic, Commercial and Consular Services are fixed in accordance with the scale shown at foot of column two of this page*

ABYSSINIA or ETHIOPIA.

Empress, Waizeru Zauditu (daughter of late Emperor Menelek), *born* 1876, *elected* Sept 27th, 1916
Heir, Ras Taffari Makonn

The area of Abyssinia and its dependencies is estimated at 350,000 square miles, with a total population of 7,000 000, of whom about one half are Abyssinians and the remainder Gallas, negro tribes on the west and south frontiers, and Danakils and Somalis on the east The political neighbours are the Sudan, the Italian colony of Massowah (Eritrea) the French colony of Djibuti, and the British Somaliland, Kenya Colony and the Uganda Protectorate

Abyssinia is volcanic and mountainous It contains some mineral wealth, iron and coal are not uncommon and gold is washed in various streams while salt, saltpetre, and sulphur are also procurable. The lower country and deep valley gorges are very hot the higher plateaus are well watered, with a genial climate In the hotter regions, sugar cane cotton, coffee rubber &c, flourish, in the middle zone maize, wheat, barley wild oranges and other fruit trees, tobacco, potatoes, &c are cultivated, and above 6,000 feet are excellent pastures with some corn cultivation There are two seasons in the year a dry winter and a rainy summer from June to September The chief river is the Blue Nile, issuing from the Tsana lake, the Atbara and many other tributaries of the Nile also have their rise in the Abyssinian highlands Horses, mules donkeys, oxen, goats, and sheep and camels in the lowlands, form a large portion of the wealth of the people

The Abyssinians are Christian (a branch of the Coptic Church), and their kings claim descent from Menelek, the son of Solomon by the Queen of Sheba There is no popular literature, and little education The potential army numbers at least 300,000, armed with rifles The principal pursuits are agriculture, cattle breeding and hunting The chief exports are coffee, civet, wax, hides, rubber, ivory, and gold The total trade is valued at about £2 000,000 for imports and exports, and is increasing The import duty on all goods at Gambela is 10 per cent *ad valorem* and at Dire Dawa and Harrar 8 per cent *ad valorem*, in the interior the duty is variable, and 3 per cent addition is imposed on goods brought to the capital A railway (187 miles) has been built under French auspices from Jibuti to the capital, *viâ* Dire Dawa The posts and telegraphs are under French management The principal towns besides Adis Ababa, are Adwa the capital of Tigré, Gondar, Debra Markos, Saiyu, Aksum Antalo, Ankober, Goré, Dembecha, Ijubé, Jimma, and Harrar There are ancient architectural remains at Aksum, Gondar, and Ankober, modern architecture is very poor

CAPITAL, Adis Ababa (population fluctuates, but is ordinarily about 50,000). Harrar, in Eastern Abyssinia, has a population of about 45,000.

FLAG Green, yellow, red.

BRITISH LEGATION

Envoy Extraordinary Minister Plenipotentiary and Consul General, C F W Russell (1920) . . £3,400

ANDORRA.

A miniature Republic in the Pyrenées, with an area of 175 sq. miles, and a population of 5,500; it is under the joint suzerainty of France and Spain. There is a Council of Twenty-four, elected by certain of the inhabitants, a judge, and two lay vicars appointed by France and the Spanish Bishop of Urgel.

ARABIA.

Arabia is a peninsula in the south-west of the Asiatic continent, forming the connecting link between Asia and Africa, and lies between 30° 30′—60° E. long. and 12° 45′—34° 50′ N. lat. The north-western limit is generally taken from Akaba, at the head of the Gulf of Akaba, to a point in the Syrian Desert about 150 miles north-east, and thence northwards to a point about 50 miles due east of Damascus. The remaining land boundaries are in the form of a horse-shoe, encompassing the Syrian Desert, and descending in a south-easterly direction to the head of the Persian Gulf, and thus excluding the whole of Mesopotamia and the Euphrates Valley. The other boundaries of Arabia are the Red Sea and Gulf of Aden, the Arabian Sea, and the Persian Gulf and Gulf of Oman. Generally speaking, the peninsula consists of a plateau sloping from south-west to north-east towards the Euphrates Valley, except that the broad south-eastern promontory, which encloses the Persian Gulf, contains a coastal range with *Jebel Akhdhar*, 10,000 feet above the level of the sea, in the Sultanate of Oman.

The total area is estimated at 1,200,000 sq. miles (of which nearly one-half is occupied by the Syrian, Nafud, and Dahna deserts), and the total population is believed to be about 5,000 000.

THE KINGDOM OF HEJAZ.

King of the Hejaz, El Hussein ibn Ali.

On June 5, 1916, the Grand Sherif of Mecca (hereditary Keeper of the Holy Places) threw off the Turkish allegiance and declared the independence of the former vilayet of Hejaz. In concert with the British Imperial forces under General Allenby, the armies of the King of the Hejaz (under the leadership of the Emir Feisal) penetrated northward, through the districts E. of the Jordan, to Damascus, and the territories of the new kingdom extend from Asir (*see* below) in S. to Palestine and Syria in N., and from the Red Sea, the Gulf of Akaba, and Palestine in the W. to the ill-defined boundaries of Central Arabia.

Parallel with the Red Sea coast runs the Tehama range (Jebel Shar, or Mount Seir, 7,000 feet, and Jebel Radhwa, 6,000 feet). On the coast are the small ports of Muwela, Dangha el Wijh, Yambu (the chief port), Rabigu and Jidda (the pilgrims' port), which contains the reputed "tomb of Eve," the mother of mankind; and inland are many settlements through which runs the Hejaz Railway. The *Oasis of Khaibar*, east of the railway, contains a considerable population, descendants of former negro slaves, with a Jewish centre at Kasr el Yahudi. The importance of Hejaz depends upon the pilgrimages to the holy cities of Medina and Mecca. *Medina* (*Al Medina*, "The City"), 800 miles by rail from Damascus, and the present terminus of the Hejaz Railway, has a permanent population of about 20,000, and is celebrated as the burial place of Mahomet, who died in the city on June 7, 632 (12 Rabia, A.H. 11). The Mosque of the Prophet (500 feet in length and over 300 in breadth) contains the sacred tomb of Mahomet. *Mecca*, the birthplace of the Prophet, is 45 miles east of the seaport of Jidda, and about 200 miles south of Medina, and has a fixed population estimated at 60,000. The city contains the great mosque surrounding the *Kaaba*, or sacred shrine of the Muhammadan religion, in which is the black stone "given by Gabriel to Abraham," placed in the south-east wall of the Kaaba at such a height that it may be kissed by the devout pilgrim.

The *Hejaz Railway* runs from Medina in S. through the Syrian Desert to Damascus and Beirut, and is connected with the projected Baghdad Railway at Aleppo. The total area under the rule of the King of the Hejaz is about 112,500 sq. miles, with a population of from 350,000 to 400,000, including many nomad tribes. The capital of Hejaz is Mecca, which is connected with the seaport of Jidda by 60 miles of railway; population about 66,000. Pilgrims from the west disembark at Jidda, from which hides, mother-of-pearl, coffee, and carpets are exported.

THE EMIRATE OF NEJD AND HASA.

Emir, Abd-el-Aziz es Saud, K.C.I.E.

This former vilayet was in the 18th century an independent Empire of the Wahabites, and has reasserted its autonomy under a representative of the former dynasty. It is known as "the true home of the Arab," and extends across the oases of Central Arabia, from the eastern boundary of Hejaz to the Persian Gulf. During military operations in 1913, the Emir of Nejd captured Hufuf (the capital of El Hasa), and extended his rule over the former Turkish province of El Hasa. The capital, Riyadh, is a station on the Pilgrims' trans-Arabian caravan route from El Hasa to Mecca, and contains a large mosque, the "Westminster Abbey" of the Wahabi Moslems. The principal trading centre is Anaiza in the central province of Qasim (Nedj). The principal port on the Persian Gulf is El Katif, on Bahrein Bay (El Hasa).

THE PRINCIPALITY OF KOWEIT.

Ruler, Sheikh Salim ibn Mubarak, C.S.I.

Koweit has been semi-independent for many years, and is in treaty relation with British India. It extends along the shore of the Persian Gulf from Mesopotamia to Nejd (El Hasa). The important harbour and gulf port of Koweit, the capital (pop. 25,000), is an entrepôt for goods for the interior, and for the export of horses, pearls, dates, wool, &c. It was designated as the terminus of the Berlin-Constantinople-Baghdad railway as originally projected in 1903.

Political Agent, Major J. C. More, D.S.O.

THE SULTANATE OF OMÂN.

Sultan, Seyyid Taimur bin Faisal, *born* 1886, *suc.* 1913.

Omân (area 82,000 sq. miles, estimated pop. 550,000) is a Muhammadan State in S.E. Arabia with a coast-line of about 1,500 miles along the Persian Gulf, the Gulf of Omân, and the Arabian Sea from El-Katar to Ras Seir. The country, much of which is arid and desert, attains in Jebel Akhdhar an elevation of 10,000 feet. The population is chiefly Arab, but includes also a considerable foreign element—Indians, Persians,

Baluchis and Swahili negroes The Sultan is in treaty relations with, and subsidised by, the Government of India, who have a political agent at his capital. In 1913, at the end of the reign of the last Sultan, the tribes of the Interior rose in rebellion, and, having elected their own Iman or Spiritual Ruler, have since administered the whole of Oman proper, the efforts of the Sultan to establish his control having been, up to date, unsuccessful This rebellion has, with the war, interfered with the prosperity of the country The Sultan is pledged not to cede territory to any Power but the British Government Muscat has a considerable trade, amounting in 1916–17 to £408,046, and in 1917–18 to £323,915, a decrease owing to interior disturbances due to the war Dates are the chief export, and rice, wheat, coffee, cotton and silk goods the chief imports The capital, Muscat, has an estimated population of 24,000

British Consul and Political Agent, R E L Wingate *per mensem* Rs 2,250

THE EMIRATE OF JEBEL SHAMMAR

Emir, Abdullah ibn Mitab el Rashid

Jebel Shammar is a Bedouin community of Central Arabia extending across the oases from Hejaz on the west to Koweit on the east with Nejd as a southern neighbour Its boundaries are indeterminate and the total population in allegiance to the Emir is believed to be about 200 000 The capital is Hail, between the two Shammar ranges (Jebel Aja and Jebel Salma) with a population of about 12,000

THE EMIRATE OF ASIR

Emir, Muhammad Hamid ed Din

The Emirate of Asir includes the Red Sea littoral between Hejaz and Yemen, and extends inland to the Dahna Desert The maritime low land is a fertile district of wadis and contains large grain and pastoral areas The capital is Ebuah, a small inland town

THE IMAMATE OF YEMEN

Imam, Yahya Muhammad Hamid ed Din

The Imamate of Yemen occupies the S W corner of the Arabian peninsula, between the Emirate of Asir and the British dependency of Aden, with an estimated area of 74,000 sq miles and a population of 600 000 to 700 000 It was formerly divided into the vilayets of Sana a Jais, Asir and Hodeida, and it extends inland to the Dahna Desert and to the tribal territories of Hadramut On the plateau between the coast and the Dahna Desert (a district known as *El Jebel*) are the most fertile parts of Arabia where wheat, barley, millet and coffee are extensively grown The sea port of *Mocha* has become associated with the coffee export trade but in this trade (and in all others) it is of secondary importance to *Hodeida* The trade of Yemen probably exceeds that of the remainder of Arabia The capital is the walled city of Sana a (pop 20,000), and about 70 miles to the S of the capital is Dhamar, an ancient seat of learning, and the headquarters of the Zaidi sect of the Muhammadans

THE HADRAMUT TRIBES

The coastal region of Southern Arabia, between Yemen and Aden on the west and Oman on the east, and extending inland (northwards) to the Dahna Desert, contains a coastal strip of some 550 miles. Parallel with the coast (at a distance of 50 miles from the Arabian Sea) is an extensive plateau inhabited by the Hadarim, an ancient people of Arabian stock (Hadoram was the son of Joktan, *Genesis* x., 27). There are many settlements on the coast and in the interior, but the latter are being steadily enveloped by the sand of the northern desert There are sacred shrines near Kasm (Kabr Hud) and Shibam (Kabr Salih) The eastern districts, known as Mahra and Gara, are very sparsely populated The estimated area of Hadramut is 82,000 sq miles, and its Muhammadan population, of independent Arab tribes, is estimated at 150,000 Agriculture and cattle raising are the principal industries, together with the cultivation of dates, indigo and tobacco The capital is Shibam, in a broad valley parallel with the coast The chief port is Mokalla.

ARGENTINE REPUBLIC

President (1916–1922), Hypolito Irigoyen, assumed office Oct 12 1916 $96,000

Vice President (1919 22), Benito Villanueva 36,000

Minister of the Interior, Dr Ramon Gomez
Foreign Affairs, Dr H Pueyrredon
Finance Domingo Salaberry
Justice and Public Instruc Jose Salinas
Agriculture, Alfredo Demarchi
War and Marine, Dr Julio Moreno
Public Works, P Torello

Minister in London, Señor Don Federico Alvarez de Toledo, 2 Palace Gate, W 1
Charge d Affaires (ad int), Señor Don J L Villegas, 22 Hans Crescent, S W 1
1st Secretary, Don Luis H Dominguez, 2 Palace Gate W 8
2nd Secretary, Don Eduardo Racedo
Military Attaché, Lt Col Don Luis J Garcia
Attaché, Don Carlos Dominguez
Naval Attaché, Capt Don Enrique Moreno
Consul Gen, Dr Sergio Garcia Ufburu, 121 Oxford Street W 1
Asst Consul, Don Arturo Parker

There are also Consulates at *Liverpool*, *Southampton*, *Cardiff*, *Manchester*, *Newcastle on Tyne*, *Newport*, and *Glasgow*

Argentina is a wedge shaped country, occupying the greater portion of the southern part of the South American Continent, and extending from Bolivia to Cape Horn, a total distance of nearly 2,300 miles, its greatest breadth is about 930 miles It is bounded on the north by Bolivia, on the north east by Paraguay, Brazil, and Uruguay, on the south east and south by the Atlantic, and on the west by Chile, from which Republic it is separated by the Cordillera de los Andes. On the west the mountainous Cordilleras, with their plateaus, extend from the northern to the southern boundaries, on the east are the great plains, those in the north are thickly wooded and are known as *El Gran Chaco*, and further south lie the treeless pampas, which together constitute *La Plata*, extending from the Bolivian boundary in the north to the Rio Negro, and south of the Rio Negro are the vast plains of Patagonia. Argentina thus contains a succession of level plains, broken only in Cordoba by the San Luis and Cordoba ranges, and in the north western states by the eastern spurs of the Andes. The Parana River, formed by the junction of the Upper Paraná with the Paraguay River, flows through the north-eastern states into the Atlantic, and is navigable throughout

its course; the Pilcomayo, and Salado del Norte are also navigable for some distance from their confluence with the Parana In the Province of Buenos Aires the Salado del Sud flows south-east for some 300 miles into Samborombon Bay (Atlantic) In the south the Colorado and Rio Negro rise in the extreme west and flow across the pampas into the Atlantic, many similar streams in Patagonia (notably the Chubut and Santa Cruz) traversing the country from the Andes to the Atlantic

The Republic is composed of 14 provinces and 10 territories, comprising in all about 1,132,000 square miles with a population of 8,462,030 in 1919 Immigration is encouraged, and comes principally from Spain and Italy, but legislation, introduced in 1919, requires intending immigrants to produce certificates of good character and ability to work The climate is moderate and healthy Spanish is the language of the country

Government —The estuary of La Plata was discovered in 1515 by Juan Diaz de Solis but it was not until 1534 that Pedro de Mendoza founded Buenos Aires In 1810 Spanish rule was overthrown, and in 1818 the independence of Argentina was complete although not acknowledged by Spain until 1842 In 1853, after more than thirty years of disturbances and civil wars the country settled down, and is now a well governed and progressive Republic The constitution dates from 1853 (revised 1859) and is modelled on that of the U S of America, but each province enjoys practically complete autonomy The executive is in the hands of the President who selects his Cabinet The National Congress consists of a Senate of 30 members and of a House of Deputies of 160 members Members of Congress receive $9,000 *per annum*

Production —Of the total area about one third is suitable for agriculture and cattle raising, and vast tracts are held by the Federal Government for sale or lease to colonists The principal productions are wheat, maize, oats, linseed sugar, wine, wool, hides, cattle, sheep and horses There were in 1914 25,866,763 cattle, sheep 43,225,452 horses 8,323 815, 565 069 mules, 4 325 280 goats and 2 900,585 pigs the total value being placed at £230,000,000 The export of frozen beef and mutton is an important industry The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho copper, manganese, and wolfram In 1920, there were 4,500 registered wine presses, handling about 600,000 tons of grapes the output in 1919 being over 4 000,000 hectolitres (88,212 000 gallons) The export of wine to neighbouring South American States is increasing annually, and the importation of wine has almost ceased

Communications —There were (1919) 22,141 miles of railroad open. The railroads are almost entirely in the hands of British companies, and absorb about £150,000,000* of British capital Telegraphs about 43,153 miles, mostly Government lines There are 22 wireless stations of which one is reserved for communication between England and the Argentine The principal ports are Buenos Aires, Rosario, La Plata, and Bahia Blanca. The number of steam and sailing merchant vessels which entered Argentine ports in 1918 was 10,868 of a total tonnage of 8 907,732 Of these 1,828 were ocean-going vessels of an aggregate tonnage of 3.393,954

* A total of about £400,000,000 British capital is invested in the Argentine

Defence —The Navy consists of 2 super Dreadnought battleships, 2 river monitors, 4 armoured cruisers, 3 cruisers (old), 4 torpedo gunboats 7 destroyers, and 2 first class and 6 second class torpedo boats. Strength about 5,000 men There is a naval port at Bahia Blanca The National Militia has a peace footing of about 30,000, with reserves of 250,000, on a war footing the Army would comprise 5 divisions of 20,000 each

Education —*Primary* Education is secular free and nominally compulsory from the ages of 6 to 14, but only some 45 per cent of attendances are secured *Secondary* Education is controlled by the Federal Government in lyceums and normal schools, with an average attendance of 6,000 There are also *Special Government Schools* —1 naval, 1 military, 1 mining, and 2 agricultural There are *National Universities* at Cordoba and Buenos Aires, and *Provincial Universities* at La Plata, Santa Fé, and Paraná

ARMENIA

Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded by the Black Sea and the Republic of Georgia on the N, by Kurdistan on the S, by the Republic of Azerbaijan on the E, and by Turkish Asia Minor on the W, and until the outbreak of the War of 1914-18 it was shared between Turkey (35,600 sq miles), Russia (20 587 sq miles), and Persia (6,518 sq miles). The country possesses great historical interest as the reputed seat of the oldest civilised people in the world. The inhabitants have always possessed definite racial characteristics, but have seldom been politically independent, the country having been held successively by the Medes, Persians, Greeks, Romans, Arabs, and Turcoman Tartars until 1514 1538 when the greater part became a province of the Ottoman Empire. The Eastern part remained under Persian rule but in 1828 Russia obtained the larger share of non Turkish Armenia. The rivers Euphrates Tigris, Aras, Kur, and Tchorokh take their rise within its boundaries, and at the meeting of the former Turkish, Persian, and Russian boundaries is *Mount Ararat* (17,160 feet), the traditional resting place of Noah's Ark. In the uplands the climate is severe, but in the valleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, sesame hemp, flax, and tobacco. Sericulture (silkworm breeding), sheep breeding, and fruit growing are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, silver, copper, lead, iron and valuable marbles, there are also numerous hot and cold mineral springs (similar in nature to those of Vichy). The Armenian Church is the oldest established Christian church, Christianity having been recognised as the State religion in 300, and from the 5th century there is a national language and literature. On account of their religion the Armenians have suffered a general persecution by Islam, particularly in the *vilayets of* Sivas, Bitlis, Diarbekir, Mamuret-el-Aziz, Van, and Erzerum, where massacres have frequently been organised with a view to extermination. In 1915-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia, while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918, during the Russian Revolution, an independent "Republic of Trans Caucasia" was formed by the union of Georgia, Armenia, and Azerbaijan, and on the dissolution of the union (June 1, 1918) the Supreme Council of the Allied Powers recognised the independence of the *Republic of Armenia* (area, 20,587 sq miles, population 2,000,000). Under the Treaty of Peace with the Allies (May 11, 1920) Turkey recognised the independence of Armenia with its capital at Erivan. The United States Government was requested by the Allies to accept a mandate for Armenia but the Foreign Relations Committee of the Senate has declined the mandate.

AUSTRIA

(Oesterreich)

President of the Federation, (Nov 20, 1920), Dr Michael Mayr.
Vice Chancellor, Eduard Heinl.
Interior and War, Dr Egon Glaz
Education, Walter Breisky
Finance Dr Ferdinand Grimm
Justice Dr Rudolph Baldauf
Agriculture and Forestry Alois Haueis

Commerce and Public Works Eduard Heinl
Food Control Dr Alfred Grunberger
Railways Dr Karl Pesta

Minister in London Baron George Franckenstein 18 Belgrave Square S W 1
First Secretary, Adolph Kunz
Press Attache, Dr Maximilian Bach

Prior to the War the Austrian Empire, joined to the Kingdom of Hungary by the identity of sovereigns, was the largest Empire, next to Russia, on the continent of Europe, situated between 42°- 51° N lat and 9° 30'—26° 20' E long. It embraced an area of 240 456 sq miles, and a population (1914) of nearly 53,000,000, and included Upper and Lower Austria, Bohemia, Bukovina Carinthia, Carniola Dalmatia, Gorz and Gradiska, Istria Moravia Salzburg Silesia, Styria, Trieste, Tyrol and Vorarlberg with Bosnia and Herzegovina as administered territories.

On June 28 1914 the assassination of the Austrian Archduke Francis at Serajevo (Bosnia) was presumed to be the outcome of a plot fostered by Serbia, and after negotiations an ultimatum was presented by the Empire to the Serbian Government (July 23), and non compliance with its unreasonable terms led to the European War of 1914 18. Before the armistice of Nov 11, 1918, Hungary had seceded from the Empire (and had established republican institutions) and a Republic of German Austria was declared Nov 12, 1918 the throne being abdicated by the Emperor Karl (Nov 28 1918).

Under the *Treaty of St Germain* (Sept 10, 1919) the political neighbours of the Austrian Republic are the Republics of Germany and Czecho Slovakia on the N, the Kingdom of Italy, the Territory of Fiume, and the Yugo-Slav Kingdom on the S., Switzerland on the W., and the Republic of Hungary on the E.

The area of the Republic is 31 756 square miles, with a population (1920) of 6 067 000

Under the new Constitution (Nov., 1920), Austria became a Republican Federation of eight Provinces —Lower Austria and Vienna, Upper Austria, Carinthia, Styria Salzburg, Tyrol Vorariberg and Burgenland (West Hungary) the Bundesrat and Nationalrat were constituted a government formed and a President elected The elections resulted in a majority for the *Christian Socialists* (Seipl Mayr Mataja and Weiskirchner) over the *Social Democrats* (Renner Adler and Bauer), the *Pan Germans* coming next in order There is a considerable body of opinion in favour of the inclusion of Austria in the German Reich and on the other side for a close alliance with Hungary

Complete religious liberty is one of the fundamental laws of the new Republic In 1915 the prevailing religion of the German speaking people was Roman Catholic

Finance —Before the War Austria had a total indebtedness of about 14 400 000 000 crowns (£600 000 000) towards the annual cost of which (489 000 000 crowns) Hungary made a contribution of 61 000 000 crowns (24=£1 sterling) The indebtedness was increased by War credits (up to June 30 1918) to £2 280 000 000 requiring an annual service of 4 335 000 000 crowns The pre war revenue was about 3 600,000 000 crowns (£150 000 000) The Budget of 1919 so provided for receipts of 2 548 280 614 crowns and for expenditure at 6 546,925 167 crowns, showing a deficit of 3 998 644 553 crowns A Financial Commission has been appointed to make recommendations concerning the indebtedness of the Republic In Oct 1919 the Secretary for Finance, announcing the budget deficit of 4 000 000 000 crowns stated that Austria would not evade her obligations under the *Treaty of St Germain* In Oct, 1920 the Austrian budget showed a deficit of over 13 000 000,000 crowns the rate of exchange at that time (24 22 to the £ before the War) being about 1 350 to the £ The Austrian section of the Reparation Commission is employed on an exhaustive examination of the resources of the country and has considered far reaching proposals for financial reconstruction

Industries —The principal industry is agriculture the chief products being wheat, barley, oats rye maize, and potatoes Forestry and stock raising are important The forests are principally coniferous trees The live stock includes horses cattle, sheep pigs and goats The vine is extensively cultivated Among the minerals produced are common and brown coal, iron, lead, zinc, silver and copper The principal manufactures are woollens, cottons glass, steel, wood work and brewing

Communications —In Sept., 1919, there were about 3,800 miles of railway (exclusive of narrow gauge lines) The mercantile marine was considerable in 1914, but the new Republic is now land locked

Commerce —The Commerce of the 'Common Customs Territory of the Dual Monarchy of Austria and Hungary amounted in 1913 to £140,000,000 for Imports and £115,000 000 for Exports of which totals £5,000 000 (Imports from) and £7,000 000 (Exports to) represented the exchange with the United Kingdom Austria has free railway access to the seaport of Fiume in the neutral zone (*see* Yugo-Slavia), but no ports of her own

Defence —During the War of 1914 18 about 5 000 000, all ranks, were passed into the common Army of Austria Hungary The total casualties exceeded 2 500,000, of whom over 700 000 were returned as killed Under the *Treaty of St Germain* the military, naval and air forces were demobilised and reduced to minimum requirements and all warships were surrendered to the Allies those under construction being broken up Service in the Republican Army is by voluntary enlistment for twelve years

Towns —Vienna, the capital, is situated on the River Danube, in 1919 it contained an estimated population of 2 000 000. Other large towns are Gratz (177,000), Linz (93,000), and Innsbruck (60 000).

CAPITAL Vienna Pop (1920) 1 852 000.

A Kingdom of Central Europe, with a total area (1920) of 11,392 square miles and a population (Census of 1919) of 7,577,037. Belgium is bounded on the N. by the Kingdom of the Netherlands, on the S. by France, on the E. by Germany and Luxemburg, and on the W. by the North Sea. The kingdom formed part of the "Low Countries" (Netherlands) from 1815 until Oct. 14, 1830, when a National Congress proclaimed its independence, and on June 4, 1831, Prince Leopold of Coburg was chosen hereditary king. The separation from the Netherlands and the neutrality and inviolability of Belgium were guaranteed by a Conference of the European Powers, and by the *Treaty of London* (April 19, 1839), the famous "Scrap of Paper," signed by Austria, France, Great Britain, Prussia, The Netherlands, and Russia. On Aug. 2, 1914, the Germans invaded Belgium and ultimately overcame the resistance of the fortresses and overran almost the whole country. In revenge for the heroism of its defenders the Germans sacked and destroyed many cities, burning Louvain (with its library), Termonde, and other places, and established a reign of terror. They levied a war contribution on Belgium of close on £100,000,000, apart from enormous fines on localities, firms, and private persons. On Friday, Nov. 15, 1918, at the great turn of the tide, Antwerp was reoccupied by the victorious Belgian army, and Brussels and the remainder of Belgian soil a few days later. About 10,000 persons were added in 1919 by the cession of Moresnet and part of Malmédy by Germany, and the district of Eupen, with the remainder of the district of Malmédy, were ceded by Germany and annexed by Belgium (Sept. 20, 1920) after a plebiscite, thus adding a further 50,000 to the inhabitants.

French and Flemish are the joint official languages, but while French is the language of the upper classes, Flemish is spoken by the majority, preponderating in Flanders, Limburg, and Brabant, including Antwerp. Nearly all the inhabitants are, at least nominally, Roman Catholics.

Belgium has a frontier of 831 miles, and a seaboard of 42 miles. The Meuse and its tributary the Sambre divide it into two distinct regions, that in the west being generally level and fertile, whilst the table-land of the Ardennes, in the east, has for the most part a poor soil. The "polders" near the coast, which are protected by dikes against floods, cover an area of 193 sq. miles. The highest hill, Baraque Michel, rises to a height of 2,230 feet, but the mean elevation of the whole country does not exceed 536 feet. The principal rivers are the Scheide (Escaut) and the Maas (Meuse). Brussels has a mean temperature of 50° F. (summer 65°, winter 37°).

GOVERNMENT.—The constitution jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 120 senators (with the exception of 27 elected by the provincial councils and 26 representatives are) elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the Electoral Law of 1894, proportional representation being secured by an Act of 1900. In April, 1919, the Belgian Parliament decided as an emergency measure to hold 1919 elections on a "one man one vote" basis for Senate and Chamber. (Unmarried widows of soldiers killed before Jan. 1, 1919, or failing widows, the mothers; widows or mothers of civilians shot by enemy; women imprisoned by enemy for patriotic acts, also voted.)

This Parliament, anomalous, and unconstitutionally elected, was required to make constitutional the machinery by which it was elected; *i.e.*, to revise article 47 of the Constitution. This has not yet been done (Oct. 1920), but it is unlikely that the outworn method of plural voting will ever again be resorted to.

Deputies receive 4,000 francs a year and a free pass over the railways. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

PRODUCTION.—Agriculture and forestry are important industries, the chief crops being oats, rye, wheat, potatoes, barley and sugar-beet. Under Annex IV. of the *Treaty of Versailles* Germany undertook to deliver to Belgium certain live stock to replace the animals seized or destroyed during the War of 1914–1918. Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kingdom yields coal, iron, zinc, lead, and copper. The leading industries are collieries, quarries, and metallurgic (Mons, Charleroi, Liège, Namur, Hainaut, and Brabant), glass, textiles (Verviers), lace (Brussels, Mechlin, Bruges, &c.), flour and starch mills, sugar, distilleries, breweries, &c.

DEFENCE.—In 1914 the *Army* on a peace footing consisted of about 50,000, all ranks. In the War of 1914–1918 over 500,000 passed into the armies, which were reorganised on French territory during the defensive period of the campaigns. An organised force of 200,000 co-operated with the Allies during the decisive offensive of the autumn of 1918. Those returned as dead or missing, during the War, numbered 102,382. Belgium has no *Navy*.

EDUCATION.—Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control. Roman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special schools abound. The Universities of Ghent and Liège are maintained by the State; those of Brussels and Louvain are free institutions. Louvain University is to be rebuilt.

	1920.

Exports to U.K. (1918)	200,918

From 1914–19 loans of 2,170,525,448 francs were advanced by France, £78,584,623 by Great Britain, and $240,643,000 by the United States.

The chief imports in 1919 were: manufactured articles (1,809,660,406 francs), raw

(1,789,141,367), foodstuffs and beverages (1,328,697,478), and live animals (138,536,502); the chief exports were: raw materials (946,896,363 francs), manufactured articles (830,658,287), and foodstuffs and beverages (508,119,512).

COMMUNICATIONS.—In 1912 there were 4,719 kilometres of railway (including branch lines and 350 kilometres of private lines rented by the State); by Jan. 1, 1920, almost the whole length destroyed during the War had been repaired or relaid. In 1914 there were 44,564 kilometres of telegraph wire and 2,295 offices; in 1919, 24,397 kilometres had been restored and the 2,295 offices re-opened. In 1920, the post office had resumed full operations. The navigable rivers and canals have a length of 2,279 kilometres (1912), and there are 9,757 kilometres of roads. Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine only consisting (1912) of 105 vessels (181,637 tons), in addition to which there were 453 fishing boats. In 1912, 9,268 foreign vessels entered at Belgian ports (tonnage 14,497,102). The principal port and commercial *entrepôt* is Antwerp, on the River Scheldt. Other ports are Ostend, Ghent, Bruges, Nieuport, Blankenburg and Zeebrugge (blocked by the British Fleet April 23, 1918, and since re-opened for traffic). The vexed question of the Scheldt, of which the right bank is in Netherlands territory and the left in Belgium, appears likely to be settled by negotiation between the respective Governments. The navigation is to be free to both countries, from the mouth to Antwerp, and the Netherlands war vessels are to be removed from the river.

The Capital, BRUSSELS, had a population in 1912 of 175,809 (with suburbs, 756,637 inhabitants). Other towns with over 100,000 inhabitants are Antwerp, the chief port (312,884 with suburbs, 412,917); Ghent (167,477), which has large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (170,634) the centre of the iron industry.

Brussels, 224 miles from London; transit, 8 hrs.

THE BELGIAN CONGO.

The Independent State of the Congo became a Belgian Colony by a law of Oct. 18, 1908.

The total area amounts to 909,654 sq. miles, with a native population estimated at 5,000,000 to 7,000,000. The total European population (Jan. 1918) was 6,487, of whom (in 1912) 379 were British, 48 Americans, 278 Italians, 303 Portuguese, 177 Swedes, 150 Germans, and 3,307 Belgians.

The Congo River is navigable for large vessels from its mouth at Banana to Matadi (95 miles), where the European steamers discharge and recharge their cargo; but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad 240 miles in length. A narrow-gauge line runs from Lukula to Boma, the cocoa planting district of Mayumbe. Above Leopoldville the river and its numerous affluents are navigable by steamer for about 5,000 miles, the falls on the Upper River being avoided by a metre-gauge line from Stanleyville to Ponthierville (125 kilometres), and another from Kindu to Kongolo (355 kilometres). Another line from Kabalo to Albertville on Lake Tanganyika (270 kilometres) was completed in 1916, connecting the West Coast of Africa with Belgian East Africa and the East Coast. The Katanga Railway reached Bukama in May, 1918, thus linking up the Rhodesian Railway system with the steamers plying on the Upper Congo River, connecting with both the East and the West Coast. Within eight years, 450 miles of railway have been constructed, 200 of which have been laid during the war. It is now possible to travel by train direct from Cape Town to the river Congo, a distance of 2,650 miles. Work has been started on the Stanleyville-Lake Albert Railway, which will run between the Congo River and the Nile, providing the last link to direct river and rail communication between the Cape and Cairo. Two new lines will run from the copper mining district of Katanga towards the West Coast, one of them reaching Lobito Bay (Portuguese Angola), the other linking the Katanga Railway with the Matadi-Leopoldville Railway. A telegraph line is laid from Banana to Coquilhatville (895 kilometres). There is telegraphic communication with Europe. Fourteen wireless stations connect the West Coast with the principal Government stations throughout the Colony. Powerful wireless stations were being erected at the outbreak of the war at Brussels and Boma, to connect Belgium with the Lower Congo. The West Coast District has a rather scanty rainfall (40 inches), but on the Maiumbe Hills and in the whole interior the rainfall averages between 60 and 80 inches, and the country is very fertile and productive. Sleeping sickness, once very prevalent and destructive, is now decreasing. Extensive forests cover the central districts; oil palms are plentiful everywhere, and supply an ever-increasing trade in palm-oil and palm-kernels. Wild rubber and wild coffee are common; coffee, cocoa, Pará and Ceara rubber and cotton are successfully planted. Mines are very extensive. The copper district of Katanga has enormous deposits of copper ore, and the smelters at the Lubumbashi produced about 30,000 tons of copper in 1918. A rich tin-belt

extends from Bukama towards Lake Tanganyika The gold bearing districts of North eastern Congo are being prospected by the Government, and contain both alluvial and reef gold Diamond bearing gravels are worked in the south The total imports during the year 1918 were valued at 37,604,762 francs the exports are mostly palm kernels and palm oil, ivory, rubber, gum copal, cocoa, copper, gold and diamonds Capital Boma (pop 500 whites, 2,000 natives) Principal towns, Elisabethville (Katanga) (pop 1,000 whites, 6,000 natives), Stanleyville (200 whites, 8 000 natives) Coquilhatville, Kinshasa (Stanley Pool) and Leopoldville

Revenue (1918)	*francs* 48 000,000
Imports from U K (1918)	£1,359 465
Exports to U K (1918)	1,562,655

By the *Anglo Belgian Agreement* of July 1919 the districts of Ruanda and Urundi portions of the former territory of German East Africa (*see* 'Tanganyika Territory'), which adjoin the Belgian Congo on the E, were assigned by Great Britain to Belgium *Ruanda* and *Urundi* formed the N W corner of German East Africa from 5 S lat to the S borders of (British) Uganda and have an area of about 15 000 square miles with an estimated population of 3 000,000 They lie E of Lake Tanganyika and S W of the Victoria Nyanza, and include the most fertile and productive portions of the former German possession They are traversed by a railway from Ajiji (S) to the Uganda boundary (N)

Interior, Señor Bautista Saavedra.
War, Señor J. M. Ramirez
Finance, Señor Abel Iturralde

* An Assembly will be convened Dec 20 1920 in order to elect a President, in place of the Council of Government.

Envoy Extraordinary, Minister Plenipotentiary in London, Señor Adolfo Ballivian.
1st Secretary,
2nd Secretary, Señor Mamerto Urriolagoitia
Offices of Legation 54 Holland Park W 11
Consul General (acting), Señor Mamerto Urriolagoitia, 20 Copthall Avenue, E C 2

The Republic of Bolivia extends between lat 8° and 23° S and long 57° 30 and 73° W, and its area is about 567,498 square miles, with a population in Jan 1917 estimated at 2 800,000. The Republic was formerly comprised in the Spanish Vice Royalty of *Alto-Peru*, and derives its present name from its liberator, Simon Bolivar, (born 1783, died 1830)

Mining and agriculture are the principal industries, the mineral productions being very valuable The ancient silver mines of Potosi are now worked only for tin, but gold partly dug and partly washed, is obtained on the Eastern Cordillera of the Andes, the tin output is after that of the Straits Settlements, the largest in the world, while copper, antimony, wolfram, bismuth, salt, and sulphur are also found Its agricultural produce consists chiefly of rice, barley oats, maize cotton, coca, indigo, india rubber cacao, potatoes, cinchona bark, medicinal herbs, &c Rubber and cinchona bark are exported in addition to tin, copper, wolfram bismuth, silver antimony, hides, and wool the chief imports being iron, cotton and woollen goods, hardware, and silks There are about 1,116 miles of trunk lines of railway in operation, and 350 miles under construction, and 4 000 miles of telegraph wire There are wireless services between Riberalta, La Paz, Cobija, Capitandi (Chaco) There is direct railway communication to the sea at Antofagasta (2 days), Arica (1 day), and Mollendo (2½ days) and also (with a gap of 125 miles) to Buenos Aires (5 days), and from Rio Mulato to Potosi, branch lines run from Oruro to Cochabamba Construction on the railway between La Quiaca and Tupiza, in Bolivia, which, when completed, will allow through railway communication with Buenos Aires, is in the hands of a French firm The gap between Tupaza and La Quiaca is crossed by an automobile service, taking one day Communication with Peru is effected by rail to Guaqui and thence by steamer across Lake Titicaca to the railroad at Puno Proposed railway from Guaqui to Puno temporarily abandoned The principal line is the Antofagasta and Bolivia railroad (729 miles), and a line from La Paz to the province of Yungas may eventually connect with the steamers on the rivers Beni, Mamoré, and other tributaries Its construction has recently been begun by means of a loan made in New York A line from Potosi to Sucre, the legal capital, is under construction The Republic intends to appeal to the League of Nations for an outlet to the Pacific, of which she was deprived in the "Pacific War" of 1879–1882 (*see* Chile) The Peace Army amounts to about 5,000, all ranks, the War Effective being about 105,000

Brazil the most extensive State of South America discovered in 1500 by Pedro Alvares Cabral Portuguese navigator, is bounded on the north by the Atlantic Ocean, Guiana and Venezuela on the west by Ecuador, Peru Bolivia, Paraguay, and Argentina, on the south by Uruguay, and on the east by the Atlantic Ocean and extends between lat 4° 22 N and 33° 45 S and long 34° 40′ and 73° 15′ W, being 2 600 miles from north to south and 2 500 from west to east with a coast line on the Atlantic of 3,700 miles The Republic comprises an area of 3,298,870 square miles, with a population estimated at 24,309,000

The northern States of Amazones and Para and the central State of Matto Grosso (which together constitute more than one-half of Brazil) are mainly wide, low lying, forest clad plains the eastern and southern States are traversed by successive mountain ranges interspersed with fertile valleys In the extreme south, towards the interior, the land rises by gentle gradations to the height of 2 000 to 5,000 feet above sea level The principal ranges are *Serra do Mar* in Sao Paulo, the *Serra do Mantiqueira* (Itatiaiassu, 9 000), and the *Serra do Espinhaço* (Itacolumi 6 000 feet) in the south east of Minas Geraes the *Serra do Paranán*, between Goyaz and Minas Geraes, the *Serra dos Aymores* which divide Espirito Santo from Minas Geraes, and the *Serra da Guigueu*, *Branca* and *Araripe*, which envelop Piauhy

Brazil is unequalled for the number and extent of its rivers The *Amazon*, the largest river in the world has tributaries which are themselves great rivers and flows from the Peruvian Andes to the Atlantic with a total length of some 4 000 miles Its northern tributaries are the *Rio Branco Rio Negro* and *Japura* its southern tributaries are the *Iurud Purus*, *Madeira* and *Tapajos* while the *Xingu* meets it within 100 miles of its outflow into the Atlantic The *Tocantins* and *Araguaya* flow northwards from the Plateau of Matto Grosso and the mountains of Goyaz to the Gulf of Pará The *Parnahyba* flows from the encircling mountains of Piauhy into the Atlantic The *São Francisco* rises in the South of Minas Geraes and traverses Bahia on its way to the Eastern coast between Alagoas and Sergipe The *Paraguay* rising in the south west of Matto Grosso forms a boundary with Bolivia on its way through Paraguay to its confluence with the *Parana* which rises in the mountains of that name and divides Brazil from Paraguay

GOVERNMENT.—Brazil was colonised by Portugal in the early part of the sixteenth century, and in 1822 became an independent empire under Dom Pedro son of the refugee King João VI of Portugal On Nov 15, 1889 Dom Pedro II second of the line, was dethroned and a republic was proclaimed The constitution rests on the fundamental law of Feb 24, 1891 which established a federal republic under the name of *Estados Unidos do Brazil* The President and Vice President are elected for 4 years by the direct votes of all male Brazilians over 21 years who can read and write they are ineligible for the succeeding term They are aided as an executive, by a Council of Ministers who are responsible to the President and not to the legislature Congress consists of a Senate of 63 members and of a Chamber of Deputies of 212 members members of both houses are paid The language of the country is Portuguese foreign languages being read and spoken in the following order —French, Italian, English, German and Spanish

PRODUCTION.—The minerals are very considerable and valuable comprising gold silver, iron, diamonds, topazes, and other precious stones The immense iron deposits have been scarcely touched Manganese is exported, and there are important deposits of monozite sand Low grade coal deposits are in the south Its agricultural produce is abundant and its forests are immense Cattle raising is an important industry, the number being computed at 31,000,000. The chief products of the country are coffee and rubber the rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Para and Manaos; coffee coming chiefly from Sao Paulo. Tobacco and cocoa are grown largely,

especially in Bahia Cotton is being largely cultivated Sugar cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar producing zone The exports include also meat, hides, maize, beans, and *Yerba mate* (tea) The imports consist principally of every description of manufactured articles, but there were (1915) 1,541 industrial establishments, including 161 cotton mills giving employment to 45 942 hands and representing an invested capital of $50,000 000 Foreign capital to the amount of £200,000,000 has been invested in Brazilian undertakings in the ten years 1908 1917 The total value of manufactured articles imported in the first six months of 1919 was £19 638 000 the enormous protective duties were again increased in 1887 1893 1896, 1906, and 1916 In 1918 the exported merchandise was classified (1) animals and their products, £7 576 000, (2) minerals and their products £1 628 000 (3) vegetables and their products £24 208 000 In 1916 the total value of the exports exceeded that of the imports by £7,507 000 in 1917 by £11,770 000 in 1918 by £6 728 000 and from Jan June 1919, by £30 463 000 In 1919 (Jan June) the exported merchandise was classified (1) animal and their products £8 844 000 (2) minerals and their products £943 000 (3) vegetables and their products £51 359 000

In 1919 (Jan June) the imports were From U S A £20 083 989 U K, £5 132,191 Argentina, £4 491 169 British India £1 400 371 France £1 309,631 Portugal £921 365 Newfoundland £915 430 Uruguay, £652 055 and Sweden, £502 128

In 1919 (Jan June) the foreign trade of Brazil was shared as under

Exports to		Exports to	
Europe—		*America*—

Sec. of Legation, M. G. Radkon.

The Kingdom of Bulgaria is bounded on the north by Rumania, on the west by Yugo Slavia and Greece, on the east by the Black Sea and the Greek province of Thrace, and on the south by Greece, the Ægean Sea and Thrace.

A Principality of Bulgaria was created by the *Treaty of Berlin* (July 13, 1878), and in 1885 Eastern Roumelia was added to the newly created principality. In 1908 the country was declared to be an independent kingdom, the area at that date being 37,202 square miles, with a population of 4,337,500. In 1912–13 a successful war of the *Balkan League* against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about 2,000 square miles to Rumania. On Oct. 12, 1915, Bulgaria entered the War on the side of the Central Powers by declaring war on Serbia. She thus became involved in the defeats of 1918, and on Sept 29, 1918, made an unconditional surrender to the Allied Powers. On Nov. 29, 1919, she signed the *Treaty of Neuilly*, which ceded the S. Dobrud to Rumania and E. and W. Thrace to Greece. The present area of Bulgaria is stated at 115,000 sq. kilometres (= 72,457 sq. miles), with an estimated population of 4,975,000. The prevailing religion of the Bulgarians is the Orthodox Greek Church. In 1916, the Gregorian was substituted for the Greek Calendar

GOVERNMENT.—The executive power is vested in the Tsar, and is exercised by a Council of Ministers, appointed by him. The legislature is a single chamber National Assembly or *Sobranyé* of 213 representatives, elected for a maximum term of four years by adult manhood suffrage. Metropolitan members receive 15 *leva*, and others 10 *leva*, a day and travelling expenses.

PRODUCTION.—Agriculture is the principal industry of the people and employs over half the population, the principal crops being wheat, rye, barley, oats, tobacco and fruit. The live stock includes sheep, goats, cattle, pigs, horses, asses and mules. Coal of good quality is mined at Pernik and Trevna, and stone, iron, gold, silver, lead, manganese and copper are worked, but the mineral development is in its infancy. The chief manufactures are woollens, cottons and cigarettes. The exports consist principally of cereals (especially wheat), live stock, essence of roses, woollens, skins, cheese, eggs, timber, cocoons, and tobacco; the principal imports being textiles, metal goods and machinery, colonial wares, leather, building materials, petroleum and other oils, paper, salt fish, rice, and coal.

DEFENCE.—Before the War of 1914–1918 service in the Army was universal and compulsory, and on a peace footing it numbered about 58,000, all ranks. During the War (Oct. 1915–Sept. 1918) about 560,000 passed into the ranks of the Army, and of those over 250,000 became casualties. By the *Treaty of Neuilly* the Bulgarian Army is limited to 20,000 all ranks.

EDUCATION is free and compulsory and the proportion of attendances is good, the number of illiterates in Bulgaria is very small. There are few technical schools. Sofia has a University.

COMMUNICATIONS.—There were 1,845 miles of railway open in 1919 and about 250 miles under construction; 4,000 miles of telegraph line and 1,254 of telephone line. In 1914 there were 2,515 post offices and 438 telegraph offices The principal Black Sea ports are Varna and Bourgas; and Rustchuk, Sistor and Vidin on the Danube. In 1913, 11,755 vessels (3,132,481 tons) entered and 11,710 vessels (3,108,505 tons) cleared at Bulgarian ports.

A State of South America of Spanish origin lying between the Andes and the shores of the South Pacific extending coastwise from the Rio Sama to Cape Horn south between lat 17 10 and 56 35 S, and long 66° 30 and 75 48 W Extreme length of coast line about 2 485 miles Its extreme length is about 2,800 miles with an average breadth, north of 41°, of 100 miles The great chain of the Andes runs along its eastern limit with a general elevation of 5 000 to 15 000 feet above the level of the sea but numerous summits attain the height of 18 000 feet—the highest are the Guallatiri, 19 882 feet the Baya, 19 993 feet Cocorputi 22 162 feet El Mueito 21 227 feet and others nearly as lofty The chain however lowers considerably towards its southern extremity There are no rivers of great size and none of them are of much service as navigable highways In the north the country is arid Chile is divided into 23 provinces and 1 territory the aggregate area of which is estimated at 289 798 square miles

The population was estimated in 1920 at 4 165 858 Included in the population are four distinct racial divisions, (*a*) the Spanish settlers and their descendants (*b*) the indigenous Araucanian Indians Fuegians and Changos, (*c*) mixed Spanish Indians and (*d*) European immigrants, who were represented in 1910 by 20 000 Spaniards 15 000 Italians, 11 000 Germans 10 000 British and Irish and 10 000 French

In 1918, the births numbered 145 871 marriages 21 614 and deaths 108 667 The principal towns, with their estimated populations (1918) are — Santiago (415 641), Valparaiso (211 659) Concepcion (72 785), Talca (42,563), Iquique (46 941), Chillan (34,269), and Antofagasta (64,584)

GOVERNMENT — Chile was discovered by Spanish adventurers in the 16th century and remained under Spanish rule until 1810 when a revolutionary war, culminating in the *Battle of Maipu* (April 5, 1818) achieved the independence of the nation The present constitution bears the date of May 25, 1853. The President is chosen by indirect vote The National Congress consists of a Senate of 37 members and a Chamber of Deputies of 118 members, elected by direct vote every three years There is universal adult male suffrage for those who can read and write From 1879 1882 Chile was at war with Peru and Bolivia, and Peru is now renewing her application for the return of the provinces of Tacna and Arica which were taken from her by Chile in the 'Pacific War Bolivia also demands an outlet to the Pacific Chile has shown a conciliatory attitude in these matters

PRODUCTION, &c —Agriculture and mining are the principal occupations Wheat maize barley, oats, beans peas, lentils, wines tobacco flax hemp, Chile pepper, and potatoes are grown extensively the vine and all European fruit trees flourish The live stock includes about 2 500 000 cattle 5 500 000 sheep 500 000 horses 290 000 mules and 225 000 pigs The mineral wealth is considerable, the country being extremely rich in copper ore and iron ore The rainless north yields more especially nitrate of soda, iodine borate of soda, gold and silver, a large number of mines yielding both being in actual work in Turapaca Tuanaco and Cachinal in Atacama and Caracoles in Antofagasta the centre copper and silver and the south iron and coal (1 500 000 tons of coal were mined in 1918) The nitrate production was valued at 500 378 680 *pesos* (of 18*d*) in 1918 and the copper exports were valued at 132 765 586 *pesos* There are smelting works for copper and silver tanneries, corn and saw mills starch soap, biscuit rope, glassware paints mineral waters, boot and shoe hosiery hat cloth cheese furniture, candle and paper factories breweries and distilleries and the domestic industry furnishes cloth, mill fabrics baskets, and pottery The many ports favour commerce and six lines of steamers connect the country with Panama and the Magellan Strait direct with Europe a passage to Liverpool occupying from 30 days The staple articles of export are nitrate of soda iodine &c, copper bars and ores silver ores corn flour hides wool, and beans The imports include silks woollens and other textiles food and machinery

COMMUNICATIONS — There were (1919) 8 511 kilometres of railway open and 576 kilometres under construction, 55 330 kilometres of telegraph, 927 post offices, and 71 519 kilometres of telephone, some worked by English companies with 7 public wireless stations The commercial marine numbers (1918) 95 steamers (46 587 tons) and 35 sailing vessels (23,381 tons). In 1918 2,289 vessels (4 622 597 tons) entered Chilean ports from abroad

DEFENCE —All able bodied male citizens from 20th to 45th year must serve in the militia The peace effective of the active army is 15 778 The navy consists of 1 battleships 1 ironclad 6 cruisers 10 destroyers 1 torpedo boat 2 torpedo boat chasers, and 6 submarines with a complement of 6 000, all ranks.

EDUCATION is free but not compulsory, and 40 per cent of the population are still illiterate There is a State University at Santiago The National Library contains 162,682 volumes The language of the country is Spanish and the State religion is Roman Catholic

AREA AND POPULATION

Territory	Square miles	Population
China Proper	1,501,000	402,000,000
Manchuria	360,000	11,000,000
Mongolia	1 076,000	3,000,000
Tibet	75 ,000	3,000,000
Eastern Turkestan	600,000	2,000,000
Total	4,287,000	421 000,000

China proper (or the Eighteen Provinces) contains an area of over 1,500 000 square miles Its length from north to south is 1,860 miles, and its breadth 1,520 miles, and its population, according to the latest Chinese estimates, exceeds 400 000,000

China became a Republic on Feb 12, 1912, with a President and Vice President and an Executive Ministry, and a Legislature of a Senate (*Tsan Yi Yuan*) of 264 members and a House of Representatives (*Chung Yi Yuan*) of 596 members The government of the 18 provinces is entrusted to civil and military governors, and under them each province is subdivided into circuits superintended by *Taoyins* or intendants, and again into districts All the territorial officials are appointed by the central Government and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs The *Treaty of Kiakhta*, 1915, between China Russia, and Outer Mongolia recognises the Hutukhta Khan as Ruler of Outer Mongolia, while China, as the Suzerain Power, appoints Residents at Urga and three other towns The civil government of the three Manchurian provinces and of Turkestan is now similar to that of the province of China proper. The exact status of Tibet is still unsettled

FOREIGN RELATIONS with the Chinese Empire have existed for many centuries In the 13th century the Venetian merchant-adventurer Marco Polo resided in Cambaluc (the present Peking), and was employed by the Mongol Emperor Kublai Khan as adviser In the 17th century Jesuit missionaries had attained considerable influence, but their power aroused jealousy, and they were expelled The Dutch and Portuguese traders had for centuries maintained commercial dealings with the port of Canton, but towards the end of the 18th century they were largely displaced by the British East India Company, and when the Company's monopoly was withdrawn, in 1833, the position of British merchants in Canton became a national question, and contributed towards the first Chinese War of 1840. A treaty was signed at Nanking, as the result of these operations, ceding Hong Kong to Great Britain and open-

ing five ports to foreign trade and residence; but the principle of extra territoriality was maintained, and foreigners remained amenable only to the laws of their own countries The continued exclusiveness of the Chinese Government led by a long chain of events to the war of 1860, when British and French troops captured Peking and burnt the Summer Palace. From this date the development of foreign trade began to be most important. In 1894 China fought a disastrous war with Japan, resulting in the loss of Formosa and the establishment of Corea as an independent state. An abortive attempt was made, in 1898, by the Emperor to introduce administrative reforms, but his reactionary ministers persuaded the Dowager Empress (his aunt) to reassume the reins of government. Under her rule a plot was hatched to rid the country of foreigners, and in the summer of 1900 the Legations in Peking and the foreign settlements in Tientsin were fiercely attacked and bombarded for many weeks The situation was relieved at its most critical moment by the arrival of an allied army despatched by nearly all the Treaty Powers, and Tientsin and Peking were captured. The Imperial Court fled, and remained in voluntary exile until early in 1902 Meanwhile, a Peace Protocol was signed between the Envoys of the Treaty Powers and the Chinese Plenipotentiaries, Prince Ching and the late Li Hung Chang This provides for an indemnity of $325,000,000, to be paid within the next 39 years. Subsequent negotiations resulted in 3 new commercial treaties—(1) between the U K and China (5 Sept, 1902), (2) U S and China (8 Oct, 1903), and (3) Japan and China (9 Oct, 1903) Under the two last Mukden, Antungkow, Chang shu, and Antung in Manchuria, were made Treaty ports

On the conclusion of the war between Russia and Japan in 1905, a Treaty and Additional Agreement relating to Manchuria were entered into between Japan and China. By the former the Chinese Government consented to all the transfers and assignments made by Russia to Japan in Manchuria; and by the latter the following cities and towns in Manchuria were opened as places of international residence and trade —Kenq huang ch'eng, Liao yang, Hsinmintun, Tung chiang tzu (on the Liao River), and Fa ku men in Fengtien Province, Ch'ang ch un, Kirin, Harbin, Ninguta, Hunch un, and Sansing in the Kirin Province; and Tsitsihar, Hailar, Aihun and Manchuli in the Heilungchiang Province

In October, 1911, a revolution broke out in Hankow, which resulted finally in February, 1912, in the abdication of the Manchu Dynasty in favour of a Republican form of Government In 1913, a second revolution, engineered by the Southern Party, was successfully put down by President Yuan Shih kai. Since that date the Central Government has been gradually consolidating its position, and bringing about a centralisation of power in Peking. In May, 1915, a new treaty with Japan was concluded by which additional privileges are granted to Japanese in Manchuria and Mongolia Towards the end of 1915 President Yuan Shih-kai engineered a campaign to revert to a Monarchical form of government, and, as the result of elections held all over the country, was invited to ascend the throne as Emperor The Southern Provinces, however, immediately rose in revolt, and the attempt failed and finally ended with the death of Yuan Shih-kai in May, 1916 The Vice President, Li Yuan hung, succeeded to the Presidency, and all traces of the Yuan Shih kai *regime* were rapidly abolished The first Republican Parliament reassembled, and the government reverted to the Republican form adopted after the overthrow of the Manchu Dynasty in 1912 Both Houses of Parliament are elected by a system of limited franchise and the government of the country is vested in them The President, who is elected by Parliament, is assisted by a Premier and a Cabinet of Ministers, whose appointments have to be approved by Parliament, and to whom they are responsible for their actions An abortive attempt to restore the Monarchy was suppressed in June, 1917 In 1920 a revolt in South China culminated in the declaration of an independent Republic of South China (with its capital at Chung King) including the former provinces of Yunnan, Kwei Chow, Sze Chuen and Honan, but this Republic has not yet been recognised, and internal and external discussions appear to threaten its existence

The estimated foreign population of China during the year 1914 was as follows British, 8,914 Japanese, 84 948, Russian, 56 319 American, 4,365, Portuguese, 3,187 German 3 013, French, 1,864, other nationalities 2,197 the total being 164 807 Out of a total of 3 421 foreign firms in China, 534 were British, 1 237 Russian 955 Japanese, 273 German, 136 American and 113 French

DEFENCE —The army is undergoing reorganisation The total strength of all forces in August 1913, just after the Rebellion of that year was estimated at 500,000 but no authenticated statistics are obtainable An Air Force is being organised with the assistance of a British officer (Group Capt F V Holt, C M G, D S O) The Navy consists of 2 protected cruisers built in 1911 (2,750 tons), 4 older protected cruisers (4,300–3,000 tons), 3 torpedo gunboats (850 tons), 11 gunboats (750–550 tons), 4 destroyers (400 tons), and 8 small torpedo boats (120 tons)

EDUCATION —Many changes in administration and development are under discussion, including a proposal to establish universal compulsory primary education There is a University in Peking and a number of colleges all over China under foreign management In 1911, there were 545 foreigners employed in educational work

COMMERCE —The net trade of the open ports for the years 1914 1919 is stated as follows in *taels* (in 1914 7 5=£1 in Oct 1920, 4 1=£1) —

Year	Imports	Exports.	Tot
1914	569 241,382	356,226,629	925
1915	484,475,719	418,861 164	873
1916	516 406,995	481 797 366	998,
1917	549 518,774	462,931,630	1,012,
1918	554,893,082	485,883,031	1 040,
1919	—	—	1,277,

The import of Indian opium is now prohibited

The foreign trade of China was shared by the nations of the world as under in 1914 —

British	%	Foreign	%
Great Britain .	12	Japan .	20
Hong Kong	28	U S A.	9
India	4	Europe (exc Russia)	11
Other British Dominions	2	Russia .	6
		Other countries .	8
% British	46	Foreign .	54

TRADE WITH UNITED KINGDOM

Imports of British produce and manufacture, 1918, £25 601,909 —

Chemicals	£132,482	Machinery	£630 845
Cottons	10 549 612	Jute do	458 766
Iron Manufactures	698 635	Woollens	1 117 994

Exports to U K , 1918, £11 122,762 —

Bristles	£555 400	Skins undressed	£502 610
Hair	101 222	Straw Plaitings	65 425
Oil	252 674	Silks	14 907
Peas and Beans	177 595	Tea	26 820
Raw Silk	831 049	Wool	329 370
Silk Manufactures	824 000		

COMMUNICATIONS — *Railways* — About 6 500 miles were open in Jan 1915 inclusive of the Manchurian lines, while 2,500 miles more are projected or under construction

Shipping —The China Merchants Steam Navigation Co have a fleet of 31 ships of an aggregate tonnage of 60,000 Besides this there are a large number of small vessels engaged in the coasting trade and on the Yangtse In 1914 the total tonnage of vessels entered and cleared at the treaty ports was 96 326 276, an increase of 2 9 1 446 on that of the previous year Of these 40 per cent were British, 25 per cent Chinese 5 per cent German, 20 per cent Japanese, 2 per cent French, and 3 per cent Russian In June 1918, a vessel of 14,750 tons, constructed at the Kiangnan Dock and Engineering Works at Shanghai was launched and supplied to the order of the United States Shipping Board

Telegraphs are being rapidly constructed by the Central Government and Peking is in communication overland with Europe and Tibet the line being extended to Lhasa In 1913 there were 37 000 miles of land lines and 51,000 miles of aerial wires

CUSTOMS AND POSTS —The Chinese Maritime Customs is the controlling service, this body consists of nearly 1,000 Europeans a large proportion of them British subjects, all under the control of the *Inspector-General* By an Imperial Decree of May, 1906 the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators General were appointed But the change has not materially affected the powers hitherto exercised by the Inspector General In addition to the collection of dues at the Treaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations The Chinese Post Office formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications and a *Postmaster General* (foreign) was appointed Already letters can be sent all over the 18 provinces at a uniform rate of 3 cents for 20 grammes The number of Chinese post offices is 8,324 538 981 400 postal packets and 5 385 260 parcels were handled in 1914

BUDGET (Nov , 1919)

Ordinary Revenue	*Taels*	375,800,000
Extraordinary Revenue		272,900,000
Total		647,700,000
Ordinary Expenditure	*Taels*	300,000,000
Extraordinary Expenditure		243,000,000
Special Expenditure		104,700,000
Total		647,700,000

Chinese Debt (Jan , 1920)

War Loans outstanding	£30 000 000
Boxer Indemnity do	48 000 000
Railway Loans do	40,000,000
General Loans do	50,000,000
Japanese Loans do	30 000 000
Short term Loans do	17,000,000
	£215,000 000

About 10s 2d per head of the population

Included in the expenditure is the sum of 214 000 000 *taels* towards repayment of debt

MANCHURIA lies to the north of China Proper, and has a total area of about 360 000 square miles with a population estimated at 11,000 000 The capital is Mukden (pop 250 000) a station on the Manchurian railroad and connected with the Russian system Indigo, opium, cotton tobacco, and various cereals are grown, and there is great mineral wealth

MONGOLIA has a total area of 1 076 000 square miles and a population estimated at about 3,000,000 Outer Mongolia is now by the Treaty of Kiakhta of 1915, an autonomous state under Chinese suzerainty Its ruler, the Hutukhta Khan of Urga receives his title from the Chinese Government. China appoints a Resident at Urga, with three Assistant Residents in other towns The principal industry is cattle and sheep raising and the provision of transport animals

TIBET (area 750 000 square miles, pop 3,000 000) borders on British India *q v*

CHINESE TURKESTAN has a total area of 600 000 square miles and a population estimated at 2 000 000 It includes Zungaria and Chinese Tartary, and provides sheep cattle, and transport animals for the caravan routes The chief centres are Urumchi and Kulja

CAPITAL OF THE CHINESE REPUBLIC, Peking Population 1,000 000

The Republic of Colombia lies in the extreme north west of South America, having a coast line on both the Atlantic and Pacific Oceans It is situated between 2° 40′ S to 12° 25′ N lat and 68° to 79° W long, with an estimated area of 461,606 square miles, and a population estimated at 5,473,000, of whom more than one-half are whites and half-castes The country is intersected by three great ranges of the Andes, known as the Western, Central, and Eastern Cordilleras, the second contains the highest peaks, but the latter is the more important, as it consists of a series of vast table lands, cool and healthy This temperate region is the most densely peopled portion of the Republic

The Colombian coast was visited in 1502 by Christopher *Columbus*, and in 1536 a Spanish expedition under Queseda established a government of certain costal communities under the name of New Granada which continued under Spanish rule until the revolt of the Spanish-American colonies of 1811 1824 In 1819 *Simon Bolivar* (born 1783 died 1830) established the Republic of Colombia consisting of the territories now known as Colombia Panama, Venezuela and Ecuador In 1829 1830 Venezuela and Ecuador withdrew from the association of provinces and in 1831 the remaining territories were formed into the Republic of New Granada From 1853–1861 many of the Colombian Provinces declared their independence and the nineteenth century contained frequent revolutions and internal wars In 1903 Panama seceded from Colombia and is now a separate Republic

The Colombian forests are extensive among the trees are mahogany cedar fustic and other dye woods and medicinal plants The mineral productions are emeralds gold silver platinum, copper iron lead, and coal petroleum is available in large quantities but is unworked The principal agricultural products are coffee cotton, plantains and bananas and in some parts tobacco wheat and other cereals Manufactures, for home consumption consist of woollen and cotton stuffs The chief exports are coffee, precious metals hides india rubber, and bananas. All religions are tolerated

The standing army consists of about 6,000 men the navy has been nearly abolished Railroads are in their infancy about 750 miles being open in 1920 with 8 680 (1907) miles of telegraph The rate of exchange is about $5 gold = £1 (approximately)

The Republic of Costa Rica, the most southern State of Central America extending across the isthmus, between 8° 17′ and 11° 10 N lat and from 82° 30 to 85° 45′ W long, contains an area of about 23 000 English square miles, and a population (1919) of 463 727

For nearly three centuries (1530 1821) Costa Rica formed part of the Spanish American dominions, the seat of government being at Cartago In 1821 the country joined in the War of Independence, and from 1824–1839 it was one of the United States of Central America

The principal agricultural products are coffee bananas, rice, maize sugar cane potatoes cocoa and beans, the soil being extremely fertile The chief exports (1919) are coffee (£2 402 277) bananas (£695 753), gold and silver bullion (£151,093), cacao (£110 852) hardwoods rubber skins and hides The imports are dry goods hardware, provisions, railway materials machinery, paints, and general merchandise (in 1919, 78 36 per cent from United States 7 58 from United Kingdom, 9 99 from Spanish and Central America

The chief ports are Limon, on the Atlantic coast through which the whole of the important banana trade with the United States is done as well as by far the larger part of the other exports and imports and Puntarenas on the Pacific coast In 1910 479 foreign vessels (486 081 tons) entered at Costa Rican ports About 405 miles of railroad were open in 1919 In 1918 there were 18a post offices, dealing with

The island of Cuba (the largest of the "West India Islands) lies between 74 and 58° W long, and 19° and 23° N lat, with a total area of 44 178 sq miles and a population of 2,150,111 (1910)

The island of Cuba was visited by Christopher Columbus, during his first voyage, on October 27, 1492, and was then believed to be part of the Western mainland of India Early in the 16th century the island was conquered by the Spaniards, to be used later as a base of operations for the conquest of Mexico and Central America, and for almost four centuries Cuba remained under a Spanish Captain General The slave trade was abolished early in the 19th century and the slaves were emancipated from 1880 1886 The government of Spain was marked by a generally corrupt administration complicated by internal unrest fomented by external influences, and the various attempts at independence met with severe military repression The separatist and autonomous agitation culminated in the closing years of the 19th century in a fierce and bloodthirsty war, and although a conciliatory movement was evinced by the Madrid authorities in 1897, the struggle was continued by the party of separation in the island In 1898 the government of the United States put into execution a threat of interference by the despatch of the battleship *Maine* to Havana harbour, and in February of that year the vessel was sunk by an explosion, the cause of which appears likely to remain an unsolved mystery On April 20, 1898 the U S Government demanded the evacuation of Cuba by the Spanish forces, and a short Spanish American war led to the abandonment of the island, which was occupied by U S troops From Jan 1, 1899, to May 20, 1902, Cuba was

under U.S. military rule, and reforms of the widest and most far-reaching character were instituted. On May 20, 1902, an autonomous government was inaugurated with an elected President, and a legislature of two houses. The island was, however, again the prey of revolution from July to Sept., 1906, when the U.S. Government resumed control. On Jan. 28, 1909, a republican government was again inaugurated.

Of the total area of 28,000,000 acres, only about 1,000,000 acres are cultivated, 50 per cent. of these being under sugar cane and 30 per cent. under tobacco, sweet potatoes and bananas. Rice, coffee, cocoa and maize are also grown and tropical fruits (oranges, coco-nuts, pine apples, &c.) flourish. The chief agricultural products of the island are tobacco and sugar (estimated crop in 1920, 3,650,000 tons; actual crop, 1918-19, 3,971,594 tons); the chief product of the forests is mahogany, while cedar is also used for boxing the tobacco crop. The live stock includes about 3,000,000 cattle and 600,000 horses, the vast savannahs of Central Cuba being particularly suitable for cattle ranges.

2,516 miles of railroad are open and about 6,000 miles of telegraph line.

Spanish is the language of the island.

Part of the Austro-Hungarian Monarchy declared its independence on Oct. 18, 1918, as the Czecho-Slovak Republic, and ten days later the *Národní Vybor* (National Council) of Czecho-Slovakia took over the administration of the independent territories. The political neighbours of the Republic are the Austrian and Hungarian Republics on the S., the German and Polish Republics on the N., the German Republic on the W., and the Ukraine Republic on the E. Within these limits are the former Austrian Provinces of Bohemia and Moravia and part of the Province of Silesia; and Northern Hungary from the Danube (at Pressburg, on the Austrian frontier) to the Carpathians (at the headwaters of the Ung River in the eastern slope of Mt. Vereezka)—a total area of about 54,450 sq. miles, with a population estimated at 10,000,000 for the Czech Provinces of Bohemia, Moravia and Silesia, and at 3,000,000 for Slovakia—a total of 13,000,000, of whom 10,500,000 are Czecho-Slovaks and 2,500,000 Germans. The new State was recognised by Austria in 1918 and by Hungary on March 10, 1919. The National Assembly, consisting of a Senate and a Chamber of Deputies, is elected by universal adult suffrage of both sexes. The executive power is exercised by a Council of Ministers, appointed by the President. In 1919 the Democrats, Agrarians and Slovaks were in the ascendancy, Socialists 28, Clericals 28 and Progressives 6 being in the minority of the 260 members. The Constitution guarantees religious and political freedom, and the Church will be separated from the State. About 75 per cent. of the people are Roman Catholics.

The principal industries are agriculture, brewing and manufactures in Bohemia, Moravia and Silesia, and mining and manufactures in Slovakia. Wheat, potatoes, sugar beet, and hops are among the principal crops. Forests are also a source of wealth in the Republic. Dyeing and calico printing, woollens, chemicals, and porcelain ware are among the chief industries, while the glass production of Bohemia is celebrated. The principal exports are timber, sugar, glassware, iron and steel manufactures, and textiles.

Czecho-Slovakia has no direct access to the sea, but has a right of access over the Elbe and Oder to Hamburg and Stettin, for which purpose the Government proposes to canalise the Upper Elbe in order to connect it with the Oder and the Danube. If this proposal is carried out, the

country will be traversed by a waterway affording a communication from the North Sea and Baltic over the Danube, to the Black Sea.

The capital is Prague on the Moldau, the former capital of Bohemia, with a population estimated in 1919 at 550,000 other large towns are Brunn (Brno) in Moravia (pop 135 000), Pilsen (Pilzen) the brewing centre in Bohemia (pop 85 000), Pressburg (Bratislava) where the Danube forms the S boundary of the Republic (pop 84 000), and Kaschau (Kosice) in Eastern Slovakia (pop 50,000)

A Kingdom of North Europe and the smallest of the Northern States consisting of the islands of Zealand Funen, Lolland &c the peninsula of Jutland and the outlying island of Bornholm in the Baltic Denmark is situated between 54° 34 57° 44 N lat and 8° 5 12° 40 E long, with an area of 15 042 square miles, and a population in 1916 of 2 921 000 nearly one half of whom live exclusively by agriculture, and one fourth by manufactures and trade

In 1864 Denmark was attacked by Prussia and Austria and deprived of Schleswig Holstein (Prussia taking the whole territory after a further war with Austria in 1866) At the conclusion of peace between the Central Powers and the Allies in 1919 the question of Schleswig Holstein was subjected to a plebiscite of the inhabitants and North Schleswig is now part of Denmark

The common products are wheat, rye, oats barley, potatoes, cattle, horses pigs sheep and butter Its manufactures are, for the most part, for home consumption Its principal imports are coals, manufactured goods (woollens silks, cotton), iron, hardware wine, fruit, tea, maize, and colonial produce In 1918, 1,070,000 hectares were under corn crops, 387,600 ha sugar and other beets and 787,200 ha hay crop In July, 1918, the live stock numbered 544 900 horses, 2 123 400 cattle, 470,000 sheep and 620,800 swine The crops in 1918 included 4,120 400 qrs of oats, 2,364 400 of barley, 1,507 500 rye 2 003 900 mixed corn and 766,000 qrs of wheat Its chief exports are agricultural produce, including wheat and barley bacon hams, flour, butter eggs hides, skins, corn meal and oil cake, horses and cattle There is a sea going mercantile marine of 399 steamers, with a tonnage of 341 835 There are (1917) 2,645 miles of railway and 8 437 miles of telegraph line

DEFENCE.—The Army consists of about 14,000 trained men the vote for 1918-19 amounting to Kr 85 000 000 (including supplementary estimates of Kr 69,000 000) The Navy consists of 4 coast-defence ironclads and 1 launched, 2 small cruisers, 27 torpedo-boats (built and

* The National Currency in the Sokol equivalent to the Franc replacing the former Austrian Crown

building), 10 submarines (built or building). Vote, 1918–19, Kr. 33,000,000.

EDUCATION is free and compulsory, the schools being maintained by local taxation. Special schools are numerous, horticulture and agriculture predominating. The University is at Copenhagen.

Vice-Consul,

The outlying possessions and colonies of Denmark have an area of about 30,000 square miles, with close on 35,000 inhabitants. They include the FARÖE, or Sheep Islands (515 sq. m., pop., 1916, 19,600); GREENLAND (ice-free portion about 50,000 sq. m., total area about 830,000 sq. m., population, 1911, 13,460), the trade of which is a Government monopoly. (The three islands in the West Indies—ST. CROIX, ST. THOMAS, and ST. JOHN—were sold to the U.S.A. in 1917, the price paid being stated as $25,000,000.)

Copenhagen, distant 728 miles; transit, 7 days.

Consul, Octavio Ventura.
Vice-Consul, A. M. Ventura.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America, having been founded in 1496 by Bartolomeo Columbus, who named it Hispaniola. The island was peopled by the Spaniards with imported African slaves, who soon exterminated the "Indian" tribes. In 1821 an independent republic was proclaimed and the Spaniards abandoned the country. The present republic of San Domingo broke away from Haiti in 1844 and its independence is secured under a law of Nov. 6, 1844. The Dominican Republic comprises an area of about 18,045 square miles, with an estimated population of nearly 700,000. Sugar and cocoa are the most important crops, and coffee, and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, cotton, wax, honey, logwood, fustic, turtle-shell, hides, and divi-divi. There are about 150 miles of public railroad, and telegraphic (3 wireless stations) and telephonic communication has been established throughout the Republic, which is connected by cable with North and South America, New York, Curaçao, and Porto Rico. The Customs are administered temporarily by officials appointed by the United States Government, under a Treaty by which the U.S. collects the Customs, assists the Government to maintain peace, and acts as intermediary between the Republic and its foreign creditors. Since 1907 not less than 55 per cent. of the Customs Collections has been deposited in a New York Bank to pay the interest and sinking fund charges of the Foreign Loan.

On 29 Nov., 1916, a military Government by U.S. officers was proclaimed. All the Government departments are being administered by these officers, while the entire control of finance and police is in their hands. A native constabulary under American officers is being formed.

British trade is hampered by the insufficiency of direct maritime communication and by the absence of direct service with the largest ports, which are on the south coast, the ships of the R.M.S.P.Co. calling at the northern ports only.

An equatorial State of South America extending from lat 1° 38 N to 6 5 S, and between 60° 20 and 81° W long (according to the Ecuadorian geography but there are boundary disputes with Peru), comprising an area of 276 000 English sq miles

The former *Kingdom of Quito* was conquered by the Incas of Peru in the latter part of the 15th century Early in the 16th century *Pizarro's* conquests led to the inclusion of the present territory of Ecuador in the Spanish Vice Royalty of Peru The independence of the country was achieved in a revolutionary war which culminated in the battle of Mount Pichincha (May 22, 1822)

The Republic of Ecuador is divided into 15 provinces and one territory It has a population of about 2 000 000, mostly descendants of the Spaniards aboriginal Indians and Mestizoes The territory of the Republic extends across the Western Andes the highest peaks of which are Chimborazo (20,702 ft), Ilinizа (17 405 ft.), Carahnairazo (16,515 ft), Cotocachi (16,302 ft), and Pichincha (16 000 ft) in the Western Cordillera, and Cotopaxi (19,498 ft), Antisana (18,864 ft), Cayambe (19,160 ft), Altar (17,930 ft), Sangay (17 464 ft), Tungurahua (16,690 ft), and Sincholagua (16,365 ft) in the Eastern Cordillera Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Mira, Santiago, Chones, and Esmeraldas on the Pacific coast There are extensive forests and the cinchona bark tree is common

Its chief products are cocoa vegetable ivory, cotton coffee india rubber sugar orchella weed straw hats and hammocks bark yams tobacco, fruits sarsaparilla wheat &c Its minerals consist of gold quicksilver lead iron and copper emeralds and rubies are occasionally met with and sulphur is found in many parts The chief exports are cocoa caoutchouc vegetable ivory and gold cinchona bark Panama hats coffee, and cattle the chief imports are textiles and other manufactured goods A railroad connecting Guayaquil and Quito was opened in 1908 Guayaquil is the chief port (population 1919 about 70 000) other chief towns Cuenca Quito 55 000 Cuenca 13.000 and Riobamba 12 000 The *Galapagos* (Portuguese) *Islands* (2 870 square miles) belong to Ecuador

The language of the country is Spanish

A country situated on the gulfs of Finland and Bothnia which was conquered by Russia from Sweden and annexed in 1808. Resulting from the revolution in Russia Finland proclaimed its independence in 1918, and is now an independent Republic The area is 145 388 square miles with a population of about 3,300,000 in 1920, of whom about 3 000 000 are Finns 300,000 Swedes and

* Exclusive of Debt Service † Not yet published

2 000 Laps leading a nomadic life in the north Nearly all the inhabitants are Lutherans There is a university at Helsingfors, with 2 512 students, of whom 518 are women The leading crops are rye barley, oats, potatoes Saw mills and paper manufacture provide the chief industry, and the forests are a great source of wealth, immense quantities of timber being prepared for export dairy produce is also exported There are 2 698 miles of railroad, and a merchant fleet of 5 022 vessels (mostly small), of which 693 are steamers Railway connexion with Sweden was completed in 1919

The country was formerly governed by the Finnish Senate, of 8 members with a Diet of 4 estates elected by the people, but under the Constitution of Jan 1 1907, there is a single Chamber elected by universal suffrage of both sexes women being likewise eligible for election to the Chamber Finland was thus the first country to concede woman suffrage and representation and it is noteworthy that it was gained without agitation

The revenue in 1920 was estimated at 1 723 750 000 Finnish marks, and the expenditure at 1 930 750,000 Finnish marks The public debt amounted (Aug 1920) to 1 292 000 000 Finnish marks, including 282 000 000 for railways 378 000,000 for war expenses 350 000 000 for the Bank of Finland, 223 000 000 for industrial development and 75 000 000 for adjusting the 1919 budget The imports in 1919 were valued at 2 505 500 000 Finnish marks and the exports at 873 000 000 Finnish marks The Finnish mark is of the same nominal value as the franc the exchange in 1920 being about 128 marks=£1 sterling

The *Aland Archipelago* a group of some 300 small islands at the entrance to the Gulf of Bothnia was wrested from Sweden by Russia in 1809 and was incorporated in the government district of Finland The total area of the archipelago is about 210 square miles, with a population of about 17 000 of whom about two thirds inhabit Aland (the largest island) Swedish claims to the archipelago are not admitted by the Finnish Government

The most westerly State of Central Europe extending from 42° 20 to 51° 5 N lat and from 7° 45 E to 4° 45′ W long bounded on the north by the English Channel and Straits of Dover (Pas de Calais) which separate it from England Its circumference is estimated at about 3 000 miles and its area (in 1914) at 207 076 square miles divided into 87 departments including the island of Corsica in the Mediterranean off the west coast of Italy The territory ceded by the *Treaty of Frankfort* (May 10, 1871) amounted to 5 602 square miles, that regained by the *Treaty of Versailles* (June 28, 1919) to 5 819 square miles making the present area of France (exclusive of Algeria) 212,895 square miles, with an estimated population (1919) of 41 500,000 The population at the census of 1911 was 39,602,509, and in 1913 there were 745,539 births, 298 760 marriages, and 703,638 deaths France has always been attractive to foreigners, of whom (1906) 1 046,905 were resident there, or 2 51 per cent of the legal population, this number included 377 638 Italians, 312,432 Belgians, 87,836 Germans, 35,990 English, 14,863 of the latter residing in the Department of

the Seine 20 per cent of the foreign population was born in France About 26 000 Frenchmen are stated to be resident in England

GOVERNMENT —The monarchical system of government was overthrown by the *French Revolution* (1789–1793), and the First Republic endured until the Great Napoleon (born Aug 15, 1769 died May 21, 1821) founded the First Empire in 1804. The monarchy was restored in 1814, and also after the "Hundred Days" of Napoleon (March 20–June 29, 1815), until the Second Republic of 1848, which became the Second Empire on Nov 22 1852 On Sept 4, 1870, the Emperor Napoleon III (nephew of the Great Napoleon) was deposed, and the Third Republic was set up The head of the Republic is the President, elected for 7 years by the National Assembly of the two houses of the Legislature, the *Senate* of 300 members (elected by indirect vote for 9 years one third being renewable every 3 years) and the *Chamber of Deputies* of 597 members (elected by direct vote for 4 years) Members of the legislature receive 15 000 francs a year and travelling facilities over the railways

PRODUCTION —The chief agricultural products are wheat, barley, rye, maize, oats, potatoes beetroot (for the manufacture of sugar) hops &c Fruit trees abound, and are very productive the principal being the olive, chestnut, walnut almond, apple pear citron fig plum &c Forestry is an important industry the principal forests being those of the Ardennes Compiegne Fontainebleau and Orleans, consisting chiefly of oak, birch pine, beech, elm, chestnut, and the cork tree in the south The vine is cultivated to a very great extent (971 778 632 gallons of wine were produced in 1913), as the names Bordeaux, Burgundy Champagne &c, universally testify, cider making is also an important industry, and the production in 1913 amounted to 661 868,702 gallons The live stock included about 15 000,000 cattle 17,000,000 sheep, and 7,000 000 pigs at the outbreak of the War of 1914–1918 Some reparation of the destruction of the War is to be made under Annex IV of the *Treaty of Versailles*, whereby Germany undertakes to deliver to the French Government specified numbers of bulls and milch cows, stallions, fillies and mares, rams and sheep, and goats The mineral resources include, coal (1913, 40,394 177 metric tons) pig iron (4 939,194 metric tons), copper, lead, silver, antimony and salt Under Article 50 of the *Treaty of Versailles*, the coalfields of the *Saar Basin* are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a *plebiscite* whether they will remain French, return to Germany, or become a self governing community The coalfields abut on Lorraine, and have an area of 227 square miles, with a population of 640,000, and they include the towns of Saarbruck (60,000), Saarlouis (16,000), and Merzig (10,000), on the River Saar It is estimated that the coalfields will yield 20,000,000 tons of high grade coal, and in 1913 the various establishments in the ceded area produced 1,375,000 tons of cast iron and 1 600,000 tons of steel Under Annex V of the Treaty, Germany also undertakes to deliver to France 7,000,000 metric tons of coal annually for 10 years, and to make good any deficiency due to War causes in the production of coal in the departments of Nord and Pas de Calais. The most important manufactures are of metals, watches, jewellery, cabinet work, carving, pottery, glass, chemicals, dyeing, paper-making, woollens, carpets, linen, silk, and lace Glass manufacture and pottery are also important, and the sardine fisheries and the culture of oysters are a source of wealth

DEFENCE —The *National Army* of France consists of the Metropolitan Army, the Colonial Army, the Gendarmerie, and Republican Guard, and of the partly native armies of Algeria, Morocco, and Tunis These forces had a total strength on a peace footing (in 1914) of 633 733 all ranks In the War of 1914 1918 over 20 per cent of the French people were mobilised, and 1 717 000 all ranks passed into the Armies of France (exclusive of troops from Algeria, Tunis, and Morocco) Of this total over 1,500,000 were returned as killed or missing By law of 1919, the French Army will consist in future of 350,000 all ranks on a peace footing, and of 1 300 000 on a war footing, with a reserve (including territorials) of 2,000,000 all ranks The *French Navy* was manned in 1914 by 64 000 officers and other ranks and consisted in 1919 of 7 Dreadnought and 13 Pre Dreadnought battleships, 15 armoured cruisers, 18 protected cruisers, 80 destroyers, 153 torpedo boats, and 100 to 120 submarines

EDUCATION —The educational system is highly developed *Central Administration* comprises (*a*) Ministry of Public Instruction, (*b*) Superior Educational Council, charged with the actual administration, (*c*) Consultative Committee (advisory), (*d*) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister *Local Administration* comprises (*a*) Territorial Academies with inspecting staffs for all grades, and (*b*) Departmental Councils presided over by the *préfet*, charged especially with *primary* education By the Law of July, 1904 all congregationist institutions are to be suppressed within 10 years, and many were at once closed some re opening under lay management (i) *Primary Secular comp* and *free* Age 6–13 Schools include (*a*) infants, (*b*) lower primary, (*c*) higher do Supplementary courses, and courses for adults Lower and higher primary certificates granted Numerous private courses are aided from local funds Schools are for boys for girls, or mixed (ii) *Secondary* State lycées, communal colleges, and many private establishments, 7 yrs course, either (*a*) purely classical, (*b*) purely modern, (*c*) Latin and sciences or (*d*) Latin and modern languages Degree of Bachelor conferred on completion For females, a similar organisation, course 5–6 yrs Sèvres school and the Sorbonne Association well known (iii) *Special Schools* are very numerous, many public institutions being dependent on ministries other than that of Public Instruction (iv) *Universities* (State universities alone grant degrees, but numerous private faculties and private institutions further higher education) Aix, Algiers, Angers, Bordeaux, Caen Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpelier, Nancy, Nantes, Paris, Poitiers Rennes, and Toulouse

COMMUNICATIONS —The principal rivers of France are the Seine, Loire, Garonne, and Rhône The system of railroads in France is very extensive, they are almost entirely *concédés*, and become State property after the expiration of the concession The length of lines of general interest, inclusive of local lines, open for traffic on 31 December, 1915, was 25,579 miles, the total receipts from passenger and goods traffic, &c, being £49,406,200

The length of telegraph wires is 151,700 miles, and of telephone lines 107,150 miles. At the 1st of January, 1923, the mercantile marine, comprising boats of 2 tons and upwards, amounted to 17 670 vessels of 1 518,518 net tons (of which 15 813 were sailing ships representing 614 024 net tons). The sums voted by Parliament for construction and navigation Bounties to Shipping and to Deep Sea Fisheries in 1912 amounted to £1 530 000 and £1 106 732 for Postal and Cable Service Subventions.

Shipping.—The French mercantile marine consisted in 1916 of 1 016 steam vessels above 100 tons with a total tonnage of 1 909 609 tons and of 523 sailing vessels above 100 tons total tonnage 376 119 tons. During the year 1913 the total number of French and foreign vessels entering French ports amounted to 27 409 representing a tonnage of 31 302 807 tons of which 7 581 374 tons were French while the total clearings amounted to 28 440 ships of a tonnage of 21 472 968 tons of which 7 763 519 tons were French. The chief ports are Marseilles, Rouen, Bordeaux, Le Havre, Calais, Boulogne, Dunkirk and Cherbourg. A bill is to be introduced into the Chamber for the canalisation of the Rhone which will make the river navigable for 1 200 ton vessels from the sea to Switzerland and will also provide electric power and irrigation to the surrounding departments.

COMMERCE. The principal imports are wool, cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, cocoa, chocolate, copper, petroleum, oils, coffee and wines. The principal exports are cotton tissues, silk tissues, woollen tissues, wines, smallwares, automobiles, &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits, refined sugar, brandy and liqueurs, fish and cheese.

Alsace-Lorraine.—*High Commissioner*, M Millerand (1920). Alsace Lorraine, formerly a part of the Holy Roman Empire was ceded to France in 1648 at the Peace of Westphalia and was ceded to Germany by the *Treaty of Frankfort* (May 10 1871) after the Franco Prussian War. At the close of the War, 1914–1918, the Provinces were regained by France under the *Treaty of Versailles* (June 28, 1919). They embrace the fertile plain between the Rhine and the Vosges, and stretch beyond these mountains as far as Luxemburg. Wine, tobacco, hops, iron and coal are among the leading productions and the cotton industry is most flourishing. The area is 5 605 square miles; the population in Dec. 1910 was 1 874 014 of whom 965 625 were males and 908 389 females; while 1 428 343 were Catholics, 408 274 Protestants and 30 483 Jews. Principal towns Strassburg (pop. 178 891), Mulhausen and Metz.

Algeria.—The three departments of Algeria—Algiers, Oran and Constantine—form an integral part of France under a Governor General assisted by a Consultative Council. These departments lie between 4° 36′ W. to 8° 16′ E. longitude, 37° 6′ N. to an undetermined S. limit about 30° N., covering an area estimated in 1906 at about 1 119 426 square miles with a population (1911) of 5 563 828 of whom 752 043 were Europeans and 4 740 526 natives. The revenue in 1917 was estimated at £5 283 653 and the expenditure at £5 213 226. The bulk of the trade is with France; the exports to France amounting in 1917 to 81·3 per cent. and the imports from France to 67·8 per cent. of the total. The exports to the U.K. in 1917 were valued at £2 300 000 and the imports from the U.K. at £2 159 000. The exports consist mainly of wine, wheat and other cereals, sheep and ox and goat skins, fruits, zinc and iron ores, olive oil, phosphates (200 000 metric tons in 1918), cork, wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K. were coal and patent fuel, machinery, cotton, oil, cotton tissues, tin plates, clothing and prepared skins. Iron, copper, quicksilver, zinc and lead mines are being worked. In 1917 there were 2 172 miles of railroad open for traffic and in 1917 the number of ships engaged in foreign trade entering and clearing Algerian ports was 4 075 of a net tonnage of 4 357 365 tons. The principal town is Algiers the capital (population 1911 172 397) a most important coaling station and much frequented as a health resort; other large towns are Oran, Constantine, Bone and Flemmone.

Governor General, M. Abel.

CAPITAL, Paris. Population (1911) 2 846 986.

FLAG. The tricolour, three vertical bands, blue, white, red (blue next to flagstaff).

BRITISH EMBASSY.

Embassy, 39 Faubourg St. Honore.

Ambassador Extraordinary and Plenipotentiary:
His Excellency Rt. Hon. Lord Hardinge of Penshurst, K.G., P.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., I.S.O. (1920) . . . £11 500

Counsellor, Hon. R. C. Lindsay, C.V.O.

FRENCH COLONIES

Colony &c.	Area	Population
Indo China	257 000	18 000 000
Asia Minor	150,000	4 500 000
Africa	4 100 200	43 550 000
America	33 200	500 000
Oceania	10 000	100 000
Total	4 550 400	66 650 000

In ASIA—*French India* includes Pondicherry on the Coromandel coast Chandernagore on the Hooghly Karikal in the Cauvery delta Yanaon in the Godavery delta and Mahé on the Malabar coast—the total area being 200 square miles with an estimated population of 277 700 *French Indo China* comprises the possession of Cochin China and the four protectorates of Cambodia Annam Tonkin and Laos In 1898–9 the port of Kwang Chow Wan was also acquired on lease from China The capital is Hanoi in Tonkin and the total area is 309 979 square miles, with a population (1912) estimated at 16 600 000

In ASIA MINOR—The French mandatory sphere of *Syria Cilicia* and *Lebanon* has a total area of about 150 000 square miles, with an estimated population of 4,500,000 (*see* also pp 800–1)

In AFRICA—*Algeria* (*see* above) is an integral part of France *Morocco* the largest of the Barbary States situate in the N W of Africa, between 27°—36° N lat and 1°—11° 40′ W long with a total area of about 220 000 square miles and an estimated population of about 6 millions In 1912 a Franco Spanish agreement fixed the boundaries between the French and Spanish zones and the principal part of Morocco now forms a French protectorate, while Tangier is to be internationalised. Among the chief products of the country are wheat, barley, maize, beans, peas oil, esparto hemp, seeds, wool eggs and skins, among fruits the fig, almond, pomegranate lemon, olive, orange, and date are common Steps have been taken to improve agriculture, which had previously been much neglected Morocco is said to be rich in mineral treasures antimony, iron, coal copper lead tin—the last three in considerable quantities. Gold and silver also are found and wool is plentiful There are no railways except the narrow gauge strategic lines of the military service All the principal towns are now connected by wire and wireless telegraph systems and from Tangier there are submarine cables to Europe and Algeria The trade is principally with France (and Algeria), U K (and Malta) Germany and Spain Fez, the capital has a population of about 120 000 other towns are Morocco or Marrakesh (60 000) Casablanca (60 000) Mequinez (56 000) Rabat (50 000) Sallee (50 000) Tangier (45 000) Tetuan (30 000) Mazagan (25 000) and Saffi (24 000) *Sultan of Morocco* Moulai Yusef *accedes* 1912

Tunis has been a French protectorate since 1881 It lies between Algeria and Tripoli and extends southwards to the Sahara with a total area of about 45 000 sq miles and an estimated population of 2 000 000 of whom about 60c 000 are Berbers and 500 000 Arabs The valleys of the northern region support large flocks and herds and contain rich agricultural areas in which wheat barley and oats are grown The vine and olive are extensively cultivated The principal minerals are coal copper lead zinc and iron and phosphates and marble are also worked The chief exports are phosphates olive oil wheat esparto grass barley, beans blankets sponges and dates the chief imports are textiles and other manufactures iron steel machinery and provisions Eighty per cent of the trade is with France and Algeria Tunis the capital has a population of 230 000 other towns are Sfax (84 000) Bizerta (30 000) Susa (30 000) Kairwan (22 000) Gabes (16 000) and Monastir (6 000) *French West Africa* extends from Mauritania to Dahomey, and has a total area of 1 509 733 square miles and a population of 11 344 076 It consists of *Senegal* (74 000 sq miles pop 1 250 500), capital, St Louis, *Upper Senegal Niger* (304 000 sq miles) and the *Niger Military Territory* (533 000 sq miles) which have a total population of about 6 036 200 *French Guinea* (92 600 sq miles pop 1 737 350) *Ivory Coast* (126 100 sq miles pop 1 216 300) and *Dahomey* (38 000 sq miles pop 878 500) adjoining Dahomey is the French Sphere of the former German colony of *Togoland* (23 400 sq miles pop 800 000) while the hinterland of these colonies forms the *French Sahara* which has an estimated area of 924,160 sq miles and a population of about 450,000 *French Equatorial Africa* consists of the *French Congo* (513 000 sq miles pop 9,000 000) and of the French Sphere in the former German territory of *Cameroon* (267 000 sq miles pop 2 750 000) *French East Africa* consists of the *Somali Coast* (46 300 sq ms pop 208 000) and of the large island of *Madagascar* (226,000 sq miles, pop 3 153 500) with its dependencies (Nossi Bé, Sainte Marie, Réunion, and the Mayotte Comoro Islands and St Paul, Amsterdam and Kerguelen Islands) Agriculture and cattle raising are the principal industries, the minerals include gold silver iron copper, lead, and zinc The chief exports are gold, cattle, bark, manioc (for arrowroot) beans, hides skins fibre, rice, timber and rubber, the chief imports are

cottons, metal manufactures, wines and spirits, coal, clothing, lime and cement. The capital, Antananarivo, has a population of 75,000; other towns are Tamatave (the chief port), Majunga, Diego-Suarez, Mananjary, Tuléar, Andevoranto and Vohémar. Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen and Amsterdam. There is now direct communication across French and British territory in Africa, with posts on the Atlantic and Indian ocean.

In AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Guadaloupe with Basse Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin); and in South America, Cayenne or French Guiana. The total area of French possessions in North and South America is 35,320 square miles, with a population of 428,850.

In AUSTRALASIA.—New Caledonia (7,200 sq. ms., pop. 50,500) is a large island with many dependencies, and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of 8,378 square miles, with a population estimated at 81,100. The New Hebrides are under joint Franco-British administration.

Trade of French Colonies with the U.K.

	Imports from U.K. 1917.	Exports to U.K. 1917
French Colonies	£4,302,155	£3,995,082
Algeria	2,365,766	2,918,579
Morocco	2,490,125	358,584
Tunis	1,934,463	1,529,499
Total	£11,092,509	£8,801,744

Ambassador in London, Dr. Friedrich Sthamer, 9 Carlton House Terrace, S.W. 1.
Consul-Gen. in London, (not yet appointed).

At the outbreak of war, Aug., 1914, "Germany" was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor." The German Empire had a total area in Europe of 208,789 sq. miles, and consisted of the following 26 States:—Prussia (including Lauenburg and since also Heligoland); Bavaria; Saxony; Württemberg; Baden; Hesse; Mecklenburg-Schwerin; Saxe-Weimar; Mecklenburg-Strelitz; Oldenburg; Brunswick; Saxe-Meiningen; Saxe-Altenburg; Saxe-Coburg-Gotha; Anhalt; Schwarzburg-Sondershausen; Schwarzburg-Rudolstadt; Waldeck; Reuss (elder line); Reuss (younger line); Schaumburg-Lippe; Lippe-Detmold; Reichsland (Alsace-Lorraine); Lübeck; Bremen; Hamburg; with a census population (1910) of 64,925,993, of whom 32,031,967 were males and 32,871,456 females.

By the *Treaty of Versailles* the "Reichsland" of Elsass-Lothringen and the Saar coal basin (temporarily) were ceded to France; parts of Posen and West Prussia to the newly-formed Republic of Poland; North Schleswig to Denmark; and Moresnet and Malmédy to Belgium. Plebiscites held in June 1920 in parts of East and West Prussia yielded majorities for Germany. A plebiscite to decide the fate of Upper Silesia will be held under the Peace treaty.

The Colonial possessions of the German Empire extended over 1,035,086 sq. miles in Africa, 96,210 sq. miles in the Pacific, and 2,943 sq. miles in Asia—a total of 1,134,239 sq. miles, with a population estimated in 1914 at 15,000,000. By the *Treaty of Versailles* Germany renounced her overseas possessions, with all rights and titles therein, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France; German East Africa to Great Britain; German S.W. Africa to the Union of South Africa; the German Pacific possessions N. of the Equator to Japan; and those S. of the Equator to Australia and New Zealand.

On Nov. 9, 1918, the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin. On Nov. 11, 1918, Germany was granted an armistice, and on June 28, 1919, peace was signed at Versailles. In Jan. 1919, elections were held to a National Assembly on the basis of universal adult suffrage (male and female), and on Feb. 11, 1919, the first President of the German Versammlung was elected at Weimar. Under the new Constitution of August 11 1919, the federal legislature consists of a *Reichstag* representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a *Reichsrat* representing the separate States. The people possess the right of initiative and the referendum. Bills dealing with economical questions or social issues arising thereout must first be submitted to the new advisory Economical Council (*Reichswirtschaftsrat*).

A counter-revolution in the Junker (aristocratic) interest was temporarily successful in March, 1920, and the President and Cabinet abandoned the capital; but in a few days the revolutionaries capitulated and the Republican administration resumed direction and control.

The religious confessions of the people of the former German Empire were divided in 1910 as follows:—39,991,421 Protestants, 23,821,453 Roman Catholics, 283,946 Christians of other categories, 615,021 Jews, and 214,152 adherents of other religions, or unknown.

There are 44 large towns with over 100,000 inhabitants, and of these 30 are in Prussia, 4 in Saxony, 3 in Bavaria, 2 in Baden, and 1 each in Württemberg, Hesse, and Brunswick, while two of the three Hanse Towns also exceed 100,000.

PRODUCTION AND INDUSTRY.—Germany, up to the commencement of the war, was becoming more and more a manufacturing country In 1907, 32·6 per cent. of the population were supported by agriculture, 37 per cent by industry and mining, 11·5 per cent by trade and communications Of the total area in 1907, 78,632,140 acres were under cultivation, and 34,272,141 acres were woods and forests. The Live Stock (Oct 1, 1919) included 2,460,000 horses, 16 360,000 cattle, and 11,000 000 pigs, large numbers of these animals were ceded to France and Belgium (as part of the reparation) under the *Treaty of Versailles* Germany supported about nine tenths of her population by her own produce in 1914. The mineral produce was valued in 1912 at £592,250 000, and included 190,109,440 tons of coal, 87,233,084 of lignite, and 28,607 903 of iron ore, potash, rock salt, lead ore, gold and silver ore, graphite, asphalt petroleum, Epsom salts, boracite tin ore quicksilver ore, antimony ore, cobalt-ore, nickel ore, uranic ore manganese ore, bismuth ore uranium ore wolfram ore, pyrites vitriolic ore and alum ore are also worked Crefeld Elberfeld Barmen Muhlhausen Chemnitz, Augsburg and the provinces of Westphalia and Silesia are the great centres of the textile industries By laws of 1919 and 1920, all coal, heavy iron and steel, potash and coal tar producing concerns were compulsorily fused into All German Syndicates governed by assemblies representing Producers Traders and Consumers with equal representation for Employers and Employed

OLD AGE AND INFIRMITY INSURANCE.—The German scheme of social legislation gives all subordinate bread winners in Germany a legal right to pecuniary subvention when unfitted for work through sickness accident, premature infirmity or old age Insurance is compulsory This National Insurance is based on mutual insurance and self administration The Infirmity Insurance Act came into force Jan 1, 1900 The insured include all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, laundresses, dressmakers, sempstresses, housekeepers, chairwomen, overseers foremen engineers assistants, clerks and apprentices in merchants offices (excepting assistants and apprentices in chemists shops), schoolmasters, schoolmistresses, tutors and governesses—in so far as the incomes do not exceed £100—including foreigners working in Germany under these categories Pensions for premature infirmity are given to insured persons when unfit for work, old age pensions to all insured persons on attaining the age of 70, though still capable of work A comprehensive project of reform of the State insurance legislation became law in 1911 The new law codified previous legislation, established new Insurance Authorities, reduced working-class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance Another Bill extending Insurance benefits to private officials, clerical employés and others above the class of manual workers, became law in 1911 A Bill establishing Federal Unemployment Insurance for industrial workers (not farm labourers or domestic servants), clerks, actors and orchestra musicians, is before the Reichstag

DEFENCE.—In the War of 1914–18 the German armies reached their zenith as a military machine during the German Offensive movement of July, 1918, when 207 divisions were available on the Western Front. At the date of the Armistice (Nov 11, 1918) only 184 divisions were available, and the reserves had dwindled from a proportion of over one half of the troops in action to that of one eleventh only, while the 184 divisions were each barely 6,000 strong, all ranks. By the grant of an armistice the German armies escaped further encounters with the Allied Armies, the reserves of which were increasing in numbers every day, while their strategical position was becoming every day more satisfactory to Marshal Foch, their generalissimo By Article 160 of the *Treaty of Versailles* the German *Military Forces*, as from March 31, 1920, must not comprise more than seven divisions of infantry and three divisions of cavalry, a total force of 100,000 all ranks By Article 181 of the Treaty, the German *Naval Forces* must not exceed 6 battle ships of the Deutschland or Lothringen class, 6 light cruisers, 12 destroyers and 12 torpedo boats No submarine vessels are to be included in the naval forces and all war vessels in excess of the above numbers are to be broken up or devoted to commercial purposes Under the terms of the Armistice of Nov 11 1918, the German High Sea Fleet surrendered to the Allies (Nov 21, 1918) and was interned in Scapa Flow, manned by German naval crews It was scuttled by its crews in Scapa Flow, while in custody on June 21, 1919 In consequence of this breach of the Armistice agreement by the German crews the Allies (Nov 10, 1919) called upon the government to surrender 5 light cruisers, and certain floating docks cranes and dredgers, in addition to the previous naval surrenders The interned vessels Berlin Seydlitz Santa Fe and Yorck are to be disarmed and treated as merchant ships By Article 198 of the Treaty the armed forces of Germany must not include any military or naval *Air Forces* and no dirigible balloons, aeroplanes, sea planes or flying boats

COMMUNICATIONS.—The total length of the *Railroads* in 1913 was 37 823 miles, of which about 92 per cent. belonged to the different States On April 1, 1920, all the State Railways passed to the Federal Government There are 1 500 miles of inland canals and 1 600 miles of ship canals The number of registered automobiles and motor cycles (January 1 1913) was 77 789. Length of *Telegraph Lines* 228 600 kilometres (length of wires 1 907 200 kilometres) telegrams handed in 49 533 000 post offices 41 415 telegraph offices 50 013 wireless stations 14, telephone call stations 37 970 letters delivered, 5 994 300 000, cash on delivery orders £640 100 000, money orders, £4 626 500 000 telegrams despatched 49 533 000 telegram received 49 643 000 The number of employés in the service of posts telegraphs and telephones was 320,363 The State postal services were taken over by the Federal Government in 1920 In addition to some 6 000 miles of navigable rivers there are over 1 500 miles of canals and 1 600 miles of ship canals At the outbreak of the War of 1914–1918 Germany ranked second to Britain in the list of maritime countries On January 1, 1913 the Mercantile Marine consisted of 2,098 sea going steamers of 17 65 register tons and upwards (4 380,348 tons gross register), and of 2,420 sailing vessels (447 870 tons gross register), number of seamen, 77,746 (January 1, 1912, 75,130) There were completed

in 1912 at German yards for German firms 659 sea going ships of 383,090 tons gross, and at German yards for foreign firms 124 sea going ships of 31 238 tons gross Eleven new shipyards were established during the War Some of the large ships were interned in foreign harbours during the War and by the *Treaty of Versailles* reparation is to be made for the losses inflicted on the Allies by the surrender of merchant ships The chief ports of Germany are Hamburg on the Elbe, Bremen on the Weser Stettin on the Oder Konigsberg on the Pregel Kiel on the Baltic (connected with the Elbe by the Kaiser Wilhelm Canal) and Lubeck on the Baltic Under the Peace Treaty Danzig became Free State subject in its foreign affairs to the Polish Republic

FINANCE.—Under Articles 248 263 of the *Treaty of Versailles* the German Government undertook to pay the cost of the Armies of Occupation from Nov 11 1918 until they shall be withdrawn the occupied area extending to the Rhine (with bridgeheads on the right bank) from Liten on the Netherlands frontier in the north to the junction of the German Lorraine frontiers in the south The amount of the indemnity due by Germany under the Treaty has not yet been fixed

Envoy Extraordinary and Minister Plenipotentiary in London M D Caclamanos 51, Upper Brook St W 1
1st Secretary M S P Lychnomiadis
Con Gen Sir John Stavridis 40, Old Broad St, E C

A maritime Kingdom in the south east of Europe bounded on the N by Albania, Yugo Slavia and Bulgaria on the S and W by the Ionian Sea and on the E by the Aegean, Sea of Marmora and Black Sea, with an estimated area of 56 000 sq miles and an estimated population of 6 000 000

Government —Greece became a kingdom in 1830 after a successful insurrection against the Turkish government to which the country had been subjected since the 15th century The legislature consists of a Chamber of Deputies (or *Boulé*) elected for 4 years by universal manhood suffrage and of a Council of State Members of the legislature are paid 4 000 *drachmæ* annually King Alexander who acceded to the throne on the abdication of his father (June 11 1917) died from the effects of a monkey bite Oct 25 1920 The crown was offered to his younger brother Paul a Regency being meanwhile proclaimed under Admiral Coundouriotis The November elections drove the Venizelists from office and the Regent having admitted M Rallis to the Premiership was called upon to resign He was succeeded by Queen Olga

Prior to the Balkan Wars of 1912 13 the area was less than 25 000 sq miles the addition of portions of *Macedonia* and *Epirus* Crete(3,950 sq miles pop 336 151), and certain *Aegean Islands* increasing the area to 43,522 sq miles During the War of 1914 1918 Greece eventually declared for the Allies against the Central Powers, and her territories were increased by the occupation of *Thrace* (including the monastic republic of *Mount Athos*), and the islands of *Imbros* and *Tenedos* Under the *Treaty of Sèvres* the *Dodecanese* (12 islands) are surrendered by Turkey, and these are to be handed over to Greece by Italy with the exception of *Rhodes*, for which a special arrangement is made Greece also receives under the Treaty a mandate for the occupation and administration of the town and district of *Smyrna*, which remain, however, under Turkish suzerainty. In addition, Greece

will receive an extension of frontier in *Epirus* the limits of which are not yet fixed The country is thus composed of a continental portion (the southern part of the Balkan Peninsula) of islands in the Ægean, Mediterranean and Ionian Seas and of a portion of the mainland of Asia Minor The surface is nearly all mountainous the coasts are elevated irregular and deeply indented

Production —Agriculture is the principal industry and employs more than half the population The most important of the fruit trees are the olive the vine orange lemon fig almond citron pomegranate and currant vine The principal minerals are silver lead zinc emery copper magnesium sulphur salt and marble The chief manufactures are smelting, textiles and shipbuilding The imports are cotton and other manufactures corn timber cattle hides sugar salt fish and coal The exports consist of currants figs olive oil wine cognac tobacco hides lead iron ore magnesite iron pyrites chrome ore emery marble and sponges

Defence —Service in the Army is universal and compulsory between the ages of 21 and 57 Both the land and sea forces were reorganised during the War of 1914 1918 and about 150 000 all ranks fought with the Allied Armies The Navy consisted (July 1919) of 6 iron clads 1 modern cruiser 14 destroyers 6 torpedo boats and 2 submarines

Education is free and compulsory maintained by local taxation supplemented by State grants Secondary education is somewhat backward particularly in the country districts The University at Athens is of some repute

Communications —There were (1919) 1 400 miles of railroad open for traffic There is a ship canal cutting through the Isthmus of Corinth for ships up to 1 500 tons The post offices in Old Greece) number 1,150 dealing with 36 000 000 postal packets telegraphs 4 951 miles The mercantile marine consists of 110 sailing vessels above 100 tons capacity and 298 steamers (449 184 tons) The principal harbours are the Piræus (port of Athens) Syra Patras Salonica Volo Corfu Kalamata Laurium Cavalla Canea (Crete) and Smyrna (Asia Minor)

The Republic of Haiti is the western or French portion of the island of San Domingo which next to Cuba, is the largest of the West India Islands

The island was visited on Dec 6 1492 by Christopher Columbus, who named it *Espagnola* the native name being *Haiti* (mountainous) or *Quisqueia* (vast) The Spaniards explored the island and almost exterminated the 2 000 000 native Indians whom they replaced with African negroes By the Treaty of Ryswick (1697) the western portion of the island was ceded to France and in 1803 the territory was abandoned by the French, and a republic was proclaimed under the aboriginal name of Haiti In 1822 the rule of the Haitian President was extended over the whole of the island, the eastern portion having declared its independence of Spain in 1821 Since 1844 the eastern portion has formed a separate republic (see Dominican Republic)

The area of the republic is 10,200 square miles, with a population estimated at 2,029,700 The mountains are richly and heavily timbered and susceptible of cultivation nearly to their summits it is probably the most fertile spot in the West Indies, whilst its harbours especially Port au Prince, offer considerable facilities to foreign trade The principal productions are coffee logwood cocoa cotton hides, sugar honey, gums and oilseeds, these being the chief exports It is said to contain mines of gold silver, copper, tin, and iron Its commercial prosperity has been almost annihilated by repeated revolutions In November, 1915, both Houses of the Congress ratified a treaty with the U S A, establishing a virtual protectorate over the Republic, which came into effect in May, 1916 An armed Constabulary, rural and urban, under American officers, has been constituted, and a coastguard service is attached The conduct of the United States Marines, gendarmerie, and black troops, officered by Americans, was severely criticised during the Presidential Election campaign of 1920 Grave accusations were brought against the U S Administration, some of the accusations being admitted by the former commandant of the U S constabulary forces The Constitution was amended in June 1918, and under its provisions the President is elected for four years and there is an elective legislation The principal foreign trade is carried on with the United States, Great and Greater Britain France, and Germany French is the language of the country

Food, D Vass
Public Works and People's Welfare Dr Bénard

Hungary was declared a Republic on Nov 17, 1918 its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Croatia and Slavonia to the new Yugo Slav Kingdom (*q v*) The area of the Republic is about 32 800 sq miles, with a population (almost entirely Magyar) estimated (1920) at 7,482,000 The political neighbours are Czecho Slovakia on the N, Yugo Slavia on the S, Rumania on the E, and Austria on the W

On the declaration of Republican institutions in 1918, Count Karolyi assumed office as Provisional President but on March 22, 1919, Count Karolyi resigned, and was succeeded by a "Bolshevik administration with a "Soviet (Workmen's Council), in which Bela Kun (or Cohen) was the dominant personality This administration was driven out of power by the successes of the Rumanian military forces (which invaded Hungary and occupied Buda Pest) and was followed by a Socialistic Government under Julius Peidel (Aug 1, 1919). Six days later the Socialistic Government was superseded by an administration appointed by the Archduke Joseph, who accepted office as Provisional President Aug 7 1919 but resigned in consequence of the protests of the League of Nations delegates in Paris

M Huszár, who became Premier at the instance of the Allied Representatives in the autumn of 1919, accepted the post on the understanding that he should be relieved as soon as a Governor had been appointed and the constitution of the country had been lawfully re established This was attained by the appointment of Admiral Nicholaus von Horthy of Nagybánya as Governor of Hungary on March 1 1920 whereupon M Huszár resigned, but at the request of the Governor continued in office until March 15 Admiral von Horth was previously Vice Admiral of the fleet of the Austro Hungarian Monarchy during the Communist era he was Minister of War to the Hungarian Government at Szeged and organised what has since become the Hungarian National Army His appointment was effected by vote of the National Assembly, which gave him royal rights with the exception that his approval is not necessary to the verification of laws made by the National Assembly

On the retirement of M Huszár, the post was filled by M Simonyi Semadam, who remained in office until after the signing of the *Treaty of the Trianon*

All religions are tolerated by far the greater number of Magyars are Roman Catholics The parcelling out of the great estates which was forcibly attempted during the Karolyi regime has been continued to a small extent but on an economic basis and at the initiative of the owners a land reform bill aiming at the forced sale of the properties exceeding a given area is under discussion

A single chamber National Assembly (introduced in Nov, 1918 in place of the Upper and Lower Houses of the former Parliament) is elected by universal suffrage

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for agricultural purposes in the world, producing grain of excellent quality and supporting a number of horses, cattle and swine The mountainous districts having been ceded to surrounding states by the Peace Treaty, Hungary has been reduced from its former wealth to comparative poverty in forests and mines

Prior to the war Hungary imported merchandise to the value of approximately £85,000,000, and exported approximately £75 000,000 annually in the year 1916 the imports amounted to about Kr 3 220,000,000 and the exports to about Kr 2,650,000,000 Taking an average exchange equivalent, based on Zurich quotation for the year 1916, these amounts may be taken as £80,500,000 and £66,250,000 respectively.

No part of Hungary touches the sea. The length of navigable rivers is 687 miles, there are about 5,000 miles of railways and 5,800 miles of telegraph in the present Kingdom

* The external debt remains the same No interest has been paid since 1852 and arrears of interest amounted on Jan 1 1917 to nearly £ 1 000 000

The pre war revenue of Hungary was about 2,250 million kronen (£93,750,000), whereas the estimated revenue according to the Budget submitted by the Minister of Finance to the National Assembly on Sept 14, 1920, for the year 1920-21, amount to 10,520,555 804 kronen The public debt stood at 6,000,000,000 kronen (£250,000,000), and its present amount may be estimated at about 800,000,000,000 kronen, but this is subject to decisions that may be given by the Reparations Commission which has not yet begun to sit in Budapest

CAPITAL: Budapest, on the Danube, has a population at present estimated at 1,071 500 The other large towns are Szeged (120,000), and Debreczen (90,000)

The value of the krone has fluctuated during 1920 between Kr 500 and Kr 1,000 per £1 sterling

King, Christian X (*see* Denmark)
Presidents of Althing G Bjornson * Joh Johannesson

Iceland is a large volcanic, and treeless island in the North Atlantic Ocean, extending from 63° 23′ to 66° 33′ N lat , and from 13° 22 to 24° 35 W long , with an estimated area of 40 497 square miles, or greater than that of Ireland The population was estimated in 1918 at 92,000

An Act for the creation of a Danish Icelandic Federal Constitution, Denmark and Iceland to be free and independent States under the same Sovereign, came into force on Dec 1, 1918, but since the constitution granted in 1915 the assembly (Al thing) had been more or less independent of the Government at Copenhagen in internal questions The principal products of the island are sheep, cattle ponies and fish and the imports consist of almost all the necessaries of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods tobacco, spirits, hardware, and timber Total imports (1917) estimated, £2 175 000 exports £1,500,000 Iceland is now in direct telegraphic communication with the United Kingdom

A Kingdom in the South of Europe, consisting of a peninsula the large islands of Sicily and Sardinia the island of Elba and about 70 minor islands (with certain dependencies hereinafter noted) It is bounded on the N by the Republics of Switzerland and Austria, on the S by the Mediterranean, on the E by the Adriatic and by the League of Nations territory of *Fiume, Istria, &c and on the W by France and the Ligurian and Tyrrhenian Seas The total area of the kingdom of Italy in 1914 was 110,623 sq miles and by the *Treaty of Versailles* (June 28, 1919) Italy gained from Austria Hungary the Trentino (about 4 000 sq miles) and Trieste (with about 1,000 sq miles of the Adriatic Sea board)

The administration of the northern portion of Albania (the former Turkish vilayet of Scutari) has also been entrusted to Italy and under the Turkish Treaty of Peace (1920) the Asia Minor Vilayet of *Konia* (40,000 sq miles, pop 1,000,000) is placed within the Italian sphere of influence The total area of the Kingdom was estimated (Jan 1920) at 120,450 square miles, with a population of about 38,000,000 There is a large settled and floating population of Americans and English with Anglican churches, and chapels belonging to Methodists Baptists, and others

The Italian peninsula is traversed throughout its length by the chain of the Apennines, the Alps form its northern limits, dividing it from France. *Mont Blanc* (15,782 feet), the highest

* See also Yugo-Slavia

peak of the Alps is in the French Pennine Alps but within the Italian borders are Monte Rosa (15 217 feet) and several peaks from 12 000 to 14 000 feet. The chief rivers are the Po, the Adige, the Tiber and the Arno.

GOVERNMENT.—Italian unity was established under the House of Savoy after a heroic struggle from 1848–1870 in which the great patriots Mazzini (born 1805, died 1872) and Garibaldi (born 1807, died 1882) were the principal figures. It was completed when the Austrians (until then masters of the whole of Venetia) evacuated Venice early in 1866, and through the evacuation of the Papal States by the French in 1870. In 1872 the King of Italy entered Rome and that city was declared to be the capital. The government is that of a constitutional monarchy with a legislature of two houses—the *Senate* (of 385 life members appointed by the King) and the *Chamber of Deputies* (of 510 members (elected by adult manhood suffrage). The maximum duration of Parliament is 5 years. Deputies receive 6 000 lire annually.

PRODUCTION.—Agriculture (including the growing of grapes, olives and chestnuts) is the principal industry. Italian wines are numerous and celebrated and olives and olive oil are furnished by Tuscany, Liguria and the province of Bari, while fruit abounds and is largely exported. The cultivation of the silkworm forms an important industry. Among the principal minerals are iron, lead, zinc, copper, manganese and antimony ores, sulphur, gypsum, amianthus, alum and boracic acid. Silver is found in Sardinia and some gold in the Alps. Salt is a Government monopoly. In 1918 the produce of the vines amounted to 1 237 632 000 gallons and that of the olive crop (1917) to 45 012 000 gallons. The principal exports are olive oil, wine, sulphur, citron and raw silk.

Chief imports are iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry, chemical products, woods, coals, &c., for dyeing and tanning, artistic works, &c. The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw silk, silkworms, eggs and cocoons, machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye stuffs, tobacco, earthenware, &c. The manufactures are woollen, cotton, silk, hemp and linen yarns and tissues, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic wools (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. Sugar is extracted from beet in large quantities for home consumption.

DEFENCE.—The *Army* consists on a peace footing of 320 000 all ranks. On May 23 1915 Italy declared war on Austro-Hungary and on Aug. 27 1916 a state of war was declared to exist with Germany. The cost of the war to Apr. 30, 1918, amounted to 36 milliards of lire (£1,440 000 000). During the War of 1914–1918 over 15 per cent. of the population were mobilised, and 5,250 000 men passed into the Armies of Italy. The killed and missing amounted to 469,000. The *Navy* includes 5 modern and 6 pre-Dreadnought battleships, 5 armoured cruisers, 30 destroyers, 100 torpedo boats, and 80 submarines. The peace *personnel* of the Italian Navy is about 40 000 all ranks. Spezia and Pola the chief naval and military ports of the kingdom are securely fortified.

EDUCATION.—Primary Education is free and compulsory and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State maintained and schools are increasing in number. Several of the Universities are of very ancient foundation.

COMMUNICATIONS.—In 1918 there were 22 213 miles of railway open for traffic; the post offices numbered 11 314 and there were 35 328 miles of telegraph line. The sea-going commercial marine (1917) consisted of 844 steamers (811,660 tons) and 4 464 sailing vessels (261,769 tons). In 1914 162 233 Italian and 10 430 foreign vessels (total tonnage 55 282 200) entered and 161 880 Italian and 10 390 foreign vessels (55 085 460 tons) cleared at Italian ports. It is proposed to construct a harbour at Ostia, at the mouth of the Tiber which will convert Rome into a seaport; improvements in the water connexion to Milan are also being taken in hand.

ITALIAN COLONIES ETC

Colony		Population
Eritrea	60 000	400 000
Somaliland	140 000	450 000
Tientsin		17 000
Tripoli	410 000	600 000
Koma	40 000	1 000 000
Total	650 020	2 467 000

Eritrea is a Red Sea colony and extends from Ras Kasar 18 2 N to Ras Demoira 10 42 N and is bounded on N W by the Anglo Egyptian Sudan on S by Abyssinia and on S E by French Somaliland It consists of a triangular portion of barren and sandy lowland with a coast line along the Red Sea of about 700 miles and covers a total area of 60 000 square miles with a population of about 400 000 of whom about 3 000 are Europeans The capital is Asmara Massowa being the chief port where there is a good harbour The principal product is salt of great value as being the monetary currency of Southern Abyssinia

Koma—Under the *Treaty of Sèvres* Italy received from Turkey the right to occupy the Asia Minor district of *Koma* (40 000 square miles) of which however, the suzerainty remains vested in the Sultan

Somaliland—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean from 11° N lat to the Equator and is bounded on the N by the Gulf of Aden on E by the Indian Ocean and on W by British Somaliland Abyssinia and British E Africa French and British Somaliland lie between Eritrea and Italian Somaliland The total area is about 140 000 sq miles and the population is estimated at 450 000 Agriculture and camel and cattle rearing are the principal industries The capital is Mogadishu on the Indian Ocean

Tientsin—Italy obtained in 1902 a concession of land fronting the Peiho river (China), with a total area of 20 square miles and a population of about 17,000 natives

Tripoli—The Turkish vilayet of Tripoli and the mutessarifat of Benghazi on the northern coast of Africa were occupied by Italy in 1911–12, and under the Treaty of Ouchy (Oct 1912) the sovereignty of the province was transferred to the King of Italy the spiritual headship over the Muhammadan population being retained by the Sultan Tripoli is the most easterly of the Barbary States extending from the frontiers of Tunis to those of Egypt, a distance along the coast line of nearly 1 100 miles and inland to the south a distance of about 800 miles The transferred territory comprises the four sub provinces or Mutessarifilik of Tripoli Khoms, Jabel el Gharb, and Fezzan, and also of Benghazi or Cyrenaica, a total area of 410,000 square miles with a population of about 600 000 There are no rivers in the country, and, the rainfall being precarious, a good harvest can only be reckoned on every

four or five years Barley, dates, olives, oranges lemons, and vegetables are produced and the principal imports are metals, British and other European manufactures, tea beads wine and spirits besides a number of articles for barter In Wadai Bornu and the Western Sudan whither caravans proceed from Tripoli The principal articles of exports are ostrich feathers ivory skins sponges hides esparto grass cattle and horses The ancient ruins in Cyrenaica especially at Cyrene Ptolemais and Apollonia are interesting to explorers as well as those at Leptis Magna which is close to Khoms or 70 miles from the city of Tripoli The population of Pentapolis consists of Arabs Greeks Maltese and a few Levantines The commerce in cereals wool cattle for Malta and other agricultural produce is considerable when a sufficient rainfall causes a good harvest The capital of Tripolitana is Tripoli (population 50 000) and of Cyrenaica Benghazi (population 35 000)

This ancient and extensive Empire consists of four large and many small islands said to comprise in all above 4 223 the principal of which are Hondo (the name of the Empire being Nippon), Shikoku, Kiushu Hokkaido or Yezo situate to the north of the main island from which it is separated by the Tsugaru Straits and Formosa, called by the Japanese Taiwan The Ainu, an uncivilised but harmless tribe who in ancient times occupied the greater part of the country, are still found in Yezo The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Riu-kiu) Islands under the name of 'Prefecture of Okinawa The empire, with its dependencies, comprises an area of 235 886 square miles, with a population (Dec 1918) of 79 636,126 The islands are eminently volcanic and 18 of the summits are still active the chief of these, Fuji san or Fujino yama the loftiest and most sacred mountain of Japan about sixty miles from Tokio is 12 370 ft high, and has been dormant since 1707 Japan is also liable to frequent, and occasionally disastrous earthquakes The country is very mountainous and not more than one sixth of its area is available for cultivation It possesses numerous fine harbours The soil is productive, teeming with every variety of agricultural produce Copper iron sulphur, lead, antimony and zinc abound whilst agate, cornelian and rock crystal are also found Gold is found in the island of Sado, and silver mining is prosecuted on a small scale, while there is a good supply of middling coal Petroleum is also being produced in large quantities especially in the Province of Echigo Among the vegetable productions may be noted the camphor tree paper mulberry vegetable wax tree and a lacquer tree which furnishes the celebrated lacquer of Japan The principal timber trees are the Cryptomeria japonica, Pinus Massoniana and Zelkowa Keaki the Paulownia imperialis is largely used for fancy boxes and works of art the maple is merely for ornament Chestnut oak beech and elm are comparatively rare and little used. The tobacco plant tea shrub potatoes rice wheat and other cereals are all cultivated rice is the staple food of the people, about 300 000 000 bushels (10 per cent imported) being consumed annually Agriculture, upon which the Japanese bestow great care, is their chief occupation The coasts are extremely rich in fish The floral kingdom is rich beautiful, and varied though scented flowers are comparatively few Fruit, for the most part of inferior quality is abundant; English fruits, such as apples strawberries pears, grapes, figs and peaches are being produced.

Commerce and Industry—The chief manufactures are silk and cotton, cotton yarn, matches paper glass lacquer ware, porcelain, and furniture and shipbuilding is an important industry in the yards The chief imports are raw cotton from India U S, Egypt, and China, flour from the U S and piece goods, metals, manufactures woollens wool, drugs rails, locomotives and machinery from the U S A and Europe Sugar is largely imported from the Dutch East Indies Philippine Islands and Formosa, indigo from Germany British India and Dutch East Indies kerosene oil from U S and the Dutch Indies beans peas and pulse from China and Korea and rice, principally from British India French India Korea, Siam, and China. The chief exports are silk, cotton yarns, rice, tea fish copper matches coal, camphor, straw plaits porcelain earthenware, lacquer ware, and marine products

Communications—There were 8,224 miles of railroad open in March 1920, in addition to 1,324 miles open in Korea and 1 221 miles in Formosa, while the South Manchurian Railway (China) is under Japanese control The mercantile marine consisted in 1920 of 3 077 steamers above 20 tons (792 of them over 1,000 tons), and 3,290 sailing

vessels over 100 tons The total tonnage entered and cleared at open ports in 1919 was 89,201,972 (66,676 vessels) In 1919 there were 7,877 post offices dealing with 3,390,850,232 postal packets and 25,721 miles of telegraph line carrying 75,256,716 messages outwards, and 76,597 583 inwards

Defence — Service in the *Army* is universal and compulsory between the ages of 20 and 40 The peace effective is 272 731 of all ranks The war strength is First line, field army, about 479,982, second line, fully trained, about 1,023,190 The *Navy* includes 17 battleships, 5 battle cruisers, 25 cruisers, 10 coast defence ships, 8 gunboats, 89 destroyers, 20 torpedo boats and 35 submarines (Sept 1920) Japan declared war against Germany on Aug 23, 1914, and her fleet was active throughout the war, while her troops are assisting to restore order in Siberia

Education is in the lower grades free and compulsory High schools are State aided, and prepare for a 3 years' course at the Universities, which is largely devoted to the study of European languages There are high schools for girls, and the technical and special schools are well attended There are five State Universities, at Tokio, Kyoto, Tohoku, Hokkaido and Kiushu

Formosa —The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace Its total area is 13,500 square miles, with about 3,650,047 inhabitants (1917). Imports, Yen 21,099,376, exports, Yen 40,215,791, in 1917 The colony has been self-supporting since 1906 Estimated revenue and expenditure (1918-19), Yen 55,261,429.

CAPITAL, Taihoku. Population (1917), 102,933

Saghalin (Karafuto) —The southern half of this island was ceded by Russia at the close of the Russo-Japanese war The ceded territory has a total area of 9,824 sq miles with a population (1918) of 76,795 The Japanese Government is encouraging the settlement of agriculturists, and there is a large fishing industry Estimated revenue and expenditure (1918-19) Yen 4 307,872

The *Kuantung Peninsula* (capital, Dairen, formerly Dalny), which had been leased to Russia by China, was similarly leased to Japan after the Russo Japanese war Area, 1,220 sq miles, population, 572,525 Dairen provides Japan with a mainland port, ice free all the year round, and the peninsula is fertile Imports (1917), Yen 148,928,309, exports, Yen 149,413 033 Estimated revenue and expenditure (1918-19), Yen 6,553,374

CAPITAL, Dairen Population (1917), 90,385

The *Pescadores* (Hokoto) consists of about 14 islands, with a total area of 85 square miles, and a population of (1917) of 56,932

Korea (Cho sen) —By a treaty of Aug 23, 1910, Korea was annexed to Japan and became part of the Japanese Empire

Korea is situated between 122° and 128° E long, and between 34° and 43° N lat, and the coast is fringed with innumerable islands, of which the largest is Quelpart Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west with an area of some 71 000 square miles Population estimated at 16,968 997 (Dec 1917) there are about 333 000 (Dec 1917) Japanese in the country The soil is fertile, but mountainous except in the river valleys About 8,790,580 acres are under cultivation the staple agricultural products being rice and other cereals, beans cotton tobacco, and hemp, the other natural products are chiefly gold and hides Ginseng a medicinal root much affected by the Chinese is largely grown under Government supervision in the province of Pyeng An, and, being a Government monopoly, forms a rich source of revenue Gold, copper, coal, iron, and other minerals are distributed throughout the country The principal exports are beans rice, livestock, cowhides, ginseng, wheat barley iron ores and raw cotton Manufactures are as yet in a primitive condition, the principal being hemp cloth, brass ware, and an excellent quality of paper resembling the Japanese article, but stouter About 73 per cent of the sea borne trade is carried in Japanese bottoms Considerable progress is being made in the direction of the proper lighting of the coast The total railway mileage open to traffic is 1 251 miles

Estimated revenue (1917 18), *Yen* 62,589,309, expenditure *Yen* 62 562,277

Imports into Korea 1919 *Yen* 159,250 000
Exports from Korea, 1919 ,, 125 500,000

Pacific Islands —Under the *Treaty of Versailles*, 1919, Germany renounced the sovereignty of all her over sea possessions, and the German Pacific Islands N of the Equator have been allocated to Japan. These islands, in Micronesia, are the Pelew, Caroline, Marshall and Ladrone groups with a total area of about 800 sq miles, and a population estimated at 100,000

Shantung —The German possessions in the *Shantung Peninsula* of China (Kiao-Chao, &c), allocated to Japan, have been restored by the latter to China

CAPITAL OF THE JAPANESE EMPIRE, Tôkiô, formerly called Yedo, the residence of the Emperor, population (Dec, 1918), 2,347,442 Other cities are—Osaka, 1,641,580, Kiôto, the ancient capital 670,357, Nagoya, 436,909 Kobé, 592,726,

KHIVA

Khan, H H Said Asfendiar, *b* 1871, *succeeded* 1910

Khiva lies between Bokhara and Russian Trans Caspia and has a total area of about 26 000 square miles with a population of 800 000 of whom about half are nomads The country occupies the fertile delta of the Oxus and is highly productive The capital (Khiva) has about 10,000 inhabitants

KURDISTAN

Kurdistan is a mountainous district of Eastern Asia Minor between Armenia (N) Syria and Mesopotamia (S), Persia (E), and Turkish Anatolia (W) The Kurds are a semi nomadic tribe inhabiting the mountainous regions of Turkish Asia Minor and of N W Persia They are believed to be the Karduchi of Xenophon's *Anabasis* and for centuries they have lived in quasi independence punctuated by raids and subsequent punitive expeditions In 1920 the autonomy of Kurdistan was recognised by Turkey and Persia and by the Supreme Council of the Allied Powers

The area of the country is estimated at 65 000 to 70 000 square miles with a population of 2 to 3 millions The chief centres are Diarbekr Bitlis, Van (to the east of Lake Van) in the former Turkish dominions and Urmia (to the west of Lake Urmia) and Kermanshah, in the Persian dominions *Lake Van* (2,000 sq miles in extent) occupies the central portion of the former Vilayet of Van *Lake Urmia* (2,600 sq miles in extent), across the Persian border, is about 4,000 feet above sea level, and its waters are so salt that fish cannot live therein

The climate is severe, with a short hot summer and long and severe winter, but cereals, vines and fruit are abundantly cultivated on the slopes of the mountains, rice is grown in the hot, well-watered plains while the rich pasture lands of the slopes and valleys support large herds of horses, mules and sheep The mineral wealth of the country is almost entirely undeveloped, but it is believed to be very great and there are numerous hot and cold mineral springs salt is obtained in large quantities in the neighbourhood of Lake Van

The Kurds are Muhammadans and fierce persecutors of the Christians in their districts and in the neighbouring territory of Armenia

CABINET
(Not yet formed)

Minister in London, Señor Miguel Covarrubias
Consul in London, Don Julio Pani 8 Fenchurch Avenue, E C 3
Liverpool—Consul Gen Senor Teodoro Frezieres, 52 South John Street

Mexico occupies the southern part of the continent of North America with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15 to 32° 30′ N lat and 87 to 117° W long and comprising one of the richest and most varied zones in the world It comprises 27 states 3 territories, and the federal district of Mexico making in all 31 political divisions, comprehending an area of 768 883 square miles, with a population of (1910) 15 063 207

The two great ranges of North America the Sierra Nevada and Rocky Mountains are prolonged from the north to a convergence towards the narrowing Isthmus of Tehantepec their course being parallel with the west and east coasts The surface of the interior consists of an elevated plateau between the two ranges with steep slopes both to the Pacific and Atlantic (Gulf of Mexico) In the west is the Peninsula of California with a mountainous surface separated from the mainland by the Gulf of California The Sierra Nevada known in Mexico as the *Sierra Madre* terminates in a transverse series of volcanic peaks from Colima on the west to Orizaba on the east the intermediate and highest peaks being Ixtaccihuatl (17 879 feet) and Popocatepetl (19 784 feet) The low lying lands of the coasts form the *Tierra Caliente* or tropical regions (below 3 000 feet) the higher levels form the *Tierra Templada* or temperate region (from 3 000 to 5,000 feet) and the summit of the plateau with its peaks is known as *Tierra Fria* or cold region (above 5 000 feet) The only considerable rivers are the *Rio Grande del Norte* which forms part of the northern boundary and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the *Rio Grande de Santiago* which runs from Lake Chapala to the Pacific The remaining streams are governed by the formation of the land and run in mountain torrents between deep cut canons or barrancas The largest fresh water lakes are *Chapala* some 50 miles in length, and *Patzcuaro* and *Xochimilco* In the north west are saline lakes amid bare and dry regions The climate varies according to the altitude Yellow fever sometimes occurs at Merida Yucatan

The earliest invaders of *Toltecs* gave place in the 13th century to the *Aztecs* who were conquered in the 16th century by Spanish adventurers under *Hernan Cortes* * Spanish rule was established at *Tenochtitlan* a 14th century Aztec city (now Mexico) and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war 1810–1827 From 1837–1848 the province of Texas gave rise to hostilities with the United States terminating in a three years war and a cession of the disputed territory to the victorious northern States In 1810 a Republic was proclaimed but Iturbide declared himself Emperor in 1821 He was shot in 1824 and a Republic was again established In 1862 the French troops came to Mexico and in 1864 an Empire under Ferdinand Maximilian of Austria was declared In 1867 the downfall of the Empire and the death of the Emperor gave rise to the new Republic which has endured to the present day The most prominent of modern Presidents is *Porfirio Diaz* who ruled (except during

* The remains of *Hernan Cortes* have been definitely identified in the Temple of Jesu Mexico City They are contained in a marble vault with the funeral garments

1880 4) from 1876 to May 25 1911 Since 1911 there have been many internal disturbances and considerable friction (amounting almost to a state of war) with the United States On July 15, 1914, Venustiano Carranza assumed control of the executive, but he was overthrown by a further revolution in 1920 and is believed to have been shot by the insurgents

Acapulco Manzanillo Mazatlan Salina Cruz, and Guaymas are the chief ports on the Pacific and Vera Cruz Tampico Progreso and Puerto Mexico on the Atlantic or Gulf of Mexico There were 15 804 miles of railroad open on Sept 16 1912 and 40 687 miles of telegraph The railroads have in a large measure been built by American and English companies

The principal agricultural crops are maize wheat, barley Chile pepper, sugar coffee cotton, tobacco vanilla flax grapes and all kinds of tropical fruit The maguey, or Mexican aloe, yields a favourite beverage pulque other species of the same plant supply pita flax and sisal hemp (henequen) The forests abound in mahogany rosewood ebony and caoutchouc trees The mineral wealth is very great silver and gold copper lead and quicksilver iron and coal, are the leading products of the mines Woollen and cotton spinning and weaving and other branches of industry are encouraged by high protective duties The imports nevertheless consist very largely of textile manufactures Of the exports 45 per cent consist of silver and gold sizal hemp (henequen) coffee hides and skins timber logwood vanilla tobacco dyestuffs sugar, and drugs ranking next in importance

During 1918 legislation of a confiscatory nature regarding the Mexican oilfields caused a diplomatic rupture with the U S and Great Britain

The monetary system has recently been placed on a gold basis Outstanding debt (June 30 1919) $529 572 085 (— U S $264 786 042)

The language of the country is Spanish

NETHERLANDS COLONIES

TOTAL AREA, 832 473 square miles

POPULATION 47 203 639

The possessions of the Kingdom of the Netherlands in the EAST INDIES (Administrative Capital *Batavia*, pop about 140,000) are very considerable comprising the whole of the SUNDA ISLANDS and MOLUCCAS *Sumatra* (area 162,000 sq miles), *Java* and *Madura* (51,000 sq miles) *Netherlands Borneo* (115,000 sq miles), *Celebes Island* (72,000 sq. mile), *Moluccas* (44,000 sq miles), *Timor Islands* (18 000 sq miles) with the exception of a portion of Borneo and Eastern Timor together with WESTERN NEW GUINEA, with a total area of 738,000 square miles, and a population (1917) of 47,203,639 of whom as many as 34,157,000 live in the islands of Java and Madura. JAVA and MADURA (customs receipts, 1917, 17,174,995 florins) produce a sufficient supply of food for a dense population, besides furnishing sugar (1,844 135 tons exported in 1919), tobacco, tea, coffee, tin, and other products for exportation The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident There was (1917) a colonial army of 1,373 officers and 40,170 men The colonial revenue for 1920 was estimated at £42,000,000 and the expenditure at £48,900,000. The exports, for private account amounted in 1917, for Java, Madura, and the other outlying islands, to 791,410,000 florins, while the imports for the same year amounted to 474,724,000 florins

In South America the colony of SURINAM, or Netherlands Guiana (imports, 1917, 7,645,941 guilders exports, 8,582,170 guilders), embraces 49 845 square miles and contains (1917) 103,194 inhabitants, and in the West Indies, CURAÇAO (imports £483,239, exports, £190,859; population 34 893) and five other small islands belong to the Netherlands having an area of 436 square miles with a population of 22,726 (imports, £88,455 exports £39,598)

Trade of Colonies with U.K.

	1918
Exports to U K	£9,544,129
Imports from U K	7,726,897

NICARAGUA, Republic of.

President (1917–1920), Emiliano Chamorro, *assumed office*, Jan 1, 1917
Foreign Affairs, J A Urtecho

Minister in London (vacant).
Consul in London, P J Chamorro, 65 Bishopsgate F C 2
Vice Consul, Wyness B Gauld.

The largest State of Central America, with a long seaboard on both the Atlantic and Pacific Oceans situate between 9° 45'—15° N lat and 83° 40—87° 38 W long, containing an area of 51 660 English square miles and a population estimated at 800 000 in 1918, of whom about three quarters are mixed blood and the rest Indians besides the Mosquitos, who are mostly in a savage state

Nicaragua was discovered by Columbus in 1502 and was overrun by the Spaniards under Davila in the first quarter of the 16th century, forming part of the Spanish Captaincy General of Guatemala until 1821, when its independence was secured The present constitution rests on the fundamental law of Nov. 10, 1911 (amended 1913) and is that of a centralised republic. The President is elected by direct suffrage for four years

The chief products are coffee, bananas, rice, beans sugar, cocoa, and tobacco, large quantities of foodstuffs are imported, in addition to cottons and other manufactures from the United States.

There are 172 miles of railway open, and 1,591 miles of telegraph Corinto is the chief commercial port

The official language of the country is Spanish.

Norway an independent kingdom founded in 872 (fundamental law of May 17 1814) was united with Sweden under the same King from Nov 4 1814 to June 7 1905 when the union was dissolved The Parliament of 123 members is called the "Storthing," which is divided into two sections chosen by itself to discuss projected Bills called "Odelsting and' Lagting Norway the western and northern portion of the Scandinavian peninsula is about 1,100 miles in length its greatest width about 250 miles It is divided into 20 provinces or amts and comprises an area of 124 130 sq miles with a population (1918) of 2 611 287 The coast line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands The surface is mountainous, consisting of elevated and barren table lands, separated by deep and narrow valleys The cultivated area is about one thirtieth part of the country, forests cover nearly one fourth, the rest consists of highland pastures or uninhabitable mountains.

Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption, hence it has been necessary to import considerable quantities of corn, meat, and pork The fisheries give employment to a large part of the population throughout the year The most important are cod and herring, the exports of these with other sea products and fish oil were valued at 98 128,000 kroner* in 1914. The mineral products are increasing the total value won in 1916 being 30 701 000 kroner Timber dressing mechanical engineering, textile manufactures, ship building and pulp making are the principal departments of Norwegian industry The exports of produce of the forests were valued at 163 401 000 kroner in 1917 The imports consist chiefly of the necessary articles of consumption The chief exports consist of timber matches, fish oil and other products of the fisheries, pulp paper skins and furs nails minerals, stone ice calcium carbide condensed milk, butter margarine tinned goods &c Norway voted for prohibition of alcoholic beverages in 1919 (385 000 for prohibition 275 000 against)

Defence —Service in the National Militia is universal and compulsory The war effective is about 110 000 of all ranks In time of war all males between the ages of 15 and 55 are liable for service The Navy consists of 4 ironclads 2 coast defence monitors 27 torpedo boats 3 gunboats 3 destroyers 5 submarines and a few smaller vessels

Education is compulsory and free between the ages of 7 and 14 schools being maintained by local taxation with State grants in aid The attendance is high Secondary schools are provided by the State by local authorities and privately There are 10 special schools and industrial and technical institutes The University of Christiania was attended in 1913 by 1 500 students

Communications —The total length of railways open in 1916 was 1 973 miles of which 281 miles were private lines The length of telegraphs and telephones belonging to the State in June 1916, was 14 070 miles The mercantile marine Jan 1 1916 consisted of 3 325 vessels of 1 784 470 tons During the war to June 1 1918 698 Norwegian vessels have been sunk by torpedo or mine 970 seamen have been killed and £37 000 000 has been paid by war insurance

Panama formerly one of the nine Departments of Colombia, revolted in Nov 1903, and established a separate Government. The area of the Republic is 31,890 square miles, the population (1910) about 400,000. The soil is extremely fertile but there is little cultivation and nearly one half of the land is unoccupied. The chief crops are bananas, coffee tobacco, and cereals. The imports are almost entirely manufactured goods and foodstuffs. A railway 47 miles in length joins the two oceans.

Revenue (1918–19)	£646,752

PAPACY, The.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the Sovereign Pontiff of the Western Church and claims temporal power over the Papal States which were incorporated with Italy from 1860 to 1870, the territory of the Papacy now being confined to the palaces of the Vatican and the Lateran and the Villa of Castel Gandolfo, which are guaranteed to the Pope (with a yearly indemnity of 3,250,000 lire, which is neither claimed nor paid) by the Italian Government.

Sovereign Pontiff (259th), His Holiness Pope Benedict XV (Della Chiesa), *born* at Genoa Nov 21, 1854 *elected* Pope (in succession to Pius X) Sept 4, 1914.

An inland State of South America situate between 20°—6° 30′ S lat and 54°—62 W long The area of Paraguay (exclusive of the Chaco) is computed at 65 000 square miles, and it contains a population of about 800,000

Paraguay was visited in 1527 by Sebastian Cabot, and in 1535 was settled as a Spanish possession In 1811 Paraguay declared its independence of Spain, and from 1814 1840 was governed by Francia, a Paraguayan despot who was succeeded by Lopez 1840 1862 In 1862 Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil Argentina and Uruguay being involved in the struggle Against these three nations Lopez conducted a five years war, which terminated in his defeat and death at the *Battle of Cerro Cora*, March 1 1870 This dogged struggle reduced the country to complete prostration, and the population which was 800,000 in 1857 is alleged to have fallen in 1870 to 250,000, of whom barely 30 000 were men The present constitution was adopted at the close of the war, and under its provisions the head of the executive is the President elected by an electoral college for four years and ineligible for office for eight consecutive years after the expiration of his term A Vice President is similarly elected, and succeeds automatically in the case of the death expulsion or absence of the President There is a Cabinet of 5 members The republic is subject to frequent revolutions of which those of 1911 and 1912 were exceptionally fierce and sanguinary

Paraguay proper consists of a series of plateaus, intersected by abrupt ranges of hills, some of which are said to reach an altitude of 2,000 feet above sea level The Paraguay and Alto Paraná rivers are navigable at all seasons Many of the tributary streams are also navigable for much of the year The Pilcomayo river is navigable for 180 miles from Asuncion and (above the shallows there encountered) for a long distance north west but is liable to shrink unduly with drought The plateaus are covered with grassy plains and dense forest, the soil being marshy in many parts and liable to floods, while the hills are covered for the most part with thickets The streams flowing into the Alto Paraná descend precipitously into that river In the angle formed by the Paraná Paraguay confluence are extensive marshes, one of which, known as "Neembucu, or endless, is drained by *Lake Ypoa*, a large lagoon, south east of the capital The *Chaco*, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Bolivia, forms the subject of a long standing dispute with Bolivia, it is practically a dead level, pierced by great rivers, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, yerba maté, oranges, timber, quebracho extract, hides and cassava (mandioca), maize, rice, sugar-cane, ground nuts, and other tropical and sub tropical plants The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad Stock raising is the chief industry The chief articles of export are hides, timber, yerba maté, tobacco quebracho extract, cattle and meat products, oranges, and petit grain oil The Army numbers 2,000 to 3 000 men A railway 232 miles in length which belongs to an English company connects Paraguay with the Argentine railway system The journey from Asuncion to Buenos Aires (985 miles) occupies 53 hours Train ferries enable the run to be accomplished without break of bulk The language is Spanish

Sheffield (Consul), J A Hill

Persia—called by the natives Irán—comprises an area of 630,000 sq ms, with a population estimated at 10,000,000 By the Anglo Russian Convention of Aug, 1907, Great Britain and Russia mutually engaged to respect the integrity and

independence of Persia, while marking out certain regions in S E and N W Persia respectively in which each had, for geographical and economic reasons, special interests On Aug 9, 1919, this Agreement was superseded by a Treaty between Great Britain and Persia, by which Great Britain agrees to respect the integrity of Persia, and to provide a loan of £2,000 000 in return for the security of diplomatic and commercial relations between the two countries, and for the purpose of establishing order and developing the resources of the State

Persia is mostly an arid table land, encircled, except on the east, by mountains those in the north rising to 18 700 ft The central and eastern portion is a vast salt desert The only navigable river is the Karun which was opened to foreign navigation from Mohammerah to Ahwaz in 1888 There are only 8 miles of railway open, and travelling is mostly by caravans, and transport by pack animals The cost of carriage is therefore very heavy An option for the construction of a railway from Khanikin to Tehran *viâ* Kermanshah and Hamadan (with a branch to Enzeli on the Caspian) was granted in 1920 to the Persian Railways Syndicate

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c with turquoises Oilfields in Southern Persia have been successfully worked by an English company since 1902 The only important manufacture is that of woollen carpets (mostly a domestic industry) but shawls silks and cotton fabrics are also produced There are extensive forests in the north and west Sheep and goats are numerous and good wool is produced The principal towns are Tehran (pop 210 000), Tabriz (180 000) Ispahan (80 000) Meshed (80,000), Kerman (50 000), Yezd (60 000) and Shiraz (60 000) The Persians are mostly Shiah Muhammadans, but there are many adherents of Babism (an eclectic form of Deistic religions) and Armenian Christians The laws and popular education are based on the precepts of the Koran Persia is divided into provinces of which the principal are under Governors or Governors General

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court a nationalist movement began in Dec 1905 In Aug 1906 the Shah, Muzaffer ud Din admitting the need for reforms granted a Constitution He was succeeded in 1907 by his son Muhammed Ali Shah who was deposed by the National Assembly in 1909, to be succeeded by his son Sultan Ahmad Shah (under the regency of Nasr ul Mulk until 1914)

The revenue (£1 480 780 in 1913–14) is derived from land tax, Crown lands, customs, opium, salt and lease of monopolies The foreign debt of Persia amounted (Dec 31, 1916) to £6 325 700 In 1919 under a special agreement, the British Government advanced to Persia the sum of £2,000,000 on the security of the revenue and customs duties The apparent increase in the trade figures is due to the fall in the exchange The British Empire was the chief trader in 1917–18, and sent about three fifths of the total imports The sea borne trade of Persia passes chiefly through the ports of Bushire, Bunder Abbas, and Mohammerah, and *viâ* Baghdad The shipping of the Persian Gulf is principally British Persia's chief imports are cotton piecegoods (mainly from England and India) and sugar (from Russia and France), with tea, cotton yarn metal wares, gold and silver petroleum, and indigo The principal exports are dried fruits raw cotton, pearls, opium rice wool, fish, hides and skins carpets, and silk cocoons

	1917–18	1918–19
Imports	£15,602 000	£15,876,000
Exports	11,300,000	9,028,000
Imports from British Empire	—	12,799,000
Exports to British Empire	—	3,827,000

Peru is a maritime Republic of South America situated between 1° 31 29 and 19° 13'S latitude and between 69° and 81° 19 W The territory between 17 47 S and 19 13 S is still occupied by Chile and representations are again being made for the return of these provinces, which were occupied by Chile during the Pacific War of 1879–1882 The area of the Republic is estimated at 532,000 square miles and the population at 3 530 000 It is bounded on the north by the republics of Ecuador and Colombia, as the latter claims a territory in the Amazonian basin, on the east by Brazil and Bolivia, and on the south by Chile and Bolivia.

Peru was conquered in the early 16th century by Francisco Pizarro (born 1478, died 1541) who subjugated the Incas (a tribe of the Quichua Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule A revolutionary war of 1821 1824 established its independence, declared on July 28, 1821 The constitution rests upon the fundamental law of Oct 18, 1856 (amended Nov 25 1860) and is that of a democratic Republic The President and two Vice Presidents are elected for four years by direct vote of the people, and are ineligible for a succeeding term of office

The country is traversed throughout its length by the Andes, running parallel to the Pacific coast, the highest points being *Huascaran* (22,050 feet), *Huandoy* (21,100 feet), *Arequipa* (01 Misti) volcano (20,013 feet), *Hualcan* (20,000 feet), and *Lurima, Tocora*, and *Sarasara*, all over 19,000 feet There are four distinct regions, the *costa*, west of the Andes, a low arid desert except where watered by transverse mountain streams, but capable of irrigation, the *sierra* or western slopes of the Andes, the *punas* or mountainous wastes below the region of perpetual snow and the inward slopes and boundless forests of the Amazonian basin The coast region is sandy desert except where watered by transverse mountain streams but capable of cultivation in the highest degree by irrigation The valleys running to the coast are very fertile and the mountains are rich in minerals among which silver quick silver copper coal (of inferior quality) and vanadium are conspicuous while in the department of Lumbes, along the coast there are important beds of petroleum Gold is found in many districts but especially in the province of Chuabiya where mining on an important scale is carried on The eastern provinces are of vast extent and fertility with a tropical climate The medicinal productions of that region are of great value comprising cinchona, or Peruvian bark (of which little is now exported), sarsaparilla copaiba &c India rubber is an important product of the country Coca, cocoa, and coffee are grown on a small scale Sugar and cotton are the staple agricultural articles of the country The Lobos and other islands on the Pacific coast provide guano

The principal imports are coal, cotton woollen linen and silk goods drugs earthen and stone wares machinery explosives metals and manufactures thereof, oils stationery, paper manufactures timber, and wheat The chief exports are minerals and metals, petroleum, raw cotton sugar hides and skins gums (chiefly rubber) and wool In 1918 the U S A sent 54 3 of the imports and took 46 6 of the exports, while the U K sent 16 1 per cent and took 31 7 per cent

The total length of the railways open (1915) was 1 724 miles There is also steam navigation on Lake Titiaca and the River Desaguadero The eastern rivers are also navigated to some extent by steam craft Wireless telegraphy stations have been established in many places.

Defence—The Army is recruited by voluntary enlistment supplemented by conscription, and numbers about 5 000 of all ranks, the Navy includes two cruisers built at Barrow, and a destroyer bought from the French Government and 2 submarines

Spanish is the language of the country

The Republic of Poland was proclaimed at Warsaw in November 1918 and under the *Treaty of Paris* (June 28 1919) the assentors to the Covenant of the League of Nations and the signatories of the Treaty of Peace guarantee the independence of the Republic which is reconstituted (as far as possible) within the limits of the 18th century Polish Commonwealth. This state extended in the year 1772 over an area of 283 000 sq miles, and included a population of about 13 000 000 The political neighbours of the Republic are the Baltic Sea, the German Republic (Prussian Konigsberg District) and the Republic of Lithuania, in the N the Republic of Czecho Slovakia in the S Soviet Russia in the E and Germany in the W The present area of the Republic may be estimated at 300,000 sq miles with a population of 30 000 000 but the disposition of the following areas has yet to be determined by plebiscite the Regency of Opole (Upper Silesia) and the Teschen district (as between Poland and Czecho Slovakia), and the Masurenland district of East Prussia (as between Poland and Germany) The predominant religion of the people is Roman Catholic, but all faiths enjoy equality, and there are large numbers of Protestants and Jews

In 1920 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red armies of Bolshevik Russia appeared likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture A dramatic counter attack by the Polish troops at the critical period reversed the nature of the campaign Poland was enabled to obtain peace on favourable terms and claimed the renunciation by the Soviet at Moscow of about 150 000 sq kilometres, containing a population of 1,330 000 Poles, 1 200 000 Ruthenians 900 000 Ukrainians, 550 000 Jews and 500 000 of various nationalities The advance of the Polish armies into Lithuania was the cause of anxiety among the Supreme Council of the Allies in the autumn of 1920

GOVERNMENT.—A Republican form of government was adopted by the Constituent Assembly in 1918 the President exercising the executive authority through a Ministry responsible to the Legislature The Legislature consists of a single chamber (*Sejm*) elected by universal adult (male and female) suffrage

PRODUCTION.—Mining cotton metal work, agriculture, forestry and stock raising are the principal industries, the chief crops being rye, wheat, oats, barley potatoes, and sugar beet, the live stock includes cattle horses sheep and pigs There are valuable coal mines in Upper Silesia Russian Poland, and Little Poland (Galicia) zinc lead ore mineral and potassium salts and in Galicia (Boryslaw) are famous oil fields The chief manufactures are textiles those of minor importance being machinery and metal works chemicals, and leather The exports in former years were principally agricultural produce and textiles the imports being raw wool cotton and jute, woollen and cotton goods and machinery

DEFENCE.—In Nov 1919 the war strength of the Polish army was 550 000 all ranks with a reserve of 400 000 When the various causes of conflict have disappeared it is not anticipated that the Republic will require a large army A small navy for coastal defence is projected

EDUCATION Education is compulsory and free and there is considerable voluntary effort in addition to the work of the State Secondary education is conducted on a high level with good attendances and there are universities at Cracow (founded 1364) Warsaw Lwow Posen Lublin, and Wilno Polytechnics at Warsaw and Lwow, and an Academy of Science at Cracow

COMMUNICATIONS.—There are about 11 000 miles of railway and over 20 000 miles of telegraph line, with well developed telephone systems in all the large centres Over 4 000 miles of navigable waterways exist on the Vistula Warta and Pilica of which about 1 100 are navigable by steamers The free city of Danzig is within the Polish Customs area, free transit for Germany being guaranteed

FINANCE.—The Budget for the 9 months ending March 31 1920 gives the revenue at 1 078 000 000 Polish marks, expenditure at 8 650 000 000, which figure includes 4,500 000,000 as the cost of the war The estimates do not include the figures of former Prussian Poland Temporary national currency: Polish mark about 3,500,000 000 in circulation, besides some 3 milliards roubles, 2 milliards German marks

and 5 milliards Austrian kronen (total of about 15 milliards Polish marks) The Polish *mark* has been adopted at the ratio of 70 Galician *kronen* = 100 Polish marks

The capital, WARSAW, on the Vistula (which is spanned by four magnificent bridges) contains many fine buildings, its population in 1914 was about 800,000, and in 1919 about 1,000 000 Other large towns are Lodz (450 000) the centre of the textile industry, Posen at the confluence of the Warta and Cybina rivers (160 000) Cracow, on the Vistula (170 000), Bialistok (110,000), and Sosnowice (100,000)

Hon Consul General Sir Albert Rollit LL D, 3 Mincing Lane E C 3
Hon Consuls at Glasgow, Manchester and Malta

Rumania is a kingdom of South Eastern Europe in the classical *Dacia*, the territory roughly defined by the three great rivers Danube Theiss, and Dniester whose central point is the line of the Carpathians The territory is known as Wallachia, Moldavia, Bessarabia, Bukovina Crizona Maramuresh, Transylvania, with part of the Banat and of the Dobrudja. The kingdom has its origin in the union of the

Danubian principalities of *Walachia* and *Moldavia* (and the addition thereto of a strip of Southern *Bessarabia*) under the *Treaty of Paris* (April, 1856). The principalities remained an integral part of the Turkish Empire until 1859, when Prince Alexander John Cuza was elected ruler under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern Sigmaringen, in whose successors the crown is now vested. By the *Treaty of Berlin* (July 13, 1878) the new Principality was recognised as an independent State, and part of the *Dobruja* (which had been occupied by the Rumanians) was incorporated in the Principality. On March 27 1881 the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a Balkan State. She took no part in the military operations of the Balkan League against Turkey in 1912–13 and her unexhausted military power secured for her a readjustment of her south eastern (Dobruja) frontier at the expense of war worn Bulgaria. In the War of 1914–1918 Rumania fought on the side of the Allies from Aug. 27 1916 and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917) she emerged in triumph at the cessation of hostilities between the protagonists. Her territories were greatly increased as a result of the War, and the *ante bellum* area of the Kingdom (53 000 sq. miles) was more than doubled by the inclusion within its borders of *Bessarabia Transylvania Bukovina* and part of the *Banat* of Temesvar. The area of the enlarged Kingdom of Rumania may thus be estimated at 122 282 sq. miles and the 1914 population of 7,000 000 has has been increased to 17 000,000. The dominating religion is that of the Greek (Orthodox) Church but there are many Jews, full political rights being accorded to all.

GOVERNMENT.—The government is that of a Constitutional Monarchy the legislative assembly consisting of a Senate (56 members) elected for 8 years and of a Chamber of Deputies (361 members) elected for 4 years by universal suffrage provision being made for the proportional representation of minority races. The executive is entrusted to a council of ministers.

PRODUCTION.—The soil of Walachia Bessarabia and Moldavia is among the richest in Europe. The wheat crop for 1919 was estimated at 7 000 000 quarters (of 480 lb.). The agricultural produce consists of wheat maize millet barley rye beans and peas. Vines and fruits are abundant. The fertile plain of Transylvania yields large crops of maize wheat rye oats, flax and hemp and the rich lands of Bessarabia produce wheat, maize barley flax tobacco, water melons fruit and grapes. Agriculture and sheep and cattle raising are the principal industries of the kingdom but the climate of this part of South Eastern Europe is of the Continental character with intense winter cold and summer heat, and fierce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (12,888 792 acres) and the timber industry is important. The country is rich in minerals, and produces petroleum, salt, coal, lignite, iron, gold, and mica. Manufactures are in their infancy, and the imports are chiefly the manufactured goods of Western Europe; the exports consist principally of wheat, barley, maize, oats, petroleum, timber, cattle, salt and hides. All estates over 1,335 acres have been expropriated and divided among the peasants.

DEFENCE.—Service in the *Army* is universal and compulsory. In the War of 1914–1918 over 900 000 all ranks passed into the Armies of Rumania and of this number over 25 per cent were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumano Hungarian question and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest. There is a small *Navy* on the Black Sea (30 vessels) and on the Danube.

EDUCATION is free and nominally compulsory there being 19 374 schools with 1,612,763 in attendance. Secondary schools are well attended. There are also special schools and Universities at Bucharest, Jassy, Cluj, and Cernauti. A Government High School of Commerce was opened in 1913.

COMMUNICATIONS.—In 1919 there were about 7 131 miles of railway open for traffic in the whole kingdom. There are 19 715 telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels. The Black Sea port of Constantza (Dobruja) is linked with the interior by a railway. An International Commission exercising sovereign powers over the navigation of the Danube, has its seat at Galatz.

RUSSIA

President of the Council of Commissaries of the People, Valdimir Ilitch Ulianov Lenin *born* April 23, 1870.

Members of the Council —

War and Marine, Leon D Bronstein Trotsky
Foreign Affairs, G Tchitcherin
Interior, Posts and Telegraphs, Glebov
Justice, Kourky
Public Instruction Lunakharsky
Finance, Goukouski

The area of *Soviet* Russia cannot be stated with accuracy, owing to the ebb and flow of the various conflicting forces It may, however, be estimated at 1,650,000 square miles (with a population of about 100,000,000) *West* of the Ural Mountains and at 3 200,000 square miles (with a population of about 8,000,000) *East* of the Urals (Siberia exclusive of Yakutsk)

Prior to the War of 1914-8 the *Russian Empire* of the Tsar Nicholas II covered more than 8 500 000 square miles, with a population of about 183 000,000 Included in this area were the present Republic of *Finland* the Russian portion of the Republic of *Poland* the Baltic Republics of *Esthonia*, *Latvia* and *Lithuania* the Southern Republics of *Georgia* the *Ukraine*, and the *Don*, the Caucasian Republics of *Kuban* and *Azerbaijan*, and the Russian portion of the Republic of *Armenia*, while the States of *Khiva* and *Bokhara* were dependencies of the Empire

The Central Government of this vast area was an absolute autocracy, the country being regarded as the estate of the autocrat and the public revenue as his private income from which the expenses of administration were met Reforms of various kinds were introduced from time to time The peasants who constituted 75 per cent. of the inhabitants, were freed from the condition of serfdom in 1861 by the Tsar Alexander II , and land was allotted to them in communal ownership After the disasters of the Russo Japanese War of 1904-5 the Tsar Nicholas II. published a rescript foreshadowing a constitutional form of government In 1906 the Imperial *Duma* (parliament), elected under the tentative constitution, was opened by the Tsar but it possessed little authority and its recommendations were usually ignored while it was liable to be dissolved at the will of the Tsar The government in force at the outbreak of the War in 1914 was 'Constitutional in name alone, as the limits to the power of the ruler were subject to the possibility of an immediate and complete resumption of the former autocracy, at the will of the autocrat

Local Government on the other hand, was highly developed In the rural districts (containing 80 per cent of the inhabitants) the village communities elected councils under the presidency of a *starosta* (mayor) villages being grouped into provinces and thus into governments, with larger elective councils for the administration of local affairs Combined with this system of village communities was a highly organised system of co operative trading, the villagers being grouped by voluntary association into districts, usually corresponding with local government areas The produce of the soil was disposed of in return for manufactures obtained by the Society and distributed at the Co operative shops Municipalities were also administered by elective councils under the presidency of a mayor, but in many cases the local authority was overshadowed by the superior authority of the military governor

Education was not widespread in the Tsar's dominions Primary schools afforded only the most elementary instruction, and the attendance was voluntary, while they were closed in rural districts during the summer months Secondary schools existed only in the great cities, and the eleven universities had only 40 000 students of both sexes Fully 90 per cent of the peasants (i e 72 per cent of the people) were illiterate A rural *starosta* who could neither read nor write was in no way unusual and accounts were frequently kept for the local branch of the Co operative Society by the village schoolmistress or by the priest the *abacus* being employed by the shopkeeper for simple additions of roubles and kopeks by means of moveable balls (of different colours) on a wire frame

For many years a sullen undercurrent of unrest had been noticeable in Russia particularly among the University students and the educated classes The movement spread rapidly among the workers and peasants from about the year 1860 and was secretly organised in 1869 as the Society for the Liberation of the People ' The reforms originally demanded were reasonable and neither anti dynastic nor revolutionary They were resisted principally because they were regarded as premature The impatient extremists endeavoured to hasten reform by violent means and resorted to terrorism and assassination to achieve their aim which was criticised as a desire to reduce rule to anarchy and to substitute for existing authority nothing as expressed in their nickname This *Nihilism* was kept in check by a large force of Secret Police whose methods were generally arbitrary and frequently inhuman arrest on suspicion of membership of a secret society or of sympathy with Nihilism, being followed by banishment for life or by penal servitude in the mines of Siberia

Involved in the War from Aug 1 1914 the military forces of the Tsar fought against the armies of the Central Powers with varying success On March 12 1917 owing to the avowed hostility of the *Duma* * the Tsar Nicholas II abdicated, but the successor nominated by him was not admitted to power and a provisional government was set up under Prince Lvov On May 16 1917 this administration was taken over by a Republican Cabinet under Alexander Kerensky, but Kerensky failed to establish a settled government Administrative chaos was followed by a *débacle* in the field, and the armies of Russia, hitherto a bulwark of the Allied cause, retreated in panic from the battle line, many of the soldiers abandoning their arms and returning to their homes

On Nov 7, 1917 a military revolution transferred the power from the Republican Cabinet of Kerensky to "People's Commissioners, appointed by an "All Russia Congress of *Soviets* the *Soviets* being Councils of delegates elected by workmen, soldiers and peasants throughout the country

The opposing theories of government were

* The Tsar Nicholas II with the Tsaritsa Tsarevitch Alexis (heir apparent) and the Princesses (and such faithful adherents as remained to them were arrested by order of the Kerensky Cabinet They were subsequently captured by the Bolsheviks and on July 16 1918 the Tsar and family and attendants were butchered in cold

known as "Maximalist" and "Minimalist" rule, the *Soviets* claiming to represent the Maximalists or largest class, the Republican Cabinet being accused of representing only the *bourgeoisie*, or smallest (Minimalist) class. The Maximalists or *Bolsheviks* (Bolsheviki = majority) professed to act in the name not only of the people of Russia, but in harmony with a projected "Federation of the Proletariates of the World."*

Meanwhile, the armies of the Central Powers advanced victoriously into Russian territory, and after granting an armistice they imposed on the *Soviet* government the crushing conditions of the *Treaty of Brest Litovsk* (March 2, 1918), which remained effective until the military strength of Germany and Austria was broken by the Allies.

The Bolshevik *regime* had been fostered by the Central Powers and was opposed by the Allies, who sent such naval and military help as could be afforded to various bodies who were stemming the tide of Bolshevism in Siberia (Admiral Koltchak), South Russia (Denikin), and North Russia (Tchaikovsky), mainly with a view to create a diversion on the eastern German-Austrian front, and in response to a declaration of war by the *Soviets* against governments which were held by them to be representative of Minimalist rule and of the *bourgeoisie* they had pledged themselves to eradicate.

In 1919 the *Soviet* armies met with almost universal success in their encounters with the forces from Siberia. Koltchak was driven across the Urals and his armies were dispersed, the leader being captured and put to death. Local resistance in North Russia was strengthened by Allied troops (principally from Great Britain and U.S.A.), and help was also rendered to General Denikin in the south. But the victorious close of the European War caused a growing reluctance among the Allied Nations for further military adventures, and the reinforcements sent in 1918 were withdrawn during the autumn and winter of 1919 from Archangel and Murmansk in the North, from Odessa in the South, and from Vladivostok in Siberia. The withdrawal preceded a collapse of the "White" resistance to the "Red" (Bolshevik) armies, and by the close of the summer of 1920 the greater part of Siberia and the Archangel government were included in *Soviet* Russia. In 1920 war broke out between the Republic of Poland and the *Soviet* armies, in conjunction with operations under General Wrangel, the successor of Denikin in the South. After initial successes the Polish armies were driven back and Warsaw appeared to be in imminent danger of capture, when a dramatic recovery saved the Polish capital and brought about negotiations for peace on terms favourable to Poland.

Soviet Russia is governed by the President and Council of the Peoples' Commissioners, nominally for the benefit of the People of Russia; but the so-called Bolshevik, or majority, rule is in effect that of a minority, and it is upheld by an army which contains at least 60 per cent. of foreign (largely Chinese) mercenaries, by methods in every way as undemocratic as those of Tsardom. "Liberty" is dismissed as a *Bourgeoisie*, and freedom of the Press and free speech are similarly regarded, while the Social Democrats (Menshevists) and the Salvation Army are proscribed as "Counter-Revolutionary." *Soviet* rule has hitherto been accompanied by indiscriminate slaughter and outrage; it has not yet been recognised by any of the Allied Powers.

Before the War the annual revenue of the State was about 3,500,000,000 *roubles* (at the 1914 rate of exchange 9·458 *roubles* = £1 sterling). The *Soviet* budget of 1919 showed a Revenue of 20,349,000,000 *roubles* for the first six months of the year, and an expenditure of 50,103,000,000 *roubles*, a deficit for the six months of 29,754,000,000 *roubles*. The State debt amounted, in 1914, to 8,811,380,000 *roubles* (£931,600,000), against which there was a gold reserve in the State Bank of 1,673,580,000 *roubles* (£175,900,000). In Oct. 1917 the State debt amounted to 32,300,000,000 *roubles*, including a number of loans contracted abroad, Great Britain being a creditor for the amount of £572,000,000 lent to Russia from Sept. 1915 to Oct. 1917. All internal and external obligations of the State have been repudiated by the *Soviet* government. In Sept. 1920 particulars were published of an agreement between the British Government and *Soviet* Russia for resumption of trade relations, and in this agreement (so far as its details were made known) the repudiation of the public debt appears to be condoned by the British Government. The internal debt has been increased by many millions of *roubles* monthly by the indiscriminate issue of paper money. Before the War of 1914-8 the paper *rouble* was worth about 2*s.*; on Nov. 8, 1920, the exchange in South Russia was quoted at 135,000 paper *roubles* = £1 sterling and the gold 10 *rouble* piece at 190,000 paper *roubles*. All banks and financial and trading concerns and shipping enterprises have been declared to be the property of the proletariate, and the balances and credits have been dissipated by theft or neglect. Private ownership of land has been abolished and all real estate has been declared proletariate property.

The harvest of 1913 produced 21,478,312 tons of wheat, 25,842,956 tons of rye (the staple food of the peasants and workmen), 10,321,593 tons of barley, 15,569,348 tons of oats, 2,354,006 tons of millet, 2,861,106 tons of maize, 37,399,474 tons of potatoes, and 124,466 tons of tobacco; the live stock included (1914) 52,052,000 cattle, 72,273,000 sheep, lambs and goats, 14,995,000 pigs, and 34,973,000 horses.

In 1913 the mineral output of Russia was 57,230,000 tons of coal (principally from the Donetz basin), gold, platinum (337 poods of 36lb.), pig iron (7,400,000 tons), copper, quicksilver, salt and lead.

In 1914 the Imports into Russia were valued at 1,100,000,000 *roubles*, and the Exports from Russia at 960,000,000 *roubles*, a total trade (at 9·458 *roubles* = £1) of £217,480,000, the chief imports from the United Kingdom being machinery and coal, the exports to the U.K. being principally cereals, timber, eggs and flax. Under Bolshevik rule trade is at a standstill, but there is a prospect of resumption of trade relations by the Allied Powers.

* Bolshevik propaganda work has been extensively carried on in Europe and the United States, but has gained few adherents in democratic countries. The principal agency for Bolshevik propaganda abroad is the *Rosta* (Russian Telegraph Agency), which has at its disposal considerable sums derived from the "national portion" of the banks and commercial houses of the *bourgeoisie*. Personal propaganda is directed by Koppelmann Semenoff. In 1920 the sum of £75,000 was offered by the *Soviet* government as a subsidy to the London Labour organ, *The Daily Herald*. The money available is derived principally from the sale of jewels of murdered Russian men and women.

There were (1913) 46,839 miles of railway with a gross revenue of £112,213,000, 15,261 post offices carrying 2,663,900,000 letters, &c., and 476,177 miles of telegraph wire The principal railway lines are the main *European* network from Petrograd, through Moscow to Astrakhan and across the Urals *vid* Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic, the Crimea and the Caucasus the *Trans Siberian Line* from Chelyabinsk, on the Ural frontier to Omsk, and round Lake Baikal to Chita and Stryetensk From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostock, where a northward extension runs to Khabarovka The projected *Amur Railway*, when completed, will connect Stryetensk with Khabarovko, and the Trans Siberian line will thus connect the western and eastern limits of Russia on Russian territory The *Trans Caspian Railway* runs from Krasnovodsk (opposite Baku) to Askabad, Merv, Bokhara, Samarkand, Khokand and Andijan, with a 200 mile branch from Merv to Kushk (near Herat) on the Afghanistan border The *Orenburg Tashkent Line*, from the European boundary, across the Kirghiz Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the Trans Caspian system The *Trans Caucasian Line* runs through the autonomous Republics of Georgia, Azerbaijan and Armenia from Batum and Poti, on the Black Sea, *vid* Tiflis to Baku, on the Caspian, where it is met by the European system of Rostov on the Don From Tiflis branches run to Kars, and *vid* Erivan to Mount Ararat on the Armenian frontier and to the Persian frontier at Julfa There are in *European Russia* about 150,000 miles of navigable rivers and canals and lakes, of which total about one-fourth of the distance is navigable by steam vessels, a further eighth by sailing vessels, and nearly one third by rafts In Asiatic Russia there are 85,000 miles of waterway, of which 20,000 miles are navigable Some 175 000 persons were engaged in the traffic (1910), the vessels numbering (in 1910) 4,000 steamers and 23 000 sailing vessels In 1906 the ships and rafts carried over 400,000,000 tons of goods

The principal ports of *Soviet* Russia are Petrograd and Kronstadt on the Baltic Archangel on the White Sea, and Ekaterinsk in the Kola River (Murmansk), Astrakan at the mouth of the Volga (on the land locked Caspian Sea) Vladivostok and Nicolaieffsk on the Pacific and Petropaulovsk in Kamtchatka

On March 14, 1918, the seat of Government was transferred from Petrograd to Moscow, which had a population in 1914 of about 1,500,000, reduced by famine, assassination and misrule to about 700,000 in 1920 PETROGRAD (before the War "St Petersburg") the former Capital, founded by Peter the Great on the banks of the Neva in 1721, had a population in 1914 of 2,000,000 (estimated at 1,000,000 in 1920) Other centres are Saratov (200,000), Kazan (170,000), Astrakhan (150,000), Tula (135,000), Minsk (110,000), Nijni Novgorod (100,000), Voronezk (90,000), Orel (88,000), Vitebsk (86,000), Kursk (80,000), and Yaroslavl (80,000). Archangel had about 45,000 inhabitants in 1914

In various districts there are organized Governments, independent of *Soviet* Russia, and in other parts there is organised opposition to *Soviet* rule The autonomous governments in Russia are —

AZERBAIJAN

Azerbaijan is a Transcaucasian Republic on the south western shore of the Caspian Sea, extending from the Caucasus in the north to Persia in the south and from the Caspian on the east to Armenia and Georgia The area is about 50 000 sq miles with a population estimated at 4 to 5 millions of whom over 75 per cent are Muhammadans

The Capital is BAKU (pop 250,000) on the shore of the Caspian Sea, the centre of the petroleum industry Baku is connected by railway with Batum (Georgia) on the Black Sea via Tiflis, and with Moscow, via Rostov Other towns are Yelisabethpol, Derbent Kuba and Shemakha

The Republic has been formally recognised by the Allied Powers

THE DON

The territory of the Cossacks of the Don declared itself a Republic in Jan 1918 Area about 63 000 sq miles, population (1914) 3 700 000 The Republic covers the greater portion of the valley of the Don, and extends to the mouth of the river at the Sea of Azov The largest town is Rostov on the Don (pop 1914, 120,000), and the seat of government is at the former Provincial capital, NOVOCHERKASS (pop 1914 75 000) *Ataman of the Don* (*Governor*), General Krasnov

ESTHONIA

The most northerly of the Baltic provinces, is bounded on the N by the Gulf of Finland, on the S by Latvia, on the W by the Baltic Sea and on the S by Lake Peipus and *Soviet* Russia (along a line roughly parallel with the eastern shore of the lake) The islands of Dago, Osel and other smaller islands in the Baltic form part of the Republic It has an area of about 20 000 sq miles (within the boundary settled by agreement with *Soviet* Russia), with a population (1920) of about 1,800 000 A large portion of the surface consists of forests, moors and small lakes Agriculture is the chief industry, rye oats, barley, and flax being the chief crops, and dairy farming is carried on There are important manufactures, including distilling, sugar refining, oil pressing, woollen, cotton, tobacco, cork, soap, and petroleum The capital is REVAL (pop 1914 170 000) an important Baltic port, connected by railway with Petrograd, other towns are Narva, Hapsa, Pernau, Valk and Dorpat

The government is administered by the *Esthonian National Council*, and has been recognised by the Allied Powers and by *Soviet* Russia

CAPITAL, Reval.

Esthonian Chargé d'Affaires (London), Prof Antonius Piip

GEORGIA

A former Kingdom in Transcaucasia, with a history of more than 2,000 years as a State, was annexed by Russia in 1801 in violation of the Treaty of Alliance of 1783 At the beginning of 1918 it regained its independence The *Republic of Georgia* comprises the former governments of Tiflis and Kutais, the dis-

tricts of Zakathali, Sodchi, Sukhum and Batum; the total area (excluding the Province of Lazistan now Turkish and claimed by Georgia ethnographically) is about 45 000 sq miles with a population (1915) of 3 175,156 The Republic is bounded on the N by the Caucasian Mountains on the S by Armenia, on the E by the Republic of Azerbaijan, and on the W by the Black Sea It includes the important Black Sea ports of Batum (pop 50 000) and Poti (pop 30,732) Other large towns are TIFLIS the capital (pop 1914 356,000) Kutais (pop 85 151) Sukhum (pop 61,974), Tchiaturi the centre of the manganese industry, (pop 25,675) Dusheti and Signagi The Railway system of Georgia extends to 970 miles The trunk line 556 miles long connects the Black Sea ports of Poti and Batum with Baku on the Caspian Sea Batum and Baku are also connected by a petroleum pipe line The Republic is very rich in mineral resources such as manganese, iron, copper silver lead petroleum coal etc It has over 500 mineral springs partly unexploited among them many containing sulphur and radium Its agricultural resources are also very considerable

Georgia is a Democratic Republic The executive power is entrusted to a Cabinet of Ministers and the President of the Cabinet is acting temporarily as Supreme Head of the Republic

President of the Republic N Jordania, *born* 1867 *Elected by the Constituent Assembly* March 12th 1919

Georgian Chargé d Affaires (London) D Ghambashidze 32 Queen's Gate, S W 7

British High Commissioner at Tiflis, Commander Luke, D S O R N

KUBAN

In Nov 1918 anti Bolshevik elements in the basin of the Kuban river N of the Caucasus and E of the Sea of Azof proclaimed a government under M Sazonov at Ekaterinodar The area includes the river basin the N slopes of the Caucasus to Elbruz (on the E), the river mouth and the coast of the Sea of Azov, and extends over about 36 500 sq miles, with a population estimated in 1914 at 3,000 000 Under normal conditions the Kuban soil not only supports the inhabitants, but enables about one third of the produce to be exported The aim of the government is reunion with Russia under a Democratic Federal Government Capital, EKATERINODAR (pop 1914, 110 000) other towns, Novorossiisk (pop 1914, 70,000) Maikop (pop 1914, 55,000), and Yeisk (pop 1914, 53,000)

LATVIA.

A Baltic Republic in the basin of the Dvina river and round the Gulf of Riga practically co extensive with the former Provincial government of Courland, the area being about 10,000 sq miles, with a population (1914) of about 900,000 On Oct 7, 1919, General Biskupski assumed office as Premier and Secretary for Foreign Affairs

The seat of government is RIGA at the mouth of the Dvina river, with an estimated population of 570,000, other centres being Libau (100,000) and Mitau (50,000) on the Baltic coast, and Dwinsk (90,000) near the Lithuanian frontier, in the south east

Commercial Commissioner (*Riga*), Wm. Peters

LITHUANIA.

The former governments of Kovno and Vilna and portions of Grodno, Moghilev and Vitebsk were united in 1918 as the *Republic of Lithuania* The Republic is bounded on the N by Latvia on the S by the German district of Konigsberg Poland and *Soviet* Russia, on the E by *Soviet* Russia, and on the W by the Baltic Sea the total area included in the Republic being about 40 000 sq miles with an estimated population of 5 000 000 The future of the districts of Memel and Tilsit is to be settled by the League of Nations, as between Lithuania and its S neighbour, Poland The seat of government is VILNA, on the Vilya river, a tributary of the Niemen (pop 1914, 210 000) connected by railway with Riga (Latvia), Petrograd, and Warsaw (Poland), Kovno, on the Niemen, had a population in 1914 of 95 000, other centres being Grodno (60 000), Memel, on the Baltic (35,000) Suvalki (30 000) and Shavli (30,000)

CAPITAL VILNA

President of the Lithuanian Republic, A Smetonia (April 4, 1919)

Lithuanian Charge d Affaires (*London*) A Tyszkiewicz

British Chargé d Affaires (*Vilna*), Lt Col R B Ward

TARTAR BASHKIR

The former Provinces of Samara, Ufa, and Orenburg declared their independence in 1918 as the *Tartar Bashkir Republic* Samara (capital, Samara on the Volga, pop 1914, 120,000) has a total area of 58,320 sq miles and a population (1914) of 3,700,000, it lies to the E of the Volga river and is largely agricultural, but includes iron founding, tanning, brickmaking, and flour milling among its industries Ufa (capital Ufa, at the confluence of the Ufa and Bielaia rivers, pop 1914, 65,000) has an area of 47,109 sq miles and a population (1914) of 3,000,000, it lies to the N E of Samara, and is largely agricultural and pastoral Orenburg (capital, Orenburg on the Ural river, pop 1914 100,000), E and S E of Ufa, is largely mountainous, but contains also fertile low lying tracts in which agriculture is extensively carried on. Orenburg has considerable mineral wealth which is practically undeveloped

TAURIDA

In March 1918 the former government of Taurida declared its independence as the *Taurida Republic*. The area is 23,312 sq miles, with a population (1914) of 2,000,000, and the Republic is bounded on the N by the Dnieper river and the Province of Ekaterinoslav, on the W and S by the Black Sea, and on the E by the Sea of Azov The soil is very productive, especially in its southern peninsular, known as the *Crimea* (the ancient Tauric Chersonese) The capital is SIMFEROPOL (pop 1914, 85,000), other towns being Sevastopol (pop 1914, 62,000), Kertch (pop 1914, 60,000), Theodosia (pop 1914, 44,000), Berdiansk (pop 1914, 41,000), Yalta (pop 1914, 32,000), Eupatoria, Melitopol, and Perekop

TEREK.

In Sept. 1918 the Ciscaucasian Province of Terek proclaimed its independence. The *Terek Republic* has an area of about 28,000 sq. miles, and includes a population of about 1,850,000.

The S neighbour is Georgia, the Kuban Republic lies to the W, and the E boundary is the Caspian Sea The N boundary is indeterminate, but the Republic extends over the basin of the Terek river towards Astrakan.

TURKESTAN

In Jan 1918 the former Russian Provinces of Ferghana Syr Daria, Amu Daria Samarkand and Semiryechensk, with a total area of about 420,000 sq miles and a population of about 7,000,000, declared their independence as the *Republic of Turkestan* The territories of this Republic extend from the Aral Sea in the W to the boundaries of the Chinese Republic in the E and between the River Chu and Lake Balkash on the N, and Khiva, Bokhara and Afghanistan on the S The capital is TASHKEND (pop 1914, 275 000), other large centres being Khohkand (pop 1914, 125 000) Samarkand (pop 1914 100 000), Andijan (pop 1914, 90,000) and Namangan (pop 1914, 80 000)

UKRAINE

On Nov 21, 1917 the greater part of "Little Russia, consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Ekaterinoslav and Kherson in South Russia, and Podolia and Volkynia in "West Russia) was encouraged by Germany to declare itself independent as the *Republic of the Ukraine* The new Republic was despoiled by Germany in 1917-18, and until August 1919 was overrun by Bolshevik forces who were then driven from Odessa and the Ukraine by a rising of the inhabitants The total area of the Republic is about 174,000 sq miles, with a population of about 30 000,000 The chief town and seat of government is KIEV (pop 1914, 600 000) other large centres being Odessa, the great port on the Black Sea (with a population in 1914 of 650 000) Kharkov (pop 1914, 260 000), Ekaterinoslav (pop 1914, 180 000), and Zhitomir (pop 1914 80 000) The Ukraine is the great wheat growing district of Russia, and contains large deposits of iron ore and coal Agriculture is the principal industry, and there are large iron and steel works Before the War of 1914-8 the exports from the Ukraine (wheat sugar, hides bristles and wool) were of the annual value of about £75 000,000 and the imports (manufactured goods and machinery) about £50,000,000 In March 1919 the Allies recognised the government of the Ukraine In the autumn of 1919 the Republic broke off relations with the forces of Admiral Koltchak and General Denikin and hostilities ensued, with varying fortunes, between the Ukrainian armies under General Wrangel and the "United Russian armies of General Denikin A "peace' was concluded in Nov 1919, and in 1920 the struggle was continued with the armies of *Soviet* Russia, the trend of the struggle appearing to be entirely in favour of the "Red" Armies

President of the Ukrainian Republic, Simon Petlura.

YAKUTSK

In May 1918 the vast East Siberian Province of Yakutsk broke away from the Republic of Siberia and established a *Republic of Yakutsk* This sparsely populated area of 1,530,253 sq miles contained in 1914 a population of less than 350,000, the chief industry being hunting and trapping in the forest regions and agriculture in the S There is considerable mineral wealth The capital is YAKUTSK on the Lena river, the centre of the Siberian fur trade (pop 1914, 10,000)

SALVADOR, Republic of.

President (1919 1923), Senor Jorge Melendez, *assumed office* March 1, 1919)
Vice President, Dr Alfonso Quinonez Molina
Interior and Public Works Dr Miguel Molina
Foreign Affairs, Dr Juan J Paredes
Finance, José E Suay
War and Marine, Dr Pio Romero Bosque

Chargé d Affaires and Consul General in London, Dr Arturo R Avila, 7, Union Court, Old Broad Street, E C 2

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles, with a general breadth of 43 miles and contains an estimated area of 7,225 square miles with a population estimated at 1,271,336 It is divided into 14 departments

Salvador was conquered in 1526 by Pedro de Alvarado, and formed part of the Spanish viceroyalty of Guatemala until 1821 In 1840 the Republic broke away from the federation of Central American States The constitution rests upon the fundamental law of 1864 (revised in 1886), the President and Vice President being elected for four years by direct vote of the people, the President being ineligible for a successive term in either office

There are distinct areas in the low alluvial plains of the coast and the interior plateau, with a mean elevation of about 2,300 feet, broken in many places by volcanic cones of which the highest are Santo Ana (8 300 feet) and San Miguel (7 120 feet) The lowlands are generally hot and unhealthy There is a wet season (winter) from May to October, and a dry season (summer) from November to April Earthquakes are frequent, and on June 8 1917, a series of seven shocks nearly destroyed the capital, and ruined the towns of Santa Tecla, Armenia, and Ap pa The volcano on Mount Salvador was actually in eruption in Oct 1917, and a severe earthquake was experienced on April 28, 1919 doing great damage to the capital

The principal river is the Rio Lempa which rises in Guatemala and flows into the Pacific, with tributaries in the Santa Ana Asalguate Sumpul and Lotola, the Lempa being navigable for most of its course by small steamers In the eastern districts the Rio San Miguel rises near the Honduras boundary and flows into the Bay of Fonseca The western boundary crosses the Laguna de Guija, the greater part of which lies within the borders of Salvador, and in the centre of the Republic is the large volcanic lake Ilopango, with a smaller lake, Coatepeque, further west

The chief industry is the cultivation of coffee, sugar is also grown and indigo, rice, &c, are important crops The principal exports are coffee, indigo, tobacco, sugar, silver, balsam (known as balsam of Peru), rice, hides, cedar, and fustic The chief imports are cotton goods (from the U S A and U K), and leather, hardware, chemicals and motor cars

A British railway nearly 100 miles in length connects Acajutla with the capital and Santa Ana, the coffee centre, and another line is in course of construction from the port of La Union to the capital This has been completed to San Vicente (112 miles), whence a motor service to San

Salvador has been organised The principal ports are Acajutla La Libertad and La Union

There are 120 post-offices and 215 telegraph offices with 3 000 miles of wire

The language of the country is Spanish

SIAM.

King, Rama VI G C B G C S I, G C V O, *born* January 1, 1880, *succeeded* October 23, 1910

Foreign Minister H R H Prince Dewawongse

Envoy Extraordinary & Minister Plenipotentiary, in London Phya Buri Navarasth, 23 Ashburn Place S W 7

Consul General Sir John Anderson, 5 Whittington Avenue, E C 3

The Kingdom of Siam, or Muang Thai (area about 195,000 square miles, population, 1914, 8,150 000), is a buffer State between British Burma and French Indo-China and its integrity is guaranteed by the British and French Governments by the Anglo French Agreement of April, 1904 The upper part of Siam is mountainous, the lower flat. Siam contains many Chinese (largely engaged in trade and industry), besides Shans, Laos, Malays, Burmese, and Cambodians, and over 1,600 Europeans The principal religion is Buddhism Education is now under the Minister of Public Instruction There are 394 public schools and 4,137 schools of all kinds, attended by 122,800 children. A University is in process of organisation. Bangkok is the only much frequented port Over two thirds of Siamese sea borne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong German shipping, which had held the lead in tonnage for many years past, has ceased to visit Bangkok since August, 1914, and, as a consequence, there has been a large increase in Norwegian and British shipping The chief products of Siam are rice teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation There is a large number of rice mills, mostly in or near Bangkok The teak industry in the great forests of N Siam is mainly in English hands. In 1918–19 rice constituted 81 per cent and teak 3½ per cent of the exports from the port of Bangkok, while hides and marine products are also exported in considerable quantities Among imports are treasure, cotton goods and yarn, silk goods, provisions gunny bags, kerosene, sugar, opium, metals and metal wares, machinery, &c The general tariff rate is 3 per cent *ad valorem* Burma imports teak and cattle overland from Siam, and exports thither cotton and silk goods, &c Except tin, wolfram rubies and sapphires, there are no important mineral products as yet The King is an absolute monarch, and appoints his successor There is an Executive Council of Ministers and a general adviser in Foreign affairs (usually of American nationality), and, since 1895 a Legislative Council of State, consisting of the Ministers, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Italians, Danes, and Americans are employed in the various State departments Siam has an army of nearly 30 000 men, and a few small gunboats compulsory military service has been introduced About 1,200 miles of railroads (mostly State owned) are now open for traffic Railways from Bangkok run to Korat (165 miles N E) Nakawn Lampang (400 miles N of Bangkok), Petriu (40 miles E), while the northern line is being extended to Chiengmai, and the southern line to Trang, on the west coast of the Malay Peninsula, was open to traffic in October, 1916 In July, 1918, the southern line was completed to the Kedah border where junction with the Federated Malay States Railway system was effected There is through railway connexion between Bangkok and Penang and Singapore Good roads are few There are 3,000 miles of telegraph lines.

The currency is the silver tical, worth about 1*s* 6½*d* The Mint was closed to the free coinage of silver in Nov, 1908 In N W Siam the Indian rupee is more or less current The Government issues notes

Madrid 1 150 miles transit, 45 to 50 hours

The BALEARIC ISLES are an archipelago of 15 islands in the Mediterranean the largest being Majorca Minorca Iviza and Formentaira the total area is 1 935 square miles with a population (1910) of 325 703 The archipelago forms a province of Spain the capital being Palma in Majorca

CEUTA which forms part of the Province of Cadiz is a fortified post on the Moroccan coast opposite Gibraltar The total area is 5 miles with a population of about 13 000

The CANARY ISLANDS are an archipelago in the Atlantic off the African coast consisting of 7 islands and 6 uninhabited islets The total area is 2 807 square miles with a population of 419 809 The Canary Islands form a Province of Spain the capital being Santa Cruz in the island of Teneriffe

SPANISH COLONIES

The Spanish Colonies (exclusive of Ceuta and the Canary Islands which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa, with a total area of close on 82 400 square miles and a population exceeding 275,000

Fernando Po

FERNANDO PO (*Fenando Poo*) lies in the Bight of Biafra in 3° 12′ N lat and 8° 48′ E long, about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak, and sugar cane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported The capital is Basile, and the largest town Port Clarence (1 500 inhabitants). Dependencies of the island of Fernando Po are —

Annobon Island (*Anno Bom*), in the Gulf of

Guinea, in 1° 24′ S lat and 50° 35′ E long The roadstead at the capital (San Antonio de Baia) is much frequented by passing vessels which also obtain water and vegetables from the islanders

Corisco Islands consisting of Corisco Bana Elobey Grando and Elobey Chico lie in Corisco Bay, and export ebony, logwood, and other forest produce

Fernando Po—British Vice Consul A C Reeve (*acting*)

Rio de Oro and Rio Muni.

RIO DE ORO is a possession on the north west coast of Africa between Cape Bogador and Cape Blanco or approximately between 21° 20′ 26° N lat, and extending eastwards to about 13° W long The territory is part of the waterless Sahara with a sparse population of wandering Muhammadan Arabs There are valuable fisheries off the coast, and cattle sheep and camels are bred where vegetation permits

Rio Muni (or *Spanish Guinea*) is a coastal settlement of West Africa between Cameroon and French Congo (1° N—2° 10 N lat) extending about 125 miles inland The inhabitants are Bantu tribes and the principal settlements are at the mouths of the Muni Benito and Campa rivers, and at Bata on the coast Cocoa, coffee and bananas are cultivated and rubber palm oil, palm kernels, and other forest produce are exported

Spanish Morocco.

On the Moroccan seaboard are certain Spanish *presidios* formerly used as convict settlements

Melilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus The population is 37 565 and the settlement exports goatskins, eggs and beeswax, and imports cotton goods and provisions

Alhucemas is a settlement on the bay of that name and includes six islands

Peñon de la Gomera (or *Peñon de Vel z*) is a fortified rocky islet about 40 miles west of Alhucemas Bay

The Chaffarinas (or Zaffarines) are a group of three islands near the Algerian frontier, about 2 miles north of Cape del Agua population about 1 000

Ifni on the Atlantic coast of Morocco, about 100 miles south of Agadir affords access to the interior of south west Morocco but has no great trade at present

SPITSBERGEN.*

The Spitsbergen ('Pointed Mountain') Archipelago lies between 76° 26 80 50 N lat and between 10 26′ 32° 40 E long with an estimated area of 25 000 square miles The archipelago consists of a main island known as West Spitsbergen (12 000 sq miles) North East Land, closely adjoining and separated by Hinlopen Strait the Wiche Islands, separated from the main land by Olga Strait Barents and Edge Islands, separated from the main land by Stort Fjord (or Wybe Jansz Water), Prince Charles Foreland, to the W Hope Island, to the S E, Bear Island (70 square miles) 127 miles to the S, with many smaller islands in the neighbourhood of the main group

The Spitsbergen whale fishery was opened up by Henry Hudson, the navigator and explorer, in the early years of the 17th century and in 1773 a Polar expedition under John Phipps (with Nelson as ships coxwain of H M S *Carcass*) penetrated to the north of the archipelago In 1817 an expedition under Buchan and Franklin wintered in the ice off Spitsbergen but the archipelago was little more than a geographical term until it came into prominence through recent exploration Although stated to have been annexed in the 17th century by the Dutch, and in the 18th by the British no steps were taken in either case to make the annexations effective and Spitsbergen was regarded internationally as *terra nullius* until 1919, when its status was under consideration by an Inter Allied Commission and it is expected that the archipelago will be assigned to the sovereignty of Norway It is also anticipated that the 'squatter' claims of various nationalities will be recognised as at present existing

The archipelago is generally mountainous and there are traces of extinct volcanic action The highest points are Mount Newton (5 676 feet) Mount Poincare (5 446 feet) in the N E and Hornunstind (4,690 feet) in the S of the main island The coast is deeply indented by fjords of which the largest are King's Bay Cross Bay Ice Fjord Bell Sound Lowe Sound and Horn Sound in the W and Red Bay Liefde Bay and Widje Bay in the N of these, Ice Fjord from the W and Widje Bay from the N the heads of which are only about 10 miles apart give access to the centre of West Spitsbergen and are of the greatest importance for the development of its resources

Spitsbergen lies within 600 miles of the North Pole but the Arctic climate is considerably influenced by a prevailing S W wind there is however, no possibility of cultivation The principal minerals are coal gypsum, oil and building stones Carboniferous coal occurs principally in the centre of W Spitsbergen the area being estimated at 240 sq miles, with a capacity computed at 6 000,000,000 tons while Bear Island contains a greater area which is stated to be of inferior quality to that of the main land Steam coal to the computed capacity of 2 000 000,000 tons, and stated to be of the first quality occurs near Ice Fjord Green Harbour and Lowe Sound In 1917 the coal export was 40 000 tons, and in 1918 60 000 tons (mainly to Scandinavia), the 1919 output is estimated at 100,000 tons Two or more British companies are concerned in the mining industry Gypsum (from which plaster of Paris is made) is stated to be abundant and small quantities of copper have been found Marble breccia and other building stones are abundant There are also supplies of oil shale and indications of free oil The archipelago is visited by whalers (but the industry is declining) and by hunters for seal and wild fowl

Certain districts in the main island (West Spitsbergen) have been named as follows — King James Land and New Friesland (W and E of Widje Fjord) in the N, Sabine Land in the centre and Torell Land in the S There are settlements at Longyear "City" (on Ice Fjord), Davis "City" (on Lowe Sound), Green Harbour (at the S entrance of Ice Fjord) with a

* The spelling of the name with a 'z' is a corruption of the true name

high power Telefunken wireless station (erected by the Norwegian Government) connecting with Europe; and Coal Haven (in King's Bay).

South Cape is 370 miles from the Norwegian Coast. Ice Fjord is 520 miles from Tromsö, 650 miles from Murmansk, and 1,300 miles from Aberdeen. Transit from Tromsö to Green Harbour (the postal station) 2½ to 3 days; from Aberdeen 5 to 6 days.

SWEDEN, Kingdom of.

Swedish Church, Harcourt Street, Marylebone Road, W. 1.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Lan," with an area of 173,086 square miles, and a population, Dec. 31, 1919, of 5,847,037, nearly all Protestant. This area includes the great lakes of Hjalmaren, Malaren, Vanern, and Vattern. Nearly 49 per cent. of the population are devoted to agriculture, about 298,000 being owners and 50,000 tenants of the land they cultivate. The country for the most part is flat with pleasant undulations, rising in the north-west to the Kolen Mountains, which separate Sweden from Norway; and may be divided into three separate districts—the northern, forest; central, mining; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and consisting of pine, birch, fir: these are of great importance, supplying timber, pitch, and tar, and also the chief fuel. The mineral products are extremely rich: iron of excellent quality, that known as the Dannemora iron being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are being worked in Scania. The chief imports are coffee, wine, tobacco, and other ordinary colonial produce, coal, cloth, yarn, wool, cotton, skins, manure, iron, fish, oils, wheat, rye, pork, and machinery. The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, &c.

Commercial travellers in Sweden are compelled to take out a licence, costing 100 crowns a month, or they incur the risk of being fined.

Railroads 9,455 miles in length (of which 3,333 are the property of the State) were open on Jan. 1, 1919; and 45,187 miles of telegraph wires (inclusive of 22,430 railroad telegraph wires), 152 stations, and 1,875 railroad and 1,282 other telegraph stations (1918). There were at the same date 273,492 miles of telephone wires.

Defence.—Service in the *Army* is universal and compulsory. The peace effective is about 90,000 trained men. The first line can be raised to war strength of about 110,000; second line, 85,000. The *Navy* consists of 81 fighting vessels (485 guns), 19 being ironclads, with submarines, submersibles, and some training ships, &c.

Education.—(i.) *Primary:* Compulsory and free. Illiteracy rare. Maintained by local taxation, with State grants. Attendance good. (ii.) *Secondary:* Well-developed, schools numerous and efficient. (iii.) *Special schools* make a feature of technics and navigation. (iv.) *Universities:* Lund, Upsala, and a few private faculties.

The Helvetia of the Romans, a Federal Republic of Central Europe, situated between 45° 50′—47° 48′ N. lat. and 5° 58′—10° 30′ E. long. It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1874, and comprises a total area of 15,950 square miles, with a population of 3,877,210 in 1923, who are divided between Roman Catholics, 40 per cent., and Protestants, 59 per cent., Jews numbering 7,400 and others 11,000. The population is formed by three nationalities, distinct by their language, as German 71 per cent., French 21 per cent., Italian 6 per cent., and Romanshe (in the Grisons), 1½ per cent. The most important cities are Zurich, pop. (1915) 203,265, Bale 137,155, Geneva 138,688, Berne 98,000 (1916), and Lausanne 66,125. It is the most mountainous country in Europe, having the Alps, covered with perennial snow and glaciers, rising from 5,000 to 15,213 feet in height, not only along its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced, and nearly all English fruits and vegetables are grown. The forests cover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neufchâtel, while leather, gloves, pottery, tobacco and snuff, cheese, &c., are made. Being an inland country, the direct trade with the United Kingdom is comparatively small. In 1914 there were 3,530 miles of railway in working order, 17,333 miles of telegraph line, 317,403 miles of telephone line, and 2,099 post-offices.

The legislative power is vested in a Parliament, consisting of two Chambers, a National Council of 189 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for three years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 20,000 francs; the Vice-President and other members of the Federal Council 18,000 francs each. The members of the Federal Council are elected for three years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for three years. Not more than one of the same canton may be elected member of the Federal Council.

Defence: Militia. Active Army, 12 yrs.; initial trg., 65–90 days. Subsequently 11 days per ann.; *then* Landwehr, 8 yrs.; 1 trg., 11 dys. for dismtd. branches only; *then* [Landsturm to age 48]. *War Strength*, 140,600; Landwehr, 65,000; Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (i.) *Primary:* Free and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cantons. School age varies. (ii.) *Secondary:* Age 12–15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii.) *Special schools* make a feature of commercial and technical instruction. (iv.) *Universities:* Bâle, Berne, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

* The President is elected in December, and remains in office from 1 Jan.—31 Dec.; he is *generally* succeeded by the Vice-President.

SYRIA CILICIA AND LEBANON

French High Commissioner General Gourand

Under an agreement of May 1916 between Great Britain and France (known as the *Sykes-Picot Agreement*) *Syria* from Tyre to Aleppo *Cilicia* (in S E Asia Minor) and *Southern Armenia* (from Sivas to Diarbekir) were to be within the French Sphere of Influence The Syrian Districts of *Damascus, Aleppo Urfah Deir* and *Mosul* were to be Independent Arab districts subject to French influence Under the same agreement *Palestine* was to be constituted an International Territory from the Jordan to the Mediterranean and *Haifa* and *Mesopotamia* (from Tekrit on the Tigris to the Persian Gulf) were to be within the British Sphere of Influence

The victorious forces of Gen Sir E H Allenby, in conjunction with Arab levies under the leadership of the Emir Feisal (son of the King of the Hejaz Arabia) freed the whole of Syria from Turkish rule in 1918, and in accordance with the terms of the Sykes-Picot Agreement French garrisons (under the command of Gen Gourand) were placed in certain cities of Syria and Lebanon, but Damascus and Aleppo had previously been occupied by Arab adherents of the Emir Feisal and on March 8, 1920, the 'Syrian Congress at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria The area claimed by the 'Syrian Congress included the Lebanon Palestine and Northern Mesopotamia The action of the Syrian Congress was repudiated by the Supreme Council of the Allied Powers

Under the Treaty of Peace with the Allies (1920) Turkey renounced the sovereignty of Syria Cilicia and Lebanon and their administration was entrusted to France by the Council of the Allied Powers the Sykes Picot agreement being modified as and where necessary to correspond with the changed circumstances.

Syria is a geographical term for part of the former Turkish territories in Asia Minor, and extends from the Arabian Desert in the south to Khurdistan and Cilicia in the north, and from the Jordan, the Grand Lebanon and Cilicia in the west to Mesopotamia in the east with an estimated area of 107,000 square miles and a population of about 3 500,000 of whom the greater number are Orthodox Muhammadans with a proportion of Shiite Muhammadans and Druses Responsible Government has been accorded to Syria and the executive power has been entrusted by the High Commissioner to a Cabinet (formed July 1920) with Alla ud din Bey Druby as Premier, the Cabinet being responsible to Congress The products of Syria are wheat tobacco fruit and wine but there is little cultivation without irrigation the inland districts being cut off from the moisture laden winds by a mountain barrier running parallel with the coast while between Syria and Mesopotamia is the Syrian Desert The principal Syrian towns are Damascus (est pop 300 000) Aleppo (250 000) Homs (70 000) and Hamah (60 000) The Pilgrims Railway (through Arabia) and the Haifa line (through Palestine) reach Damascus from S and the Beirut line from W the last named extending northwards (with a westward connexion to the coast at Tripoli) to Aleppo where there is a junction with the Baghdad railway Damascus contains the Mosque of the Ommayedes (where is the tomb of Saladin), and in the south western quarter is The Gate of God through which the pilgrimage to Mecca passes annually while the "street called Straight (Acts IX 11) runs E to W through the city Damascus is an important commercial centre and among its industries are metal work and mother of pearl inlay At Baalbek (Heliopolis), on the eastern slopes of the Anti Lebanon range (35 miles N N W of Damascus), are ruins of 1st to 3rd century Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world (60 × 17 × 14 feet) weighing 1 500 tons

The Capital of Syria is Damascus
British Consul General, Damascus,

Cilicia extends round the Gulf of Alexandretta, from Lebanon in the south to the Anti Taurus in the north and from the Seihun Irmak river in the west to Urfa in the east, the total area

* Estimated

(which includes part only of the ancient Roman province of Cilicia or of the Turkish villayet of Adana) being about 12,000 square miles with a population estimated 300,000 The country is generally fertile and produces wheat cotton, wool, sesame, etc , and is capable of considerable agricultural development The principal towns are Adana (45 000), the former capital of the Turkish vilayet of that name Marash (50 000), and Alexandretta or Iskanderun (10,000), the chief port and an important strategical centre with command of the Beilan Pass

British Consul General Alexandretta,

The Great Lebanon (the former Turkish vilayets of Lebanon and Beirut), declared a State by the High Commissioner under the title of *The Great Lebanon*, in 1920, extends along the Mediterranean littoral from Palestine and Haifa to Cilicia, and eastward to the Anti Lebanon Ridge and to Syria The estimated area of the Great Lebanon is about 7,000 square miles, with an estimated population of 600 000 The products of the soil are wheat and other grain, and cotton the live stock are numerous and one of the principal sources of wealth The Capital is Beirut (pop 200 000) other towns being Tripoli (30 000) and Antioch (25 000) The seaports are Tyre, Sidon Beirut Tripoli (or Tarabulus) and Latakia The national flag is the French tricolour with a Cedar of Lebanon on the white band

British Consul General, Beirut, R A Fontana

Consul-General, London (not yet appointed)

The Ottoman Turks are derived from Central Asian tribes, who were converted to the Muhammadan faith in the seventh century These Muhammadan tribes attacked and conquered the Asiatic Provinces of the Byzantine (or Eastern Roman) Empire, and by the middle of the fourteenth century they had spread from Asia Minor into South East Europe In 1453 they captured Constantinople, and spread over the whole of the Balkan Peninsula, their name of Osmanli, or Ottoman Turks, being derived from Othman, or Osman (1299–1326), a notable Turkish leader in the fourteenth century Early in the sixteenth century the Ottoman Empire was spread over Egypt and northern Africa, and penetrated northward into Hungary, a great part of which was incorporated with the Turkish dominions until 1699, when the *Peace of Carlowitz* freed the country from Turkish rule In the nineteenth century the outlying African dominions with the exception of Tripoli broke away from their suzerain or were occupied by other Powers, and in the latter part of the century the northern states of the Balkan Peninsula asserted their independence under guarantees of the Christian Powers The outcome of these political upheavals was a demand for better government in the remaining dominions of the Sultan During the process of constitutional reforms, which drove the Sultan Abdul Hamid (1876 1908) from the throne war broke out between Italy and Turkey, and Tripoli and Benghazi were ceded to Italy under the *Treaty of Lausanne* (Oct 12 1912) These events were followed in the autumn of 1912 and the early months of 1913 by a disastrous war with the states of the Balkan League (Bulgaria Montenegro Serbia and Greece) At the outbreak of hostilities the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia Herzegovina (Austria), thus including the districts known as Macedonia, Thrace and Albania By the *Treaty of London* (1913) the north western boundary of European Turkey was a line drawn from Enos on the Adriatic coast, to Midia on the Black Sea thus excluding Adrianople which had capitulated (after a long siege) to the Bulgarian forces At the outbreak of the second Balkan war (in which Serbia and Greece were aided against Bulgaria by Rumania) Turkey took advantage of the military difficulties of Bulgaria and re occupied Adrianople, thus recovering a part of the lost dominions In the war of 1914 1918, Turkey threw in her lot with the Central Powers and made unsuccessful attacks on Egypt and South Russia Great Britain sent expeditions to Gallipoli (which were withdrawn) and to Mesopotamia and Palestine, which freed those countries and Syria from Turkish rule while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula On Oct 30 1918 Turkey surrendered unconditionally before the conquests of the various Anglo Indian and Imperial British columns and their Arabian allies

Under the *Treaty of Sevres* (1920) the bound aries of Turkey are set out and the Ottoman Empire now consists (Nov 1920) of —

Turkey in Europe (1,500 sq miles) consisting of the city and district of Constantinople, including Lake Derkes (the reservoir for the water supply of the city) with a population of about 1 300,000 European Turkey is separated from Asia by the Bosporus at Constantinople and by the *Dardanelles* (Hellespont)—about 40 miles in length, with a width varying from 1 to 4 miles —the only political neighbour being Greece, on the west The custody of the Dardanelles (the gateway to the Black Sea) and the navigation of the Straits, the Sea of Marmora and the Bosporus, is placed under international control The port of Constantinople (from St Stefano to Dolma Bagtchi) in European Turkey, and of Haida Pasha Smyrna, Alexandretta, Haifa, Basra, Trebizond and Batum, in Asia Minor, are declared to be of "international interest

Turkey in Asia (140,000 sq miles, estimated population 8 000,000) comprises the whole of Asia Minor (with exceptions afterwards noted) and extends from the Aegean Sea to about 41° 30 E long and from the Black Sea to the Mediterranean This area corresponds approximately with *Anatolia* ("Land of the Rising Sun, or Orient) of the Greek historians,

but part of the former vilayet of *Aidin* (Smyrna) is assigned to Greece (subject to a *plebiscite* of the inhabitants within 5 years from 1920), while the vilayet of *Konia* (about 40,000 sq miles) is similarly assigned to Italy and part of *Cilicia* (Adana) to France. In addition Turkish *Armenia* is declared to be autonomous, and *Kurdistan* is recognised as independent.

All other territories formerly subject to the Ottoman Empire are declared to be independent of Turkey. The *Aegean Islands* and the *Dodecanese* are transferred to Greece and Italy, *Cyprus Egypt* and the *Sudan* are recognised as British Protectorates while *Syria* the *Great Lebanon*, *Mesopotamia Palestine* and *Haifa*, and *Arabia* are acknowledged to be independent of Ottoman rule.

The Capital of the Ottoman Empire and the principal town of European Turkey is Constantinople (the Roman city of Byzantium selected by Constantine the Great as the capital of the Roman Empire about A.D. 328 and renamed by him became capital of the Eastern Roman Empire, A.D. 364); those of Asiatic Turkey are Scutari in Anatolia (80,000), Broussa (80,000), Kaisariya (70,000) and Sivas or Sebastia (65,000).

The present Sultan is in direct descent from Othman the founder of the Empire in whose line the succession is vested the eldest male representative in the direct succession being the presumptive or apparent heir.

The Sultan is Caliph of the Muhammadan world but the outcome of the War of 1914-18 has greatly restricted his title. The religion of the State is by law Muhammadan. Education is nominally compulsory and free. There are training schools, and at Constantinople a university, founded in 1900.

Although the soil of Turkish Asia Minor is generally fertile, agriculture is still very primitive. Cereals are abundantly produced, cotton tobacco and coffee are generally cultivated and figs nuts, grapes olives, and many varieties of fruit are grown. Cattle raising is an important industry. The exports were considerable before the War, and consisted principally of coffee opium tobacco, cotton carpets gums and ottar of roses. The forests are a source of wealth, and the mulberry is planted for the silkworm industry. The mineral wealth of Asia Minor is considerable, but almost undeveloped. Chrome ore, zinc, manganese antimony copper borax corundum (emery) coal and lignite, petroleum, gold, and arsenic are among the minerals produced. The principal manufacture is carpet weaving. Before the War the exports were valued at about £T25,000,000 annually, and the imports at about £145,000,000 (£1 12s = £10).

About 60 miles of railway remain under Turkish control in European Turkey. In Asia Minor the Anatolian Railways run from Smyrna to Konia, and thence (as part of the projected Baghdad Railway) to Eregli, and from Haidar to Angora, with other lines these have a total length of about 1,500 miles. There are electric trams in Constantinople.

Turkish Finances.—Attempts have been made since 1908 to establish a Parliamentary control over the finances, and budgets have been drawn up and adopted. The chief sources of revenue are direct taxes, customs duties, and monopolies, and from these sources a revenue of about 30 to 35 millions (£T) is obtainable on the present basis of taxation. The expenditure (owing to the service of the debt) is at least half as much again in recent budget estimates the interest on the debt requiring almost the whole of the revenue.

The General Debt of the Ottoman Empire was stated on Oct. 1, 1915, at *£1,165,250,967, and during the War of 1915-18 loans and advances of £T289,398,623 increased the total to £T454,649,590 by Aug. 31, 1918. The Egyptian Tribute Loan (£T17,485,655) has to be deducted from this total leaving it at £T437,163,935, exclusive of indemnities or reparations to the Allies. The Debt of £T437,000,000 requires £T21,000,000 for interest and administration annually out of a total average revenue of about £138,000,000. There is a proposal for a Joint International Financial Commission to reorganise the finances of the country.

	1918	1919
Imports from U.K.	£1,814,103	£22,962,868

The smallest Republic in South America on the east coast of the Rio de la Plata situate in lat 30°—35 S and long 53° 25—57° 42' W, containing an area of 72 210 square miles and a population on Jan 1 1918 of 1 407 247

Uruguay resisted all attempted invasions of the Portuguese and Spaniards until the beginning of the 17th century and 100 years later the Portuguese settlements were captured by the Spaniards From 1726–1814 the country formed part of Spanish South America and underwent many vicissitudes during the Wars of Independence In 1814 the armies of the Argentine Confederation captured the capital and annexed the province and it was afterwards annexed by Portugal and became a province of Brazil On Aug 25 1825, through the heroism of the 33 liberators (whose memory is perpetuated in the name of the province of *Treinta y Tres*) the country threw off the Brazilian yoke This action led to war between Argentina and Brazil which was settled by the mediation of the United Kingdom Uruguay being declared an independent state in 1828 In 1830 a Republic was inaugurated with a Constitution of Sept 10 1829 The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office By an amendment to the Constitution (which came into force March 1 1919) an administrative council was appointed to share the Executive power with the President This amendment has already caused difficulties

The country consists mainly (and particularly in the south and west) of undulating grassy plains The principal chains of hills are the Cuchilla del Haedo which crosses the Brazilian boundary and extends southwards to the Cuchilla Grande of the south and east In no case do the peaks exceed 2 000 feet The principal river is the *Rio Negro* (with its tributary the Yi) flowing from north east to south west into the Rio de la Plata The boundary river *Uruguay* is navigable from its estuary to Salto about 200 miles north and the Negro is also navigable for a considerable distance Smaller rivers are the Cuareim Yaguaron Santa Lucia Quequay and the Cebollati On the south east coast are several lagoons and the north east boundary crosses (the Brazilian) lake Mirim The climate is extraordinarily healthy with great uniformity of temperature the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter

Wheat barley, and maize are cultivated but the export is at present prohibited The wealth of the country is obtained from its pasturage which supports large herds of horned cattle (9 000 000 in 1908) and sheep (26,000,000 in 1908) the wool of which is of excellent quality Gold mines exist at Cunapiru The exports are entirely animal products and include frozen and preserved meat wool hides horn, hair, tallow and jerked beef the imports are principally machinery textiles and clothing, food substances and beverages coal and bloodstock The imports from the U K are numerous the principal being woollen and cotton goods hardware and coals There are 1 639 miles of railway open (1918), all in British hands, and 4 850 miles of telegraph, with 19 039 miles of telephones There were 995 post offices dealing with 101,638 265 letters and packets The language spoken is Spanish

The most northerly Confederation of South America situated approximately between 1°40 S lat and 12° 26 N lat and 59° 52 —73 15 W long It consists of 20 States and 2 federal territories The best authorities calculate the actual present area to be approximately 363 728 square miles The census of 1891 gave the population as 2 323 527 it was estimated to be 2,796,448 at July 31 1914

Venezuela lies on the north of the South American continent and is bounded on the north by the Caribbean Sea west by the Republic of Colombia, east by British Guiana, and south by Brazil The western boundary is in dispute, the area estimated by Venezuelan geographers (509 538 square miles) lying between 1°40 S –12° 26' N lat and 59 40 –73° 31 W long Included in this area are over 70 islands off the coast, with a total area of about 14,630 square miles, the largest being *Margarita*, which is politically associated with Tortuga, Cubagua and

Coche to form the newly constituted State of *Nueva Esparta* Margarita has an area of about 400 square miles

Venezuela was visited by Columbus in 1498 and in 1499 by Alonzo de Ojeda and Amerigo Vespucci the former naming the Gulf of Maracaibo Venezuela or 'Little Venice' (on account of the Indian pile built settlements on the coast and shores of the lake) and the name was afterwards extended to the whole of the Orinoco basin In 1550 the territory was formed into the captaincy general of Caracas, and the country remained under Spanish rule until the revolt under *Simon Bolivar*, a native of Carácas who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1821), and thus secured the independence of the country Bolivar was an untiring hero in the cause of independence and through his efforts (and those of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories He died in 1830, at the age of 47 and his remains were re interred at Caracas in 1842 Venezuela formed part of the Federal Republic of Colombia from 1822–1830 since which time it has been independent There have been many revolutions since 1846, particularly in 1849 1868 1889 1891 1900 and 1908 In 1854 President Monagas liberated the African slaves, and in 1864 President Falcón divided the country into States and formed them into a Federal Republic The present constitution rests upon the fundamental law of August 5 1909, under which the government is that of a Federal Republic of twenty autonomous States, a Federal District and two Territories, with a President elected by the Federal Congress for four years and ineligible for a consecutive term of office and a Council of Government of ten members (one for each two States) chosen by Congress for four years its members (by seniority) supplying at need a successor to the President

The Eastern Andes from the south west cross the border and reach to the Caribbean Coast where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north east The main range is known as the Sierra Nevada de Merida and contains the highest peaks in the country in Picacho de la Sierra (15 420 feet) and Salado (13 878 feet) the maritime ranges containing the Silla de Carácas (8 531 feet) Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Rincote and de Usupamo enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries The Sierra Parima contains Yaparana (7 175 feet) and Duida (8,120 feet) and Para Caima contains Maraguaca (8,228 feet) and Roraima (8,530 feet), the latter being on the Venezuela Guiana boundary The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly *llanos*, or level stretches of open prairie, with occasional woods

The principal river of Venezuela is the *Orinoco* with innumerable affluents the main river exceeding 1,500 miles in length from its rise in the north western mountains of the republic to its outflow in the deltaic region of the north east The Orinoco is navigable for large steamers from its mouth for some 700 miles and by smaller vessels as far as the Maipures Cataract, some 200 miles further up stream Among the many tributaries of the main stream are the Ventuari Caura and Caroni from the south and the Apure (with its tributary the Portuguesa) Aranca Meta and Guaviare from the west the Meta and Guaviare being principally Colombian rivers The upper waters of the Orinoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal known as the *Casiquiare* The costal regions of Venezuela are much indented and contain many lagoons and lakes of which *Maracaibo* with an area exceeding 7 000 square miles is the largest lake in South America Other lakes are Zulia (290 square miles) south west of Maracaibo, and Valencia (216 square miles) about 1 400 feet above sea level in the Maritime Andes The *llanos* also contain lakes and swamps caused by the river floods but so far as is known they are frequently dry in the summer seasons

The climate is tropical and except where modified by altitude or tempered by sea breezes is unhealthy particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons The hot wet season lasts from April to October the dry cooler season from November to March Yellow fever is endemic at Carácas, and plague cases have occurred there since 1908

The principal imports are cotton prints and shirtings and cotton drill mainly from the U K and hardware principally from the U S The principal articles of export are coffee (82 382 metric tons in 1918 19) cacao (18 527 metric tons in 1918 19) gatskins asphalt sugar hides and balata The U S is the principal customer Spanish is the language of the country

The Kingdom of the Serbs Croats and Slovenes is an outcome of the War of 1914 1918 through the fusion of the Kingdoms of Serbia and Montenegro with the Yugo Slav districts of Austria Hungary The area and population of the new kingdom are approximately as under —

District	Sq Miles	Est Pop
Serbia	34 500	5 000 000
Montenegro	5 800	500 000
Croatia and Slavonia	16 418	2 700 000
Banat (part)	6 000	800 000
Bosnia	16 233	1 630 000
Herzegovina	3 527	270 000
Carniola (part)	2 500	350 000
Styria (part)	1 900	350 000
Total	86 878	11 600 000

The political neighbours are the Republic of Austria and Hungary on the north Albania and Greece on the south Bulgaria and N W Greece on the east and on the west the buffer state of *Fiume Istria Dalmatia* and the Adriatic Sea This buffer state has been constituted by agreement with Italy, and in it Fiume (the former Austrian port) has a special status and is administered by a committee of five members (two Italians two Yugo Slavs and one citizen of Fiume) In Sept 1919 an unofficial raiding party of Italians under the leadership of Gabriele D'Annunzio the soldier poet seized the port and town of Fiume

In 1913 Serbia as a member of the *Balkan League* (Bulgaria Greece Serbia and Montenegro) waged a successful war against Turkey and enlarged her boundaries but in August 1913 Serbia and Greece were attacked by Bulgaria their former allys, owing to disputes concerning the division of the spoils The second war collapsed in a few weeks through the threatened intervention of Rumania and ended in the *Treaty of Bucharest* (Aug 7 1913) by which the whole of Old Serbia (the greater parts of the Turkish vilayets of Macedonia) were included within the Serbian boundaries The assassination of the Austrian Heir Presumptive (June 28, 1914) brought about an invasion of Serbia by the forces of Austria Hungary and resulted in the War of 1914–1918 during which the whole country was overrun by the forces of Austria, Germany, and Bulgaria. On Aug 28 1916, the Serbian Parliament met at Corfu but in Oct 1918 the Serbian armies were again in occupation of Nish and on Nov 3, 1918, the capital was re occupied

Serbia has no seaport, but access to the Adriatic is guaranteed by the *Treaty of London* (May 13, 1913), over any railways built through Albania under Serbian auspices By a convention with Greece of May, 1914 similar access is obtained to the port of Salonika on the Aegean; and by the *Treaty of Paris* (June 28 1919) access is granted to Fiume and the Dalmatian ports The bulk of the trade is with Austria. There were (1913) 980 miles of railway and (1914) 2 800 miles of telegraph line with 1 560 post-offices and 2 325 miles of telephone line

The Army on a peace footing consists of 30 000 officers and men the war strength being about 250 000

The religion of the state is Greek Orthodox Primary education is free and nominally compulsory, but the attendance does not exceed 25 per cent of the young The State also maintains Secondary and Girls High Schools The University is at Belgrade

The capital Belgrade (*Beograd* — White Fortress) at the confluence of the Save and Danube is a modern city with electric tramways and light and wide streets it contains the university the national museum and library and the old Turkish citadel In 1914 Belgrade contained about 100 000 inhabitants Other towns with their (1914) populations are Monastir (60 000) Prisrend (42 000) Uskub (32 000) Nish (25 000) and Prilip (24 000)

Montenegro was formerly a province of the old Serbian Empire which came to an end after the battle of Kossovo in 1389 since which date it has always claimed to be independent, and it was recognised to be so by the *Treaty of Berlin* (July 13 1878) It has an area of 5 800 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500 000 On Nov 29 1918 the National Skupshtina deposed King Nicholas (who had reigned since Aug 28 1860) and a decision was made to reunite Montenegro with Serbia The capital is Cettinje (pop 5 000) and the ports are Antivari and Dulcigno

Croatia, Slavonia &c — On Oct 30 1918, at the dissolution of the Austro Hungarian Kingdom the National Assembly of the former Hungarian provinces of Croatia and Slavonia proclaimed the complete independence of those provinces, and a National Council was established to which representatives of other Slav States (Pozmi Herzegovina, and parts of Austria and Hungary) were admitted

BUILDING GUILDS.

An interesting experiment in the building world has been inaugurated during the past year in the form of Building Guilds For some years past the principles of the guild system have been finding increasing favour in the labour world, and to the building industry has now been given the opportunity of putting these principles to a practical test The supporters of the new system hold that the old system has completely failed to cope with the post war housing difficulties and that a fair trial of the new scheme will lead to an increase in efficiency and an improvement in output The control of the guilds is vested in the representatives of trade unions, together with representatives of the administrative and technical staffs required for the work Provision is made for a full week or "all weather employment, so that workers will not suffer from pay shortages owing to interruptions of work due to inclement weather It is thus hoped that labour difficulties will be surmounted It is not desired to run the guilds on a profit earning basis, but an additional per centage over cost is required to cover losses from the full week wage system, purchase of plant, etc

The first guild to start operations was the Manchester Building Guild, a limited company under the Companies Act, which came into existence early in 1920, with the object of contracting for the building of houses for local authorities After negotiations between the Guild and the Ministry of Health an agreement was reached with regard to the form of contract between building guilds and local housing authorities which the Ministry will approve The guild agreed to give a definite estimate for each type of house, which must be approved by the Ministry, and the guild's remuneration will be a lump sum of £40 per house to guarantee the full working week, and a further allowance of 6 per cent on the prime cost of each house to cover overhead charges The agreement provided that the Co operative Wholesale Society might be associated in the contract for the purchase of materials, and that the Co operative Insurance Society, Limited, on being satisfied with a contract, would insure the local authority against loss under a contract for a premium of one eighth of 1 per cent

Following the Manchester Guild, the London District Council of the National Federation of Building Operatives proceeded to the formation of the Guild of Builders (London), Ltd , which is a society registered under the Industrial and Provident Societies Acts, 1893-1913 Similar to the Manchester Guild in the essentials of its working arrangements, the London Guild intends to work for every type of building owner whether public or private A large number of building guilds have since been formed throughout the country, affiliated to the London or Manchester Guilds, and it is hoped by the supporters of the new system that a National Building Guild, which will link up all the branches in one organisation, will be subsequently established

CAPITAL LEVY AND WAR WEALTH TAX.

The much-discussed question of a capital levy was brought to the direct attention of the House of Commons in connexion with the appointment of a Select Committee to enquire into the proposal to impose a tax on war time increases of wealth An amendment to the motion to appoint this committee was moved, to widen the terms of reference to include an enquiry into a levy on capital for the specific purpose of reducing the National Debt But this amendment, which received the support of the Labour Party, was defeated by 167 to 62 Thereupon the Government's resolution was agreed to and the Select Committee appointed This Committee heard the views of the Chancellor of the Exchequer, representatives of bankers stockbrokers, land owners, agriculture trade and commerce, expert economists and surveyors, the Treasury and the Board of Inland Revenue The Committee examined a scheme prepared by the Board of Inland Revenue under which taxpayers liable would be required to furnish returns, to be officially examined and checked giving particulars of their wealth at home and abroad on June 30, 1914 and June 30 1919 Duty would be payable either in cash or by the transfer of Government stock or other appointed securities, and payment might be made by instalments with interest over a period of years The Board submitted for illustration purposes two graduated scales of duty, which would have yielded estimated amounts of £900,000,000 and £1 000,000 000 respectively It was estimated that the aggregate of the individual increases of wealth for the whole population of the United Kingdom is £4,180 000 000 and that if the increases in the hands of those persons whose post war wealth does not exceed £5 000 are excluded, there remains an aggregate increase of £2 846,000 000 in the hands of 340,000 persons

Objections were raised to this scheme, and several new schemes were prepared in which provision was made for largely increased tax free allowances Under the scheme adopted as a basis for enquiry, an abatement equivalent to a percentage of pre war wealth was to be deducted from the amount of the increase of wealth That percentage was 100 where the pre war wealth did not exceed £25 000 and diminished by steps until it reached 30 in cases where the pre war wealth exceeded £500,000 The rates of duty on the balance started at 40 per cent and rose by stages to 80 per cent The number of taxpayers under this scheme it was thought would not exceed 75,000 and the yield of the tax was estimated at £500 000,000 The Committee decided that the scheme was practicable and that the burden of taxation would in the main be cast only on those individuals who could most justly be called on to make the sacrifice As regards the question of practicability in its wider sense of expedience and desirability, the Committee felt that this question was one which could only be determined with regard to national and financial conditions in general

Following the report, discussion in Parliament was opened by Mr Clynes moving "that in order to meet the financial burdens and assist in liquidating the National Debt further measures should be adopted for raising revenue from accumulated wealth" The Chancellor of the Exchequer in his reply declared that as a fiscal expedient the levy is shown to be a failure, and the motion was defeated by 244 to 81

THE CENSUS OF 1921.

The decennial census of Great Britain will be taken during 1921 The Census Act of 1920 differs

from previous Census Acts in that instead of being limited to a single census it provides that censuses for Great Britain or for any part of Great Britain may be taken from time to time under Orders in Council The Order may prescribe the date on which the census is to be taken the persons by whom and with respect to whom the returns are to be made, and the particulars to be stated in the returns The Act stipulates that an Order may not require a census to be taken more often than every five years so that apparently a quinquennial census is contemplated, as this departure from past procedure, *i e*, a census every ten years means that if an extra census is not taken in the fifth year following a decennial census it cannot be taken afterwards without breaking the series of decennial censuses

The particulars required in the census returns are not all specifically set out in the Act as has been the case with previous Acts passed in each year preceding the taking of the census but must be defined by the Order in Council subject to the limitations laid down in a general way in the schedule to the Act The particulars in the schedule include—names sex age occupation, profession, trade or employment, nationality birthplace, race language place of abode and character of dwelling, condition as to marriage, relation to head of family issue born in marriage, any other matters with respect to which it is desirable to obtain statistical information with a view to ascertaining the social or civil condition of the population

For the purpose of enabling any Order in Council directing a census to be taken to be carried into effect the Minister of Health (or the Secretary for Scotland) may make regulations (*a*) providing for the division of the country into districts and the appointment of persons to act in those districts (*b*) requiring superintendent registrars, registrars, overseers and assistant overseers of the poor relieving officers for poor law unions collectors of the poor rate and such other persons as may be employed for the purpose of the census to perform such duties as may be prescribed (*c*) requiring persons employed for the purpose of the census to make a statutory declaration with respect to the performance of their duties (*d*) requiring the chief officers of public or charitable institutions or of any other institutions prescribed by the regulations to make returns with respect to the inmates thereof (*e*) with respect to the forms to be used in the taking of a census

An interesting innovation is contained in Clause 6 of the Act which provides that if an application is made at any time by a local authority to the Minister of Health or the Secretary for Scotland asking that a census may be taken for the whole or a part of its own area, or for the whole or any part of an adjoining area the required permission may be given if it be considered that the census would facilitate the due performance by the local authority of its statutory duties Any expenses incurred in connection with the taking of such an enumeration, including the publication of any reports or returns with reference thereto, are to be paid by the local authority by which application is made and are to be deemed to be part of the general expenses of that authority

Penalties are specified in the Act for failure to comply with its provisions The Act does not apply to Ireland

DAY CONTINUATION SCHOOLS

AN innovation which will have far reaching effects on the educational, industrial and social life of the country will be made during 1921 by the opening of compulsory day continuation schools, in accordance with the provisions of the Education Act of 1918 After an 'appointed day all young persons between the ages of 14 and 18, with certain exceptions, must attend these schools to be conducted between 8 a m and 7 p m Young persons who have attained the age of 14 prior to the appointed day will be exempt and in the first instance the obligation will not apply to young persons between 16 and 18 years of age Only after a period of seven years from the appointed day will these latter young persons come within the scope of the obligation The "appointed day will be fixed generally by agreement between the Board of Education and the local education authorities throughout the country, and the President of the Board of Education has stated that he contemplates some time in the autumn of 1921 as the date by which all education authorities should have made some provision for compulsory attendance, but that he would welcome any efforts on the part of the local authorities to anticipate this date In London a number of schools will be opened on or about Jan 1, 1921

Attendance at a day continuation school will be compulsory for a minimum period of 320 hours a year and in order to enable all young persons to attend the schools employers must suspend their employment and allow them such time not exceeding two hours on any one occasion as the local education authority consider necessary, to secure that they arrive at the school in a fit mental and bodily condition to receive full benefit from the instruction given Instruction will be free, and important powers in connection with the provision of medical inspection and treatment are given to the local education authorities A large number of business houses have already instituted voluntary day continuation schools for their employees, and those employers will probably wish their schools continued in accordance with the Act Other employers may desire the local education authorities to conduct and maintain compulsory day continuation schools in premises which they are prepared to place at the disposal of the authorities

The scheme for London has received a great amount of careful attention from the London County Council during the past year, and representatives of employers and employees in various industries have been consulted as to the most satisfactory lines on which to proceed The following general principles were approved by the Education Committee of the Council — (*a*) With some exceptions it would appear that the most convenient arrangement would be for the young persons to attend the schools for two half days of four hours each week (*b*) Schools should be established near the place of employment rather than near the place of residence (*c*) The curriculum should, as a rule, provide general education for the 14 to 16 age groups, with at least a vocational bias for the 16 to 18 age groups, and in some cases education of a definitely technical or commercial character (*d*) Except in the case of seasonal trades, facilities for instruction should be continuous throughout the year, *i e*, the schools should be

open practically all the year, and should also be open on Saturday mornings

It is hoped by the Council that the corporate life of these schools will be fostered by the development of many extraneous social activities, and that sports and games clubs, recreational and social organisations visits to places of educational interest, rambles, etc, will become established The schools should eventually become in the evening centres of vigorous social life

DRUNKENNESS

THE fear that the encouragement to drink rum whilst on active service would lead to much drunkenness after the war appears to be quite unfounded It is not fashionable to become intoxicated whilst on the other hand women drink, and smoke also, in public considerably in advance to the custom of 1913 The advent of Mr "Pussyfoot" Johnson in England, the strengthening of the Prohibition Parties abroad has raised considerable interest in temperance matters the experiment of Local Option in Scotland may lead to similar legislative measures for England and Wales Statistics in regard to drunkenness are hardly satisfactory for purposes of argument It is impossible to count the people who get drunk simply because there is not a means of registering them The official figures for drunkenness convictions are —

	England and Wales	Metropolitan Police Area
1914	183 831	73 689
1915	135 811	56,979
1916	84 191	31 154
1917	46 410	18 263
1918	29 075	10 910
1919	57 948	22 391

The premises licensed for the sale of intoxicating liquors for consumption on or off decreased from 84 644 on Jan 1 1918 to 84 044 on Jan 1 1919 The average decrease per annum since the 1904 Licensing Act came into force was 1,069. In 1919, 8,049 Clubs were registered

GAMBLING IN MARKS

IN pre war days, transactions in foreign exchanges were for the most part in the ordinary course of trade, *e c*, purchase and sale of goods abroad Violent fluctuations that came with the war gave rise to much speculation, and the lucky gamblers made big profits Large quantities of rouble notes were bought and sold, and millions of notes were gradually brought into this country, being paid for at 2s or less each To day, these notes are practically worthless currency When war ended with Germany trade began, and some basis had to be fixed for the value of currency for exchange purposes The par value of the German mark in pre war times was 24 02 to the £1 It is expected that in due course, when trade resumes internationally and all indemnities have been paid, that the mark will return to that value But trade was resumed on a basis of 125 marks to the £ in November, 1919 Large purchases were made of German currency by people in this country, as they were optimistic enough to believe that in a few months everything would be normal

Foreign exchange operators also saw an opportunity for working the market. Large quantities of notes were printed by the German Bank without adequate gold cover, and the rate went gradually against Germany Then followed the attempt of the Kapp revolution The number of marks to the £1 rose on the first days of the month thus, Dec 168, Jan 187, Feb 293, March 331 An improvement set in from the German point of view, and on April 1 the number of marks to the £1 fell to 277, and a month later the figure was 220 The Kappist episode had been well used by the speculators to reduce the value of the mark Throughout May the improvement in value grew from 220 to 120 on May 26 The tide turned, and on June 14 the figure was back to that of May 22 namely 153 Fluctuations were recorded daily as will be seen from the range of 147 on July 6 and 217 on August 31 Sept 7 had a figure of 170, Oct 20 240 and Oct 30, 262

The Bank of Germany had been increasing its note issue almost beyond bounds In the year ended Oct 15 1920 the notes in circulation increased from 29 286 976,000 marks to 62 128 656 000 marks whilst the gold holding showed little change, on the latter date it was 1 098 593 000 Speculators have not been paying so much attention to the gold cover of the notes Provided they are able by buying to send up the daily value of the mark or in selling to reduce it they are well satisfied Much of the changing is done with borrowed money the bills and drafts and notes being held as securities by the lenders Naturally whilst there is a continued fluctuation in the value of the mark commerce is difficult because the seller cannot have any security in regard to the sum he will actually receive

HOUSING PROGRESS.

PRACTICALLY no relief has yet been felt from the great shortage of housing accommodation, although measures have been taken during the past year which it is hoped will shortly result in a considerable acceleration of house building The number of new houses which had been completed up to September 1 last was less than 6 000, including 2,000 which were completed with the exception of painting Shortage of labour would appear to be one of the chief causes of the slowness of building operations, the number of men employed in trades in the building industry for part of the past year being considerably less than half the number employed in 1910, whilst the number of men in the various trades employed on state aided housing schemes at the end of June last represented a small percentage of the total in the industry, *e g*, carpenters, 4 3 bricklayers, 13 2 slaters, 15 5, plasterers, 9 0, painters, 1 0 plumbers, 2 5 Negotiations between the Government and the Resettlement Committee of the Joint Industrial Council of the Building Trades having for their object the formulating of a scheme to speed up house building extended over many months, and resulted in a settlement at the beginning of October last This provisional settlement had to be submitted to the various trades in the industry, and at the time of going to press the final decision had not been given Further interesting developments in connection with the building industry have been the establishment of building guilds (*quod vide*) and building by direct labour by local housing authorities Up to the middle of September last the Ministry of Health had sanctioned building by direct labour in the districts of 65 local authorities who

had been unable to obtain satisfactory tenders from contractors The number of houses covered by these schemes was 5,695 Sanction had also been given to five public utility societies to build 1,069 houses by direct labour

The financial difficulties connected with the housing problem have been responsible for the issue by local authorities of Housing Bonds and for the extension up to December 23, 1921, of the period in which houses may be completed in order to rank for the Government grant to private builders Up to September 21 plans had been approved for the erection of 19,706 houses by private enterprise, involving an ultimate payment by the Government of £4 773,252 The number of houses actually completed to that date was 1,507, and the grant paid in respect of these houses amounted to £320 356

In August last a move was made by the Government to deal with the question of empty houses by the introduction of a Bill providing that local housing authorities should be empowered to hire compulsorily any house suitable for the housing of the working classes which had been withheld from occupation for a period of at least three months It was also proposed to give further powers to the Ministry of Health to check luxury building and general powers to local authorities to provide houses for their own employees

The total number of house plans of local authorities and public utility societies approved by the Ministry of Health up to September 18 1920 was 241 294 the total number of houses in tenders approved was 144 615 and contracts had been signed for 104 287 houses

INDUSTRIAL COURT

The Industrial Court Act that received the Royal Assent in December 1919 placed on a permanent basis the work of the old Wages (Temporary Regulation) Act of November 1918 Under the latter Act 930 awards were made by the Interim Court and on fifty occasions (subsequent to which twelve orders were made) the Labour Department was advised by the Court The engineering trade had an arrangement whereby a four monthly meeting was held under the Court The 1919 Act confers powers upon the Minister of Labour to appoint a Court of Enquiry to investigate the causes and circumstances of any existing or apprehended trade dispute The Court thus appointed has no power in itself to settle a dispute by arbitration It can only investigate report and recommend A permanent Court of Arbitration is created under Section 2 of the Act to settle any dispute by arbitration after other means have failed

First important case under the Act was the Dockers' Enquiry A general request was made by the Port Labour Employers and the Transport Workers Federation for the investigation of the programme of claims presented by the workmen First sitting was held on Feb 3 1920, and 20th, and last on March 11 Enquiry was open to the public Press paid considerable attention to the evidence, the dockers case was stated in a remarkably efficient manner by Mr Bevan Men wanted 8s per half day for eleven half days per week as a basic wage plus certain other advantages On the production of the Report of the Court, both sides accepted it and endeavoured to work out amicably the findings In October, 1920, decasualisation of labour was still being discussed by both parties

Second enquiry of note was that in response to a demand from coal tippers of South Wales for a substitution of two continuous shifts for the existing broken shift system that involved night work Court supported the trimmers, and the employers granted the demand Up to October, 1920 500 cases had been submitted to the Courts and the tendency was for the Courts to recommend that wages had reached their maximum

INSURANCE

UNEMPLOYMENT INSURANCE

A PLACE among measures of social reform passed by the present Government must be given to the Unemployed Insurance Act 1920, which came into force on the 8th November last Under this Act the total number of persons insured will be ultimately about 12,000,000 including non manual workers in receipt of remuneration not exceeding in value £250 per annum, compared with about 4,000,000 covered by the Acts of 1911 and 1916 It is estimated that 8,000 000 will be insured under the general scheme of the new Act and ultimately 4 000 000 will come under special schemes which may be set up by industries which provide benefits at least equivalent to those of the general scheme Compulsory insurance is extended to substantially all persons for whom health insurance contributions have to be paid except out workers and persons employed in agriculture and private domestic service The employees of local authorities railways and certain other public utility undertakings, and persons with rights under a statutory superannuation scheme are also excepted if the Minister of Labour certifies that they are not subject to dismissal except for misconduct and are employed under conditions which make insurance unnecessary but generally the exceptions include only persons who are excepted from the Health Insurance Acts A distinction from Health Insurance is that workpeople over 70 are insurable, except in the case of Old Age Pensioners who are excluded from insurance Contributions and benefits have both been considerably increased and under the general scheme are as set out below

Contributions —

	From Employer	From Employee	Total
Men 18 and over	4*d*	4*d*	8*d*
Women, 18 and over	3½*d*	3*d*	6½*d*
Boys, 16 and 17	2*d*	2*d*	4*d*
Girls, 16 and 17	2*d*	1½*d*	3½*d*

For every contribution paid in respect of men and women the State contributes 2*d* and 1½*d* respectively and proportionate amounts in the case of boys and girls

Benefits are at the rate of 15*s* per week for men and 12*s* per week for women Contributors under 18 are entitled to half the full rate No benefit is payable for the first three days of unemployment, which constitutes a "waiting period" Thereafter it is payable for a maximum of 15 weeks in any insurance year, subject to the limitation that the amount of benefit drawn must not exceed the proportion of one week for every six contributions Before an insured person can become entitled to benefit, not less than 12 contributions must have been paid in respect of him, but during the first 12 months

of the Act this condition may be satisfied by the payment of 4 contributions The Act specifies certain other conditions which must also be fulfilled Disqualification from benefit ensues, among other reasons, if (a) unemployment is due to a stoppage of work owing to a trade dispute or to misconduct, or to leaving employment voluntarily without just cause, (b) the insured person is in receipt of sickness benefit, or an old age pension, or benefit under a special scheme

Insured contributors who have made 500 contributions (or a smaller number if over the age of 55 on entry into insurance) will on reaching the age of 60 be entitled to a refund of the amount of their own contributions less any benefit paid, together with interest

Special schemes which may be set up by industries which contract out of the general scheme with the approval of the Minister of Labour will be administered by a joint Board of Managers representing employers and employees on behalf of the industry or industries concerned, and the form and amount of the contributions and benefits will be determined in the scheme itself, and need not be the same as those laid down in the general scheme

HEALTH INSURANCE

The National Health Insurance Act which came into force on July 5 last, affected over 15,000,000 male and female workers, and almost all employers Generally speaking, all manual workers, and non manual workers whose remuneration does not exceed £250 per annum come within the scope of the Act Rates of contributions payable by employers and employees and benefits are increased as follows —

Contributions —Apart from employed persons to whom certificates of exemption have been granted (in which cases the employer's rate is 3*d*), the weekly contribution payable in Great Britain is increased from 7*d* to 10*d* in the case of men workers and from 6*d* to 9*d* in the case of women workers, the worker's share ordinarily 4*d* for men and 3*d* for women being increased to 5*d* and 4*d* respectively The balance to be met by employers therefore becomes 5*d* in each case instead of 3*d* In cases where a worker aged 18 or upwards is not in receipt of board and lodging from the employer and the rate of remuneration does not exceed 4*s* a working day, the amounts to be deducted from the worker's wages are less than 5*d* for men and 4*d* for women—*i e*, where the rate of remuneration is over 3*s* but not over 4*s* a working day—4*d* for men and 3*d* for women where the rate of remuneration is not over 3*s* a working day no deduction can be made from wages

Benefits —The ordinary rates of sickness benefit are increased from 10*s* to 15*s* per week in the case of men, whilst women's rates have risen from 7*s* 6*d* to 12*s* per week But before the expiration of 104 weeks from entry into insurance and the payment of 104 contributions, the benefits per week are for men 9*s* and for women 7*s* 6*d* Disablement benefit has been increased for both men and women from 5*s* to 7*s* 6*d* per week, and maternity benefit is now £2 instead of 30*s* under the old Act Sanatorium benefit, so far as Great Britain is concerned, ceases to be included among the benefits conferred by Part I of the Act of 1911, but medical benefit is to include treatment and attendance in respect of tuberculosis The total annual expenditure on benefits will it is estimated, approach £30,000,000 It will be seen that the rates of benefits have been increased in greater proportion than the contributions of the workers, sickness benefits for men having been raised 50 per cent and for women 60 per cent, disablement benefits 50 per cent and the maternity benefit 33⅓ per cent, whilst the weekly contributions have been increased by 25 per cent for men and 33⅓ per cent for women Further increases in benefits may accrue in some cases from surplus funds of Approved Societies

Important new provisions for the payment to Insurance Committees of sums in respect of medical benefit and the cost of administration are contained in Clause 7 of the new Act

INDUSTRIAL ASSURANCE

A scathing report has been made during the past year by the Board of Trade Departmental Committee appointed under the chairmanship of Lord Parmoor, to enquire into the working of Industrial Assurance Companies and Collecting Societies The magnitude of the interests which came under the review of the Committee is shown by the fact that the total amount of premiums received in respect of policies in the Industrial Branches of the companies and societies in the year 1918 exceeded £25,000 000 the number of policies in existence at the end of that year being about 51 000,000 whilst the total number of whole time and spare time agents and collectors employed was estimated at 70 000 The institutions affected comprised 18 Companies registered under the Companies Acts and 56 Collecting Societies registered under the Friendly Societies Acts The abuses to which the present industrial assurance system lends itself and the extremely unsatisfactory conditions under which it is worked, are fully exposed by the Committee who are agreed that there is urgent need for many reforms, and recommend that legislation should be undertaken without delay

Industrial assurance which consists in the assurance of small sums payable for the most part on the death of the life assured in consideration of the payment of weekly premiums appeals chiefly to the working classes and has a possible *habitat* of about 35,000 000 persons It is evident that many millions are assured under two or more policies, and policies on a single life are frequently held by different persons Great laxity has prevailed in this respect and in spite of legislation the Committee state that it is doubtful whether the practice of issuing illegal policies has entirely ceased But there is no doubt that in many cases premiums continue to be paid on illegal policies effected before 1909 to the advantage of the companies and their agents, but with doubtful security to the holders of the policies The poor return received by the policy holders generally is referred to in the Report which states that about 44 per cent of the total premium income on industrial policies is absorbed by expenses and commission, and in the case of companies by dividends to shareholders—in other words of £25,000,000 paid yearly in premiums by the working classes, only £14,000,000 come back to them, and £11,000,000 are absorbed in expenses and dividends

The great majority of policies affected lapse

within a short time In the case of one of the largest companies (which in this connexion, is in no way exceptional) the Committee found that in the ten years 1909 18 9 322,336 policies were issued, while 6,426 313 lapsed It is probable that the premiums paid on these latter policies amounted to £500 000 practically the whole of which must have been absorbed in new business charges chiefly procuration fees and commissions paid to the agents Taking all the offices together it is probable that lapses of policies in the year of issue or in the year following, reach an annual total of 5 000 000

The question of nationalisation of industrial assurance was not brought prominently to the notice of the Committee but they were of opinion that, as the system is constituted the State could not properly undertake its administration Their proposals, which therefore contemplate the continuance of the present societies include (*a*) the bringing of these under the supervision and control of the Chief Registrar of Friendly Societies (*b*) the extension of the block system of collection (*c*) the prohibition of payment to agents of procuration fees for new business, (*d*) the payment to policy holders of a larger part of the profits than is accorded to them at present (*e*) the securing to policy holders of some return when premiums are not continued (*f*) statutory forms of proposals and policies, (*g*) penalties for assisting in effecting policies without insurable interests (*h*) for audit purposes the employment of a public auditor instead of a person carrying on publicly the business of an accountant

INTER IMPERIAL COMMUNICATIONS

(*a*) BY CABLE

THE devastation in our Imperial Cable lines must be counted as one of the more important outcomes of the recent Great War The number of lines interfered with meant lasting traffic congestion and delay in those still left intact but this state of things was almost equally contributed to by (*a*) the increased demand for communication between different branches of the British Commonwealth and (*b*) the wastage in ships Neither the subsequent return to cable codes without censorship nor the gradual renewal of cables at all met the difficulty Apart from the Home Government and the Dominions carrying on much more communication than in pre war days there is a markedly increased tendency on the part of the British communities to converse telegraphically as well as in every other way Owing to the prevailing shortage of labour and to the cost of materials the demand has not yet been by any means met—a demand which should proceed apace if we are to achieve the increased production that is so essential for British Trade and Commerce let alone high political considerations Moreover no recent invention has so far come to the rescue to any adequate extent practically

In the face of much opposition from the Cable Companies as well as H M Post Office the late Sir Sandford Fleming K C M G in Canada and Mr (now Sir Charles) Bright F R S P in this country actively and for many years urged the construction of the All British Pacific Cable which was eventually laid in 1902 This line proved its value times out of number during the war Its traffic has since remained so large that duplication is now more than ever essential—apart from the strategic objections to reliance on a single line on any given route

Again ever since the Western Union Telegraph Company of America took over the control, in 1912 of all our British Trans Atlantic Cables, our communication with Canada—and *via* the Pacific line, with Australasia—has not been on as satisfactory a footing as is desirable from an Imperial standpoint This danger was pointed to by Sir Charles Bright as soon as the Government (represented by H M Postmaster General) was approached over the transfer of landing rights * Had the Post Office refused to transfer these rights to the American Company the deal —which was quite contrary to national interests could not have gone through The Postmaster General excused himself for agreeing to the transfer on the grounds of securing a reduction of rates in exchange, but no such reduction ever transpired The War has fully borne out this view and though one of the two former German Atlantic Cables (interrupted within six hours of the declaration of war) was eventually turned to British account this has never given much satisfaction Thus when, towards the close of 1919 the Western Union Company had repudiated their 99 years lease of the Direct United State Cable (originally laid in 1874) on account of its constant inoperation, negotiations for the purchase of the latter were embarked on by H M Government this having for many years physically speaking formed a direct All British link between Ballinskelligs Bay (Ireland) and Halifax (Canada) This line, like the late German Atlantic Cable is to be worked as a direct link with the Imperial Pacific Cable, by H M Post Office—the department, as it happens which as stated above had entirely failed to recognise the seriousness of this British Cable falling out of British control just as it had previously opposed the scheme for an All British Pacific Cable

Whilst there has been much talk about All British Cables for the last 30 years it is only since the war that the United States have taken up the same idea Our cousins over the water, on the other hand—moving more promptly in such matters—have already taken active steps to establish on a low rate basis All American Cable links with the object of embracing (telegraphically speaking) the whole of the North Central and South American Continent, as well as for fostering friendly relations between the republics here involved The United States Government is taking an active part in this matter being fully alive to the strategic, political and commercial value of American owned and American controlled cables

Thus if we in this country are to maintain the position we should hold as the original pioneers of Submarine Telegraphy, we shall require to act a little more speedily than we have done of late years There is some prospect of this now for an Inter Departmental Imperial Communications Committee was established at the beginning of 1919, under the Chairmanship of the Colonial Secretary (Lord Milner)

This was the outcome of a suggestion of 1902 from Sir Charles Bright By its institution, whereas formerly all telegraphic matters were solely controlled by H M Post Office authority now rests equally and combinedly with all the

* Address to the London Chamber of Commerce, Nov 29th 1911 (L C C Tract No 80

Government Departments concerned, representatives of which meet periodically to settle things as they arise—whether concerning Cable Wireless or Air communications This Board of Control ought to achieve much in National Strategic and Commercial interests as well as in the interests of the British public generally

(*b*) BY WIRELESS TELEGRAPHY

The development and application of Wireless Telegraphy under the auspices of the Admiralty (and with the assistance of the Marconi Company) was one of the most remarkable features of the war There is to day little to choose between the actual working speed attainable through a cable and that, under the same conditions by Wireless of a correspondingly up to date character Indeed, so far reaching and important have been the technical developments of this (Wireless) method of communication* since hostilities commenced that it is clearly destined to be turned to something like the same account between distant lands as has already taken effect for marine purposes

We now need (1) the All British Wireless Chain without much further delay (2) every inter Imperial Cable connected supplemented by Wireless, and (3) a highly developed Wireless News Service established for the prompt and synchronous dissemination of news betwixt all branches of the Empire this being a field for which 'Wireless is especially well adapted

It has to be remembered that Wireless can in some instances be satisfactorily used and maintained where the same does not apply with a Cable Moreover, Wireless Stations can usually be more speedily established than a Cable can be made and laid

But just as we have talked about All British Cables out of all proportion to what has been achieved, so similarly though the Imperial Wireless Chain is becoming quite an old story in theory nothing whatever has yet been done in the matter In November 1919 a Committee was appointed under the Chairmanship of Sir Henry Norman M P with fairly wide terms of reference to go into the whole question their Report [Cd 777] was issued in June but at the time of writing the Government have taken no steps The Marconi Company have for long been prepared with a separate scheme of a highly enterprising nature, but that also awaits Government decision

Meanwhile "Wireless is proceeding apace in the United States, whilst Germany is fast recovering from the war destruction she experienced at our hands over her Wireless Stations

(*c*) BY AIR

The security of the British Empire seems now to be far more dependent on Aerial Supremacy than on Naval or Military action This being so it becomes essential that we should not allow our Air strength to fall below a certain figure It happens, however, that this strength can be turned to admirable account for other purposes in time of peace *i e*, for the purpose of civil aviation It should be added that whilst a fighting air plane cannot readily be converted into a commercial air plane the latter can comparatively readily be turned to account for the purposes of warfare

The principal pioneers of the Air were largely instrumental in winning the War They exhibited much enterprise in the development of aviation and the position is such at the present time that unless the Government take some practical steps to keep aviation alive, it will be impossible for it to proceed Having regard to the enormous amount of aviation that was accomplished during hostilities it may well seem strange that so far as this country is concerned Civil Aviation has not yet been made to pay its own way successfully The reasons are generally speaking jointly or severally as follows –

(*a*) That for a considerable time—and in a lesser degree still—non economical war machines were in use (*b*) present cost of petrol (*c*) luke warm encouragement of the Post Office which also fails to take ordinary business methods to bring Air transport to public notice (*d*) the public still regarding aviation as somewhat dangerous (*e*) the present cost of transport by air (*f*) business men are not yet satisfied as to its reliability So far as safety goes it will be found on close investigation that the percentage of accidents in the Air are far less than those associated with Road or Rail and as regards the cost the enormous saving of time when travelling by air—especially over considerable distances—should be taken into fuller account This time advantage would be more marked in the case of the mail were the Post Office to establish better connecting arrangements at the terminals

It should also be remembered that a passage in an air ship (*e g* across the Atlantic) is far less troubled by weather conditions (in the matter of fog etc) than any ship at sea

These are days when the country needs to be economical but the Government have plenty of scope for further economy in other directions without exercising a false economy by failing to recognise—as other Governments have done—the necessity of encouraging Civil Aviation in the interests of national trade as well as indirectly for national security If the Anglo Continental Air Service is to proceed in a healthy way the Government must come forward either with some sort of guarantee or else, as substantially in the case of cables, with a material subsidy Commercial firms should also show a little more inclination to encourage enterprise in aviation when it is remembered that a business man can now thanks thereto breakfast in London lunch in Paris, and be back in London in time for dinner

Looking ahead, however whereas all methods of communication and transport are of use the special scope for Aviation would appear to be over great distances and for connecting up those parts of the Empire which are, at present ill provided with systems of communication or transport Here, however, material preparation is entailed in the matter of Air routes, such as must necessarily be carried out by the Air authorities

Over the War we undoubtedly achieved first place in the Air On the other hand both Germany and France, as well as the United States, have been officially far more active in the development of Civil Aviation In all these other countries and in Italy Air lines have been operating regularly day by day In the United

* Special mention should be made of the thermionic oscillation valve largely originating from the work of Dr J A Fleming F R S as Scientific Adviser to the Marconi Company in addition to that of Dr Lee De Forest

States, Aviation has lately been proceeding at a great pace—with a line from New York to Chicago and in Germany, metal air planes are the order of the day, that country being also convinced that future wars will be settled in the air.

It has of late become a commonplace that England ceased to be an island when men learned to fly. The welfare of the British Empire is likely to be considerably influenced by our Air policy. In days to come air stations will be at least as important as coaling stations are now. It may almost be said that in the matter of Imperial routes everything is to hand for us so to speak—seeing that our possessions are dotted more or less all over the world. It surely behoves us, therefore for the various reasons set forth, to take up Aviation in earnest.

Aviation should be put on trial and be regarded for some time from the point of view of what it achieves for the country, its security and welfare—much in the same way as we regard our Navy and Army. This view is already accepted so far as the Air Force is concerned but expenditure on Aviation generally (to keep it alive) would, as already indicated, serve the double purpose.

LABOUR QUESTIONS

THE LABOUR PARTY

THE second Annual Conference after the Labour Party's reconstruction was held at Scarborough June 22 to 25 1920 when 1 100 delegates representing a membership of 3 300 000 attended with Mr. W. A. Hutchinson of the Amalgamated Engineers' Union in the Chair. The Party, whose membership is open to all producers by hand or by brain, issued at the Conference a programme that was described as a labour manifesto to the nations and the world. The chief points were the revision of the Peace Treaties with a view to speedy and equitable settlement of international disputes in Europe; end of intrigue abroad and interference by military missions in local governments; denunciation of secret agreements and treaties; economic arrangements to cope with the famine threatened in Central Europe; and reconstruction of the basis of the League of Nations. A deputation from the Party was to wait upon the Prime Minister to report the investigations of the Party's representatives in Finland, Hungary and Russia.

Conference re-affirmed belief in nationalisation with joint control between the representatives of the producers, consumers and the State as the only satisfactory solution of the mining problem. A resolution to join the Third (Moscow) International was rejected upon a card vote by 2 940 000 to 225 000. The Labour Party thus remains affiliated with the *Second* (Amsterdam and London) *International*. A Prohibition motion was defeated by 2 603 000 card votes to 472,000, whilst a resolution in favour of Local Option was accepted by 2 903 000 card votes to 623,000. Self-determination was proposed for Ireland (with immediate withdrawal of all armed forces) Egypt and India. The customary resolutions in favour of various socialistic projects were adopted.

To meet the expenses of political action, it was found necessary to increase the affiliation fee for each member in the societies forming the Labour Party from 2*d.* to 3*d.* per annum, and the new income was estimated at £43,740 for the current year. England was to be divided into eight districts with a responsible organiser for each in order to spread propaganda. Every Labour candidate has to sign the constitution of the Labour Party before he or she is adopted. The Executive Committee consists of representatives from trade unions, local societies and kindred organisations in the Party and women's societies. The Executive is dominated by the general workers, miners, railwaymen, engineers, and textile workers' unions. For the Labour Peace Memorial the sum of £12,000 was collected by the Party.

At the *Annual Co-operative Congress* in May, 1920, at Bristol a Coventry representative proposed that the Co-operative Movement should affiliate with the Labour Party but an amendment was carried to refer the proposal to the District Conferences in readiness for the Co-operative Congress of 1921.

THE I.L.P.

The Independent Labour Party (known more familiarly by its initials I.L.P.) was established at a Conference at Bradford in Jan., 1893. The Party has decidedly pacifist tendencies, though it aims at collective ownership. It subscribes to the Second International. The 28th Annual Conference was held at Glasgow on April 4 1920, when Mr. Philip Snowden took the Chair. There was a loss of £2 000 on the year's working, and an increase in subscription was found necessary. The Party does not appear to be making very great headway in spite of the fact that its leaders include Mr. J. R. Macdonald, and it owns the *Labour Leader*, besides controlling a National Labour Press.

THE COUNCIL OF ACTION

With the stated purpose of organising a protest against active intervention in the war between Poland and the Soviet Government of Russia an emergency meeting of the Parliamentary Committee of the Trade Union Congress, Parliamentary Labour Party, and the Executive Committee of the Labour Party was held on Aug. 9 1920. A Committee was appointed to give a lead, the committee being known as the Council of Action. Five members were nominated by each of the bodies mentioned and eight further labour leaders were co-opted on the following day. Mr. Lloyd George gave the Council of Action an interview on Aug. 10, but the result was not satisfactory to the Council. A special Labour Conference was called by the C. of A. at Central Hall, Westminster, for Aug. 13, when 1 044 delegates (689 from trade unions and 355 from labour parties and societies) attended and protested against any war with Russia.

The idea of Councils of Action spread to the country, and in most industrial centres local C. of A. were formed. It was not a question of election to Councils in any democratic way. Leaders were simply nominated by themselves and friends and the local Councils of Action came into being. They were without power of action except to call public meetings and endeavour to impress their importance upon the public. Of course, the advanced section of the labour movement saw more in the idea. Councils of Action were to be another name for local Soviets on the Russian plan, but they died down almost as quickly as they were formed. The

Government had denied any intention of declaring war, but as war was not declared the Councils of Action claimed that they had stopped the war. What the central Council of Action really meant was stated by Mr J. H. Thomas in his address to the Trade Union Congress on September 6, 1920.

"Our course of action was bold: that it definitely challenged the Constitution there can be no doubt. Dangerous as was our remedy, it was justified by the results. Our action does not carry with it an acclamation of the Soviet method of government, and many who advocate a Russian peace do not subscribe to its methods. The Council of Action was called into being to secure the complete independence of Poland and peace with Russia, and having done that it will be content with the result of its labours."

British labour tried to enlist the sympathies of the French labour leaders, but the two envoys from London were asked to leave the country by the French Government. The Communist Party attempted to form a federation of Councils of Action during Oct., 1920, and were at the same time agitating against the non-elective manner of choice of members.

AMALGAMATED ENGINEERING UNION.

The Amalgamated Engineering Union came into existence on July 1, 1920. Eleven existing trade unions, representing 460,000 members, amalgamated in order to form one union for the industry. The chief Union was the Amalgamated Society of Engineers with 328,000 members; the other societies were Steam Engine Makers, General Toolmakers, Machine Workers, Instrument Makers, Smiths and Strikers, Brassfounders (3), Brass Finishers, United Metal. *President*, J. T. Brownlie; *Gen. Sec.*, Tom Mann. The change in conditions of employment of engineers was stated as in 1851, 60 hour week with £1 5s. wages, and 1920, 47 hour week with £4 7s.

LABOUR UNREST.

By the end of Oct. 1920 the total for the whole of 1919 was surpassed in strikes, workmen involved and days lost. Comparative figures are:

Year	Disputes	Employees (in 000)	Days lost (in 000)
1905	358	94	2 470
1912	857	1 463	40 915
1913	1,497	689	11 631
1918	1,252	1,097	6 237
1919	1,413	2 750	34 000
1920	1 499	798	9 765

(Jan.–Sept. only.)

Wage questions have predominated. Hours of labour, employment of non-unionists and objection to disciplinary action on the part of employers have been responsible for many strikes. An exceptional strike that led to a general lockout began at Cammell, Laird's works near Sheffield. Employees objected to non-union foreman, and a lockout began on Sept. 4, when the Ministry of Labour intervened with a Committee of Enquiry. The year's strikes were dominated by the miners' strike of Oct.–Nov., 1920, in support of increase of 2s. per shift.

Jan. opened well with the end of the iron moulders' strike on Jan. 22, after having been in existence since Sept. 22, 1919. Increase of 12s. had been demanded but men returned after ballot on 5s., an amount they could have had in the first instance. 65,000 were directly concerned and much unemployment resulted in kindred industries. Much public interest was displayed in a strike of the agents of the Pearl Assurance Co. for minimum weekly wage of £3. The transfer of certain men from the Dockers to the Railwaymen's Union resulted in a strike of 5,000 men at Barry.

In Feb. the chief strike was that of the Rhondda miners against disciplinary action on part of employers. A 40 per cent. wage increase was demanded by the S. Wales steelworkers and failing grant the men went on strike, only to return to resume negotiations after 11 days' idleness. During March 69,000 of the 134,000 workpeople involved in the strikes were miners. Considerable interest existed in the enquiry into the dockers' claim for better conditions and the report was published at end of month. April was remarkable for the number of small disputes—the average for the 84 was less than 2,000 workpeople. Miners were again troublesome, mostly over individuals dealt with by the managements. Unrest was evident again in the cotton industry when demands were being made for increases of 300 and 350 per cent. on pre-war wages.

May was an average month. There was danger of a strike of vehicle workers in London. Railwaymen in Liverpool were delaying carriage of goods by working strictly to the rule. Purely political matters were being brought before the trade unions, and there was a constant endeavour from this time to use the strength of the trade union movement to influence the Government in regard to Irish and Russian policies. In Scotland 11,000 joiners went on strike for 2s. 6d. per hour. Workers during June were still attempting to interfere in workshop practice in going on strike because of the dismissal or punishment of workers. Strikes affected only small numbers of workpeople, the average number affected being less than 500 per dispute. In July the gasworkers went on strike in the provinces in spite of the appeals from responsible leaders, the object being to secure higher increases. The tendency was to make the minimum wage of the unskilled and partially skilled men £4 weekly in all industries. There was an attempt at a general strike in Ireland on political matters, and at the end of July a labour conference of 1,000 delegates in Glasgow decided on a no-rent strike as a means to appeal against rent increases.

Political matters entered largely into trade union matters during August. Councils of Action were formed to threaten the Government with a general strike because of a possible war with Russia. Otherwise the strikes were large in number but concerned relatively few people. A strike of 20,000 textile workers of Oldham who refused to accept the terms laid down by their union was the largest of Sept. The average people affected by the remaining strikes was just over 300. There was an attempt at a general strike of vehicle workers (6,500 took part) for an increase in wages. Oct. was very unsettling. The shadow of the miners' general strike loomed in Sept., and the end of Oct. witnessed the long threatened dispute. Negotiations broke down and industry suffered considerably. Certain of the advanced sections of the labour movement looked to the strike to mean a general industrial upheaval. Happily the railwaymen and transport workers, who were allied with the miners, were content to mark time and only morally support the miners.

THE INTERNATIONAL

The International, *i e* the congress of socialist organisations of various countries, dates from 1862 The Interi ational formed then disappeared in 1871, following the failure of the Paris Commune The Second International came into being in 1888 when suggestions were made by the working class organisations for a Congress Before anything definite was settled a split occurred in the Socialist section of France with the result that two rival Congresses were held in Paris in 1889 Negotiations led to co operation and in 1891 a united Congress was held in Brussels International Congresses were held in Zurich (400 dele„ates) in 1893 London (800) in 1896 Paris in 1900 when an International Bureau was established Amsterdam in 1904 when the British Labour Party took part for the first time Stuttgart in 1907 at which the Women s International was established Copenhagen in 1910 was visited by 887 delegates from 33 nations—the German delegation opposed the idea of a general strike to stop war Bale in 1912 with 555 delegates from 22 countries

Second International—Informal conferences were held in Berne and Lausanne in 1919 with the object of establishing the International The socialists by parliamentary action carried on the old and Second International The socialists by revolution were headed by Lenin who established a separate Congress at Mosc w known as the Third International The Second International met at Geneva on July 31 1920 when Mr Tom Shaw M P took the chair The delegates numbered 150 of whom 22 came from Bel„ium Camille Huysmans resigned the secretaryship and it was decided to transfer the Bureau to London Discussions t ok place as to who were the real authors of the War admission of Germany to the Congress Britain s help to the starving if any in Central Europe League of Nations Socialism against which resolution the British voted as it was not strong enough Belgium s resolution to let bygones be bygones in regard to the war against Sovietism —a resolution supported by I Shaw Vandervelde (Belgium) and Scheidemann (Germany) whilst Troelstra and Neil Maclean accused the Congress of timidity Final session was held on Aug 6 Next Congress is to be held at Brussels in 1922 The International Committee includes Messrs Henderson (Pres ident) J H Thomas and J R Macdonald A proposal at the British Labour Party Conference to withdraw from the Second International was defeated

Third International—A secret Congress was held in Amsterdam early in 1920 to lay the foundations of the Moscow or Third International Dele„ates to Moscow arrived on July 21 1920, from 28 countries including China Japan Korea and Mexico The Moscow wireless announced that the delegates are united with one object and one idea *i e* through the Third International to establish Communist *régime* throughout the world On July 30 Lenin stated that the 'dictatorship of the proletariat was unthinkable without assault and violence Zinovieff (Apfelbaum) is President of the Executive Committee, as such he attended the Halle Conference of the German Socialist Party of Oct ,1920 Considerable division exists amongst the Socialist bodies of the world in supporting either the Second or the Third International

NATIONAL COMMUNIST PARTY

Scattered groups of communists sent delegates to London on July 31 and Aug 1, when a National Communist Party was formed with Mr Arthur Macmanus as Chairman The Party is in favour of the establishment of a system of Soviets or Workers Councils somewhat on the lines of those existing in Russia The Party is far from unanimous on its methods It has applied for affiliation to the British Labour Party but its application has been refused The Party supports the Third (Moscow) International, and has a weekly organ *The Communist* On July 10 1920, M Lenin sent a message welcoming the formation of the Party

THE O B U

An industrial organisation conceived by prominent Socialists of Canada who hope to effect revolution by means of strike The idea is the organising of all workpeople into one union, the pledge of membership being "I, the undersigned do hereby declare that, by the help of God I will strike against the use of money at any time I may be called upon' Uriah Smith originated the Knights of Labour in Philadelphia in 1869 but the sabotage of the Gould Strike in 1885 condemned the Knights of Labour publicly and the society was dissolved The chief plank of the Knights of Labour was one socialist organisation for all workpeople The Socialist Trade and Labour Alliance grew from the remnants of the Knights of Labour in 1895 under the leadership of Daniel de Lion but in 1905 the Alliance ceased to exist Its leaders formed the Industrial Workers of the World at Chicago in 1905 The One Big Union had its first convention in Calgary in 1919 and a second was held at Winnipeg in January 1920 In the new Constitution adopted at the second convention the O B U calls upon all workers to organise irrespective of nationality sex, or craft into a workers organisation Apparently the O B U was established by the I W W to mislead those Canadian workers who fought shy of the I W W A Labour Church has also been established by the O B U , and the Russian Soviet representatives in America are known to be in touch with the leaders of the O B U At the beginning of 1920 the O B U had 41 150 members attached to 101 units The total membership of all Canadian trade unions on Jan 1 1920, was 378 047

THE LAMBETH CONFERENCE

THE sixth Lambeth Conference was held during July and August last when 252 Bishops in communion with the Anglican Church assembled at Lambeth Palace from all parts of the world to discuss matters affecting the welfare of the Church and other questions of current importance The subjects dealt with covered a wide field and included the Re union of the Churches the Ministry of Women Missionary Work Marriage and sexual morality, Spiritualism Christian Science and Theosophy, and international and industrial questions Each of these subjects was considered by a committee of the Conference and evidence was received from expert witnesses lay men and women, in addition to clergy The Committees reports were then discussed by the whole Conference and a series of important resolutions passed The most widely discussed of these resolutions are

those relating to Re union This question was considered by the largest committee ever appointed by a Lambeth Conference on whose report definite proposals were laid down by the Bishops for the re union of all the Churches These proposals have met with criticism from Free Churchmen, notably as regards the fundamental conditions of episcopacy and re ordination put forward

In view of prospects and projects of Re union the Conference decided that a Bishop is justified in giving occasional authorisation to ministers, not episcopally ordained who in his judgment are working towards an ideal of union such as is suggested to preach in churches within his diocese and to clergy of the diocese to preach in the churches of such ministers But no approval was given to any general schemes of intercommunication or exchange of pulpits, or the celebration in Anglican Churches of the Holy Communion by ministers who have not been episcopally ordained

With regard to the position of women in the Church, the Conference resolved that opportunity should be given to lay women to speak in consecrated or unconsecrated buildings and to lead in prayer at other than the regular and appointed services of the Church and that ordained women (deaconesses) should be allowed to read the Sunday services and preach the sermon, with the consent of the Bishop and to prepare candidates for baptism and confirmation

Modern movements of thought connected with Spiritualism Christian Science and Theosophy received a large measure of attention from the Conference, which recognised that new phenomena of consciousness have been presented to us which claim and at the hands of competent psychologists have received careful investigation and as far as possible the application of scientific method But such scientific researches have confessedly not reached an advanced stage and we are supported by the best psychologists in warning our people against accepting as final theories which further knowledge may disprove and still more against the indiscriminate and undisciplined exercise of psychic powers and the habit of recourse to séances, seers and mediums As a result of the consideration of the subject of venereal disease the Conference expressed its condemnation of the distribution or use of prophylactics on the ground that they were an invitation to vice

LICENSED PREMISES IN LONDON

THE total number of premises licensed for the retail of intoxicating liquors in the Administrative County of London in April, 1919 the latest date for which full details in connection therewith are available, was 8 276 The on licensed premises, numbering 6,097 comprised 4 378 public houses, 1 357 beer houses and 362 hotels, restaurants, etc The total of the off licences was 2 179 The distribution of public houses and beer houses is shown in the following table, which gives for each metropolitan borough the total number of houses, population, and the number of acres per house

Since the Licensing Act, 1904, came into operation new licences have been granted in respect of 41 premises Of these 31 are still licensed, and with the exception of one public house all are hotels or restaurants On the other hand over

900 on licences have been extinguished during the same period these comprising 395 public houses and 514 beer houses The amount awarded as compensation for the loss of these licences purports to represent in each case the difference between the value of the premises as licensed and their value without a licence plus the amount of any depreciation of trade fixtures arising by reason of refusal to renew the licence The total compensation awarded in respect of the 395 public houses amounted to £1 091 123 an average per licence of £2 762, or 29½ years purchase of the rateable value In respect of the 514 beer houses £1 059 376 was paid, an average per licence of £2,061 or 42 years purchase of the rateable value

LOCAL OPTION IN SCOTLAND

THE coming into force on June 1 last of the provisions of the Act passed in 1913 relating to local option has given the electors of Scotland the opportunity of expressing their opinions on the drink question For the purposes of the 'Act to promote Temperance in Scotland the country is divided into areas—burghs, wards of burghs, and parishes—and it is provided that if 10 per cent of the local government electors in any area sign a requisition demanding a poll then the local authority shall cause a poll to be taken Immediately on the Act coming into operation, steps were taken throughout Scotland by the temperance party to obtain requisition forms from the local authorities and the necessary signatures in all areas where licensed premises existed Organisations were set up throughout the country, with headquarters in Glasgow, to carry on a campaign in favour of "No licence," and vigorous counter measures

were taken by the "Trade." A resolution passed at a conference of the Scottish Labour Party urged all trade unionists to vote 'no licence.'

Three questions were placed before the electors in November and December viz., the adoption of (1) a no change resolution (2) a limiting resolution or (3) a no licence resolution. The adoption of a *no change resolution* means that the discretion of the licensing authority in granting licences shall remain as before the poll. The passing of a *limiting resolution* prohibits the licensing court from granting a greater number of licensing certificates than 75 per cent. of the number in force at the date of the poll. For the period during which a *no licence resolution* remains in force, the Act stipulates that no certificate shall be granted except in the case of an inn or hotel or premises structurally adapted for use and *bonâ fide* used or to be used as a restaurant. In these cases licences may be granted on the conditions that no drinking bar or other part of the premises is mainly used for the consumption of excisable liquors and that such liquors shall be sold only to lodgers or residents or persons taking a meal on the premises for consumption with the meal. The decision of the electors remains in force for three years at the end of which period another poll may be taken.

To carry a no licence resolution requires at least 55 per cent. of the votes recorded and not less than 35 per cent. of the total electorate. A limiting resolution is carried if a bare majority of the votes are in favour and these represent not less than 35 per cent. of the electors. If a no licence resolution is not carried, the votes recorded in favour thereof are added to those recorded for the limiting resolution. A no change resolution is deemed to be carried if a majority of votes are in favour of it or if neither of the other two resolutions is carried. The resolution carried comes into force on May 28 1921. At the time of going to press results of the polls were not available.

MAYFLOWER TERCENTENARY.

THREE hundred years ago the Pilgrim Fathers left Plymouth on their voyage for liberty and landed in New England. The efforts of the Pilgrims at first in vain to escape to Holland, their reunion and sufferings in that country, the departure from Delfthaven in July, 1620, the sailing from Southampton on August 5, 1620, of the two ships *Mayflower* and *Speedwell* and the subsequent dismissal from the enterprise of the latter ill fated vessel, the final departure of the *Mayflower* from Plymouth on September 6 1620, and the arrival two months later at New Plymouth, the subsequent terrible hardships of the Pilgrims and the eventual triumphant events and achievements arising as direct results from the expedition, form a chain of events constituting one of the most moving episodes of religious history. Wide attention has been focussed upon these events during the past year by the celebrations which have taken place in the United Kingdom, the United States and Holland.

A large number of commemorative functions was organised, and pageants, plays and processions have been popular features in a number of towns where homage has been paid to the Pilgrim Fathers. Churchmen, of course, have taken a prominent part in the celebrations, and in many churches during September the Pilgrims' struggles formed the subject matter of sermons. Plymouth, as was to be expected, led the way in the celebrations, and many of our most distinguished men and women as well as important American and Dutch visitors took part in the functions, which lasted throughout the second week in September. The Prime Minister, unable to be present through absence from the country, paid his tribute in a letter to the Secretary of the National Free Church Council in which he said, 'Many brave ships have set out from these shores on voyages whose fame will ever live. By no means the least of these was the historic voyage of the renowned *Mayflower*. We have good reason to commemorate the labours and sacrifices of the gallant men and women who sailed on her three hundred years ago. Actuated by a high purpose they faced the unknown with undaunted courage and cheerfulness, and with abundant and abiding faith. They achieved far reaching results, which have exceeded all their hopes and expectations anxious though they were of the greatness of their venture.

We pay respectful and grateful tribute to their fidelity to the principles of freedom and democracy, which were alike their inspiration and their guide, and to their lasting contribution to the cause of human progress.

"We also welcome these celebrations as an opportunity for fostering the good relations which happily exist between ourselves and the great American people, and for furthering and strengthening the bonds of union, amity and co-operation between the descendants and country men of the Pilgrim Fathers in all parts of the world."

MUNICIPAL HOSPITALS.

PROPOSALS to empower county and county borough councils to supply and maintain hospitals and to assist voluntary hospitals out of local rates were included in a Government Bill introduced in the latter part of 1920. Clause II of the Ministry of Health (Miscellaneous Provisions) Bill, as introduced, provides that county and county borough councils shall have power—

(*a*) To supply and maintain hospitals (including out patient departments) for the treatment of illnesses and diseases generally, or for the treatment of any particular illness or disease, or any particular class of illnesses or diseases.

(*b*) To contribute, on such terms and conditions as may be approved by the Minister of Health to any voluntary hospitals or similar institutions within their area.

(*c*) To undertake the maintenance of any poor law hospitals or infirmaries within their area.

(*d*) To establish and maintain, or to contribute towards the cost of, or otherwise aid in establishing or maintaining, an ambulance service for dealing with cases of accident or illness within their area.

It is also provided that the councils of two or more counties may, with the consent of the Minister of Health and subject to such conditions as he may prescribe, combine for the purpose of supplying and maintaining hospitals, to be managed under a joint committee.

In several districts where institutional accommodation has been insufficient the establishment of municipal hospitals had been suggested and in Bradford official sanction has recently been

obtained for the conversion of a poor law infirmary into a municipal hospital Municipal ambulance services have already been established, notably in London, where the London County Council has erected and maintains stations with motor ambulances in various parts of the metropolis and under the Public Health (London) Act of 1891 the metropolitan borough councils have power to provide hospitals and to contribute to hospitals serving their districts At the time of going to press the Bill had not been read a second time but it was anticipated that the provisions relating to hospitals would meet with opposition The chief objections raised to the new proposals of the Government were that (1) in view of the heavy and increasing burden of the rates, no further spending powers should be bestowed on local authorities at present, and (2) the present difficulties of the hospitals in attracting voluntary contributions would be increased by reason of the possibility of their receiving contributions from local rates.

PROFIT SHARING AND CO PARTNERSHIP

THE latest available figures compiled by the Intelligence and Statistics Department of the Ministry of Labour deal with 116 schemes in operation in the United Kingdom during 1919 A further number of schemes was in operation but returns were not received by the Ministry from firms whose first bonus payment was not made until 1920 and others whose schemes are of such a nature that the amount of bonus cannot be stated During 1919 42 schemes were started, this being the largest number started in any one year The number started during the first six months of the past year, so far as had been ascertained at the 30th June, was 19 The following summaries give particulars of the 116 schemes for which returns were received arranged (*a*) according to trades and (*b*) according to the percentage of bonus to wages

RAILWAY POLICY

PROPOSALS for the future organisation of the railways in Great Britain have been outlined on behalf of the Government by the Minister of Transport For England and Wales it is suggested that there shall be five main groups of lines with a subordinate group of the lines in the London district whilst the whole of the Scottish railways shall be combined in a single group It is proposed that the five main English groups shall be constituted roughly as follows —

(1) Southern—combining the South Eastern and Chatham the Brighton, and the South Western
(2) Western—the present Great Western system with the Welsh lines
(3) North Western—combining the North Western the Midland and the Lancashire and Yorkshire, North Staffordshire and Furness
(4) Eastern combining the Great Northern the Great Central and the Great Eastern
(5) North Eastern—the present North Eastern system and the Hull and Barnsley

Each of the groups will be under a Board of Management not exceeding 21 in number The composition of these Boards is considered to be of the greatest importance and the Government is of opinion that the present system should be superseded and that the officials and manual workers should have some voice in management It is therefore proposed that the Board of Management should be composed of representatives (*a*) of the shareholders who should form a majority on the Board, and of whom a proportion should hold large trading interests, and (*b*) of employees, of whom one third might be leading administrative officials of the group to be co opted by the rest of the Board and two thirds members selected from and by the workers on the railway

It is not proposed to give to the companies any financial guarantee, but it is suggested that a flexible rates machinery shall be set up which will enable appropriate charges to be levied so that each group will be enabled to earn a net revenue substantially equivalent, on some pre war basis to be settled, to the combined net revenue of all the companies absorbed in the group In the event of any surplus revenues accruing from economies which may be effected, the Government is of opinion that these should

be apportioned between the companies and the Government on a basis to be settled later, the Government's share to be funded for development purposes to assist backward districts to develop light railways etc

Further proposals include the setting up of permanent machinery to deal with questions of wages and working conditions, on the lines of the two Boards which have been established temporarily by agreement, viz (1) the Central Wages Board, consisting of equal numbers of managers and men with an appeal to (2) the National Wages Board consisting of 4 managers, 4 men and 4 users of the railways with an impartial chairman Certain powers it is thought should be conferred upon the Government for the protection of the public for the economical working of the railway systems and to safeguard national interests It is proposed to exclude light railways from the grouping arrangements and there is no intention of altering the status of the dock undertakings of the country, except to bring railway owned docks under the same regulations as other docks in certain respects The future of canals is to be investigated by a Committee which has been set up under the chairmanship of Mr Neville Chamberlain, M P, and the Government will not formulate a policy until the Report of the Committee has been received

RENT RESTRICTIONS

THE Increase of Rent and Mortgage Interest (Restrictions) Act, 1920, was passed to consolidate and amend the enactments relating to increase of rent and rate of interest on mortgage of premises, and recovery of possession in certain cases The Act applies generally to houses and business premises or parts thereof, let separately where either the 'standard rent' or rateable value does not exceed—in the Metropolitan Police District (including the City of London) £105 in Scotland £90, and elsewhere £78 and it continues in force until June 24 1923 except as regards business premises in which case the date is June 24 1921 The increases of rent over the 'standard rent' authorised by the Act are, in respect of houses as follows —

(*a*) Where the landlord has since August 4 1914 spent money on improvement or structural alteration, he may add to the annual rent a sum equal to 6 per cent on any expenditure incurred up to July 20 1920, and 8 per cent on expenditure since that date This expenditure does not cover money spent on repairs or decorations

(*b*) Any increase in rates payable by the landlord since the period which included August 3 1914 may be passed on to the tenant

(*c*) To meet the increased rate of mortgage interest, and to provide an increased return on capital invested an increase of 15 per cent of the "net rent" is permitted but in the case of houses covered by previous Rent Acts 5 per cent only may be added during the first year from the passing of the Act These are houses where neither the standard rent nor rateable value exceed £70 in the Metropolitan Police District, £60 in Scotland, and £52 elsewhere

(*d*) To meet the increased cost of repairs 25 per cent of the net rent may be added where the landlord is responsible for all repairs, or a smaller proportion, which may be agreed or settled by a County Court where the landlord is responsible for part only of the repairs

But on the expiration of three months after the date of any increase under (*d*) the tenant may apply to a County Court for an order to suspend any increase under (*c*) and (*d*) on the ground that the house is not in all respects reasonably fit for habitation, or is otherwise not in a reasonable state of repair

The 'standard rent' is the rent on August 3 1914 or, where a house was not let at that date, the rent at which it was last let before that date, or in the case of a house first let after August 3, 1914 the rent at which it was first let The 'net rent' is the same as the standard rent except where the latter included rates In these cases the net rent is the standard rent minus the rates

It is important to note that no increase of rent is authorised except in respect of a period during which the landlord would be entitled to obtain possession if it were not for the security of tenure provisions of the Act

New provisions with regard to the recovery of possession are included in the Act, notably one dealing with ex-Service men who were tenants but a wide discretion is left to the Courts in all cases and no order for possession need be made unless a Court considers it reasonable to do so The existence of alternative accommodation need not be shown in certain cases *e g* where a landlord gave up possession in consequence of his service in the forces during the War

Business premises within the values given above are covered by the Act with modifications as to security of tenure provisions and a permitted increase in rent of 35 per cent instead of 15 per cent under (*c*) above making a total permitted increase of 60 per cent

SILVER COINAGE

THE great rise in the market price of silver has been responsible for the passing of an Act to amend the law in respect of the Standard Fineness of Silver Coins current in the United Kingdom and in the other parts of His Majesty's Dominions The Act applies to any British possession where the Coinage Act of 1870 is in force but not to any self-governing Dominion unless and until the provisions of the Act are adopted as regards the Dominion by a proclamation of the Governor General or Governor The new measure authorises a reduction of the fineness of silver in coins from 925 fine to 500 fine, that is to say instead of being composed of $\frac{11}{12}$ of fine silver and $\frac{1}{12}$ of alloy, our silver coins minted in future will contain one half silver and the half alloy

One troy pound of standard silver is used for coining 66 shillings a troy ounce therefore, on this basis, being equivalent to 66 pence, and one ounce of pure silver to 71 pence As for many years the market price of silver was much below these figures (*e g*, for the seven years 1909-15, the average price per ounce in the London market was 25$\frac{5}{8}$*d*) the Government gained by minting and there was no inducement to melt silver coins and no reason for prohibiting the export of silver coins, etc But with the rise in the market price of silver during the last three years the necessity for stringent regulations to deal with these matters was realised A more important question involved by the greatly increased price was the loss

occasioned by minting For instance, if silver had been coined in the old proportions at a market value prevailing at one time during the past year, the cost of the pure silver alone in 66 shillings would have been something like 83 shillings Under the new Act the troy ounce of silver which will coin 5 5 shillings, will contain half an ounce of fine silver, so that unless the market price reaches a figure very much higher than the highest point hitherto touched, the Government's margin of gain in minting will be preserved

With regard to the calling in of the old, and the issue of new coins, the machinery of the banks will probably be utilised for these purposes, as has been done in the past so that the change will be carried through without any inconvenience to the general public

TRADE UNION CONGRESS

THE 52nd Annual Trade Union Congress was held at Portsmouth September 6 11, 1920 with Mr J H Thomas M P , in the chair The delegates numbered 949, from 195 trade unions having a membership of 6 494 707 The corresponding figures for the Congress held at Glasgow a year earlier were 850 delegates 203 societies, 5,282 500 members First Congress was held at Sheffield in 1866 and was attended by 143 delegates from 94 societies and councils with membership of 199,374.

Arising out of the Glasgow Congress a special T U C was held at Central Hall, Westminster on Dec 9 and 10, 1919, when resolutions were passed against increase in cost of living and sundry matters after the Congress had decided to support the miners by means of a national propaganda for the nationalisation of the mines A second Congress was held on Mar 11, 1920 to consider the result of the propaganda, when it had to be admitted that the public was not yet convinced of the benefits of nationalisation A strike in support of nationalisation was ruled out as impossible by 3 870 000 votes to 1,050 000 and an alternative resolution in favour of "political action by means of intensive propaganda in preparation for a general election was carried by 3 733 000 votes to 1 015 000 A third special Congress was held at Westminster on July 13 to consider the situation in Poland and Ireland Later on the Parliamentary Committee of the T U C assisted in the formation of the Council of Action

At the Portsmouth Annual Congress attention was paid to the formation of a General Staff for Labour The stated intention was the establishment of a General Council on behalf of Labour and a resolution embodying the proposal to establish such was carried by 4,858,000 votes to 1,767,600 Stock socialist resolutions were carried, there was a remarkable attack on Mr Appleton, the General Secretary of the English Trade Union Federation, full support was given to the miners, who were in negotiation with the Government for the 2s per shift wage increase Mr Smillie made an attack on the method of electing the Parliamentary Committee, stating that votes of the delegates were a matter of barter between individuals

VICTORY BOND DRAWINGS.

FIRST annual drawings of the Victory Bonds were announced in a special supplement of the *London Gazette* of June 25, 1920, when the numbers of bonds in the Bank of England issue to the extent of £1,721,000 and Post Office £75,900 were listed for payment at par on Sept 1 following Two separate drawings are to be held yearly *i e*, one for the Bank of England issue which will be completed at the Bank in the presence of the Governor, Permanent Secretary to the Treasury and the Comptroller of the National Debt and the other for the Post Office issue at the P O S B in the presence of the same officials excepting that the Postmaster General replaces the Governor of the Bank of England The smaller bonds are to be drawn in groups and those of £1,000 and £5,000 also in separate groups Drawn numbers are to be published not later than July 1 of every year for bond repayments two months later The final drawing is to take place in 1976

WAGES.

REMUNERATION for services rendered has taken quite a different plane since 1914 A big percentage increase has been given to the skilled and unskilled mechanical workers and to obtain such there has been almost continuous negotiation between trade unions and employers with the Ministry of Labour intervening And in a large number of cases there has been a strike before the increase has been obtained In the year 1918 5 998 000 workpeople were reported to have had their wages increased by a total of £2,988 000 weekly, or almost 10*s* each on the average During 1919, 5,647 000 workpeople received wages increases totalling £2,161,000 weekly (approximately 7*s* 6*d* each weekly The first nine months of 1920 recorded 7,216 000 workpeople with a weekly increase of £3,681,600 From Jan , 1918, to Sept , 1920 the average miner's weekly increase was £3, engineers £2 10*s* , and building trade employees £2 15*s* weekly Generally the increase has been to meet the additional cost of living, but there is a tendency to increase the standard of living also Hours of labour are gradually being reduced from 48 hours to 44 and 47 weekly

EMPLOYMENT FOR WOMEN

ESTATE AGENTS AND AUCTIONEERS

THE Auctioneers and Estate Agents Institute have recently opened their door to women, and they are admitted under the same conditions as men The fact that the University of London now grant a Bachelor of Science (Estate Management) Degree has raised the status of the profession very much and women who enter it will be wise if they aim at the higher and obtain the degree

The degree is an external one, and can be worked up for while studying for the examinations of the Institute

There is plenty of scope for women in this new profession, both for those with capital, who can eventually start an office of their own, and for those who only wish for appointments

The first step in entering the profession is to pass the preliminary examination of the Institute or to obtain exemption from it, which is possible for those who have passed one of the recognised examinations, such as the matriculation examination of any university of the United Kingdom It is then necessary to become a student, or an articled clerk to an auctioneer, estate agent, or valuer The earliest age to start

as either is sixteen, and the intermediate examination of the Institute cannot be taken under nineteen, but none under twenty one may be elected as Associates of the Institute, and it is when the woman is an Associate that she is qualified to take an appointment There is an examination qualifying for the grade of Fellow, but none may be elected as Fellows under twenty five years of age The distinguishing letters to be used by those in the profession are F A I and A A I according to whether they are Fellows or Associates The examinations are held once a year in London

The subjects required for the preliminary examination are practically the three Rs For the intermediate most of the subjects are technical, such as law of landlord and tenant land surveying estate accounts the valuation of dilapidations and so forth For the Fellowship very similar subjects are studied as for the intermediate only more advanced including Practical work preliminary to Sale by Auction "Report Writing Agricultural Customs, Sanitation, and several others

There are so many sides to an auctioneer's and estate agent's work that those women who study and become proficient will have plenty of choice Doubtless some branches will be found more suitable to women than others while much will depend on the woman herself It is a profession that affords opportunity for a county as well as a town career, unlike many which necessitate living in London or a large town. Women have not had to fight their way into the estate agents and auctioneers world as in some others But they have been invited to enter and consequently are assured of a welcome and there is every prospect of it becoming a most lucrative profession for the right class of women

The Institute have prizes that they offer in connexion with the different examinations

WOMEN DISPENSERS

Quite a number of women have entered the dispensing world during recent years Some have passed the Pharmaceutical Society's Examination and become qualified Chemists and Druggists while others have contented themselves with the Assistants Examination of the Society of Apothecaries Women who aspire to having a chemist's shop of their own or to obtaining one of the big appointments open to dispensers, or taking a managership, must pass the Pharmaceutical Examination but those who only wish to dispense and are not aiming at the highest, need only enter for the "Assistants examination

It is necessary to have three years preparation for the former one of which must be spent in a Pharmaceutical College and to do at least 6 months practical dispensing for the latter

Women dispensers are to be found in every branch of the dispensing world — hospitals infirmaries, in the wholesale as well as the retail druggists, and during the War they were to be found on foreign service, as well as in Military and Red Cross hospitals at home There was naturally a large increase in the number who entered for the Assistants examination during war time, as the certificate could be so quickly gained, and the result is that the special side of the profession is rather overcrowded, but will soon right itself There is still plenty of scope for the fully qualified woman, and those who have started a chemist and druggist shop have been most successful The public have become quite used to the fact of women dispensers at chemists, so that prejudice has been broken down In their examinations women have won distinction and in their practical work proved themselves capable workers— methodical, neat and accurate

Several women have passed the Major Examination of the Pharmaceutical Society, which is very advanced and is only taken by a comparatively few altogether, as the "Minor Examination is the qualifying one

The women dispensers have their own special societies

The women who have the highest qualification should by right receive the highest pay but with women dispensers it is not always the case and this fact has in several instances prevented them from aspiring to the chief examination, knowing that it does not always mean real gain financially

The cost of training for either examination varies very much according to the college For either it is very moderate A course at a Pharmaceutical College for the Minor may be only about £12 or it may be as much as £60 For the Assistants Examination (or the Hall, as it is commonly spoken of from the Apothecaries Hall), the fee is as low as £7 and as high as £60 There are few professions that can be entered at so small a cost as that of the Chemists and Druggists and the Dispensers but for the former there is usually a premium to pay to the chemist and druggist to whom the pupil is apprenticed and under whom he or she does a large share of the three years dispensing necessary to fulfil the Pharmaceutical Society's qualifications

WOMEN POLICE

The Women's Division of the Metropolitan Police has proved a great success When it was first started at the end of 1918 it was an experiment and its future depended on the satisfaction it gave during the experimental period that has recently come to an end The division has been 100 strong but its numbers will now be increased and women police will become a much more familiar figure to the London public

The work of the division is chiefly connected with women and girls and it is anticipated that as the numbers increase they will enter many more spheres of work than they have been able to when they were so small a body Their usefulness in 'open spaces and the streets has been proved many times their patrol work in cafes and all they have done towards uplifting the moral tone of where they work has been most beneficial to those they are meant to help There is a great demand for their services and doubtless before long all cases connected with women and girls will, as far as the police force is concerned come under their care

Already there is a long list of names of women anxious to join the division only those who are thoroughly suitable have their names put down None are accepted under twenty five years of age or over thirty eight, they must be medically fit and have received a good general education Recruits undergo three months' training, during which time they are paid

The officers will always be promoted from the ranks, so that although a higher standard of education will be demanded (university standard

if possible) from them, all must start at the bottom and work their way up

The Superintendent (Mrs Stanley) was formerly Superintendent of the "National Union of Women Workers Patrols" started in 1914, and it was because of the useful work done by this body in war time that the Metropolitan Police decided to have a Women's Division especially to protect women and girls from the dangers of the streets and parks The Superintendent has done much towards raising the present division to its high standard of efficiency none but the best are accepted as recruits and the work expected from each woman is of a high standard

The normal hours on duty are seven and this includes one hour for rest and refreshment One day's leave in seven is granted and an annual leave The time varies according to the rank. The rate of pay is very good and as promotion is gained it increases in proportion

Altogether the future of the Division is very hopeful, and judging by the last two years when their activities have been so limited great things may be looked for from them when the 100 enlarge into a division of an imposing number

HEALTH VISITORS AND INFANT WELFARE WORKERS

There is a great deal of work to be done among young children by the welfare worker while that of health visitor is of a more general character For either employment a special course of training is necessary For welfare work it is best to start quite young—on leaving school—as then the time can be spared to go right through each branch The first thing to do is to work at a crèche where valuable experience is to be gained while there a salary will be paid to the learner A course of classes on domestic science and hygiene are very necessary and also on maternity and child care so that theory as well as the practical work may be learnt

At the various polytechnics very useful classes are held, and the more of such subjects a girl is well informed in the better worker will she be and the more capable later on of holding a responsible post The most important part of the training is the time spent at a hospital The most suitable is a children's hospital If she goes to a general hospital she will not be able to work in a children's ward only but will be moved from ward to ward consequently learning a great deal that is not necessary for her future work In addition, probationers are admitted at a children's hospital at a much earlier age than at a general hospital

It is essential for the infant welfare worker to have training in midwifery When this has been obtained she must enter for the examination of the Central Midwives Board As none may sit for this under twenty four years of age, it is a long way off from the young girl fresh from school All the same she must bear in mind that directly she is old enough she must gain it

The training necessary takes six months Those outside the infant welfare world may wonder at so much training being required, but it is only those girls who are fully qualified who have the slightest chance of gaining a good appointment. If a girl does not feel disposed to train very thoroughly it is better not to go in for the work.

The appointments are of different kinds At the various infant welfare centres posts are held of superintendents and assistant superintendents At the hostels for mothers and infants, and at creches matrons and assistant matrons are appointed The worker who is not thoroughly well trained can never hope to rise above being an 'assistant

The health visitor requires a training rather similar to that of the infant welfare worker

While the health visitor may obtain an appointment in town or country, the infant welfare worker's life will be spent in cities or large towns The more crowded the neighbourhood the more probability is there of a creche or hostel being opened, or an infant welfare centre being started

MASSAGE

Massage is now a recognised profession Only a masseuse who has passed the examination of the Incorporated Society of Trained Masseuses has any standing, the qualified masseuse only attends cases under a doctor

The training undergone has to be of the special nature required by the society, otherwise a candidate is not allowed to enter for the examination, and the school must be "recognised

It is important for a girl who is thinking of learning massage to realise these important points before starting on her course of training otherwise time and money may be lost

Twenty one years of age is the youngest at which a girl can enter for the examination The shortest possible time required to train is six months The practical work is done at a hospital and the theory at the school, but the pupils enter at the school only as they work in conjunction with certain hospitals and the week's work for each pupil is planned out so that they get not less than four hours practical work on hospital patients per week for three months The pupils learn a good deal of anatomy and physiology

At the end of their training the examination is in two parts One is practical (massage) and the other is theoretical, and consists of an oral and written test in all they have learnt at the school which includes the theory of massage The examination is held twice a year

Once a girl has passed her examination, she is able to take a post at a hospital or other institution, or to start a practice of her own, but not to run a school There is another examination—it is on "Swedish Remedial Exercises — and those girls who wish to be thoroughly proficient always enter for it There is yet another, for teachers To study for the former means six months longer at school, making twelve months altogether This examination is only held once a year It is necessary to have passed the first and second examinations and to have taught for more than eight months in a recognised school before going in for the teacher's examination

The appointments open to a trained masseuse are resident and non resident, but the most lucrative branch of work is a private practice A masseuse who has interest among medical men and starts to work in a fashionable neighbourhood can make a very good income, far in excess of any salary that can be obtained by taking an appointment Teaching is, again, another branch of the profession that can be

made very profitable It must be very well managed for the Incorporated Society of Trained Masseuses periodically inspects all the schools recognised by them to see that they are up to the necessary standard Capital is required to start a school

During the period a girl is training she will be able to judge to a large extent as to what branch of the profession interests her the most and certainly when first qualified if she takes an appointment the experience gained will be very valuable should she later on set up in practice

WOMEN DOCTORS

The number of women entering the medical profession in the last few years has been very much larger than ever before The opportunities open to them once they are qualified are so much more numerous than they were even a few years ago Hospitals that never before the War had women on their staff now appoint them (proving such appointments were not for the period of the War only) In many branches of the profession women are to be found, and in the near future it is anticipated there will be various new appointments to be filled that will be especially suitable for medical women *e.g.* in connexion with work among children The education of the medical student has changed very largely In London many of the general hospitals now admit them to the medical schools so that those who prefer co-education need not enter the School of Medicine for Women but can become students elsewhere While many have taken advantage of this fact the School of Medicine for Women continues to be filled with students to its uttermost limit

The women students show their ability for their work by their successes in their examinations Whatever medical school a woman enters her work and her examinations will be the same—to fit her to be admitted to the Medical Register Five years must be spent at a recognised medical school she must go through the necessary course of work and either take a medical degree or pass the Conjoint Board (*e.g.* The Royal College of Physicians London and the Royal College of Surgeons England) or the examinations of the Society of Apothecaries

The length of time necessary at a medical school is five years (for the degree a little longer) The fees vary according to the medical schools, and there are examination fees to be paid books and other expenses making a total cost of from £175 to £235 It is not every student who passes his or her examinations in five years If longer time is required the expense is increased Women can obtain medical degrees at not only the University of London, but in Scotland Ireland Birmingham Bristol, Leeds, Liverpool, Manchester, Sheffield

There are a large number of scholarships and prizes at the various medical schools The School of Medicine for Women London, is especially rich in them Sixteen years of age is the earliest at which a girl can enter as a student at any medical school The first two to two and a half years are spent in work in class rooms and laboratories, so that a student is at least between 18 and 19 before she actually enters the hospital itself This fact overcomes many of the objections against starting their career while so young

There is undoubtedly a good prospect for the medical woman of the future, but one thing is essential and it is that those who study for the profession become as highly qualified as possible

WOMEN VOTERS

A GREAT increase in the number of women voters was proposed by the Representation of the People Bill presented to Parliament during the past year The objects of the Bill as stated in the memorandum thereto were to confer the franchise on women at the age of 21 to assimilate the parliamentary and local government franchises by abolishing the occupational qualification and the qualification of women as the wives of local government electors and to place the whole franchise for both sexes (other than university electors) on a similar basis of residence Other amendments of the Representation of the People Act 1918 were provided for The main principle of the Bill was contained in Clause 1 — 'A person whether male or female shall be entitled to be registered as a parliamentary or local government elector for a constituency (other than a university constituency) or local government electoral area respectively if such person has attained the age of 21 years and is not subject to any legal incapacity and has the requisite residence qualification The Bill proposed to abolish (except in the case of a university constituency) the alternative or business premises qualification for the parliamentary franchise provided for by the Representation of the People Act 1918 and also the right given in certain circumstances to vote in two constituencies at a general parliamentary election

The effect of lowering the age for women voters as proposed would be to increase by about 5 000 000 the number of women entitled to vote at parliamentary elections making the total number qualified over 13 000 000 whilst the total number of men voters would be somewhat less than 13 000 000 women voters exceeding men voters by about half a million

On the second reading of the Bill the Minister of Health stated that the Government proposed to leave the Bill to the free determination of the House reserving to themselves the right to bring forward amendments in Committee Personally he was entirely in favour of the Bill With regard to the work of preparing the register Dr Addison stated that the additional cost due to the increased electorate was estimated at between £300 000 and £400,000 per annum The Bill passed the second reading without a division and was referred to Standing Committee D of the House of Commons but owing to a considerable amount of opposition made little progress A special report presented to the House by the Committee stated that they could not with advantage proceed further with the Bill

WORKMEN'S COMPENSATION

FAR REACHING recommendations are contained in the Report of the Committee appointed by the Home Secretary to enquire into the present system of compensation for injuries to workmen (Information as to the schemes in force in countries which have passed Workmen's Compensation laws was given in last year's issue of

WHITAKER'S ALMANACK pp 747 8) One of the most important questions considered by the Committee was the desirability of establishing a State system of accident insurance in the United Kingdom State systems have been in operation for some years in many countries but the Committee were of opinion that the defects in our present system could be largely remedied by the adoption of the following modifications without resort to a State system —

(1) State supervision of rates of premium of insurance companies with a view to the restriction of their expenses and profits in workmen's compensation business, not more than 30 per cent of the premium income to be expended in profits, management expenses and payments for commission to agents, the latter not to exceed 5 per cent of the premium income in any case the maximum rates to be approved or fixed by a Government official

(2) Mutual associations to be placed under the same obligations as insurance companies as to setting aside funds to meet outstanding liabilities and as to returns &c

(3) Every employer —other than the Crown a local or other public authority a statutory company or a householder in respect of servants not employed by him for the purpose of his trade or business and, under certain circumstances firms whose pay roll for three years averages over £20 000 and who are self insurers —to be required to insure against workmen's compensation risks

It is proposed that several new classes of workers should be brought within the scope of the scheme in addition to the 15 000 000 workers already covered among these being persons employed otherwise than by way of manual labour whose rate of remuneration does not exceed £350 per annum, instead of £250 under the existing law

With regard to benefits, instead of the present basis of earnings in cases of payments to dependents and compensation during incapacity, the Committee make the following recommendations —

In fatal cases—for total dependents—

(*a*) Where a widow is left £250

(*b*) Where children under 15 are left a weekly allowance of 10s for the first, 7s 6d for the second and 6s for every other child these allowances to be provided out of a Central Fund to which the employer will pay £500 in every case of a workman dying and leaving any children under 15

(*c*) Where other total dependents are left in addition to the above, a further sum not exceeding £50

(*d*) Where total dependents are left not including a widow or children under 15 the sum of £250

Burial and medical expenses to be increased to £15

In cases of total incapacity, two thirds of the average weekly earnings, with a maximum of £3

In cases of partial incapacity, two thirds of the difference between the average weekly earnings before and after the accident in the latter cases provision to be made for increased payments if wages are increased by upwards of 20 per cent in the workman's particular occupation at the time of his accident

Resident Supt F Seymour

This is one of our great National Institutions where Sailors Soldiers and Airmen can go when on leave or passing through London, a place where they may deposit their kit and valuables, where they may obtain at moderate charges a good meal and a comfortable bedroom, where their every need is studied and where they are under their own roof and feel really at home

The Union Jack Club was erected by public subscription as a National Memorial to those who had fallen in the South African War, opened on July 1st, 1907, by His late Majesty King Edward VII, and handed over to the Regular Services Membership is limited to Petty Officers, Non Commissioned Officers and men on the Active List of the Regular Forces but during the War all mobilised men including those from the Overseas Dominions and Allied Countries were made Honorary Members The Club is self supporting and managed by a Committee which includes representative members elected by the men themselves Already firmly established before 1914, the Union Jack Club was an inestimable boon to Service men in the Great War during which period alone sleeping accommodation was provided for no fewer than 1,131 338 men and 3,054 809 meals were served whilst many millions of whom no record was kept passed through its doors for rest and refreshment, many of them straight from the trenches in France Open day and night, the capacity of the Club was taxed to the uttermost

Work has been commenced on a considerable extension of the Club with funds raised in all parts of the Empire to commemorate the recent inspiring services of our gallant fighting forces and to provide the increased accommodation which is so much needed.

A Railway Tunnel between Great Britain and Ireland.

AMONG the ambitious projects with which engineers of imagination are wont to solace their leisure moments is that of a tunnel connecting England and Ireland, or Scotland and Ireland, or both. The near prospect of the Channel Tunnel has set them thinking and as they have not to concern themselves like the promoters of the Channel scheme, with questions of national defence, or possible invasion from the Continent they are free to devote themselves entirely to engineering considerations.

More than a generation ago the question of an Irish tunnel was taken up by engineering and commercial men on both sides of St. George's Channel and it may be convenient to mention here that it was included in the terms of reference of the Select Committee appointed to deal with the problem of Inland Transport. Hitherto the attention of these pioneers has been given to the possibility of boring a tunnel between Ulster and the south west corner of Scotland where it may be seen from the study of the map Great Britain and Ireland are closer together than at any other point. Four or five schemes have been prepared for a tunnel under the sea somewhere near this point, where the average depth on the North Channel is about 80 fathoms. The shortest of all these projected routes is from the southernmost point of the Mull of Kintyre to a point on the Irish coast a little to the south east of Fair Head. The distance by sea between these two points is about 15 miles and the sea bed is one of uniform level. But as often happens in the affairs of life the shortest cut is the longest way round. Given the tunnel between the Mull of Kintyre and Fair Head and more than 100 miles of new railway would still be required to join up the Scottish end with the existing railway system in Scotland and a shorter line to link up the Irish end with the Irish railways. The journey involved would demand of the traveller from London as much time as is required by any of the existing routes. Unless therefore the Irish tunnel is to be constructed solely for the use of Scotsmen and Irishmen the route here described must be ruled out of consideration.

Most of the promoters of the scheme fix on Belfast as the ultimate goal to be aimed at and a good deal is to be said for this point of view. The second shortest route is from Portpatrick in Wigtownshire to Donaghadee a distance of 22 miles. The sea bed rests upon the Silurian system of rocks but the unfortunate point about it is that about 7 miles from the Scottish coast there is a sudden drop from 80 to 150 fathoms, which runs for a distance of nearly 2 miles. Engineers have considered two possibilities in this connexion. They may tunnel at a greater depth so as to get completely under the dip, but this would involve steeper gradients and longer approach lines at each end. They could also swing about the line of the tunnel so as to avoid the great hollow but this would mean extending the length of the tunnel from 22 to 40 miles and an under water railway journey of at least an hour.

A slightly better route is that from Portpatrick to Whitehead. The distance is 23½ miles, or 27 miles allowing for the land approach the greatest depth involved is 120 fathoms, and the gradient 1 in 52. A fourth route and one which has found the largest number of supporters is that between Wierston Hill and Magee Island. The length would be 27 miles of actual tunnel increased to 30 miles if a dip in the bottom of the sea known as Beaufort Dyke is to be avoided. The land approach would probably mean another 7 miles added to the distance but against this disadvantage must be set the advantage of a lesser gradient 1 in 75 in fact.

More ambitious schemes have at one time or another been projected for connecting Holyhead and Dublin by tunnel a distance of 60 miles, and Fishguard to Rosslare a distance of 62 miles. For the moment these plans are likely to be left out of account and attention concentrated on the more northerly tunnels. Many years ago Sir Robert Giffen, of the Board of Trade who gave evidence before the Financial Relations Committee said — "I think the tunnel from Scotland to Ireland should be taken up by the State irrespective of any estimate of profit or loss on the undertaking. Looking at the immense trade between the two countries and the possibilities of developing the tourist traffic and extending the residence in Ireland of people at present living in Great Britain I think that the effect of making a tunnel would result in enormous commercial advantages apart from the political advantages that might follow."

This was said before the War and in any scheme of tunnel building the altered political aspect of the question and above all the enormous rise in the cost of every kind of engineering work since hostilities ceased would have to be seriously considered. The £10 000 000 which 20 years ago was considered to be sufficient for the Wierston Hill–Magee Island tunnel must now be multiplied by *x* and will then probably be found to be insufficient. Apart from politics and cost however it is clear that the more the two countries can be drawn together the better it will be for both. The mail and passenger services between England and Ireland and Scotland and Ireland would be accelerated and vastly improved. In pre War days the journey between London and Belfast was 13 to 13¼ hours. According to calculations made when the under water way between Scotland and Ireland was most talked about the tunnel would reduce the journey to 10½ hours. Glasgow, it was said, could be reached from Belfast in 4 hours Edinburgh in 5 York in 7 in fact all the important cities and towns in Great Britain would be brought nearer to Belfast by 2 or 3 hours. What this journey by through carriage would mean to thousands of passengers passing between the two countries what it would mean to send goods between the two countries without breaking bulk in the journey must be apparent to all who consider the scheme without prejudice. We live in the days of marvels even Irish marvels and the day may not be far distant when the 'horrors of the middle passage' are abolished, and passengers can take their seats at Euston and St. Pancras in the knowledge that they need not leave the comfort of the railway carriage until they can set foot on Irish soil.

British Association for the Advancement of Science.—The eighty eighth annual meeting of the British Association for the Advancement of Science was held at Cardiff from Tuesday, Aug 24 till Saturday Aug 28 Professor W A Herdman, who succeeded the Hon Sir Charles Parsons as President gave an address on 'Oceanography and the Sea Fisheries He contended that the fisherman must become the settled farmer of the sea if his harvest was to be less precarious It was important to determine the number of fish in our waters, and what was the food value of each of them Furthermore we needed to know their habits and movements, and the nature of the elementary organisms on which they fed As an instance of our ignorance in this respect, he mentioned the incomplete life history of the eel No spawning eel had ever been seen, he said From all the fresh waters eels migrated in the autumn to the coast, and thence to the mid Atlantic, and we know not how much farther for the exact locality and manner of spawning has still to be discovered Professor Herdman suggested that the abundant food supplies which lie at our door should be used to the fullest advantage, and that Cardiff, as a great seaport might do something for fishery research The following were the Presidents of the various sections —A, Mathematical and Physical Science Prof A S Eddington, B, Chemistry Mr C F Heycock, C Geology, Dr F A Bather D, Zoology Prof Stanley Gardiner, E, Geography Mr J McFarlane F Economic Science and Statistics Dr J H Clapham G, Engineering, Prof C E Jenkin H, Anthropology Prof Karl Pearson I, Physiology, Mr Joseph Barcroft K Botany, Miss E R Saunders L, Educational Science, Sir Robert Blair M, Agriculture Prof T W Keeble Three citizens lectures were delivered Prof J Lloyd Williams on 'Light and Life Prof A W Kirkaldy on Present Industrial Conditions, and Dr Vaughan Cornish on 'The Geographical Position of the British Empire In 1921 the Association will meet at Edinburgh under the presidency of Sir Edward Thorpe and in the following year at Hull

Amber as a Form of Wealth.—Mr W J Perry discusses in the *Journal of the Manchester Egyptian and Oriental Society* the problem of amber and its association with the megalithic problem The amber used for decorative purposes in the Mycenæan age was he suggests found in the Adriatic In explanation of its value, of its adoption as a form of wealth he supposes that amber a solidified resin may have been associated with the productions of certain trees venerated in Egypt as the source of resinous substances used in mummification and other death rites

Anglo Swedish Ferry Service.—The proposal to establish a regular daily ferry service between Great Britain and Sweden has again been revived The scheme was originally broached in March 1917, by the Swedish consul for Hull and Immingham, and contemplates a direct train ferry service between Immingham and Gothenburg, where suitable harbours for the ferry boats would be built The uniformity of railway gauge between the two countries is urged in favour of the proposal The Swedish Government, while approving the scheme, are not prepared to finance it

Australia and its Population.—In the *Geographical Review* Mr Griffith Taylor, discussing the possible settlement of Australia, says that he sees little hope of the tropical part of the continent becoming prosperous and productive if the policy of White Australia is maintained The hot, dry climate of the greater part of tropical Australia is best suited to the natives of India Even if white settlement proved to be possible by a slow process of acclimatisation, it would only be at the cost of many lives, and at best would take a very long time Assuming that political difficulties will eventually be overcome Mr Taylor estimates that one district in the interior of Western Australia and the Northern Territory, with an area of about 150,000 square miles is suited for any population The remainder of the area under consideration could support a total population of about 1,400,000 with a density varying from 8 per square mile in the east of Queensland to 1 per square mile or less in the more arid parts of Western Australia and the inland regions of the Northern Territory

Bride's Stone in the Sudan.—Mr H A MacMichael, in *Sudan Notes and Records*, describes a curious example of a fertility charm, associated with stone worship, among the Tungur Fur tribe The stone is known as the 'custom stone, or the bride's stone, and is brought into use at a birth, a marriage, or the visit of a high official After the marriage ceremony the bride and bridegroom are made to rub the blood of a sacrificed animal on the stone in the form of a cross If they are too poor to pay for an animal to be sacrificed they offer a piece of cow dung They are then taken to a well where the celebrant, taking a handful of mud from the pool daubs it on their foreheads shoulders waists knees, and loins and bind their necks wrists and ankles with green grass

Cattle Colour and Markings.—Miss F Pitt in the *Journal of Genetics* discusses the colour and markings of pedigree Hereford cattle She finds that the breed arose by selection from the nondescript cattle of the county in the 17th and early 18th centuries All colours and markings prevailed, but among them the red with white face, which is still characteristic of the breed, was most common "pattern" probably originated through a mutation which appeared in a dark herd in 1750, and was kept and bred from as a curiosity The white face is a dominant condition, while excessive white in modern Herefords is found to be recessive to the typical pigmentation Modern variations from type are due to the outcrop of recessive characters inherited from the time before pattern selection was practised

Cliff Dwellers in Colorado.—Mr J W Fewkes has written for the Bureau of American Ethnology a monograph on the pre historic villages, castles and homes of south western Colorado having special reference to the Pueblo state of culture in that domain of cliff dwellers He says that the buildings indicate communal thought as they were constructed by groups rather than individuals He finds no support among architectural data for the view that the Pueblo people were derived from Mexican tribes, or that their descendants travelled south and developed into the Aztecs The buildings ante date the coming of the white man

Colliery Warnings.—The author of the anonymous "Colliery Warnings, telling miners of the existence of atmospheric conditions favourable

to dangerous situations, has been revealed as Mr Henry Harries, late of the Meteorological Office In an article in the *Morning Post* Mr Harries stated that he had carried on the work for 38 years, in the face of great hostile criticisms His investigations led him to discover that nearly all the serious colliery explosions had occurred within areas of high barometric readings or anticyclones The Abercarne disaster of 1878, with 268 deaths had been preceded by a vast anticyclone which had drifted to and fro over Glamorganshire for ten days during which the enormous weight of the superincumbent atmosphere had caused the roof of the mine to creep and return and great outbreaks of gas to occur Mr Harries states that in the years 1851 to 1880 when no colliery warnings were given explosions caused a total of 7,364 deaths for the next 38 years, with the warnings in circulation the total was only 4 797 notwithstanding that the number of men employed below ground had more than doubled since 1880

Concrete Arch of 400 ft Span —The Franklin Avenue Bridge over the Mississippi at Minneapolis is to contain an arch of reinforced concrete of 400 ft span, which is considered to be the largest in the world It will consist of two arch ribs with a rise of 88 ft The arch will be flanked at each end by an arch of 199 ft clear span and another of 55 ft 6 in span, the total length of the bridge being 1 082 ft over the abutments Hitherto the longest reinforced concrete arch completed has been that of 330 ft span in the Risorgimento Bridge across the Tiber

Electricity and Seeds Messrs Sutton and Sons of Reading have published the results of a number of electrical germination and field tests carried out in 1919 with seeds of carrot swede cabbage and mangold The best known process of seed germination is the Wolfryn process consists in immersing the seeds in a solution of salt and water or of calcium chloride and water through which an electric current is then passed After the seeds have been dried at a temperature of 100° F they are then ready for sowing The Reading experiments were designed to test the value of the Wolfryn process, and to decide whether the advantages are due to the immersion in to the electrification or to the two combined Tests were made with untreated seeds, with seeds electrified by the Wolfryn process with seeds soaked in a solution of sulphate of ammonia and with seeds soaked in a solution of salt and water After immersion the seeds were dried at 100 F and then sown The tests do not reveal any advantage from seed electrification the only exception occurring in mangolds, where the germination of the electrified seed was 94 per cent compared with 82 per cent for the untreated seed and 86 per cent for the seed soaked in the salt solution In the field tests the electrified mangold seeds yielded 6a lb per pole more than the untreated seed

Electricity from Natural Steam —Italy is not a coal producing country, but it has other sources of natural power one of which is to be found in the natural steam at Lardorello in Tuscany The natural steam was first used for boiler heating, and subsequently, was turned into a piston engine, which gave satisfactory results Still later a turbo generator was installed Developments then took the form of turbines of a special type Each of the turbines requires about 77,000lb of steam per hour, and this steam is raised in tubular boilers containing aluminium tubes in a sheet iron shell the natural steam having a pressure of about one atmosphere, and that produced in the boiler of half an atmosphere Each boiler produces 13,200lb of pure steam per hour

Electric Locomotives in Coal Mines —Small electric locomotives for use in coal mines have been sanctioned by the Home Secretary They are built to haul a load of 10 to 15 tons on the level, or of 3 tons up a gradient of 1 in 30, and the wheel gauge is so arranged that they will take any track from 19 ins upwards The battery cells by which they are actuated are charged from a power station in the mine, and a normal charge is equivalent to a run of 20 to 25 miles The locomotive has a speed of 5 miles per hour with a load It is expected that with the extension of this engine the pit pony will be largely displaced

Electrified Cables for Ships —The Admiralty are interested in bringing into more extensive use an ingenious device consisting of electrified cables laid in the approaches to the principal ports such as Liverpool for the guidance of ships Captains of vessels by the new method, are able to follow the cable at any speed as easily as a street car follows the rails From the moment the ship 'picks up' the outer end of the guiding cables the man at the wheel need no longer be troubled by reefs shallows and currents or even by fog The principle of the invention is that of the electrified cable in use in ocean telegraphy Electric circulating cables carefully protected by metal coverings against frying at the bottom are fastened to the ground at one end near a station possessing powerful alternators for sending alternating currents

Eyes Grow Keener in the Dark —Mr Selig Hecht of Creighton University, Omaha has conducted a series of researches into the sensitiveness of the eye in the dark He has pointed out that when a person enters a dark room after a stay in the outside daylight the eye at once increases in sensitivity At first this increase appears to be slow but after five minutes it is quite rapid the eye acquiring a sensitivity several hundred times its initial value After thirty minutes sojourn in the dark the sensitivity still increases but more slowly than before and after forty five minutes of an hour the maximum sensitivity is reached The final sensitivity varies slightly with different people but in fully adapted condition the eye is easily 5 000 or 10 000 times more sensitive than it was at the beginning

Fish Rings and Their Meaning —Miss R Sa M Lee Naturalist Inspector to the Ministry of Agriculture and Fisheries has written a report on the methods by which growth and age in fishes are determined The main theory is that each of the rings seen on the scales of many fishes is formed in the course of a year, and that their number gives the number of years the fish has lived Other theories ascribe the rings to the influence of temperature the amount of food or some other physiological factor Some Norwegian scientists believe the growth of the scale is proportional to the length of the fish, and that the length at the end of each previous year of its life can be calculated from the proportional width of winter rings on the scale The general conclusions to which the evidence and the mathematical tests lead are (1) That the age determinations can be made with a

considerable degree of accuracy from salmon and herring scales, and for the youngest age, groups of certain other species, such as haddock and cod, the amount of reliance which can be placed on the results depending to a certain extent on the locality from which the fish is taken (2) That the growth determinations can be made with a considerable degree of accuracy from the measurements of the scales combined with the length of the fish using a modified form of the Norwegian method (3) That the varying influence of food and temperature in the production of winter rings in scales is as yet indeterminate although certain progress has been made in this investigation by experiments on plaice and flounders in tanks

Galveston Sea Wall Extension—An important improvement and extension has been made to the concrete sea wall five miles long which was built about seven years ago to protect the city of Galveston from a repetition of the flood of 1900. The great flood of 1915 overflowed the top of the defences. It was therefore decided to build a 5 ft. curtain wall along the top, and to extend the eastern end by two miles.

Guadalquivir to be Dammed—A scheme has been put forward to render the swift flowing river Guadalquivir navigable between Seville and Cordoba. It is proposed to build eleven dams on the river, similar to that across the Rhine at Chevres each with an opening of about ten metres and varying in height between six and ten metres. The cost of the work will be 80 000 000 pesetas and the time for its construction will be twenty years. The differences in water level will be overcome by eleven modern locks. Barges of 525 tons capacity will be able to use the stream and it will be possible to form convoys of two or three barges and a tug of 150 tons. One important feature of the project is that the piles of the dams will be used for the construction of bridges connecting the two banks at eleven different points. At present there is only one bridge over the Guadalquivir in the whole length of 112 miles.

Hair and Eye Colour—Professor F. G. Parsons in a lecture on The Distribution of Hair and Eye Colour in the British Isles to the Royal Anthropological Institute stated that the index of colour based on hair only was given by Beddoe in 1860 as 23·8 dark. His own index showed these subdivisions of percentages—red 4·8, fair 15·8, brown 38·9, dark 36·6, black 3·9. The original man had black hair and black eyes. Contrary to popular belief women were darker than men and even in districts where the population was fairest this held good, but where the population was generally dark there was very little difference. He gave the following representative table of darkness —

In	No. of Records	Index Male	Index Female	Difference
Four Northern Counties	1767	26·2	33·5	7·3
Three Eastern Counties	1563	34·4	38·2	3·8
Two Western Counties	4057	45·5	46·7	1·2
London	6223	37·7	38·5	·8

In Scotland, the fairest populated part of the British Isles, the women were 8·9 per cent. darker than the men, in England 2·1, and in Wales a little over 2. Town people were generally darker than country people. In the east and north the hair and eyes usually matched; in the west central districts there was much difference between them. In Wales, where most of the people had dark hair, they had not dark eyes also. In those parts of the country where there was the most pure Nordic and Saxon blood, the hair and eyes harmonised, and the reverse was the case where the Mediterranean type was a strong local strain. A combination of fair hair and blue eyes was to be found in Ireland.

"*Lusitania* may be Raised"—M. Emile Bertin, a distinguished French scientist a member of the Institut de France and a former Director of Engineering in the French Navy has put forward a proposal for raising the wreck of the *Lusitania* which lies in 250 ft. of water off the Old Head of Kinsale where it was sunk by a German torpedo. His plan is to construct a floating chamber 300 yards long by 100 wide and 20 in height which would be attached to the wreck of the vessel at low tide by means of 800 steel cables, and so manipulated as to raise the wreck as the tide rose. Once lifted and supported by this floating chamber the wreck would be towed towards the shore, where pumping operations might be carried out. The most problematic part of the proposal is the scheme for beaching the vessel. M. Bertin says that when once the necessary cables have been attached there should be no difficulty in raising the wreck from three to four metres nearer the surface by taking advantage of each tide. Once part of the wreck has been brought above the level of the sea the work of the divers would be greatly facilitated. "The difficulty will lie in the fact that no dry dock exists which would be capable of receiving both the floating chamber and the wreck, states M. Bertin.

Microbes in Fossilised Amber—Dr. Galippe, of the French Academy of Science has discovered a number of micro organisms in fossilised amber. Some time ago considerable interest was shown in the discovery that microbes remained alive for hundreds of years in parchments and papyri and the question as to whether such microbes still had power to transmit the virus of plagues such as the Black Death was much discussed. Living organisms incomparably older than the microbes found in Egyptian papyri have been discovered by Dr. Galippe and it is thought that these organisms may probably be among the very early elements possessing life to inhabit the earth. Dr. Galippe's discovery was the result of investigation into the composition of several pieces of fossilised amber. Examination showed him that the specimens were full of micro organisms which he considers can only have been imprisoned in the amber whilst it was in course of formation. As soon as these organisms were set free from their prison they manifested very evident signs of life and when carefully cultivated, developed great activity.

Moving a 3 000 ton Building—In the *Engineering News Record* may be found an account of the moving of a 3 000-ton building, measuring 95 ft. by 60 ft. over a distance of 450 ft. The new site was first cleared and the foundations laid. The walls of the building were underpinned with steel needles on timber shoes, supported on twelve sliding ways, and interior concrete columns carrying one third of the total weight of the building were similarly supported. The walls and columns were then cut away from the foundations and raised by 500 jacks. Three 90 horse power hoisting winches supplied the pull for removing. The ways along which the removal was effected were laid only 60 ft. in advance of the building sufficient for a day's

haul of 50 ft. The entire removal was accomplished in nine stages. America does not have it all its own way in this respect. A timber and ferro concrete building weighing 150 tons, 60 ft. in length, 60 ft. in breadth and two storeys in height, situated at Burnside, near Glasgow has been moved about 80 ft. from its original site without any internal disturbance and even without interruption to the business transacted inside. The cost of demolition and re-erection would have been £1 000, the work of removal was about one third of that sum.

Niagara River and Electricity.—Mr. J. Kennard Thomson, a consulting engineer has put forward a plan for damming the Niagara River and thus creating 2 000,000 horse power of electricity. The structure proposed would be an immense convex affair which would have a tendency to force the ice over the top in the spring, and allow it to slide rather than fall down the other side. The base of the structure would be about 700 ft. in width but a large portion of the necessary generating plant could be installed in the interior of the structure. The dam would create a head of 102 ft. below the foot of the falls, turning the present rapids and whirlpool into a long narrow lake but having plenty of possibilities for rapids below the new falls. Thus all the water still going over the old falls and what is now used at the plants next to the falls would be utilised. It is estimated that the dam would cost £20 000 000. The falls would be preserved for the present. Mr. Thomson says that if any further great volume of water is taken from the river—and Canada is now taking every drop she can get—there would be much greater danger of serious ice jams.

Noise and the Nervous System.—Professor Walker, of South Kensington has been conducting a series of experiments to determine if in the absence of any ordinary visible signs of emotion in a person electrical signs of emotive discharges can be detected by the galvanometer. It was found that large and sudden electrical responses which are independent of any muscular movement accompany a great many of the shocks and alarms of life. In the first series of experiments strong and disagreeable stimuli were used—*e.g.* an unexpected loud sound an unexpected burn (lighted match under hand) a disagreeable pungent smell a painful thought. While muscular movement might be absent marked electrical reactions occurred. In a Belgian woman who was told to think of her native land she had seen various episodes of the German occupation a very strong reaction followed. The most effective ideas were such as were accompanied by disagreeable or painful emotion. The threat of a burn was often more effective in altering electrical relations than the burn itself. Lighting a match might give a larger effect than the application of a match to the free hand. The apprehension of a bad smell which had just been experienced proved to the particularly effective. The expected prick of a needle produced in some cases more effect than an unexpected prick.

Oil Fuel Locomotive.—Oil is rapidly coming into its own in our industrial life. In May last the London and North Western Railway Company fitted the Watt locomotive for burning oil, and she has since been tried on passenger services of various kinds. The Scarab Oil Burning Company's system was the one installed. In the tender of the engine is a tank in place of the coal. The oil which is the residuum of petrol, is fed by pipes to the burner in the fire box by force of gravity. It is vaporised by steam as it falls from the feed pipe into a fan shaped receptacle. Not until it is thus vaporised is the oil inflammable. Given the requisite materials, a locomotive can be converted from coal to oil burning in four days. The advantages claimed for the Scarab system are that oil fuel is more easily handled than coal. The laborious task of stoking is eliminated. The engine emits neither smoke nor sparks, and as the combustion of oil is almost perfect there are no ashes or dirt to be removed after a run. A train which requires the provision of, say, 70lb. of coal per mile can be run on about 30lb. of oil.

Plant Asleep.—Sir Jagadis Bose, at University College, London, explained the cresco-graph, his own invention by which plants are made to record their life story. Plants, he said had a conducting tissue analogous to the nervous system of animals and an experiment with a mimosa showed how its leaves contracted when subjected to shock. A remarkable record was that obtained in investigating the problem of sleep in plants. A shock was applied every hour of the day and night and showed that from twelve to five o'clock the plant was wide awake at eight it was getting sleepy and it went fast asleep until nine a.m., after which there was a slow awakening the responses to shock becoming gradually longer after being absent while the plant slept soundly. Under chloroform he said the plant was at first excited and eventually died with a marked death tremor due to electrical discharge.

River Bank Protected.—An ingenious plan has been devised to protect the banks of the Missouri River against erosion. It consists of concrete pile jetties which check the current without diverting it or causing destructive eddies. They carry wire cables to which are attached trees and brush or frames faced with wire netting on the upstream side. The velocity of the current is so reduced that the material in suspension is deposited and a bar or shoal thus built up where erosion has occurred or is threatened. Some of this work has been done near Omaha.

Smell as a Method of Research.—Sir J. J. Thomson, in discussing various methods of studying the constitution of matter suggested that the sense of smell might be brought into use, for even a man who had nearly lost that sense could detect a minute proportion of ozone, equal to one in a million. He would like to see an experiment with hounds whose business it was to smell to ascertain the quality that they were able to detect.

Steel Making by Secret Process.—The *Morning Post* of February 17, 1920 contained a long article from its Paris correspondent stating that three days previously he had witnessed five experiments at a works in the city, each of which involved the production of a ton and a half of "high class steel." The novelty of the experiments consisted in the fact that the steels were made in some form of converter of the Bessemer type. Usually this process does not give a sufficiently scientific control of the product to enable high class steels to be made. In the experiments mentioned certain "secret substances" were added which had the effect of controlling the quality of the metal produced, so that it could be used as a basis for the

manufacture of high grade alloy steels The process is said to have been worked out by four inventors, two of whom are Belgians It was stated that they had decided not to patent their method, but to operate it as a secret process

Stone Age in Ceylon—Mr E J Weyland, late Assistant Mineral Surveyor to the Ceylon Government, has published an article on the Stone Age in Ceylon in which he states his belief that there is no evidence that the Veddas passed through a stone age phase in Ceylon They are assumed to be immigrants from the Indian peninsula and the Palæolithic age dates from a period long antecedent to their arrival in the island The Ceylon implements fall into two groups—that of the hills and that of the lowlands Pigmy flints are abundant and Mr Weyland believes that they were used mainly in boring bone needles The Chellean type is represented by the hand axe, the Mousterian by scrapers, and the Aurignacian by pointed implements with edge trimming

Stormy Petrel's Courtship — Mr Audrey Gordon gives an interesting account of the nesting habits of the stormy petrel in *British Birds* the result of observations taken during a stay on the Inner Hebrides He believes that certain weird noises uttered when on the wing during dark and stormy nights, or when the nights are misty, are part of the courtship performances of the males During this time the birds circle round the nesting area at a great speed While this is going on an incessant 'purring' can be heard from the female birds in the rocky crevices

Turbine Record Run—A world's record in the operation of a multiple element steam turbine of the cross compound type was established at the Naragansett Electric Lighting Works Providence Rhode Island The 45 000 kilowatt turbo generator ran continuously for 84 days 11 hours 36 minutes No special preparations were made for the run during which 51 104 000 kilowatt hours were generated, or considerably more than the whole output of the company for any year before 1915 This continuous operation was made possible to some extent by an 800 gallon self contained lubricating system

Vulcanising Rubber by the Cold Process—A new method of vulcanising rubber has been invented by Mr S J Peachey Lecturer in Chemistry at the Manchester College of Technology The present method of vulcanising is to heat together rubber and sulphur to a temperature of about 138 deg centigrade It has therefore not been easy to get combinations of rubber with raw materials that will stand so high a temperature Mr Peachey's method is one of cold vulcanising It makes use of the two gases sulphuretted hydrogen and sulphur dioxide which react on each other to produce water and free sulphur Mr Peachey has found that when crude rubber either in a solid form or in solution, is treated with these two gases the sulphur produced by their interaction vulcanises the rubber If the rubber be mixed with a waste material such as sawdust or leather scraps or paper, and the mixture is vulcanised, the resultant materials will serve a variety of useful purposes Under the old process the heat would have destroyed the properties of the leather, the sawdust or the paper The immediate purpose to which the new discovery is likely to be put are the manufacture of linoleum the heavier kinds of wallpapers, and artificial leather upholstery It will also be possible to make one piece boots without stitching

Water Divining—Mr A J Ellis contributes a report on the 'Divining Rod' to the publications of the United States Geological Survey He considers that for all practical purposes the "rod is thoroughly discredited and of no value whatever in locating either water or mineral ores Mr Ellis dismisses the claims of various mechanical "water finders as purely speculative and quite unsound in principle In the September number of *Discovery* however, the mystery of 'dowsing' was discussed at length by the editor who decided that the evidence was all in favour of certain individuals possessing powers of this sort

Water Power in Canada—Mr Leo G Dennis Hydro Electric Engineer of the Canadian Commission of Conservation, has reviewed in the *Engineer* the situation in regard to water power development in the Dominion In 1900 less than 200,000 h p was utilised, as compared with 2 383 240 h p now available, sub divided as follows —

	Horse power		Horse power
Ontario	1 000 000	Nova Scotia	30 000
Quebec	900 000	New Brunswick	17 000
British Columbia	10 000	Yukon	13,400
Manitoba	78 600	Prince Edward I	1 700
Alberta	32 500	Saskatchewan	40

Of a total of 525 000 h p installed for paper and pulp manufacture at least 475,000 h p is derived from hydraulic sources Canada's potential water power resources are placed at 18 832 000 h p sub divided as follows :

	Horse power		Horse power
Quebec	6 000 000	Saskatchewan	220 000
Ontario	5 800 000	Nova Scotia	100 000
British Columbia	3 000 000	Yukon	100 000
Manitoba	2 797 000	North West Territories	50 000
Alberta	462 000	Prince Edward I	3 000
New Brunswick	300 000		

Water Power in Tasmania—Two articles in the *Engineer* describes the hydro electric power works at the Great Lake Tasmania situated at a height of 3 350 ft above sea level From the southern end of the Lake the River Shannon finds an outlet some two miles west of the bed of the River Ouse and the two streams flow parallel for some distance But as the fall of the Ouse is much more rapid than that of the Shannon the former river at a point opposite the middle of the lake has an elevation of 120 ft above it but a few miles south the Ouse has fallen to more than 1 000 ft below the Shannon A short connection between the two rivers enables a very high head of water to be obtained The head waters of the Ouse will be diverted into the lake and by this means a total capacity of 70 000 h p will be available at the turbine shafts The dam across the southern end of the Great Lake which impounds the water to a height of 11 ft above the sill will be raised to give an effective height of 40 ft

Wettest Place in the World—According to the *Monthly Weather Review* of the United States Department of Agriculture the wettest place in the world is not, as has been supposed, Cherra punji in the Khasi Hills in India, with a mean annual rainfall of 426 ins That distinction belongs to some of the mountains in the Hawaiian Islands Thus on Mount Waialeale a peak 5,080 ft high there was recorded during the periods August 2, 1911 to March 26 1924 and May 31, 1915, to August 13 1917—a period of

1,782 days—a total precipitation of 2 325 ins , or an average of 1 3047 ins per day In a year of 365 days this would amount to 476 inches Other rainy places in the Hawaiian Islands are Puu Kukui, with a seven years average of 369 ins , and one on Hawaiian Island where the rainfall in 1914 amounted to 504 inches

Wireless Telegraphy and Telephony —Considerable progress in the use of wireless for private and commercial purposes was made during 1920 A practical demonstration of Marconi wireless telephony to and from a Handley Page aeroplane in flight over the Eastern Counties was made in May In June Dame Melba gave a concert at the Marconi Company's station at Chelmsford, and by means of the wireless telephone her songs were transmitted over a radius of 1 000 miles In August a business conversation was carried out between London and an Instone Vimy machine, crossing the Channel to Paris, by means of the ordinary telephone exchange combined with wireless telephony The Radio Corporation of America are building on Long Island the largest wireless station in the world by which an immediate message service will be established with France and Germany and ultimately with Buenos Ayres and other parts of South America

Wood Pulp Substitute —From successful experiments carried out at Para it appears that the fibres of a plant known as aninga which grows freely in the marshy districts of South America are likely to be of great value as a substitute for wood pulp The crops of aninga —one every year —are abundant and the treatment simple It is said that the quality of the cellulose is very good and that the yield of paper is 20 per cent greater than from Norwegian pulp One prominent Brazilian chemist asserts that the aninga fibre can be treated so as to give a product superior to cotton, inasmuch as the filaments of the latter under the microscope appear twisted, while the Brazilian fibres are quite straight It is estimated that at least 150,000 tons of aninga cellulose could be exported every year, the value of which would be comparable with that of the rubber now exported from Para

World's Largest Wooden Dry Dock —The largest wooden sectional dry dock in the world has been constructed by the Morse Dry Dock and Repair Company of Brooklyn It is built in sections, each complete with separate pumping plant, and in such a manner that a 15 000 ton vessel 475 feet long can be raised by three sections the whole of the six sections being able to accommodate vessels of 725 feet in length and 30 000 tons burden Its first great task was to raise the 630 foot steamer *Minnesota* clear of the water, which it did in twenty five minutes

X Ray Thumb Prints —Dr Pilon, of Paris, demonstrated a method of taking thumb prints by means of X rays, which was afterwards exhibited at the annual exhibition of the Royal Photographic Society in London These 'radio metallographs' as they are called of a thumb show the lines in the skin and also the shape of the nail and the angual phalange The method employed is to powder the ball of the finger with salt which is opaque to X rays then photograph it through and enlarge finger print experts at Scotland Yard attach considerable importance to the invention

The Nobel Prizes.

THE Nobel Prizes are awarded from the income of a fund bequeathed to trustees for distribution to those who have contributed most largely to the common good and is divided into five shares, which are devoted to workers in the domains of (*a*) Physics (*b*) Chemistry, (*c*) Medicine or Physiology (*d*) Literature, and (*e*) the Preservation of Peace The testator was the Swedish scientist Alfred Nobel the inventor of dynamite who died December 10 1896 leaving a fortune of about £1 750 000 The first awards were distributed on the fifth anniversary of Nobel's death, Dec 10 1901 The awarding authorities are the Swedish Academy of Science —(*a*) Physics, (*b*) Chemistry the Stockholm Faculty of Medicine—(*c*) Medicine or Physiology the Swedish Academy of Literature—(*d*) Literature and a committee of five persons elected by the Norwegian Storthing—(*e*) Peace The fund is managed by a Board of Directors elected by fifteen deputies appointed by the authorities above named The Swedish Government appoints a President of the Board of Directors Particulars concerning conditions &c can be obtained from Nobelstiftelsens Styrelse Norrlandsgatan 6, Stockholm Sweden

LIST OF AWARDS (Value about £7 500 each)

DUKE OF YORK'S —*Nov* 11, 1919 *Le Bourgeois Gentilhomme*, Molière's comedy (Messieurs Gaston Ougier and Saint Vallon, and Mesdames Edmée Dormeuil and Georgette Debray) *Nov* 25 *Le Malade Imaginaire* (M Gaston Ougier and Mdlle Edmée Dormeuil) *Dec* 11 *Arms and the Man*, Bernard Shaw's play revived (Messrs Robert Loraine, Gerald Lawrence, Arthur Whitby, and M R Morand and Mesdames Stella Mervyn Campbell, Dorothy Holmes Gore, and Beverly Sitgreaves) *Dec.* 26. *Perruchon* (Messieurs Gaston Ougier, André Randall and George

de Warfaz, and Mesdames Rambert and Georgette Debray). *Jan* 6, 1920 *Les Plaideurs* (Messieurs André Randall, George Desplas, and Roger Treville, and Mesdames Georgette Debray and Rambert) *Feb* 16 *Kitty Breaks Loose*, a fantastical comedy by Kingston Stack (Messrs Arthur Whitby, Eric Cowley Leslie Howard and O D Roberts, and Mesdames Helen Haye Mary Peter and Ethel Newman) *April* 13 *The Government Inspector*, Gogol's comedy translated by T H Hall (Messrs Maurice Moscovitch, Claude Rains, and Leyton Cancellor, and Mesdames Mary Grey and Jane Amstel) *June* 3 *Madame Sand*, by Philip Moeller (Messrs Basil Rathbone, Hubert Harben, Frank Cellier, and Edgar Kent, and Mesdames Patrick Campbell and Haidée Wright) *July* 7 *Brown Sugar* a comedy by the late Lady (Arthur) Lever (Messrs Eric Lewis, Martyn Roland, and Herbert Marshall, and Mesdames Edna Best Henrietta Watson and Margaret Halstan) *Oct* 13 *Priscilla and the Profligate*, a comedy by Laura Wildig (Messrs Frank Denton, A G Poulton and Cyril Raymond, and Mesdames Iris Hoey and Madeline Seymour)

EMPIRE —*Dec* 26, 1919 *The Red Mill*, a musical comedy by Henry Blossom, with music by Victor Herbert (Messrs John Luxton, Ray Kay, and Little Tich, and Mesdames Amy Augarde, Ivy Tresmand, and Gladys Simmonds). *Feb* 28, 1920 *Sunshine of the World*, operetta by Gladys Unger and K K Ardaschir, music by M Cuvillier (Messrs Randle Ayrton, Martin Iredale, and Alfred Clark and Miss Clara Simons) *April* 7 *Irene*, a musical comedy by James Montgomery, with music by Harry Tierney (Messrs Robert Michaelis Robert Hale, and Pat Somerset, and Mesdames Edith Day Margaret Campbell, Winnie Collins, and Daisy Hancox)

GAIETY —*March* 25, 1920 *The Shop Girl* revived and brought up to date by Arthur Wimperis and Herman Darewski (Messrs Robert Nainby, Alfred Lester, Thorpe Bates and Roy Royston, and Mesdames Evelyn Laye, Gladys Homfrey, Kathleen Hilliard, and Nancie Lovat)

GARRICK —*Nov* 12 1919 *The Eclipse*, a musical farce by Fred Thompson and E Phillips Oppenheim with music by Herman Darewski and Melville Gideon, and lyrics by Adrian Ross (Messrs Alfred Lester Morris Harvey, Farren Soutar and Arthur Hatherton, and Mesdames Teddie Gerard Dorothy Monkman and Dorothy Hanson) *May* 3 1920 *One Night in Rome*, a comedy by J Hartley Manners (Messrs Arthur Wontner, Henry Vibart, and Barry Baxter, and Mesdames Laurette Taylor and Lynn Fontanne) *Sept* 3 *The Dancing Man*, a farce from the French of P Armont and Jacques Bousquet (Messrs. Jack Buchanan, Reginald Bach, Ben Field, and Ronald Squire, and Mesdames Viola Tree and Auriol Lee) *Sept* 28 *The Right to Strike*, a "play of to day,' by Ernest Hutchinson (Messrs Holman Clark Lauderdale Maitland Bassett Roe, Charles Lamyon, Leon M Lion, and Olaf Hytten and Mesdames Marjorie Day and Lilian Christine)

GLOBE —*April* 9, 1920 *Birds of a Feather* a comedy by H V Esmond (Messrs H V Esmond, J R. Tozer and James Dale, and Mesdames Marie Lohr, Rachel de Solla, and Dorothy Holmes Gore) *May* 18 *A Marriage of Convenience* Sydney Grundy's adaptation revived (Messrs. Dawson Milward, E Vivian Reynolds, Leslie Faber, and Lauri de Frece, and Mesdames Marie Löhr and Kathleen Gordon Lee). *July* 15. *French Leave*, a "war anecdote,' by Reginald Berkeley (Messrs M R Morand, Charles Groves, Hylton Allen, and Henry Kendall and Miss Renée Kelly) *Sept* 28 *Every Woman's Privilege* a comedy by J Hastings Turner (Messrs C M Hallard, Basil Rathbone, and Herbert Ross and Mesdames Marie Lohr Helen Rous and Vane Featherston). *Oct* 30 *Fedora*, Sardou's tragedy revived (Messrs Basil Rathbone Allan Aynesworth Henry Vibart, and William Stack and Mesdames Marie Lohr and Ellis Jeffreys)

HAYMARKET —*Feb* 3 1920 *Tea for Three*, a comedy by Roi Cooper Megrue (Messrs Stanley Logan and A E Matthews, and Miss Fay Compton) *April* 22 *Mary Rose*, a play by Sir James Barrie (Messrs Robert Loraine, Norman Forbes, Ernest Thesiger, and Arthur Whitby, and Mesdames Fay Compton, Mary Jerrold, and Jean Cadell)

HIPPODROME —*June* 16, 1920 *Jig Saw*, a revue by Albert de Courville Wal Pink and Edgar Wallace with music by Frederick Chappelle and Edward A Horan (Messrs Stanley Lupino, Laddie Cliff, Fred Allendale and William and Gordon Dooley and Mesdames Winnie Melville, Nancy Gibbs, and Daphne Pollard, and the Dolly Sisters)

HOLBORN EMPIRE —*March* 15, 1920 *Tom Trouble*, a "North Country comedy by John Burley (Messrs Nicholas Hannen and Lewis Casson, and Mesdames Sybil Thorndike and Clare Greet) *April* 19 *The Showroom*, a comedy by Lady Bell (Messrs Nicholas Hannen and Jack Anderson and Mesdames Sybil Thorndike and Helen Ferrers)

KINGSWAY —*Dec* 31, 1919 *In the Night*, problem play by Cyril Harcourt (Messrs Reginald Owen, Alfred Drayton, and Leslie Faber, and Miss Jessie Winter *March* 16, 1920 *Sinners Both*, a drama by Herbert Thomas (Mr Herbert Thomas and Miss Frances Ivor) *April* 7 *First Love*, farcical comedy by J Leslie Sparkes (Messrs Thomas Brough, Leslie Sparkes, and Malcolm Moffat, and Mesdames Kate Yates and Phyllis Joyce) *May* 19 *Within the Law*, Bayard Veiller's play revived (Messrs Clarence Blakiston, Dennis Wyndham Kenneth Kent, and Harold Anstruther, and Mesdames Edyth Goodall and Marjorie Day) *Sept* 14 *The Daisy*, adapted by Osmond Shillingford and A L Ellis from F Molnar (Messrs Henry Caine and Dennis Wyndham, and Mesdames Suzanne Sheldon, Alice Mansfield, and Mary Merrall) *Oct* 29 *The Brute and the Fair*, a comedy by Cicely Hamilton (Messrs D A. Clarke Smith, St Barbe West, Frederick Irving, and Reginald Nugent, and Mesdames Doreen Whitten, Hilda Sims, and Margherita Yorke).

LITTLE —*Feb* 24, 1920 *Mumsee*, a war play by Edward Knoblock (Messrs Dawson Milward, Arthur Pusey, and H O Nicholson, and Mesdames Eva Moore and Dorothy Lane) *April* 6 *Other Times*, a comedy by Harold Brighouse (Messrs Dawson Milward, Hubert Harben, H O Nicholson Cyril Raymond, and Arthur Pusey, and Mesdames Mary Merrall, Madge Stuart, Dorothy Fetley, and Mary Brough). *May* 6. *Husbands for All*, a farce by Gertrude Jennings (Messrs Campbell Gullan, Malcolm Cherry, and Sutton Vane, and Mesdames Dorothy Minto, Doris Lytton, and Edna Best) *Sept* 1 "Grand Guignol Season *How to be Happy, G H Q. Love, The Hand of Death*, a drama by André de Lorde and Alfred Binet (Messrs George Bealby, Russell Thorndike and Lewis Casson, and Miss

Sybil Thorndike), and *Oh Hell!* a revue by Reginald Arkell and Russell Thorndike, with music by Albert Fox (Miss Sybil Thorndike) *Sept 27 What Did Her Husband Say?* a comedy by H F Maltby (Messrs Jack Barquhar and Fred Eastman, and Miss Dorothy Minto), and *The Medium* a drama (Miss Sybil Thorndike)

LYCEUM.—*Dec 24 1919 Dick Whittington* pantomime by Newman Maurice with music by H. Sullivan Brooke (Messrs George Bass Eddy Foy and Daley Cooper and Mesdames Mabel Lait Edith Drayson and Nan Hearne) *March 6 1920 Boy of My Heart* a melodrama by Walter Howard (Messrs Alec Fraser Leslie Carter and Bassett Roe and Mesdames Helen Temple Annie Saker, and Alice Bowes) *July 14 My Old Dutch*, by Albert Chevalier and Arthur Shirley (Messrs Albert Chevalier Charles Sawcett and Eric Lugg and Mesdames Alice Bowes and Daisy Maynard)

LYRIC.—*June 9 1920 East & West* a comedy by Samuel Shipman and John B Hymer (Messrs Frank Petley George Nash and Ronald Squire and Mesdames Iris Hoey and Helen Ross) *July 14 A White Man*, F M Boyle's romance revived (Messrs Frank E Petley Herbert Leonard Peter Wiser Dhelincourt Odlum C E Cooke, and A G Poulton and Miss Rose Ralph) *Aug 24 On Our Selection* an Australian play by Steele Rudd (Messrs Bert Bailey Graham Pockett, and J Scott Leighton and Mesdames M Alcott (Messrs Leslie Faber Sydney Paxton and Antony Holles and Mesdames Katharine Cornell and Henrietta Watson) *Dec 18 Peter Pan*, Sir James Barrie's phantasy revived (Messrs Philip Easton Allan Jeayes G W Anson, and Charles Trevor and Mesdames Georgette Cohan, Renée Mayer and Phyllis Joyce) *Jan 5, 1920 Mr Pim Passes By* comedy by A A Milne (Messrs Dion Boucicault Ben Webster, and Leslie Howard, and Mesdames Irene Vanbrugh, Ethel Griffies and Georgette Cohan) *Feb 5 Carnival* adapted from Italian by H C M Hardinge and Matheson Lang (Messrs Matheson Lang Dennis Neilson Terry, and H R Hignett and Miss Hilda Bayley) *Feb 11 Othello* (Messrs Matheson Lang H R Hignett Arthur Bouchier and Murray Carlington, and Mesdames Hilda Bayley Hutin Britton and Betty Belloc) *July 21 I'll Leave it to You* a light comedy by Noel Coward (Messrs Holman Clark, Douglas Jefferies and Noel Coward and Mesdame Kate Cutler Stella Jesse Muriel Pope and Esmé Wynne) *Sept 9 The Wandering Jew* a drama by E Temple Thurston (Mr Matheson Lang and Mesdames Hutin Britton, Lillah McCarthy, Ethel Carrington and Dorothy Holmes Gore)

OXFORD.—*March 1 1920.—The Better Ole* revived (Messrs Martin Adeson and Tom Woottwell). *April 8 The Man who Came Back*, a drama by Jules Eckert Goodman from the story by John Fleming Wilson (Messrs George Relph, Henry Wenman, and Allan Atwell, and Mesdames Mary Nash and Lilian Braithwaite)

PALACE.—*Dec 23 1919 The Whirling*, a revue by Albert de Courville, Wal Pink and Edgar Wallace, with music by Frederick Chappelle (Messrs Morris Harvey, Jack Morrison, Charles Withers and Don Barclay, and Mesdames Maisie Gay, Dorma Leigh, Emma Trentini, and Wanda Lyon).

PAVILION.—*Sept 4 1920 London, Paris and New York*, a revue by Arthur Wimperis and Herman Darewski (Messrs Nelson Keys, Arthur Roberts Charles Stone, Hugh Wakefield Robert Quinault and Albert Bruno, and Mesdames Nellie Taylor Georgia O'Ramey, and Laura de Santelmo and Maurice and Leonora Hughes)

PLAYHOUSE.—*April 3 1920 My Lady's Dress* Edward Knoblock's play revived (Messrs Malcolm Cherry and John Fresahar and Mesdames Gladys Cooper Ethel Coleridge and Joan Vivian Rees) *Aug 31 Wedding Bells* a comedy by Salisbury Field (Messrs Owen Nares Will West George Carr and John Deverell and Mesdames Gladys Cooper and Edith Evans)

PRINCE'S *Nov 3 1919 The Mikado* by Gilbert and Sullivan revived (Messrs Henry A Lytton Frederick Hobbs Derek Oldham and Leo Sheffield and Mesdames Nellie Briercliffe, Bertha Lewis and Helen Gilliland) *Nov 24 Patience* revived (Messrs Lytton and Sheffield, and Mesdames Nellie Briercliffe Sylvia Cecil and Bertha Lewis *Dec 1 The Yeomen of the Guard* revived (Messrs Lytton Sheffield and Oldham and Mesdames Elsie Griffin Cecil Nellie Briercliffe and Bertha Lewis) *Dec 30 Princess Ida* revived (Messrs Lytton Oldham Sheffield James Hay and Gordon Cleather and Mesdames Cecil Lewis Briercliffe and Marion Bignal) *Jan 6 1920 Trial by Jury* and *The Pirates of Penzance* revived (Messrs Sheffield Lytton Arthur Lucas Sydney Granville, James Hay Hobbs and Cleather, and Mesdames Lewis, Griffin Briercliffe Cecil and Catherine Ferguson) *Jan 13 The Sorcerer*, revived (Messrs Lytton Sheffield Oldham and Cleather and Mesdames Lewis Gilliland and Anna Bethell) *Jan 20 H M S Pinafore* (Messrs Lytton Sheffield and James Hay and Mesdames Lewis and Griffin) *Feb 17 Pretty Peggy* a musical comedy (Messrs Austin Wilfred Seagram and R Heaton Grey and Mesdames Lorna and Toots Pounds)

PRINCE OF WALES.—*Feb 10 1920 The Young Person in Pink*, a comedy by Gertrude Jennings (Messrs Reginald Bach and Leslie Howard Lady Tree and Mesdames Sydney Fairbrother, Mary Brough Mabel Terry Lewis, Helen Haye, and Joyce Carey) *Aug 28 The Blue Lagoon*, adapted by Norman MacOwan and Charlton Mann from H de Vere Stacpoole's novel (Messrs Harold French, Edward Rigby, Allan Jeayes and Roy Byford and Mesdames Faith Celli and Madeline Robinson)

QUEEN'S.—*Jan 30 1920 Mr Todd's Experiment* a comedy by Walter Hackett (Messrs Owen Nares Fred Kerr, and E Holman Clark, and Mesdames Marion Lorne Doris Lloyd, Marie Polini and Meggie Albanesi) *March 30 The Fold* a comedy by Lady Townshend (Messrs Sydney Paxton Godfrey Tearle, and Holman Clark, and Mesdames Hilda Trevelyan and A B Tapping) *Sept 15 A Pair of Sixes*, a farce by Edward Peple (Messrs Percy Hutchison and Sam Livesey and Mesdames Pollie Emery, Jessie Winter and Elsie Stranack)

ROYAL OPERA HOUSE.—*Nov 3 1919* Season of Grand Opera in English opened with Verdi's *Othello* (Messrs Frank Mullings, George Milner, and Webster Millar and Mesdames Jeanne Brola and Edith Clegg) *Nov 17 Parsifal*, first performance in English (Messrs Frank Mullings, Norman Allin, Foster Richardson and Herbert Langley, and Miss Gladys Ancrum). *Dec 26 Hamlet* (Messrs Martin Harvey, Fred Ross, H O Nicholson, and James Dale, and Mesdames

N de Silva and Miriam Lewes) *Jan* 22 1920 *The Only Way*, revived (Messrs Martin Harvey, William Stack, James Dale and Fred Grove, and Mesdames N de Silva and Marie Hemingway). *Feb* 24 Season of Grand Opera in English inaugurated with *Parsifal* (Messrs Edmund Burke Norman Allin, Herbert Langley and Walter Hyde and Miss Gladys Ancrum) *Feb* 25 *The Fair Maid of Perth* (Messrs Webster Millar and Walter Hyde, and Mesdames Sylvia Nelis and Edith Clegg) *May* 10 Season of Grand Opera inaugurated with *La Bohème* (Messrs Thomas Burke Herbert Langley Edouard Cotreuil and Ernesto Badini, and Mesdames Maria Kousnezova and Madeleine Collins)

ROYALTY —*Dec* 16 1919 *Charley's Aunt* revived (Messrs William Kershaw James F Page and Sydney Compton and Mesdames Ada Kerrar Kathleen Grace Betty Williamson and Agatha Kentish). *Jan* 31 1920 *The Admirable Crichton* Sir James Barrie's play revised and revived (Messrs Dennis Eadie Alfred Bishop and John Astley Lady Tree and Mesdames Iulia James Ann Desmond and Sylvia Oakley) *June* 8 *My Lady's Dress*, Edward Knoblock's play revived (Messrs Dennis Eadie and John Prescahar and Mesdames Gladys Cooper and Joan Vivian Rees) *Sept* 16 *The Romantic Young Lady*, a comedy by G Martinez Sierra English version by Helen and Harley Granville Barker (Messrs Dennis Eadie and Harry Fullpiss and Mesdames Joyce Carey, Barbara Gott, and Mary Rorke)

ST JAMES'S *Jan* 9 1920 *Julius Cæsar* (Messrs Henry Ainley Basil Gill and Milton Rosmer and Mesdames Lilian Braithwaite and Esmé Beringer) *March* 27 *Uncle Ned* a comedy by Douglas Murray (Messrs Henry Ainley Randle Ayrton, G W Anson, and Claude Rains and Mesdames Irene Rooke and Edna Best). *May* 26 *The Mystery of the Yellow Room* adapted by Hannaford Bennett from a story by Gaston Leroux (Messrs Franklin Dyall Nicholas Hannen and Arthur Pusey and Mesdames Sybil Thorndike and Daisy Markham) *July* 13 *Daughters of Eve* a comedy by Rita (Messrs H A Saintsbury J H Twyford and H Halladay Hope and Mesdames Kathleen Saintsbury Rena Davise and Constance Robertson) *Aug* 17 *His Lady Friends*, a comedy by Emile Nyitray and Frank Mandel (Messrs Charles Hawtrey and James Carew and Mesdames Jessie Bateman Athene Seyler and Madeline Seymour)

ST MARTIN'S —*Dec* 1 1919 *A Dear Little Lady* a comedy by Cecil Whitehead (Messrs Fred Kerr, Paul Arthur Alex Scott Gatty and Reginald Bach and Mesdames Peggy Primrose and Muriel Pope) *Dec* 22 *Once Upon a Time* a fairy play by Laura Wildig (Messrs William Stack Dennis Wyndham Tripp Edgar and Bewlass Llewellyn and Mesdames Betty Bair, Dorothy Fane Elsie Stafford, and Margaret Scudamore) *Jan* 21 1920 *Pompey the Great*, a drama by John Masefield (Sir Frank Benson, Messrs Henry Twyford Harold Neilson and A S Cookson and Mesdames Constance Robertson and Esmé Biddle) *Feb* 2 *Hamlet*, revived (Sir Frank Benson, Messrs S A Cookson, Matthew Boulton, Harvey Adams, and F G Bailey, and Mesdames Constance Robertson and Esmé Biddle). *Feb* 11 *Just Like Judy* a light comedy by Ernest Denny (Messrs Donald Calthrop and Leslie Vernon, and Mesdames Iris Hoey, Mary Merrall, and Joan Vivian Rees) *Feb* 27 *Over Sunday*, a farce by William Hurlbut (Messrs Clive Brook and J H Roberts and Mesdames Iris Hoey and Helen Ferrers). *April* 21 *The Skin Game*, a play by John Galsworthy (Messrs Edmund Gwenn, Athole Stewart and George Elton and Mesdames Helen Haye, Mary Clare and Meggie Albanesi)

SAVOY —*Feb* 6 1920 *Peter Ibbetson*, dramatic version of George du Maurier's novel by J N Raphael (Messrs Basil Rathbone Gilbert Hare, William Burchill and Leonard Calvert, and Mesdames Constance Collier and Jessie Bateman) *April* 5 *Paddy the Next Best Thing*, a comedy adapted from Gertrude Page's novel by W Gayer MacKay and Robert Ord (Messrs J H Barnes Ion Swinley, and Clive Currie, and Mesdames Peggy O Neil and Betty Fair)

SCALA —*Oct* 17 1919 *Othello* (Messrs F J Nettlefold H A Saintsbury, and Henry Bedford, and Mesdames Nettlefold Ethel Griffies and Florence Leclercq) *Dec* 20 *Fifinella*, a musical fantasy by Barry Jackson and Basil Dean with music by Norman Hayes and Harold Samuel (Messrs Roy Roston Alfred Heather, George Elton and and Roy Byford and Mesdames Primrose Morgan, Vera Lennox Minnie Rayner and Edna Maude) *Jan* 26 1920 *When Knights were Bold* revived (Messrs Bromley Challenor Colin Johnston and John R Allan and Miss Marjorie Bellairs). *March* 24 *Society Limited* a musical play by Arthur Branscombe with music by Arthur Carrington (Messrs Arthur Roberts Bromley Challenor, Hugh Buckler Aubrey Fitzgerald and Wheeler and Hayes and Miss Marie Dainton) *May* 27 *The Yellow Cockade* a drama by Bromley Challenor and Wilfrid Stephens (Messrs Arthur Stratton J Forbes Knowles and Norman Partredge and Miss Dorothy Hanson)

SHAFTESBURY —*April* 20 1920 *The Little Whopper* a musical comedy by O Harbach and B Dudley with music by Rudolph Friml (Messrs Davy Burnaby and Eric Lewis and Mesdames Lily St John and Lena Halliday) *June* 22 *Oh! Julie* a musical comedy by F Firth Shephard and Lee Banson, with music by H Sullivan Brooke and Herman Darewski (Messrs Harvey Welchman, Fred Leslie, Davy Burnaby and Morris Harvey and Mesdames Ethel Levey Nellie Briercliffe Gladys Ffolliott, and Mai Bacon) *Oct* 2 *The Great Lover*, a romantic comedy by Leo Ditrichstein and Frederick and Fanny Hatton (Messrs Maurice Moscovitch A E George Morgan Selten, Frank Randall and William Ricciardi and Mesdames Virginia Fox Brooks and Ruth MacKay)

STRAND —*Nov* 29 1919 *The Crimson Alibi*, a detective play by George Broadhurst founded on the novel by Octavius Roy Cohen (Messrs A F George Herbert Bunston, Robert Maclachlan James Lindsay and Louis Hector, and Mesdames Kyrle Bellew, Mary Robson, and Florence Wood) *March* 15, 1920. *Come Out of the Kitchen* a comedy by A E Thomas from the story by Alice Duer Miller (Messrs Frank Denton Frederic Worlock, and H Athol Forde, and Mesdames Gertrude Elliott Barbara Gott, and Molly Hamley Clifford) *June* 2 *Tiger! Tiger!* a play by Edward Knoblock (Messrs Leon Quartermaine Allan Jeayes, Gilbert Hare, and Herbert Ross and Mesdames Kyrle Bellew and Stella Mervyn Campbell) *July* 10. *At the Villa Rose*, detective play by A E W Mason (Messrs Arthur Bourchier, Harcourt Williams, and Norman Page, and Mesdames Kyrle Bellew,

Hutin Britton, and Miriam Lewes). *Oct* 4. *King Henry the Fifth* revived. (Messrs. Murray Carrington, George Cooke, Stanley Lathbury, James Dale, Chris Walker, and Baliol Holloway, and Mesdames A. B Tapping and Ethel Warwick).

VAUDEVILLE.—*March* 26, 1920. *Just Fancy*, a revue by Arthur Wimperis and Herman Darewski (Messrs. Walter Williams and Ralph Lynn, and Mesdames Margaret Bannerman, Ivy Tresmand, and Betty Chester).

VICTORIA PALACE.—*Dec.* 20, 1919. *Where the Rainbow Ends*, children's play revived (Messrs. Edward Cooper, Clifton Anderson, and George de Warfaz, and Mesdames Stella Bonheur, Sunday Wilshin and Eileen Orton).

WINTER GARDEN.—*Nov.* 14, 1919. *Sakuntala*, Kalidasa's Indian drama, translated by Laurence Binyon (Messrs. Arthur Wontner, Caleb Porter, Bruce Winston and Gordon Bailey, and Mesdames Sybil Thorndike and Colette O'Neil). *Sept.* 28, 1920. *A Night Out*, a musical play, adapted by George Grossmith and Arthur Miller from the French comedy, with music by Willie Redstone and lyrics by Clifford Grey (Messrs. Leslie Henson, Fred Leslie, Austin Melford, and Davy Burnaby, and Mesdames Phyllis Monkman, Lily St. John, and Elsa Macfarlane).

WYNDHAM'S.—*June* 15, 1920. *Daddalums*, a comedy, by Louis Anspacher (Messrs. Louis Calvert, Ernest Hendrie, and Francis Lister, and Mesdames Edyth Olive and Agnes Thomas). *Sept.* 1. *The Prude's Fall*, a play, by Rudolf Besier and May Edginton (Messrs. Gerald du Maurier, Gilbert Hare, and Franklin Dyall, and Mesdames Nina Boucicault, Emily Brooke, and Lilian Braithwaite).

THE STAGE AND PHŒNIX SOCIETIES produced the following:—*Nov.* 24, 1919, at the Lyric, Hammersmith, *The Duchess of Malfi*, by John Webster (Messrs. Robert Farquharson, William Rea, Ion Swinley, and Nicholas Hannen, and Miss Cathleen Nesbitt); *Dec.* 15, at the Court, *The Reprobate*, by Henry James (Messrs. Nicholas Hannen, Brember Wills, Ben Field, and Herbert Bunston, and Mesdames Athene Seyler, Meggie Albanesi and Suzanne Sheldon); *Jan.* 19, 1920, at the Shaftesbury, *Joan of Memories* and *There Remains a Gesture*, by Willson Disher (Messrs. William Armstrong, Nicholas Hannen, Leon M. Lion, and Brember Wells, and Mesdames Joan Vivian Rees and Rambert); *March* 29, *From Morn to Midnight*, by Georg Kaiser, translated by Ashley Dukes (Messrs. Brember Wills and V. Tarver Penna, and Mesdames Rhoda Symons and Edith Evans); *April* 12, at the Lyric, Hammersmith, *The Fair Maid of the West*, Thomas Heywood's comedy (Messrs. Murray Kinnell, Baliol Holloway, and Herbert Bunston, and Miss Violet Graham); *June* 14, at the Lyric, Hammersmith, *The Steamship Tenacity*, by Charles Vildrac, translated by Harold Bowen (Messrs. J. H. Roberts, Basil Sydney, and Franklin Dyall, and Mesdames Florence Buckton and Nell Carter).

RESEARCH ASSOCIATIONS.

RESEARCH Associations are voluntary associations of British manufacturers for the systematic application of scientific research to problems in industry. In constitution they are non-profit-sharing companies limited by the guarantee of a nominal sum. Firms in an industry which are engaged in the production of similar articles, or less frequently firms in different industries which make use of the same or similar raw or semi-manufactured materials, combine in this way to improve these articles or materials, or discover new processes or to increase the efficiency of existing processes for the benefit of all British firms in the industry contributing to the common fund on an agreed scale.

To associations approved by the Department of Scientific and Industrial Research, the Government offer support by means of grants from a fund of a million sterling which has been placed at the disposal of the Department of Scientific and Industrial Research (*see* page 260).

British Boot, Shoe and Allied Trades, Technical School, Abington Square, Northampton; *Sec.*, John Blakeman, M.A., M.Sc.

British Cocoa, Chocolate, Sugar, Confectionery, and Jam, 9 Queen Street Place, E.C. 4; *Sec.*, R. M. Leonard.

British Cotton, Shirley Institute, Didsbury, Manchester; *Sec.*, Miss B. Thomas.

British Cutlery, P.O. Box 49, Sheffield: *Sec.*, J. M. Denton.

British Electrical and Allied Trades, 19 Tothill Street, Westminster, S.W. 1; *Sec.*, E. B. Wedmore.

British Empire Sugar, care of British Empire Producers Organisation, 3–5 Old Queen Street, S.W. 1; *Acting Hon. Sec.*, Mr. H. T. Pooley.

British Iron Manufacturers, Atlantic Chambers, Brazennose Street, Manchester; *Sec.*, H. S. Knowles.

British Launderers', 62–5 Bank Chambers, 329 High Holborn, W.C. 2; *Sec.*, J. J. Stark.

British Leather Trades, 26 Thomas Street, S.E. 1; *Sec.* Miss M. A. Stevens.

British Linen Industry, "Glenmore House," Lambeg, Belfast; *Sec.*, Miss M. Burton.

British Motor and Allied Manufacturers, 39 St. James Street, S.W. 1; *Technical Sec*, H. S. Rowell, O.B.E., A.R.C.Sc., Wh.Sch.

British Motor Cycle and Cycle Car, The Towers, Warwick Road, Coventry; *Sec.*, H. R. Watling.

British Non-Ferrous Metals, 29 Paradise Street, Birmingham; *Sec.*, E. A. Smith, A.R.S.M.

British Photographic, Sicilian House, Southampton Row, W.C. 2; *Sec.* Arthur C. Brookes.

British Portland Cement, 6 Lloyd's Avenue, E.C.; *Sec.*, S. G. S. Panisset, A.C.G.I., F.C.S.

British Refractories, 14 Great George Street, S.W. 1; *Sec.*, R. C. Rann.

British Rubber and Tyre Manufacturers, care of Messrs. W. B. Peat and Co., 11 Ironmonger Lane, E.C. 2.

British Silk, The Silk Assocn. of Great Britain and Ireland, Incor., Kingsway House, W.C.; *Sec.*, A. B. Ball.

British Scientific Instrument, 26 Russell Square, W.C. 1; *Sec.*, J.W. Williamson, B.Sc.

British Woollen and Worsted Industry, "Torridon," Headingley Lane, Leeds; *Sec.*, Arnold Frobisher, B.Sc.

Glass Research, 50 Bedford Square, W.C. 2; *Sec.*, E. Quine, B.Sc.

Scottish Shale Oil, Scientific and Industrial, 135 Buchanan Street, Glasgow; *Sec.*, H. R. J. Conacher.

PRE-WAR conditions having, more or less, obtained during the past year, music in England has come into its own. Opera, headed by the Covent Garden Season, has been well supported, both in London and in the Provinces; festivals have taken place; and concerts, several of which were of some note, made life agreeable for musical amateurs. English composers, if still pining for recognition, were afforded opportunities of showing their quality, and amongst the performers from other countries were a dozen or so whose better acquaintance is desired.

Covent Garden.—The Royal Opera, unfortunately, was not the Royal Opera of half-a-dozen years ago. The special *cachet*, to which singers of the first rank contributed, was lacking; and the audience and its strange get-up seemed out of place, the stalls often suggesting the *négligé* of the home rather than a Covent Garden *tenue*. Signor Badini, a baritone, certainly was an acquisition to the Company, and Mr. Joseph Hislop, a tenor who had sung in Stockholm, enjoyed a well-merited success. M. Dinh Gilly, who made his reputation during former seasons, was as welcome as of old, his fine expressive voice and intelligent acting creating as good an impression as ever; and Miss Mignon Nevada, whose fresh, flexible voice, and complete understanding of the *rôles* she interprets are so valuable an asset to the lyric stage, was heard to considerable advantage. But it must be confessed that the important name-part in "Orphée" was none too happily cast, and that the hard, thin voices of the new sopranos scarcely justified their engagement. Mistakes such as these are inexcusable.

The *répertoire* was very much on the old lines, since novelties, alas, seldom pay for their production. The management, however, produced three short operas by Puccini: "Il Tabarro," "Suor Angelica," and "Gianni Schichi." "Suor Angelica" failed to arouse enthusiasm, but the other two, happily, were well received. Donizetti's entertaining "Don Pasquale" was revived; and though the score contains much that one would like to hear again, the opera did not prove to be a successful venture, only being accorded one solitary performance. Perhaps sufficient exponents of the art of *il bel canto* could not be found to make a success of the revival. The majority of those who formed the cast certainly did not do full justice to the engaging strains.

Other Operatic Ventures.—A remunerative season was given by the Carl Rosa Company at the Lyceum, during which a version of Dante and Beatrice was produced. The new work, however, did not suggest that its composer is destined to illuminate the operatic stage. Luckily, the *troupe* had its long list of established favourites upon which to fall back, and these drew large and appreciative audiences. The Directorate, which has no fewer than four companies "on the road," has acquired the old Turner's Opera Company, thus reducing competition. The Fairbairn-Milne Company also had a successful London season, at the Surrey Theatre. Like the Carl Rosa, it relied for support upon the standing dishes of the past. A novelty, "The Tempest," by Mr. Nicholas Gatty, gained much approbation for its clever orchestration. Indeed, Mr. Gatty seems to possess a born sense of orchestral possibilities, for he arrives at his effects without having recourse to the bizarre, and, at the same time, he avoids the obvious, which generally is another name for the banal. The Company also was fortunate in having the co-operation of Mr. Fairbairn, whose ideas upon stage management, scenery, and costumes commend themselves to all who consider that tradition should be tempered with discretion.

Mention may be made of the O'Mara Opera Company, which, touring the provinces, gives performances of works suited to the needs of its supporters. In this respect, the management displays wisdom. If a public cannot be found for all that is best in opera it is well to give one's patrons exactly what they want. Failure to do so spells financial disaster.

During these various seasons there was considerable heart-burning amongst British composers of opera whose works were not accepted for production. Unfortunately for the aspirants, managers cannot afford to be philanthropists. For years past they occasionally have relaxed their sound business principles—at the expense of their pockets. Mr. Charles Manners, for example, during his super-active career as an *impresario*, offered prizes for home-made efforts, and produced them regardless of expense. And the result? They seldom survived the initial performance, while those critics who were in a position to judge of their merits found that the few pleasing pages in the score had—unhappily—already been introduced into less recent scores. Not for a moment was plagiarism intended; it was a case of two great minds having thought alike; and the greater of the two thought first.

Much the same thing happened to-day. The would-be British composer of opera is not sufficiently well acquainted with the music of his *confrères*, past and present, to be capable of checking what he has composed with what they have composed. Until the aspirant is better informed, his attempts at originality are, it is to be feared, doomed to failure.

The "Promenade" Concerts.—The "Promenades" at the Queen's Hall, as of old, have attracted music-lovers from the most distant parts of London; no suburb was too recondite to send its musical contingent nightly to Langham Place. In fact, many a City clerk, rather than miss some particular item in the programme, would dine in town, subsequently hieing him to the evening's "Prom." People living in the outlying townlets and villages used to "assist," the discomforts attendant upon facing a dreary journey home in the dead of night vanishing at the thought of the pleasure in which they had participated. The devotion and enthusiasm of these pilgrims, in short, knew no bounds. Students also attended in large numbers, for they wisely recognised that a capable singer and an impeccable solo instrumentalist provide the best of all object-lessons.

The programmes were much as in former years. One heard everything that had been heard before, and much that one would like to hear again—and again. The novelties, as usual, proved to be disappointing. Still, they were afforded every chance of "making good," for the admirable Queen's Hall Orchestra did full justice to them. The composers usually have mistaken musicianship for musical feeling—two totally different things. The music, which has survived the changes in taste and those innovations which are dear to the modern composer, has been founded on melody—pure and simple. That is why the God-given genius of the immortal Mozart remains an oasis in a

wilderness of perplexing, or, at the best, learned dullness

The most popular nights undoubtedly were those devoted to Wagner At the commencement of the season there was some discussion in circles which mix music with patriotism as to whether "Wagner nights should be supported The insufficient excuse that German compositions had no right to figure in an English programme was put forward by illogical persons and taken up by their adherents As, however no successor to the gorgeous 'Tannhäuser overture or to the various excerpts from the Ring could be found and as these indispensable component parts of a promenade concert were known to bring money to the box office common sense triumphed It may by the way be pointed out that Wagner, though a German of the Germans was very much again the Government with which he maintained a more or less life long feud Adoring his country, he could not tolerate many of its institutions

The singers as in former years seldom were of the first rank though the native born instrumentalists again proved to be all that one could have wished No country in fact produces better teachers of instrumental playing than does England The same however cannot be said of the people who profess to teach singing with a few notable exceptions they themselves are in need of instruction

Other Concerts—Among those who returned to the scenes of former triumphs was Madame Calvé incomparable as of old Although many moons have waxed and waned since she first was heard in England, time has dealt lightly with her voice, the quality of which scarcely is impaired, even if the upper notes are not what they were a few years ago The charm and fascination of her singing are as remarkable as ever while the singer's fine art remains That Madame Calvé's last recital should not have been better attended was regrettable since an artist of her calibre seldom appears in London Possibly the concert was badly managed, good management being indispensable to a good house

Madame d'Alvarez was heard upon many occasions and if this popular contralto did not always sing music worthy of her attainments she at least sang herself into the good graces of her hearers Miss Suggia, a very clever and accomplished cellist was extremely well received and Mr Heifetz, an American violinist, created a well deserved *furore*, recalling the acclamations which used to greet Kubelik Mention also may be made of the recitals given by Miss Gladwys Newberry, who appeared to considerable advantage Her well directed voice and interpretative ability did justice to some interesting songs by Ravel, Rhené Baton, Cyril Scott, and Poldowski, who was represented by his ever welcome "Mandoline' Countless recitals, too, were offered by performers whose equipment was inferior to their ambition, Indeed, it is to be feared that the majority of these ill advised beginners must have lost heavily over their unhappy ventures few of them even secured the 'good Press at which they aimed But so long as concert agents persuade unfledged students into tempting fate will these unsatisfactory recitals continue to be given

Other entertainments included innumerable ballad concerts which like their predecessors during the fleeting decades, and for obvious reasons do not call for criticism Engineered with a view to advertising 'all the latest songs they served their purpose The Queen's Hall Symphony and Saturday concerts were well attended, a clever and original orchestral piece by Miss Dorothy Howell a new comer to the ranks of composers being performed thereat It had a great success and was repeated upon several occasions

Festivals—The musical year has been remarkable for various festivals The Handel Festival took place at the Crystal Palace the chorus under Sir Frederic Cowen's experienced conductorship paying the necessary attention to those light and shade effects which were so necessary to good choral singing The Messiah and Israel in Egypt were performed and there was the customary Selection Day The attendance too was satisfactory the audience being drawn from all parts of the kingdom Gaston Jury also had its Festival when a setting of the Arthurian Legend was included in the programme and to the gratification of its hearers Worcester rose to the occasion with its three Choirs Festival and Mr Daniel Godfrey was indefatigable in his direction of Bournemouth's musical affairs

Other seaside towns, both large and small, maintained their reputation for competent orchestral playing In some instances a lack of strings was ingeniously made light of by utilising clarinets, and often with excellent effect At the same time it may be pointed out that vaunting ambition overleaped itself in the case of an enterprising bandmaster who attempted the Tannhäuser overture with a band which possessed no violins The effect of the famous descending chromatic scale passages can be better imagined than expressed However, his intentions were commendable

Winter Music—The winter brought back to London several foreign artists who had appeared with varying degrees of success during the spring and summer concert seasons The customary orchestral concerts took place being well patronised, and there was some activity in operatic circles The majority of the critics, as usual showed how dangerous a thing a little learning may be, their pronouncements often being more original than reliable

For the rest the musical year, all things considered, has been a satisfactory one

GEORGE CECIL.

WHITAKER'S PEERAGE,

Published in January, 1921,

will contain the New Year's Honours and (in addition to the Royal Family, Peerage, Privy Council, Baronetage and Knightage) a list of Companions of the various Orders of Knighthood, Commanders and Officers of the British Empire, Companions of the Distinguished Service Order, Members of the Royal Victorian Order, and Companions of the Imperial Service Order.

The Year's Weather (British Isles), 1919–1920.

NOVEMBER 1, 1919, TO OCTOBER 31, 1920

(1919) *November* was very cold with frequent hail and snow and many sunless days Fogs were rare and there was only one gale of a general character Ground frosts and hoar frosts were frequent and often severe The 11th–16th was a particularly cold period the minima at many places being the lowest November readings for at least 50 years In Scotland as a whole the mean temperature was the lowest on record for November The highest maximum reported was 63 at Kilmarnock on the 23rd the lowest minimum being – 10 at Braemar on the 14th In the English Channel the lowest reading was 31 at Jersey on the 28th Rainfall as a rule was less than usual in amount but the rainy days were more numerous In the Midland counties only 1 6 ins fell on 20 days Sunshine was in excess of normal in Scotland and Ireland but in defect in England The sunniest district was Ireland S with a daily average of 2¾ hours while the loudiest was the Midland Counties where with the smallest rainfall of any district the average daily sunshine was only 1¼ hours Solar halos were frequent The Zodiacal Light was seen at Oxford on three days and Aurora was seen in Scotland on four days The highest wind velocity reported was 72 miles per hour in a gust at Quilty on the 23rd

December was dull rainy and mild with frequent gales Temperature was above the average except in Scotland but the differences were nowhere large The highest of the maxima was 57° reported from several stations while the lowest reading was 11 on the 26th at Braemar Rainfall was normal in Scotland N but was more than usual in all other districts In some places the excess was very marked and at Rothesay the total for the month 11 10 ins was the greatest amount recorded in any month at that station over 120 years The number of rain days was high many stations reporting 28 or upwards Snow fell frequently in Scotland but only in a few places did it lie to any considerable extent Hail was fairly frequent and thunderstorms occurred on several days, the most widely spread storm being on the 4th Bright sunshine was in defect over Eastern England and the Channel Islands, but in excess elsewhere The sunniest station was Dublin, with a daily average of 2 10 hours At Manchester there were only seven hours bright sunshine throughout the month and at Hull only one hour The Zodiacal Light was seen in Jersey on the 19th and in Oxford on the 21st Aurora was observed in Scotland on various dates in Ireland on the 15th and at Oxford on the 30th

(1920) *January* was mild wet and windy There was cold weather during the earlier part of the month when temperatures fell to 14° in Scotland and to 16° in England, but later the weather became very mild and during the week ended the 17th the mean temperature was above the average in all parts and by as much as 8 5 at Wokingham Strong gales were reported on several occasions and on the 27th at Quilty on the West Coast of Ireland a gust of 110 miles per hour was recorded which is the highest on record in the British Islands The mean temperature of the month was above the normal in all districts except Scotland N and E but the excess nowhere exceeded 3 The highest reading recorded during the month was 63 at Colwyn Bay on the 17th while the lowest was 14° at Braemar on the 31d Rainfall was above the average in all districts the total fall in Scotland N being half as much again as usual At Fort William the total fall for the month was 15 8 ins on 30 days In spite of the excessive rainfall the amount of bright sunshine was on the whole in excess and in Jersey the mean daily amount was 2 65 hrs Solar or lunar halos were seen on 12 days and Aurora on 11 days Thunderstorms were reported on the 9th 11th and 31st the storm on the 31st being accompanied by heavy hail

February was mild and except in the north and north west dry Gales were rare the most notable being between the 9th and 11th The strongest gust however was recorded on the 1st at Paisley 74 miles per hour Temperature was above the normal in all districts and by as much as 3 6° in England N W The highest reading reported was 64° at East Ham on the 18th, while in Jersey the maximum for the month was only 59 The lowest reading was 18 at Garforth, near Leeds, on the 5th At Meltham, Yorks, the maximum, 62, was the highest reading recorded in February for at least 43 years Rainfall was

above the average in Scotland, England N W. and Ireland N, but was below elsewhere In Scotland N the total was almost double the average, while in the English Channel it was less than one fourth of the usual amount There were great differences in the amounts at individual stations Thus Aberdeen had a total of 1 62 ins, while at Kingussie in nearly the same latitude on the western coast, the amount was 19 11 ins. Sunshine varied from a daily average of 1 62 hrs in Scotland N to 3 28 hrs in the English Channel The sunniest stations were Jersey, with a mean of 3 90 hrs, and Ramsgate, 3 86 hrs The Zodiacal Light was observed on 7 days and there was a wide display of Aurora on the 24th

March was unusually mild with a marked absence of cold drying winds and but few gales Temperature was above the average in all districts, the excess ranging from 0 9° in Ireland S to 4 1° in England E The highest reading reported was 69° at Woking on the 20th while the lowest was 19° which was observed both at Leadhills (Lanark) and at Wokingham (Berks) on the 9th Rainfall was above the average in all districts except England E. and S E and the English Channel The general rainfall expressed as a percentage of the normal was :—England and Wales 150, Scotland, 137, Ireland, 129, and British Isles as a whole, 139 There was much snow during the first half of the month and in the Midlands on the 14th 15th snow lay to the depth of a foot Sunshine exceeded the average in England E, S E and the Midland counties but was normal in Scotland E, and was in defect in other districts The sunniest district was England E, with a daily average of 4 66 hours and the sunniest station was Felixstowe, with a daily mean of 5 45 hours Halos were not very numerous The Zodiacal Light was observed several times, and Aurora was seen over a wide area on the 22nd, accompanied by a magnetic storm.

April was dull, unsettled and wet, with but little strong wind The strongest force in a gust was 74 miles per hour which was reported on the 20th both at Falmouth and at Guilty Temperature was above the average in England, but was normal or below normal in Scotland and Ireland The differences from normal were, however, not large The highest reading reported was 66° at Woking on the 23rd and 24th, while the lowest reading was 22° at Eskdalemuir on the 8th In the English Channel the lowest reading was 40° Rainfall was above the average in all districts except Scotland N The excesses ranged up to 2·64 ins in the Midland counties in which district many stations reported amounts exceeding twice the average The large totals were due to the persistency of the rain rather than to exceptionally heavy falls, for there were only five stations at which falls of 1 in or upwards in 24 hours were reported. Sunshine was less than usual in all districts except Scotland N, and in the Midland counties the daily mean duration was only one-half the average At Buxton the daily mean was only 1 83 hours, while at Castlebay, in the Hebrides, it was as high as 5 77 hours Solar halos were seen on several days, but the Zodiacal Light, which is usually frequently observed in the spring, was reported on three occasions only Fogs were rare, and there were several thunderstorms

May was wet in the north and west, but warm and dry in the south east. At first the weather generally was cool, but after the 11th it was mild, and from the 20th for about a week it was very fine During the last days of the month it was cloudy, with thunderstorms and very heavy rains. There was a severe gale on the 3rd, when much damage was done in Leyland (Lancs) and in Dublin, the maximum gust velocity being 72 miles per hour at Southport at 6 a m Temperature was above the normal in all districts, the differences ranging up to 3 1° in England E The highest reading reported was 85° at Eye (Northants) on the 25th, while the lowest of the minima was 22° on the 1st at Bellingham (Northumberland) and at Eskdalemuir Temperatures below 32° were noted in all districts except Ireland S and the English Channel Rainfall was less than usual in England E and S E and the English Channel, but above in the other districts Some very heavy falls were noted, among them being 4½ ins in 3 hours at Elkington, near Louth Disastrous floods resulted and great damage was done in Louth and elsewhere Sunshine was in excess in the eastern districts, but in defect in other parts In England E the daily average of sunshine was 7 64 hrs, and the daily record at Yarmouth for the four days 22nd–25th exceeded 14 hrs per day Fogs were rare

June was notable for its many thunderstorms, its marked absence of strong winds, and its few hot days Till the 10th the weather was dry but cold, with severe ground frosts in places, and at nearly every station the lowest reading for the month occurred during this period Taking the month as a whole, the temperature was slightly above the average in all districts The highest reading reported was 82° at Raunds on the 17th, and the lowest was 27° at Braemar on the 5th Rainfall was deficient in Scotland, Ireland and England E and N E, but was in excess elsewhere Some heavy thunderstorm rains were reported Thus at Reading on the 17th, 1 02 ins fell in 45 minutes, while at York, on the 18th, 0 55 in fell in 10 minutes, followed half an hour later by 0 79 in in 20 minutes Sunshine was more than average in Scotland England N E and E, and in Ireland S, but was less than usual in other districts The mean daily duration varied from 5 50 hrs in Ireland N to 8 07 hrs in Scotland N The sunniest station was Inverness, with a daily mean of 8 47 hrs At Deerness, Orkney, the aggregate for the month was 233 hrs, the largest in June for 40 years At Baltasound, Shetland, on the 15th, the record for the day was 17 5 hrs Fog was experienced towards the end of the month A very fine solar halo was seen on the 17th, on which day nine men were injured by lightning at Helensburgh

July was dull, wet and cool, with but little strong wind and practically no gales The strongest wind reported was 54 miles per hour in a gust at Paisley on the 13th. Temperature was below normal in all districts, the defect being greatest, 2 3°, in England S W. The maximum reported was in many cases lower than in May or June, the highest reading being 79° at Yarmouth and at Geldeston on the 17th. On the other hand, the lowest readings were in most places higher than those in May or June, the lowest of all being 30° at Braemar on the 7th On the 5th at noon the reading at Benson (Oxon) was 15° lower than the reading at Seydisfjord, Iceland, at the same time. Rainfall was in

excess in all districts and in England S E the total collected was double the usual amount At Sheepstor, Devon, the total fall was 9 29 ins , and the Observer reported that the month was the very worst July he could remember Sunshine was more than usual in Scotland N by nearly 1 hr per day but in all the other districts it was below the average and in England N W it was less than two thirds of the normal amount The sunniest station was Felixstowe with a daily average of 6½ hrs Halos were observed on 8 days Thunderstorms were reported from all parts of the country except the north eastern counties of Scotland

August was dull and cool with but little strong wind Temperature was below the normal in all districts the deficiency being greatest — 3 4° — in England S E Summer temperatures were rare the highest reading reported being 78 at Southend on the 8th Low minima were reported from most stations the lowest being 31° at Braemar on the 26th At Kew the minimum on the 21st 43° was the lowest reading recorded there in August since 1891 while at Falmouth the minimum on the same day 45° equalled the record for that station for more than 50 years Rainfall was less than usual except in Scotland E and W In Scotland N and in England S W the total recorded was not much more than half the usual amount The general rainfall expressed as a percentage of the normal was —England and Wales 59 Scotland 85 Ireland 62 and the British Isles as a whole 68 At Worksop the total for the month 0 64 in was the smallest total in August for 46 years There were however some heavy individual falls causing floods in places Thus on the 3rd 2 20 ins fell at Cockburn Hill near Edinburgh in 3 hrs Sunshine was deficient generally the daily mean in England N E being nearly an hour and a half less than usual The sunniest station was Guernsey with an average of 8 52 hrs per day Thunderstorms were not frequent during one on the 12th at Tenbury (Glos) there was intense darkness with heavy rain and hail the size of marbles

September was damp with very variable temperature Gales were experienced on the 4th and 18th the maximum wind velocity 60 miles per hour being reported at Falmouth on the latter date The mean temperature differed but little from the normal the greatest variation in any district being less than 1 The extremes however ranged from 80 at East Ham on the 12th to 27° at Braemar on the 22nd Temperatures of 33° or below were reported in all districts except the English Channel, where the minimum was 47° the maximum being 75° In some cases the variation in temperature was very rapid At Wokingham Berks the maximum on the 12th was 74° while the minimum on the next day was 32° Rainfall was below the normal in Scotland England N E , N W , and S W , and in Ireland S but above it in the other districts The number of rain days was nowhere large but there was much dew wet fog and mist which gave the month its character for dampness Sunshine was above the normal in Scotland N , but below it elsewhere and in England S E the deficiency was as much as 1¼ hrs per day There were bright periods from the 9th 14th and from 19th 25th when more than 10 hrs per day were recorded in some parts of the country Solar halos were seen during the first part of the month and Aurora was observed in Scotland between the 8th and 22nd and also on the latter date in Ireland

October was sunny with little rain except in Ireland but with much fog and mist The first few days were unsettled, and there was a gale with heavy rain on the 3rd when a gust velocity of 67 miles per hour was recorded at Valencia. For the rest of the month there was but little strong wind Temperature was above the normal in all districts the excesses ranging from 1 4° in Scotland E to 3 6° in Ireland N The highest reading reported was 76° at Brighton on the 6th while the lowest was 19° at Braemar on the 26th and at West Linton on the 27th

Rainfall was less than usual except in Ireland, where it was considerably in excess The number of rain days was small in all parts and in England E and S E amounted on'y to 9 for the month In Scotland N the total fall was less than one third of the average In spite of the low totals some heavy local falls were reported and there were disastrous floods in Aberdeenshire and elsewhere in consequence Sunshine was above the average in all districts except the Midland Counties Scotland W and Ireland S In England E the daily mean exceeded the average by 2 18 hrs and reached 52 per cent During the week ended Oct 30 the daily mean of sunshine at Cromer St Leonards and St. Helier was 8 9 hrs or upwards of 87 per cent of its possible duration The Zodiacal light was seen in Jersey on 7 days and Aurora was observed in Scotland on 5 nights

HARNESSING THE SEVERN TIDES

The *Daily Telegraph* of Nov 26 1920 announced that the Civil Engineering Department of the Ministry of Transport had worked out a scheme for the construction of a barrage in the estuary of the River Severn from which it is estimated that 500 000 electrical horse power per day could be generated at a cost of little more than ½*d* per B of T unit A similar scheme was noticed in WHITAKER'S ALMANACK for 1920 (p 772) and the potentialities of the water power to be derived therefrom were estimated The Ministry of Transport develops the barrage from the point of view of transport facilities across the estuary and of shipping facilities above the line of the Severn Tunnel in addition to the provision of electrical power from the tide driven turbines The *Daily Telegraph* adds a list of the world's greatest water power installations for purposes of comparison as shown below —

	Scheme	Horse power
1	Proposed Severn Scheme	500 000
2	Amalgamated Niagara Falls Power Co	385 500
3.	Big Creek Development Pacific Light and Power Co	350 000
4.	Ontario Power Co	200,000
5	Capdella River Llamisell Spain	150 000
6	Toronto Power Co	146 000
7	Keokuk Dam on the Mississippi	130,000
8	Kinlochleven (Scotland)	30,000

Storms and Floods in 1919–20.

(1919) *November* 6 Fierce gale in Nova Scotia, much damage done 16 Heavy snow, 8 ins deep, in Paris 17 Severe drought in Australia and in South Africa, in the latter country it was the most severe drought ever experienced there

December 6 Good rains in Australia. 10 Extensive floods in Flanders 15 Flood at Cootamundra Australia, railway between Sydney and Melbourne partly washed away 23 Avalanche at Davos Platz the first experienced there for more than 100 years, eight lives lost and several persons injured 27 Heavy floods in France 28 Drought broken by heavy rains in Victoria and New South Wales

(1920) *January* 1 Blizzard across Esthonia, thousands frozen to death, 300 dead found in one forest including babies frozen to death at their mothers breasts 2 Severe floods in Paris, Seine rose 24 ft 2 ins above the normal the highest ever recorded 15 000 persons thrown out of work 3 Floods in Holland, 150 millions of bricks destroyed as well as several factories 11 Hurricane over France causing much damage Frequent avalanches in Northern Italy causing many deaths 12 Serious floods in Tuscany causing much damage Avalanches in Switzerland 16 Flood waters in Rhine and Moselle reached a higher stage than any recorded during 136 years 17 Floods in Budapest houses washed away 18 Dyke burst in North Brabant, causing very severe flood and the loss of thousands of cattle

February 2 Storm in Newfoundland, waves reached the top of a tower 200 ft. high and encased it with ice 9 ins thick 3. Cyclone at Cairns, North Queensland, a whole forest razed damage estimated at £100,000 5 Great gale and blizzard in New York, few lives lost but much damage done traffic practically suspended for a fortnight 11 Heavy snow in Jerusalem, 39 ins deep, the heaviest fall for 60 years 20 Floods in south of France 25–26 Very heavy rain in Madeira, 8 5 ins in 48 hours 28 Snow storms in Newfoundland, an express train timed to do a journey in 29 hours took 3 weeks over it

March 7 Heavy gale in New York 9 Hurricane in the Black Sea causing loss of American Red Cross steamer with 500 wounded soldiers 15 Tornado in Kentucky, school house blown into an adjoining field, 30 persons injured 17 An avalanche at Bernina, Switzerland, fell on a train, 8 persons killed 17 Bad storm in Quebec, much damage done Severe blizzard in western provinces of Canada only three telegraph poles left standing in a stretch of 7½ miles 28 Tornado near Chicago causing 188 deaths, thousands of persons injured 28 Tornado in Georgia caused 25 deaths 31 Severe floods in North Auckland

April 20 Tornado in Alabama and Tennessee damaging several townships and causing 28 deaths 23. Violent cyclone at Nanikgani Bengal, causing 93 deaths 30 Violent storms in Malay peninsula, 22,000 rubber trees blown down on one estate

May 2 Great gale in Oklahoma, the town of Peggs almost totally destroyed, many deaths and great damage 14 Terrific thunderstorms with hail and rain in central Spain, railway tracks washed away, lowlands inundated great damage to fruit crops 21 Great heat in Rome, maximum 92°, the highest reading recorded in May for 89 years 25 Very heavy storm in the department of the Oise, near Paris, houses unroofed, much damage to crops, many cattle killed, hail over 12 ins deep The drought which had continued since Christmas in Queensland, New South Wales and Victoria was broken at the end of May by good rains Losses due to the drought in 1918 and 1919 were returned at 348 878 cattle and 7,028,852 sheep

June 1 Very heavy rain at Mansfield, Central Germany, water 6 ft deep in the streets 19 Violent thunderstorm in Belgium 4 persons killed by lightning and great damage done 21 Cloud burst in Naples causing much damage streets flooded 10 inches deep At the close of the month there were violent storms among the Pyrenees causing loss of life and much damage to property At Albany, West Australia, lat 35 S, snow fell for the first time on record

July 5 Extensive floods in New South Wales interrupting traffic on railways 7 Floods in north west Australia causing damage estimated at £50,000 14 Snow fell at Buenos Ayres, the second fall within 300 years 21 Great floods in Vancouver, many thousands of acres in the Fraser River Valley ruined The Matsqui dyke broke, flooding 10,000 acres more and causing damage estimated at £90,000 26 Thunderstorm with heavy rain at Barcelona, city flooded, 6 persons killed 28 Typhoon at Luzon, Philippine Islands, thousands of persons rendered homeless

August 9. Great floods at Jamshedpur, near Bombay, causing over 100 deaths 9. Heat wave in America temperature of 100° in the shade in Connecticut the hottest day for 40 years 18 Tremendous floods in Japan, whole towns and villages being overwhelmed 20 Land slide in Philippines owing to rain, causing the death of 70 persons 28 A great wave swept over Odomari, Japan, causing destruction of 370 houses and the death of 200 persons

September 8 Very heavy rains in South Germany causing floods and much damage, towns isolated for days 15 Severe storm of wind, rain and hail in Niagara fruit district, causing great damage to orchards and vineyards 20 Lightning struck seven oil storage tanks at Tampico, and set contents on fire causing great damag 24 Torrential rains in the Engadine causing severe floods, River Vedeggio rose nearly 10 feet in less than an hour 24 Fierce storms in North Italy crops badly damaged railway station flooded much loss

October 7 Abundant rains in Argentina greatly benefiting the crops 11. Serious floods in the South of France, with loss of life and much damage to property 17 Recurrence of floods in South of France, with much further damage 25 Splendid rains in South Australia, assuring a good wheat harvest 30. Floods in Perpignan, rivers overflowed their banks.

Hunts and Hounds.

Staghounds —England 9 packs (200 couples) Ireland 2 packs (40 couples)
Foxhounds —England and Wales 265 packs (over 4 800 couples), Scotland 10 packs (260 couples), Ireland 22 packs 690 couples)
Harriers —England and Wales 45 packs (645 couples Ireland 25 packs (209 couples)
Beagles —England and Wales 43 packs (538 couples) Scotland and Ireland 4 packs 52 couples)

Close-Times for Game, Wild Birds, and Fish.

CLOSE SEASON FOR GAME, WILD BIRDS, &c

It is illegal to pursue the different kinds of game between the following dates (inclusive) —

GAME	ENGLAND	SCOTLAND	IRELAND
Black Game or Heath Fowl	11 Dec to 19 Aug (31 Aug in Somerset Devon, and New Forest)	11 Dec to 19 Aug	11 Dec to 19 Aug
Bustard	1 Mar to 31 Aug	None	11 Jan to 31 Aug
Deer, Male	None	None	1 Jan to 9 June
„ Fallow Male	None	None	Michaels to 9 June
*Grouse or Red Game	11 Dec to 11 Aug	11 Dec to 11 Aug	11 Dec to 11 Aug
*Hare	None	None	20 Apr to 12 Aug †
*Heath or Moor Game	None	As "Mun fowl"	11 Dec to 11 Aug
Landrail, Quail	As "Wild Birds"	As "Wild Birds"	11 Jan to 19 Sept
*Munfowl Ptarmigan	None	11 Dec to 11 Aug	11 Dec to 19 Aug
*Partridge	1 Feb to 31 Aug	1 Feb to 31 Aug	1 Feb to 31 Aug
*Pheasant	1 Feb to 30 Sept	1 Feb to 30 Sept	1 Feb to 30 Sept

† Subject to variation in various counties *e g* Tyrone 1 Apr to 12 Aug Dublin 1 Mar to 20 Sept

It is also unlawful to kill the game marked * on a Sunday or Christmas Day

In England hares, rabbits, woodcock, snipe, quail, landrail, and heath or moor game (and the eggs of swan, wild duck teal and widgeon) are protected under the Game Laws though no close time is fixed for them by those laws In Scotland the same remarks apply to deer and hares, to the first four birds and to wild duck in Ireland to all these five birds with the further addition of widgeon, teal, and plover The close time for all these birds (except quail and landrail in Ireland, for whose close time see above) is, under the Wild Birds Protection Acts 1880 to 1908, from 2 March to 31 July, both inclusive Otherwise this close time applies to all wild birds throughout the United Kingdom The penalty for killing any wild bird in such close time, or for selling or having in possession between 16 March and 31 July, both inclusive (unless the killing can be proved to have occurred at a time and place to which the Act does not apply), is a reprimand and costs for the first offence, and 5s and costs for each bird for every subsequent offence, or, in the case of the undermentioned birds, £1 for each bird for each offence In any case the Court may also order the forfeiture of any bird (or egg, where protected—*see* next column) in respect of which the offence was committed In the Island of St. Kilda the fork tailed petrel and St. Kilda wren are deemed to be included in the following list, and the birds marked ‡ to be omitted.

American quail	Kittiwake	Scout
Auk	Lapwing	Sealark
Avocet	Lark	Seamew
Bee eater	Loon	Sea parrot
Bittern	Mallard	Sea swallow
Bonxie.	Marrot	Shearwater
Colin	Merganser	Sheldrake
Cornish chough	Murre	Shoveller
Coulterneb	Night hawk	Skua
Cuckoo	Night jar	Smew.
Curlew	Nightingale	Snipe
Diver	Oriole	Solan goose
Dotterel	Owl	Spoonbill
Dunbird	Ox bird	Stint
Dunlin	Oyster catcher	Stone curlew
Eider duck	Peewit	Stonehatch
Fern owl	Petrel	Summer snipe
‡Fulmar	Phalarope	Tarrock
‡Gannet	Plover	Teal
Goatsucker	Ploverspage	Tern
Godwit	Pochard	Thicknee
Goldfinch	‡Puffin	Tystey
Grebe	Purre	Whaup
Greenshank	‡Razorbill	Widgeon
‡Guillemot	Redshank	Wild duck
Gull (except black backed)	Reeve or Puff	Willock
	Roller	Wimbrel
Hoopoe	Sanderling	Woodcock
Kingfisher	Sandpiper	Woodpecker

Offenders refusing their names and addresses are liable to a further penalty of 10s, but the Acts do not apply to any person shooting on his own land or authorising anyone so to shoot any wild bird not included in the above list

On the application of the local authorities the Secretary of State in England and Wales the Secretary for Scotland in Scotland, or the Lord Lieutenant in Ireland, has power to vary or abolish the close time for any bird or birds in any county by order to be published in the *Gazette* They may also direct that the above enactments shall apply to any wild bird not specified in the list, and may further prohibit the taking of the eggs of any wild bird in any county or part thereof The Secretary of State in England and Wales, or the Secretary for Scotland, may also on the application of the local authorities make an order providing that in any specified area the taking or killing of any particular kinds of wild birds shall be illegal during any period specified in the order These various powers have been exercised in many cases—too numerous to recapitulate here

Penalties are imposed on persons setting springs, gins, &c on poles, trees, mounds &c, so as to injure wild birds Persons permitting such acts are equally liable The use of a hook or like instrument for taking wild birds is forbidden

HUNTING AND GROUND GAME

There is no statutory close time for fox hunting or rabbit-shooting, nor is there, except in Ireland, for deer or hares but there is an "unwritten law which the sportsman respects as much as he does the enactments of Parliament 1 November is the recognised date for the opening of the fox hunting season, which continues till the following April. Otter hunting lasts from mid April to mid-September The period for deer hunting or stalking varies from about 12 Aug to 12 Oct. for stags, and from 20 Nov to the end of March for hinds. By an Act passed in

1892 the sale of hares or leverets in Great Britain is prohibited from March to July inclusive under a penalty of a pound This does not apply to foreign hares The statutory close season for hares in Ireland has been varied for some counties by order of the Lord Lieutenant, and it is now mostly from 1 April to 12 August

ANNUAL CLOSE TIME FOR SALMON.

I ENGLAND AND WALES (including the Esk in Dumfries) The close time for salmon (including all migratory fish of the *genus* salmon) begins, for nets, on 1 Sept, and for rods on 2 Nov, for both nets and rods it ends on 1 Feb For putts and putchers the annual close season is from 1 Sept to 1 May By an Act of 1907 the Board of Agriculture and Fisheries may make provisional orders varying the law on these and other points The close time may also be varied by bye law by local boards of conservators provided it begins for nets not later than 1 Nov with a minimum of 154 days and for rods not later than 1 Dec, with a minimum of 92 days The statutory dates have been varied as follows —

Close time for	Nets	Rods
Brome	—	1 Aug to 28 Feb
Adur	1 Sept to 2 Feb	1 Oct to 2 Feb
Hampshire‡‡	31 July to 1 Feb	2 Oct to 1 Feb

¶¶ Bala Lake 14 Sept to 14 Jan

char, which live in fresh water, except those kinds which migrate to or from the open sea) is fixed from 15 March to 15 June, both inclusive, for England and Wales except small parts of Norfolk and Suffolk, under a penalty of £2 for a first and £5 for a subsequent conviction The close season, however, does not apply to eels taken otherwise than by angling, or to freshwater fish other than grayling taken in certain private waters by leave of the owner or to angling in public waters by leave of a board of conservators, or in private waters by leave of the owner, or to taking fish in certain cases for bait or for scientific purposes Fishery districts may be wholly or partially exempted from this close time with the sanction of the Board of Agriculture and Fisheries The Axe, Avon (Devon), Wye, Eden, and Lowy districts have been so exempted, also the Kent and Bela and Severn as regards pike, the Usk as regards eels and parts of the Severn as regards fish other than grayling For eels a separate close time exists (so far as regards fixed engines in salmon rivers) in England from 1 Jan to 24 June, in Ireland, with one or two exceptions, from 11 Jan to 30 June In the Severn, elvers, or eel fry, are protected between 1 Jan and the last day of Feb, and between 15 May and 30 June Certain other local close times exist for freshwater fish, under local Acts or bye laws.

PROTECTION OF CRABS AND LOBSTERS

Under the Fisheries (Oyster, Crab, and Lobster) Act, 1877, it is prohibited to buy or sell crabs under 4¼ inches, measured across the largest diameter of the back, or lobsters under 8 inches, measured from tip of beak to end of tail when spread out flat The capture of "soft crabs and crabs with spawn is also prohibited By local bye laws of Sea Fisheries Committees (*vide infra*), the minimum size of lobsters and crabs that may be lawfully taken in different parts of the territorial seas has been increased, and in some cases the taking of lobsters with spawn is prohibited, or a close season fixed

CLOSE TIME FOR OYSTERS

There are also local regulations for the protection of oysters, and by the Fisheries (Oyster, Crab, and Lobster) Act, 1877, a close time for the capture and sale of "Deep Sea Oysters is fixed for England and Scotland, but not for Ireland, from 15 June to 4 Aug, and for all other kinds of oysters—except oysters taken in the waters of a foreign state—from 14 May to 4 Aug By the Sea Fisheries Act, 1868, fishing for oysters is prohibited from 16 June to 31 Aug in the English Channel between lines drawn (1) from North Foreland to Dunkirk and (2) from Land's End to Ushant—the territorial seas of England and France being excepted This close time, however, cannot be enforced till the Convention between England and France, included in the Act, is ratified, until that is done the Convention concluded in 1839, which prohibits oyster fishing in those limits from 1 May to 31 Aug, remains in force so far as French fishermen are concerned But both Powers usually agree to suspend the close season till 16 June in each year In Ireland, taking oysters from licensed beds is larceny, and by 5 & 6 Vict. cap 106 no oysters may be taken between 1 May and 1 Sept, though this close season has been varied in the following cases —

Estuary of Suir	1 Jan to 30 Sept
Tralee Bay	1 Mar to 30 Sept
Galway Bay and Carlingford Lough	1 Jan to 30 Nov
Strangford Lough	1 Mar to 31 Aug
Achil Sound, Clew Bay	2 April to 30 Sept
Sligo, Ballisodare and Drumcliffe Bays	1 May to 31 May

Licences for Shooting and Fishing.

GAME AND GUN LICENCES —A licence is required by every person who hunts, shoots, or takes game, except persons (in Great Britain) taking woodcock and snipe with nets or springes, proprietors, or tenants, on enclosed land killing rabbits, persons hunting deer, or hares, with hounds, owners or occupiers, or their servants, killing deer on their own enclosed land beaters and others, not holding guns, attending holders of game licences Occupiers of enclosed land, or owners, having the right to kill game may themselves kill hares, or authorise others to do so, without a licence, but such authority must be limited to one person at a time in any one parish, and must be registered with the clerk of the Justices of the Petty Sessional Division in which the land is situate Even when the quarry is not what is legally known as 'game a "gun licence is necessary A game licence, however, covers a gun licence Soldiers sailors, volunteers or constables on duty or at practice need not take out a gun licence nor need occupiers of land scaring birds or killing vermin on such land, or persons so acting under the orders of occupiers holding a licence Unless, however, the occupier is himself licensed, he cannot authorise any unlicensed person to carry a gun "Scaring birds is not to be regarded as including killing of any birds, and "vermin' does not include rabbits The rates of duty are given at p 405.

FISHING LICENCES —In all fishery districts in England and Wales, and in Ireland, a licence to fish for salmon is necessary, and in most English and Welsh rivers a similar licence is necessary for trout or char, except that a salmon licence includes the latter In the Lune, Derwent, Severn, and Wye and in Norfolk licences for "freshwater fish' are in force In Scotland no licence is needed A licence is available only in the district, and for the season, in which it is issued, except that in Ireland rod licences are available in all parts of that country. The rates on salmon nets and other like instruments range from £20 downwards in England and Wales and from £30 downwards in Ireland In the latter country the rate on dratt nets the kind most commonly used, is £3, in England and Wales it varies from £5 to £2. The licence duty on a salmon rod and line is £1 in Ireland In England and Wales different rates are charged in different districts as follows (an asterisk signifies that lower rates of duty are chargeable for short periods or for certain parts of the district) —

*Dee, 40/ *Eden, *Derwent, *Exe, Hampshire, *Wye, *Usk 30/ Taw and Torridge, 24/-, *Lune, *Ribble Clwyd & Elwy *Conway *Dovey, *Teify Avon (Devon), *Dart, *Teign, Frome Stour (Kent), *Yorkshire, *Tees, *Tyne 20/, *Dwyfach, Towy 21/, *Seiont Avon, Brue & Parret Axe, *Camel, *Towey, 15/-, Cleddy, Taff & Ely, Ogmore, W Cumberland, 10/6, *Kent & Leven, Rhymney, *Ayron, Severn, Axe, Trent Tamar & Plym, 10/ *Esk (Yorkshire), 7/6, Ouse (Sussex), Wear, Coquet, Cuckmere, Rother, Adur, 5/-

ENGLAND AND WALES.—The administration of the laws of close season, &c., for salmon and freshwater fish is placed by the Salmon and Freshwater Fisheries Acts, 1861 to 1907, and the Board of Agriculture and Fisheries Act, 1903, in the hands of local boards, with the Board of Agriculture and Fisheries as the central authority. Districts may be formed and Boards of Conservators appointed, and the following districts have been formed, including generally all rivers running into the sea between the points named. Except in the cases marked † they also include the sea for three miles from the shore, or to the mid-channel in estuaries.

These Boards of Conservators consist mainly of three classes of members—those appointed annually by the Councils of the various counties through which the rivers flow; *ex-officio* members, qualified by ownership of lands or fisheries of a certain value; and representative members, elected annually by persons who have paid licence duty on instruments other than rod and line for salmon fishing in public waters. In certain cases, under local Provisional Orders, there are also members representative of freshwater anglers. Districts where Provisional Orders are in force are marked thus *.

There are also certain bodies created by local statutes, having authority over the fisheries, *e.g.*, the Thames Conservancy Board, Port of London Authority, Lee Conservancy Board, and Conservators of the Medway.

The above-mentioned Boards have power to make bye-laws, not only for the regulation of the fisheries for salmon and freshwater fish, but also, in certain cases, for the regulation of other

Wear	Hardwick Hall to Souter Point	W. E. Raine, Sunderland.
Tyne	Souter Point to Newbiggin Point	J. A. Williamson, Newc'stle-on-Tyne
Coquet	Newbiggin Point to Hawick Burn	C. Percy, Alnwick.

There are also certain bodies created by local statutes, having authority over the fisheries, *e.g.*, the Thames Conservancy Board, Port of London Authority, Lee Conservancy Board, and Conservators of the Medway.

The above-mentioned Boards have power to make bye-laws, not only for the regulation of the fisheries for salmon and freshwater fish, but also, in certain cases, for the regulation of other

kinds of fishing which are prejudicial to such fisheries. They are also empowered to issue licences for fishing for salmon, trout, and in some cases freshwater fish generally

SCOTLAND.—In Scotland there are 105 Fishery Districts, nearly each separate river forming a district of itself, but only 37 Boards of Conservators. The powers of these Boards are limited to the Salmon Fisheries

IRELAND. In Ireland there are 24 districts, embracing between them the whole country, each with a separate Board of Conservators (*see* p 846)

SEA FISHERIES DISTRICTS. Under the Sea Fisheries Regulation Acts, 1888 to 1894, the Board of Agriculture and Fisheries has power to form sea fisheries districts within the territorial waters of England and Wales, and to constitute local Fisheries Committees, either for a single county or borough, or for several jointly These Committees have power to make bye laws to be confirmed by the Board of Agriculture and Fisheries regulating or prohibiting the use of instruments for the capture of sea fish (including shell fish and crustaceans, but excluding salmon), the deposit of rubbish on fishing grounds, &c. The following districts have been created, including in each case the adjoining coast and territorial seas between the points respectively mentioned — 1 Northumberland (coterminous with that county) 2 North Eastern, from Northumberland to Donna Nook in Lincolnshire 3. Eastern, Donna Nook to Yarmouth 4 Kent and Essex, Dovercourt to Dungeness, including the Thames estuary to London Stone near Yantlet Creek 5. Sussex (coterminous with that county) 6 Southern, Western boundary of Dorset to Hayling Island 7 Devon, and 8 Cornwall (each coterminous with the respective counties) 9 South Wales, Eastern boundary of Cardiff to Cemmaes Head. 10 Lancashire and Western, Cemmaes Head to Haverigg Point 11 Cumberland, Haverigg Point to Sark Foot

Similar districts may be formed in Scotland under the Sea Fisheries Regulation (Scotland) Act 1895

Seasonable and Unseasonable Fish.

THE following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season"

The letter *p* signifies that the fish are then in their prime or most plentiful, the letter *x* signifies that the fish may be obtained, but are not at their best the letter *c* signifies that it is "close time" as fixed by statute

(*a*) This is for sea crayfish (or crawfish) River crayfish can be obtained in the summer and autumn. It is illegal to take fresh-water crayfish from March to June

(*b*) Foreign oysters can be sold in the close season, and are to be had almost all through the year, even though they have been laid down in English beds for temporary storage.

(*d*) In the close season, salmon from Holland, and also from certain British rivers where net fishing is permitted later in the year than usual, are largely sold

(*e*) For the first six months the bulk of our London supply of shrimps comes from Holland, but Dutch shrimps are far inferior to the English, which are plentiful from July to December.

Assay Office Marks—The official marks stamped on gold and silver plate at Goldsmiths Hall, London, or at the Assay Offices at Birmingham, Chester Sheffield Edinburgh, Glasgow or Dublin are distinguished as under —

Office	*Distinguishing Mark*
London	Leopard's Head (crowned, until 1823).
Birmingham	Anchor (square frame for gold pointed shield for silver)
Chester	City Arms (3 Garbs and a Sword)
Sheffield	Crown
Edinburgh	Castle
Glasgow	Tree, Fish & Bell.
Dublin	Harp crowned

In addition to the above there have been Assay Offices at Bristol Exeter Newcastle upon Tyne, Norwich and York all of which have long been closed

Makers Mark (instituted in 1363)—This is impressed by the maker and consists of initial letter (or letters) indicating the Surname (or Christian and Surname) of the maker

Date Mark—The year in which the article is marked at the Assay Office is indicated by a letter on a shield, the *type of letter* and the *shape of the shield* being changed in cycles of 20 25 or 26 years. In 20-year cycles (London invariably Chester, alternately with 25 and Sheffield, alternately with 25) the letters J V W X Y, Z are omitted, in 25 year cycles (Birmingham Edinburgh and Dublin, and alternately at Chester and Sheffield) the letter J is omitted from the alphabet at Glasgow all the letters are employed in a 26 year cycle

The Sovereign's Mark—The "lion passant" introduced in the reign of Edward I. (1300) for *silver* articles only

The Sovereign's Head—The portrait of the reigning Sovereign was impressed on all plate chargeable to duty assayed from 1784—1889 90 The duty on plate was removed in 1890 and the Sovereign's head does not appear on plate assayed before 1784 or after 1890

The Crown—On *gold* articles only in lieu of the 'lion passant' on silver

Britannia—A full length figure of Britannia was impressed on silver plate of a special standard of fineness (11 oz 10 dwt of fine metal to each 12 dwt. of alloy) during a short period only, 1697–1720

Sterling Silver—Articles of silver plate marked at an assay office are guaranteed to be of the requisite standard of purity and to contain 11 oz 2 dwt of fine metal to each 12 dwt of alloy

Sterling Gold—Articles of gold plate marked at an assay office are guaranteed to contain such amount of pure gold as is marked thereon by the assaying office in carats and decimals thereof The *relative* values of the various standards is shown below —

	£	s	d
Pure gold, 24 carats	4	4	11¹
Standard, 22 carats	3	17	10¹
2nd ditto, 18 carats	3	3	8½
3rd ditto, 15 carats	2	13	1
4th ditto, 12 carats	2	2	5¼
5th ditto, 9 carats	1	11	10½

* For the greater part of the material for this article readers of the ALMANACK are indebted to the late Mr Wilfred Cripps (author of 'Old English Plate') by whose courtesy also many of the illustrations were provided

The Collector will find but little difficulty in distinguishing a letter of one cycle from that of another, presuming his knowledge to be insufficient to judge by the style and period of the article itself, *e.g.*:

An article marked with the letter F 1721–2 can be distinguished from letter F 1801–2 by the difference in the shape of the respective shields; as also those containing the crowned leopard's head and the lion passant; the absence of the sovereign's head in the former as against its presence in the latter case; the different form of the leopard's head (which was "crowned" until 1823); and lastly, the irregularity of the stamp in the first case as compared with the uniformity of the latter stamp. These again can be distinguished from F 1881–2 as before, by the different shield of the date letter only (the shields of the remaining marks being the same as those of 1801–2); the absence of crown on leopard's head, and the presence of the Queen's *vice* the King's head.

Imported Plate.

Any gold or silver plate or article manufactured out of the United Kingdom and brought to be assayed, stamped or marked at a British or an Irish Assay Office must be marked in the manner prescribed by the Order in Council of May 11, 1906, under which the mark for each Assay Office is ordained to be:—*London*, the sign of the Constellation Leo; *Birmingham*, Equilateral Triangle; *Chester*, Acorn and two leaves; *Sheffield*, the sign of the Constellation Libra; *Edinburgh*, St. Andrew's Cross; *Glasgow*, double block letter F inverted; *Dublin*, Boujet. The annual date letter is to be added by the Assay Office, as for plate, etc., of home manufacture.

The Periods of English Architecture.

	Date.		
I.	Before B.C. 55		Ancient British.
II.	B.C. 55 to A.D. 420		Roman Period.
		Rickman.	
III.	A.D. 449 to Norman Conquest (1066)		Anglo-Saxon.
IV.	1066–1189 (*i.e.* to end 12th cent.)		Norman.
V.	1189–1307 (*i.e.* 13th cent.)		Early English, Lancet, or Geometrical.
VI.	1307–1377 (*i.e.* 14th cent.)		Decorated or Curviline.
VII.	1377–1485 (*i.e.* 15th cent.)		Perpendicular or Rectilinear.
VIII.	1485–1558 (*i.e.* first half 16th cent.)		Tudor.
IX.	A.D. 1558–1625	Early Renaissance	Elizabethan (A.D. 1558–1603). Jacobean (A.D. 1603–1625).
X.	A.D. 1625–1830.	Late Renaissance	Anglo-Classic (A.D. 1625–1702). Queen Anne and Georgian (A.D. 1702–1830).
	19th cent. to present time	Modern Architecture The Age of Revivals	William IV. (A.D. 1830–1837). Victoria (A.D. 1837–1901). Edward VII. (A.D. 1901–1910). George V. (A.D. 1910–).

This Comparative Table shows the approximate period of each style. It must, however, be remembered that the transition from one style to the next was slow and gradual, and can often hardly be traced, so minute are the differences. It is only for convenience in alluding to the different stages of evolution that the division is made, for it must not be forgotten that the Architecture of England is one continuous development.

Note.—The first portion (I–VIII) of this table is based upon that given on p. 327, and Parts IX, X; and "Modern" on p. 551, of "A History of Architecture on the Comparative Method" (5th ed.), by Sir Banister Fletcher. (Batsford.)

THE LONDON FIRE BRIGADE

Headquarters 94 Southwark Bridge Rd, S E 1

PREVIOUS to the formation of the Metropolitan Fire Brigade in 1866, the churchwardens and overseers of every parish in London under an Act passed in 1774, had been compelled to maintain an engine for putting out all fires occurring within their own boundaries For more than thirty years before 1866 the leading fire insurance companies had jointly organised and worked a fire-engine establishment of their own On 1st January, 1866 the Metropolitan Board of Works took over these responsibilities and on 1st January, 1867, the Board also took over from the Royal Society for the Protection of Life from Fire (founded 1844) the service of the saving of life from fire Under the Local Government Act, 1888 the London County Council assumed control of the Metropolitan Fire Brigade, and in 1904 the title was altered to 'London Fire Brigade

On 31st March, 1918 the complement of the Brigade consisted of —1 chief officer, 3 principal officers, and 1,297 officers, firemen coachmen and pilots, a technical and clerical staff of 130, and an ambulance service staff of 58. There were 79 land fire stations, 6 ambulance stations, 3 river stations, and the appliances included 8 horsed fire engines, 18 horsed fire escapes 75 motor fire engines, 81 motor fire-escapes 5 motor hose tenders, 4 electrically driven turntable long ladders, 19 long ladders 36 smoke helmets 86 hose carts, 4 fire floats, and 4 steam fire engines on rafts 1 oil tank wagon, 16 motor cars, and 9 motor ambulances There were 36 horses and 60 miles of hose in use by the Brigade. The fire alarms distributed over London numbered 1 582 The number of calls to which the Brigade responded during the year ended 31st December 1918, totalled 3 356, and the fires numbered 3 463 of which 107 were classed as serious, including calls and fires due to air raids

In the first half of the seventeenth century (1633 has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of *rails* for the lessening of friction upon roads Beams of wood, some six or seven inches in breadth, were about this time laid down to facilitate the draught of the wagons in the vicinity of some of the coal mines at Newcastle, and as a matter of necessity the addition of "sleepers" had speedily to follow In 1738, at Whitehaven, it is stated that iron was first substituted as the material of the rails and in 1767 it appears established that this revolution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till 1789 that "edge rails were introduced, the credit of their adoption being assigned to William Jessop on the Loughborough and Nanpantan line James Watt had conceived the idea of utilising steam for locomotion and there is a record of a model locomotive having been used in Cornwall in 1784 George Stephenson however, in the year 1825, was the first to bring the project fairly into practical shape

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801 for a line 9½ miles long from Wandsworth to Croydon In 1804 an Act was passed 'for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth, in the County of Glamorgan, and for the hauling or drawing of wagons or other carriages passing upon the said railway or tramroad with men, horses, *or otherwise*'

Up to 1840 inclusive, 299 Acts authorizing the construction of 3,000 miles of line had been passed The inevitable reaction set in and in 1841 2 3 only a few small Bills were passed by the Legislature but in the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying 10 per cent dividends and some of the smaller lines were yielding even larger returns, attention was naturally drawn to the remunerative character of this class of property and the supply of railway shares became far below the demand A flood of new projects appeared before the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered In 1844, 797 miles were authorized in 1845 2 883 miles, and in 1846, the prodigious total of 4,790 miles under no less than 272 Acts obtained Parliamentary sanction The succeeding years saw some abatement but still there were 1 663 miles passed in 1847 and 300 in 1848 These figures illustrate the rise and fall of the great fever known as the "railway mania'

The Railways Regulation Act of 1840 the first of the General Acts provided for a month's notice being given to the Board of Trade before opening for returns of traffic to be made by the companies, as also of accidents involving personal injury for Government inspection of works for the approval of bye laws, &c Afterwards were passed Acts for their better regulations and for the conveyance of troops, 1842, the Railways Further Regulation Act of 1844 the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session

The Cheap Trains Act 1883, provides that fares not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate Duty shall be payable at a reduced rate of 2 per cent on fares exceeding the rate of one penny a mile between stations within one urban district Such district shall contain not less than one hundred thousand inhabitants and must be of a continuous urban as distinguished from a rural or suburban character

Officers or men in the military or police forces, when travelling on public service are charged three fourths or one half of ordinary passenger rates, according to number travelling The Act does not extend to Ireland

Hiring of Special Trains — Although the majority of railway companies have no fixed charges for hire of special trains, the general charges are five shillings per mile, plus the ordinary fare for each passenger according to class of vehicle hired

The Workmen's Compensation Act 1897 —This Act, which received the Royal assent on Aug 6 1897 came into operation on July 1 1898

Government Control —The following is an extract of announcement issued from the War Office, Aug 4 1919 —

"An Order in Council has been made under Section 16 of the Regulation of the Forces Act 1871 declaring that it is expedient that the Government should have control over the railroads in Great Britain This control will be exercised through an Executive Committee composed of general managers of railways which has been formed for some time and has prepared plans with a view to facilitating the working of these provisions of the Act

The Board of Trade issued the following notice dated September 15 1914 —

'The Regulation of the Forces Act 1871, under which His Majesty's Government have taken possession of most of the railways of Great Britain provides that full compensation shall be paid to the owners for any loss or injury they may have sustained thereby, the amount of such compensation to be settled by agreement, or if necessary by arbitration

His Majesty's Government have agreed with the railway companies concerned that subject to the undermentioned condition the compensation to be paid them shall be the sum by which the aggregate net receipts of their railways for the period during which the Government are in possession of them fall short of the aggregate net receipts for the corresponding period of 1913 If however the net receipts of the companies for the first half of 1914 were less than the net receipts for the first half of 1913 the sum payable is to be reduced in the same proportion [On April 14 1915 the Board of Trade announced that an alteration had been made in this agreement by which the proportionate reduction in net receipts for the companies referred to will not in future be made, but 25 per cent of the war bonus granted to railway employees who come within the Railway Conciliation Scheme shall be borne by the railway companies, and not by the Government]

"This sum, together with the net receipts of the railway companies taken over, is to be

distributed amongst those companies in proportion to the net receipts of each company during the period with which comparison is made

"The compensation to be paid under this arrangement will cover all special services, such as those in connexion with Military and Naval transport rendered to the Government by the railway companies concerned, and it will therefore be unnecessary to make any payments in respect of such transport on the railways taken over

On behalf of the Government the control of the railways in Great Britain was vested as from August 5 1914 in a Committee composed of twelve General Managers of Railways This Committee ceased to act as an Executive Committee on Sept 25, 1919, but with the addition of four Railway Union representatives became the Railway Advisory Committee under the Ministry of Transport

MINISTRY OF TRANSPORT BILL

This Bill became operative on the 25th of September, 1919 On that date there were transferred to the Ministry of Transport powers and duties, hitherto exercised by the Board of Trade in connexion with Railways, two years being allowed under the Act for formulating a Transportation Policy The Right Hon Sir Eric Geddes, M P is the Minister of Transport and the Parliamentary Secretary Mr Arthur Neal, M P, the Railway Advisory Committee being composed as follows —

Mr C Aldington, C B E, Gen Manager, Great Western Rly
Sir A K Butterworth, Gen Manager, North Eastern Rly
Mr C H Dent Gen Manager, Great Northern Rly
*Sir F H Dent Gen Manager, S E & C Rly

* Sir Francis Dent retired from the position of Gen Manager S E & C Rly March 31 1920

RAILWAYS IN 1913, 1914, 1915, 1916, 1917, and 1918

The number of persons employed in working the railways of the United Kingdom in 1914 was 643 135, and there were in use 24,818 locomotive engines, 79 539 coaching vehicles, 759,910 wagons for the conveyance of live stock, minerals and general merchandise, and 49,629 service vehicles

During the War 460 locomotives and 30,000 wagons, in addition to certain passenger stock was sent to France, most of which have now been returned

Capital embarked in Railways —The total amount of paid up capital in the United Kingdom amounted on the 31st December, 1918, to £1 350,101 000 (which includes £199,896,000 nominal capital caused by the consolidation or conversion of stocks) The £1,350,101,000 is composed of £494 878 000 ordinary, £362,630,000 preferential, and £124,349,000 guaranteed, £13 224 000 loans, and £355 020 000 debenture stock The net receipts for the year amount to £53,951,000 equal to 3 99 per cent on the total capital sunk, as compared with £52 727,000 in 1917, with a corresponding capital of £1,350,134,000, which gave a net receipt of 3 90 per cent It may be seen, therefore, from the foregoing figures that the total amount

of capital raised at the close of the year was over £1,350,101,000, of which about £199,896,000, or approximately 16 per cent, was due to nominal additions Of the total paid up capital at the end of 1918, ordinary stock formed 37 0 per cent, preferential and guaranteed 35 9 per cent, and loans and debenture stock 27 1 per cent The average rate of dividend on the ordinary capital was 3 70 per cent in 1918, as compared with 3 57 per cent in 1917. The average rate of dividend on the preferential capital rose from 3 62 per cent in 1917 to 3 65 per cent in 1918 These rates are naturally lower than they would have been had there been no nominal additions to the capital of the companies The average rate of dividend or interest computed on the total capital, as it would have stood if no nominal additions had been made thereto, was 3 70 per cent, as compared with the rate of 3 57 per cent paid on the total capital including nominal additions

Gross Earnings of the Railways —The earnings for the year 1918 amounted to £197,293,000, as compared with £168 721,000 for the year 1917, which gives an increase of £29,572 000, equal to 14 99 per cent

The passenger amounts for the year 1913 (the latest available figures) are as follows —

	1913 £	1912 £	Inc or Dec £
1st Class	3 772,000	3,631,676	+140 324

Note 1.—COMPENSATION PAYABLE TO RAILWAY COMPANIES.—The sum receivable per annum by the Railway Companies as compensation during the period of Government Control is limited to the Net Receipts of the year 1913 with the addition of 4 per cent upon Capital Expenditure brought into use since the beginning of that year.

Note 2.—AUDIT.—The figures for the year ended March 31, 1920, are subject to audit, and as regards Government Traffic the rates at which the charges are to be raised are not finally agreed.

Note 3.—No sum has been allowed for any liabilities which may attach to the Government in respect of:—(*a*) Replacement of stock of stores and materials; (*b*) Abnormal wear and tear; (*c*) Arrears of maintenance other than permanent way and rolling stock.

Note 4.—Arrears of maintenance—permanent way and rolling stock—are estimated at 1913 cost of ascertained arrears plus 75 per cent. for additional cost of labour and material. The actual cost is not yet ascertainable, but payments have only been made on the basis of a 15 per cent. addition.

Note 5.—There is a debit amount of £447,680 balance of expenditure over revenue for the year ended March 31, 1920, on Passenger Road Vehicles, Steamboats, Canals, Docks, Harbours and Wharves, Hotels, Refreshment Rooms and Cars, etc., thus reducing the net balance to £7,141,070. The Government Guarantee is:—

Standard year proportion of net Receipts	£47,440,000
Interest on capital works brought into use	1,050,600
Total Government Guarantee	£48,490,600
Less net Balance of Revenue over Expenditure	7,141,070
Net Government Liability for year ended March 31, 1920	**£41,349,530**

DAILY RATES OF PAY OF RAILWAY DRIVERS, FIREMEN & CLEANERS (In force from August 18, 1919).

Drivers.	*Firemen.*	*Cleaners.*
1st and 2nd years, 12*s.* per day.	1st and 2nd years 9*s.* 6*d.* per day.	16 yrs. of age and under 18 per day.
3rd and 4th years...13*s.*	3rd and 4th years 10*s.* 6*d.*	17 years..... 5*s.*
5th year .....14*s.*	5th year .....11*s.*	18 and 19 years of age 6*s.*
8th year .....15*s.*		20 yrs. of age and over 7*s.*

WEEKLY EARNINGS OF RAILWAY SERVANTS (Except Drivers, Firemen & Cleaners, which *see above*).

This shows the Pre-War Wage, the Present Wage, and the Minimum Wage. The Present Wage is guaranteed till Sept. 30th, 1920, after which the Government have offered to adjust it either according to the present scale, depending on the cost of living, or by Court of Arbitration, or by any other method which may be agreed between the Government and the Railwaymen. The Minimum Wage (which takes effect from Sept. 30, 1920) will not be reduced, however much the cost of living falls; the War Bonus continues until the cost of living falls, and can then be altered only by agreement or arbitration. On March 20, 1920, a "cost-of-living" bonus was granted, that is, for every rise or fall in the cost of living of a full five points an increase or decrease of 1*s.* per week shall be added to or deducted from wages, and the following increases have (under this agreement) been paid in addition to the war bonus:—April 1, 1920, 1*s.* per week; April 12, 1920, 2*s.* per week; July 1, 1920, 2*s.* per week; October 1, 1920, 2*s.* per week.

	Pre-War Wage.	Present Wage.	Minimum Wage	War Bonus.
Porters	16*s.* to 22*s.*	51*s.* to 55*s.*	40*s.* to 49*s.*	9*s.* to 6*s.*
Parcel Porters	22*s.* to 30*s.*	53*s.* to 63*s.*	45*s.* to 54*s.*	8*s.* to 9*s.*
Ticket Collectors	21*s.* to 31*s.*	54*s.* to 64*s.*	45*s.* to 54*s.*	9*s.* to 10*s.*
Passenger Guards	25*s.* to 35*s.*	58*s.* to 68*s.*	48*s.* to 60*s.*	10*s.* to 8*s.*
Goods Guards	25*s.* to 35*s.*	58*s.* to 68*s.*	48*s.* to 60*s.*	10*s.* to 8*s.*
Shunters	20*s.* to 31*s.*	53*s.* to 64*s.*	46*s.* to 60*s.*	7*s.* to 4*s.*
Goods Porters	20*s.* to 26*s.*	53*s.* to 59*s.*	40*s.* to 47*s.*	13*s.* to 12*s.*
Checkers	21*s.* to 31*s.*	54*s.* to 64*s.*	46*s.* to 55*s.*	8*s.* to 9*s.*
Carmen	20*s.* to 29*s.*	53*s.* to 62*s.*	45*s.* to 52*s.*	8*s.* to 10*s.*
Platelayers	21*s.* to 24*s.*	54*s.* to 57*s.*	40*s.* to 50*s.*	14*s.* to 7*s.*

NOTE 1.—The lower rates apply chiefly in the country; the higher rates in industrial areas.

RAILWAY ACCIDENTS DURING 1919

The number of personal accidents on railways to passengers, railway servants, and others reported to the Board of Trade during the year 1919 show a total of 932 killed and 23,983 injured

TABLE I

	Killed	Injured
A. *Passengers*—		
1 From accidents to trains rolling stock, permanent way, &c		513
2 By other accidents in which the movement of trains or railway vehicles was concerned	83	1,835
3 By accidents in which the movement of trains, &c was not concerned†		495
B *Servants of Companies or Contractors**—		
1 From accidents to trains rolling stock, permanent way, &c		
2 By other accidents in which the movement of trains, &c, was concerned	328	3,845
3 By accidents in which the movement of trains, &c		
1 was not concerned†		16 489
C *Other Persons*—		
From accidents to trains &c	8	
2 Persons passing over railways at level crossings	32	19
2 Trespassers (including suicides)	361	72
2 Persons on business at stations, &c and other persons not included above	33	126
3 By accidents in which the movement of trains &c was not concerned†	23	445
Total	932	23 983

* Of contractors servants 5 were killed and 94 injured In 3 of the fatal and 83 of the non fatal cases the movement of trains &c was not concerned

† Of accidents in which the movement of trains and railway vehicles was not concerned only the fatal cases were required to be reported in the years 1916 17 and 1918

As regards the fatal cases shown in Table I —

A *Passengers* —By falling on steps or from platforms, &c, in station limits, 9 were killed, and from other causes 3 were killed

B *Servants* —While dealing with the loading, unloading, and movement of goods 12 were killed while attending to engines at rest 4 were killed, by falls on railway premises 23 were killed, while working on the permanent way 5 were killed and from other causes 6 were killed

C *Other Persons* —Twenty three persons other than passengers or servants were killed on railway premises 10 of whom were killed while on business at stations or sidings Of these cases 3 were due to the falling of goods &c from vehicles 3 to persons falling off walls &c 1 by coming in contact with electric rails when trespassing on the line and 8 to other causes

III *Accidents caused by the Movement of Trains and Railway Vehicles, ex lusive of Train Accidents* —

A *Passengers* —Twenty seven passengers were killed and 810 injured by falling between trains and platforms, or on to platforms ballast &c, when attempting to enter or alight from trains 9 were killed and 9 injured by falling off platforms and being struck or run over by trains 9 were killed and 13 injured when crossing lines at stations 28 were killed and 76 injured by falling out of carriages during the running of trains and 10 were killed and 927 injured from other causes

B *Servants* Seventy two servants of the companies and of contractors were killed and 2 157 injured by accidents occuring during shunting operations of whom 19 were killed and 498 injured while coupling or uncoupling vehicles while apart from shunting operations, 12 were killed and 166 injured by falling off or when getting on or off trains engines vans &c in motion 2 were killed and 40 injured by coming in contact with overbridges and erections at the sides of the lines 4 were killed and 558 injured while attending to the machinery, &c of engines in motion 48 were killed and 73 injured while working on the permanent way sidings, &c, 120 were killed and 260 injured while walking or standing on the line on duty or when proceeding to or from work and 60 were killed and 591 injured from other causes

Thirty two persons were killed and 19 injured while passing over railways at level crossings 182 were killed and 59 injured while trespassing on the lines 179 committed suicide and 13 were injured while attempting suicide and 33 were killed and 126 injured while on business at stations and sidings or in other circumstances

TABLE II

The following Table gives the number of casualties in the various classes of train accidents —

Class of Accident	A Passengers		B Servants		C Other Persons		Total All Persons	
	Killed	Injured	Killed	Injured	Killed	Injured	Killed	Injured
A Collision in which passenger trains were concerned		475		34		14		523
B Other collisions				45				45
C Derailment of passenger trains								24
D Other derailments								7
E Accidents due to failure of engines or rolling stock		13		18				31
F Other accidents		4		7		16	13	27
Total		513				30	18	657

C. *Other Persons.*—Of these (excluding casualties due to accidents to trains), 426 were killed and 217 injured; see Table I.

Inquiries.—During the year 1919, 355 inquiries were held by the Assistant Inspecting Officer and Sub-Inspecting Officers of Railways into accidents, other than train accidents, that involved fatal or other injuries to 371 persons, nearly all of whom were servants of the railway companies, the remainder being principally contractors' servants and persons at work or transacting business on the companies' premises. Of this number 327 inquiries related to accidents to 331 servants of railway companies due to the movement of vehicles.

The net working profit from State Railways, after meeting interest and other miscellaneous charges, &c., amounted in 1918-1919 to £10.858,379.

THE RAILWAY CLEARING HOUSE

This Institution was opened in Jan 1842 and in addition to the work of clearing through bookings of passenger and luggage traffic, is the medium through which agreements relating to rates and fares, &c, are arrived at. *Chairman*, F R Iuiton, M P, *Secretary* P H Price C B E *Offices*, Seymour Street N W

IRISH RAILWAY CLEARING HOUSE

The Irish Railway Clearing House occupies much the same position to the railway system of Ireland as the (London) Clearing House does to the railways of Great Britain It was established July 1, 1848 *Chairman* Sir William J Goulding Bart, *Secretary* Peter J Brennan, *Offices* 5 Kildare Street, Dublin

Indian Railways.

THE construction of Railways in India commenced in 1853 and the total length open on 31st March 1918-19 was 36 616 miles The following are the chief officials of the India Office (Railway Department Whitehall, S W) —Secretary, Mr W Stantiall Government Director of Indian Railway Companies, Mr G Deuchars, Consulting Engineers, Messrs Rendel Palmer & Tritton The Indian railways have in their service about 697,000 employees, of whom 6,000 are Europeans, 9 000 Anglo-Indians, and 612,000 Indians The table on opposite page gives some of the main results for the past three years for Indian railways as a whole, i e, including branch lines promoted by companies, district board lines, Indian State lines, &c, as well as State Railways

RAILWAY SPEED (Year 1900).

The Fastest Running, without Stoppage, is made by the Companies as under :—

Company.	Train.			Distance.	Av. Speed.
				Miles	
Great Central	4.13 A.M.	Rugby	Leicester	19	56·8
Great Western	2.30 A.M.	Paddington	Swindon	77¼	56·6

KINEMATOGRAPHY.

By C. E. HODGES, M.A.

IN face of the wonderful developments of kinematography during recent years, it is astonishing to reflect that some of the earlier pioneers in the art of motion pictures put both projectors and films aside, after achieving a large measure of success, and allowed the discovery to lapse into temporary disuse because there seemed no commercial utility in the idea. Yet almost within the space of a generation motion photography has become one of the most influential agencies in the world, and is moulding to an ever greater extent the thoughts and opinions of vast masses of people in every civilised country in the world.

From the zoëtrope to modern kinematography is a very great stride in progress, but even to-day the moving picture, with its adjuncts of palatial buildings, elaborate equipment, skilled projection, costly accessories, and enormously expensive films, is only at the beginning of its career. Both from the aspects of efficiency and utility of this device we stand at the threshold of most promising developments. Every week brings claims to improvements in apparatus, lighting, technique, and all the thousand and one factors that make for success. It is asserted in more than one quarter that the difficulty of colour in film projection has been solved. Numerous laboratories are working steadily towards non-inflammable film, and it is reported that some of them have attained their aim.

With the coming of such improvements motion photography would immediately advance in a fashion calculated to reduce to insignificance even the astoundingly rapid progress already made. So far the main use of the film has been recreation, but there is an ever-increasing realisation of its value in commerce and instruction of all kinds. Practically all the film used to-day is highly inflammable. To safeguard the public properly it has been necessary to hedge round the use of films with restrictions that are rigidly enforced. Those who desire to use kinematography for non-theatrical purposes are therefore frequently hindered by the expenditure and trouble involved in such a scheme. To business men, educationists, ministers of the churches, social welfare workers, and similar potential users of the film in fields other than recreation, the advent of efficient portable machines offers great possibilities. If, as we are led to expect, non-inflammable film and daylight screens are almost an accomplished fact, there will be no bounds to the usefulness of the moving picture and to its sphere of action in the near future. Already many commercial houses, churches, and schools are employing films; many others are endeavouring to acquire the necessary equipment and film service, or are earnestly enquiring as to the possibilities which this innovation holds for them; mobile units capable of generating the necessary power and light are travelling round the country for various specific commercial and welfare purposes, and there is no room for doubt that within the next few years kinematography will become one of the greatest forces for non-recreative as well as for recreative ends.

For commercial ends the utility of the film can hardly be over-estimated. The device is already being widely used as a medium for demonstrating the soundness of business methods and the excellence of manufactured goods. By the same means employees are being interested in their work and taught how to achieve better results. In scientific research, practical engineering, agriculture, and other industrial fields, motion photography is playing an important part, and has proved itself of the utmost service. It is a matter for regret that America and Germany—to quote but two cases—are credibly reported to be far ahead of our own country in this direction, and it is strongly to be hoped that British enterprise will not stint the due thought and attention which this subject demands, and will take steps to prevent us from lagging behind our competitors in the markets of the world and in the advancement of mankind.

MARINE INSURANCE.

TOWARDS the latter part of the Seventeenth Century, the Commercial Community interested in Shipping met at a small Coffee-House kept by a man of the name of Edward Lloyd, first of all in Tower Street and, after 1691, at the corner of Abchurch Lane and Lombard Street, in the City of London. The name of this Coffee-House keeper has come down from generation to generation in connection with the greatest Shipping and Marine Insurance transactions of the World.

Before his time Marine Insurance appears to have been conducted in England by the Lombards, who came from Italy and gave their name to Lombard Street, but from the time that Lloyd established his Coffee-House, where Seafaring men jostled against Merchants, Britons conducted Marine Insurance in England.

There is still preserved at Lloyd's a Policy of Marine Insurance dated January 20th, 1680, upon the Good Ship called the "Golden Fleece," of 250 Tons (Gasper Hicks, Master), for a voyage from Lisbon to Venice, at the rate of Four Pounds per cent.

Edward Lloyd, a man of wisdom and enterprise, was the founder of that great system of Commercial and Maritime Intelligence which has ever since been carried on by Lloyd's.

In 1696 he started a Newspaper, which gave a List of Ships whose arrivals and sailings had been reported. That Newspaper, which he called "Lloyd's List," succeeded admirably for a short time, but criticism was not much tolerated in those days, and Edward Lloyd ventured to write an Article which called in question the action of the House of Lords with regard to Silks. The House of Lords apparently resented this; they immediately censured Edward Lloyd, and suppressed his Newspaper, and it was not till 30 years later that he was allowed to re-establish it. Since that date "Lloyd's List" has appeared regularly, and is still printed and published as a daily Shipping and Commercial Newspaper at Lloyd's, Royal Exchange, in the City of London.

The frequenters of Lloyd's Coffee-House were not permitted to enjoy for long the monopoly of Marine Insurance, and in the year 1720 Parliament allowed two Marine Insurance Companies to be established in London. These Companies, The Royal Exchange Assurance Corporation and the London Assurance Corporation, are continuing business at the present day.

In the year 1770 those frequenters of Lloyd's Coffee-House whose particular business was Marine Insurance, formed themselves into an alliance, and moved to Pope's Head Alley, taking with them "Lloyd's List." In 1774 they removed to the Royal Exchange, where the Corporation of Lloyd's is still established, and in the same year the Underwriters of Lloyd's found it necessary to have complete information with regard to the construction and condition of the Ships which they insured, and they accordingly established a Register of Shipping. This undertaking grew and prospered, and is still carried on by "Lloyd's Register of Shipping" at 71, Fenchurch Street, E.C. 3.

In 1803 the Members of Lloyd's started a Fund for the benefit of sufferers by the War between this Country and Napoleon. This Fund, called "Lloyd's Patriotic Fund," eventually reached a sum of over £883,000, and has rendered much help to the relatives of Sailors and Soldiers who have fought in our Wars from 1803 down to the present day. In 1915 the Members of Lloyd's subscribed over £115,000 for a similar object in connection with the recent Great War, and this sum is administered by the Committee of Lloyd's Patriotic Fund.

Several other funds have been raised at Lloyd's in connection with the Great War, amounting in the aggregate to over £600,000, of which £173,000 was subscribed in response to Earl Haig's appeal on behalf of the Officers' Association.

In the year 1810 a select Parliamentary Committee was appointed to enquire into the monopoly of Marine Insurance, which was held by Lloyd's and the two Marine Insurance Companies referred to above. The Committee recommended that the monopoly should be abolished, but the House of Commons decided that Lloyd's had rendered a great service to the Country, through the long years

of War with France by supplying the Government with information in regard to maritime matters and, together with the Marine Insurance Companies, by insuring the arrival in this Country of Merchant Ships and their valuable cargoes. The House, therefore, resolved that no alteration should be made, but ten years later, in 1820, an Act was passed by which Marine Insurance in this Country was thrown open, and since that date many other Marine Insurance Companies have been established, and these Companies together with Lloyd's form the Marine Insurance Market of London.

The Marine Insurance Companies, although competitors with the Underwriters at Lloyd's for Insurance business, are yet supporters of the Corporation of Lloyd's and its system of collecting Maritime Intelligence from and diffusing it to all parts of the World.

The Royal Exchange was destroyed by fire on the 10th January, 1838, and by this unfortunate circumstance most of the important records of Lloyd's were lost. It was to the Rooms at present occupied by Lloyd's that Queen Victoria came when she opened the new Royal Exchange in 1844.

Lloyd's was incorporated in 1871 under Lloyd's Act of that year, having previously existed for about 200 years as an unincorporated Society of Underwriters, which had since 1811 been regulated by a Deed of Association and by rules from time to time made under that Deed.

This Act was amended by Lloyd's Act, 1911, under which the objects of the Society were extended to meet the requirements of modern developments.

The Committee of Lloyd's, as a body, is only interested in the Insurance Business carried on at Lloyd's to the same extent that the Committee of the Stock Exchange is interested in the Business carried on by its Members, namely, the laying down of regulations to safeguard the interests of Members as well as those of Policy holders.

The work of Lloyd's, as a Corporation, is to protect the interests of Members of the Society in respect of Shipping, Cargoes, Freights and other Insurance business, and for this purpose it is necessary to obtain early information of the movements of British and Foreign Mercantile Shipping and to be in touch with every Port in the World

The Corporation of Lloyd's has therefore established Signal Stations and Wireless Stations at many important points on the Coasts of the United Kingdom and Abroad, and there is a Lloyd's Agent, or Sub-Agent, at every Port in the World.

Lloyd's Signal and Wireless Stations have proved themselves very valuable not only to Underwriters but also to Shipowners and Merchants, as, besides getting news of a vessel, it is frequently necessary that she should be intercepted off the Coast, either in Home or in distant Waters, and ordered to a new destination.

Marine Insurance business has always been the principal business at Lloyd's, but for some years past a very considerable Insurance business for War Risks, Fire, Aircraft, Accident, Employers' Liability, Jewellery, Motor Cars, Burglary, etc., etc., has been transacted by Members of Lloyd's.

All Underwriting Members of Lloyd's deposit with the Committee of Lloyd's Securities and Guarantees in proportion to the amount of business that they transact, and all Underwriters' accounts are audited annually by approved Auditors, who report the result of these Audits to the Committee of Lloyd's. In addition to this, the personal Liability of all Underwriters is unlimited, and the security of a Lloyd's Policy is, therefore, fully safeguarded.

To effect an Insurance at Lloyd's, it is necessary to employ the services of an Insurance Broker, who must be either a Member of, or a Subscriber to, Lloyd's.

LLOYD'S,

ROYAL EXCHANGE, LONDON, E.C. 3.

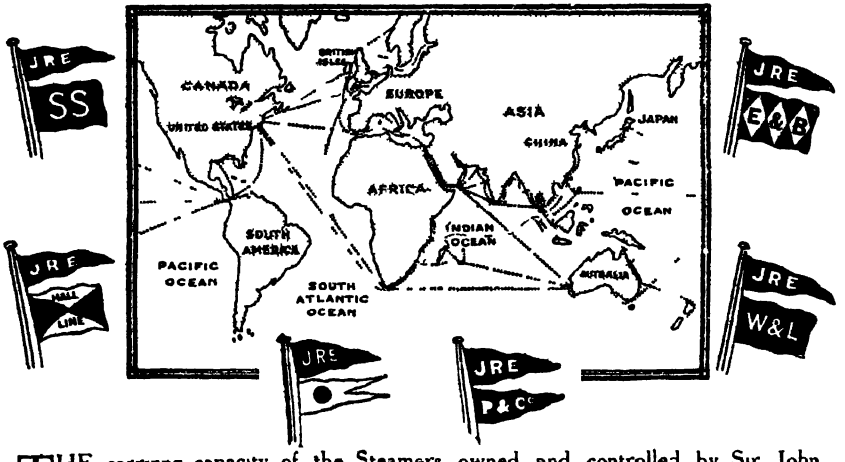
BRITISH SHIPOWNING.

By the Editor of "The Shipping World."

THROUGHOUT 1920 the shipping industry of the country was exposed to a succession of influences partly political but more largely economic in their origin and effect. As in the case of other key industries the 'turn over' in shipping from war to peace conditions, from State control and management to individual responsibility and initiative, with its attendant risks and no State indemnity to fall back upon, has not been easy. The return to economic conditions meant that shipping companies founded to reap the artificial profits of war time had to prove their financial stability in normal times, or go under. Probably in the end after the final 'shake out' shipowning interests will be less liable than of late to financial speculation and fluctuation, stronger and healthier better able to meet trade depression and to survive it. But meanwhile the position is not a particularly comfortable one for the shipowner either here or abroad.



In August last the war expedient of the Government control of shipping virtually came to an end and although the Shipping Controller claims still to exercise a nominal right to direct voyages and limit freights these powers are only retained so that they may be put in force should a critical financial or political situation again arise. This is not, of course, anticipated so for all practical purposes State control of the industry is over. Unfortunately, while coal exports remain subject to Departmental restrictions, the freedom of shipping cannot be said to be complete, and the natural laws of supply and demand cannot operate if the staple export of the country is prohibited and imports have to pay for the round voyage when the vessel goes out in ballast.

Nevertheless there is no British shipowner who does not appreciate the benefits of being allowed to manage his own business in his own way. He is convinced that he can do it better than any outside agency and he is right. Freights may fall, running costs may remain extravagantly high, and labour prove refractory, yet the shipowner, although he may growl, remains in business, and all that he asks is to be left alone to meet the strong international competition which looms up in the West and from the Far East. Before the War the competition of the German merchant marine on the high seas was severe and not always fair and above board. The competition which threatens from America is more straightforward, but there, again, no attempt is made to disguise the fact that the Government is being evoked to render aid to its own nationals. The attempt to revive the ten-year old controversy of giving a preference to American ships using the Panama Canal in the payment of dues is one instance, the passing of the Jones Shipping Act by the United States Congress is another example of political action directed to economic ends. In Japan, too, the same tendency is to be observed and from that country it is possible British shipowning may yet experience the most serious competition. But in spite of it all, the Britisher is confident he can meet any of his overseas competitors in fair fight. North of England shipowners belonging to a generation that is passing may sell their fleets to younger men on the Bristol Channel and elsewhere but even the veterans cannot rest on their oars, and Sir Walter Runciman, among others, takes up the burden of business again and is convinced he can make good.

This faith in the future is all the more remarkable in view of the steady fall in freight quotations which set in during the early summer and deepened with the autumn months, even although they revived temporarily under the menace of a national coal strike. The truth is that there are now more ships afloat than ever before in the history of the world. There is less cargo for them to carry nowadays, an impoverished Europe has little to export, and cannot afford to pay much for anything in the shape of imports other than the most urgent necessaries of life. On the other hand, ships have to make long voyages instead of short, and hence more tonnage is required to carry the same quantity of goods, while delays and expenses in port contribute still further to the abnormal conditions of seaborne trade. Railways rates have advanced, and coastwise shipping benefits. But the restrictions on coal exports sent abroad, and the high level of prices of that commodity, have diverted coal-carrying tonnage into other routes, and given a great fillip to the construction of, and demand for, oil tankers. The unsettled conditions generally have alarmed the weaker shipping companies and have correspondingly strengthened the regular liner firms, whose pre war tonnage, written down to a low figure, is now a valuable asset in face of the high costs of new construction.

ELLERMAN LINES LIMITED

Controlled by Sir John R. Ellerman, Bart.

THE carrying capacity of the Steamers owned and controlled by Sir John Ellerman, B rt , throughout the world is now over 1,150 000 tons deadweight, and additional steamers, with an approximate capacity of 300,000 tons, are in course of construction Powerful and Luxurious Passenger Steamers to suit the various trades are a special feature

The following are the principal Lines (known collectively as the Ellerman Lines Ltd) and their trade routes —

ELLERMAN'S CITY & HALL LINES	**U.K. to and from India, South Africa, East Africa, etc.**
ELLERMAN & BUCKNALL S S. CO., Ltd.	**U K Canada and U.S A. to and from South Africa, India, Straits China, Japan, Australia, e'c U.K. to Persian Gulf.**
ELLERMAN & PAPAYANNI LINES.	**U.K. to and from Portugal, Italy, Levant, Egypt and Black Sea.**
WESTCOTT & LAURANCE LINE.	**U.K. to and from Gibraltar, Malta, Egypt, Levant and Black Sea.**
ELLERMAN'S WILSON LINE.	**U.K. to and from France, Scandinavia, Baltic, Mediterranean, India, U.S.A. and Australia.**

Principal Offices: LONDON, LIVERPOOL, HULL, GLASGOW.
Agencies throughout the World.

BRITISH SHIP-REPAIRING.

By JOSEPH L. CAROZZI, Editor of "Syren and Shipping."

THE ship repairing industry is complementary to that of shipowning For the successful operation of the latter it is essential that there should be adequate facilities for the repairs of hulls and engines and for the general overhaul of ships equipment Serious repairs are usually dry dock jobs and hence no up to date port is without its public or private dry docks Liverpool and Southampton are the only United Kingdom ports where such ships as the *Aquitania*, *Imperator*, and *Olympic* can be drydocked, and hence they must go there for painting or for hull or propeller repairs The Clyde, Tyne, Wear, Tees Humber the Bristol Channel at Cardiff Barry, Newport and Bristol and the Thames have splendid facilities for repairs to all but the very largest type of vessel British ship repairing works are in great demand, not only by British shipowners but also for foreign shipping Great Britain is in fact the World's centre of ship repairing and there is no reason why its activities should not be appreciably extended The industry can hardly hope to attain the enormous output of the later period of the war and that following the armistice Between the middle of June 1917 and the cessation of hostilities no fewer than 10 000 British ships, aggregating over 30,000 000 tons passed through the repairers hands at our home ports while in addition hundreds of Allied and Neutral vessels were also dealt with During 1919 and 1920 work was also very brisk chiefly because the ships released from Admiralty control had to be reconditioned before being returned to their owners This type of work lasted well into 1920 and in addition to the demands which it made upon the ship repairers there was a large volume of work in connection with the adaptation of steamships to burn liquid fuel instead of coal The two biggest jobs of this description were those of the *Aquitania* and the *Olympic*, the conversion of the latter it is stated having cost over £400 000 Hundreds of other vessels were also converted and there is yet much work of this description waiting its turn The outlook for 1921 is therefore distinctly encouraging for, besides adapting furnaces for burning and bunkers for carrying oil, there is in addition to casualty and depreciation repairs, a vast amount of work overdue upon hundreds of ships These, when the shortage of tonnage was acute, could not be withdrawn from active service There is, however, a problematical factor which may affect the industry very disastrously In the latter portion of the year there were several strikes which seriously hampered the work of the repairers, and inconvenienced shipowners to such an extent that they were compelled to send their vessels to Antwerp Rotterdam, and even Bremen and Hamburg to be repaired At these ports the work which cost less, was well done, and time contracts were faithfully fulfilled In ship repairing the time factor is of vital importance as while the ship is in the repairers hands she is earning neither freight nor passage money Labour has it in its power to make or mar the British ship repairing industry, and it cannot be too plainly recognised that the insane policy of calling a strike whenever any dispute arises, can only result in driving repair work to Continental competitors The work of ship repairing is closely allied with that of shipbuilding In fact the modern plants with the exception of launching ways and extensive plating sheds, do not greatly differ from a shipbuilding and marine engineering works They must be self contained and hence able at a moment's notice to tackle repairs either to hull or machinery As might be expected many shipbuilders make a feature of repair work A notable case in point is furnished by Messrs Harland & Wolff who have established magnificent repairing establishments at Liverpool Southampton and more recently on the Thames These are a great boon to shipowners as they enable their vessels to be overhauled expeditiously at their terminal ports The entrance of a firm which has built so many of the largest vessels of the British mercantile marine into the ship repairing business, is advantageous in another direction As builders they have special knowledge of the detailed construction of hull machinery, and passenger accommodation of many of the vessels which come into their hands for repair or overhaul As illustrative of the equipment necessary for the modern ship repairing plant dealing with the largest jobs, it may be mentioned that 60 and 50 ton cranes lathes that will deal with 56 feet length and 11 feet diameter shaftings and rolls capable of manipulating plates up to 33 feet in width are all to be found in the Harland & Wolff establishments at Liverpool and Southampton The bulk of the ship repair work done at British ports is, however, to cargo boats and in this phase of the industry the Bristol Channel and the Tyne have established a world wide reputation To sum up the situation the outlook is very hopeful, there is more than a normal amount of work, and the industry should flourish accordingly—provided that high costs and harassing strikes no not drive the trade away to cheaper and more reliable centres

OIL FUEL.

THE most noteworthy development in connection with marine engineering during the past year has been the substitution of oil fuel for coal This has been done either by use in internal combustion engines or by burning oil in place of coal to raise steam The advance in the use of the internal combustion engine has been very marked but for reasons which are not difficult to understand has been far exceeded by the conversion of the ordinary steam engines to burn oil fuel Those reasons briefly, are that although the design of internal combustion engines has made marked progress during and since the war it has not yet advanced to the point where such engines can be employed for passenger liner traffic That will come in time but not for a few years, because not only is the question of engine design involved but also that of hull design The fast motor driven passenger liner will be not only a revolution in marine engineering but also in hull design and construction Nevertheless the use of the internal combustion engine has made substantial progress, for it has proved itself to be economic in upkeep reliable in operation and profitable in earning capacity These advantages which become more and more important as the unskilled factory labour conditions throughout the world tend to become stabilised, far outweigh the greater prime cost of the internal combustion engine and compensate for the loss of greater flexibility of steam power Mr James Richardson B Sc, in a paper read last October before the Institute of Marine Engineers, shows that if the operation costs of a twin screw Diesel engine (2 400 b h p) vessel are compared with those of single screw double reduction geared turbine steamers (2 400 s h p) it will be found that the turbine steamer burning coal will cost in engine room charges alone £13 650 per annum and if burning oil £30 390 per annum more than the motorship without making any allowance for the increased carrying capacity of the motorship The advance in motorship tonnage building to day is therefore comprehensible At September 30 the total of such tonnage was 1 263 000 tons deadweight having an aggregate b h p of 40 000 Every month brings additional evidence of the great part the marine internal combustion engine is to play during the next decade in ocean transport

The consumption of oil in internal combustion engines is of course the ideal method but for technical reasons this is not always possible and it is necessary to burn the oil in the furnaces Strictly speaking this is not an economical procedure because the volume of oil required to raise steam in boilers is just about double the amount of oil required to develop the same horse power by internal combustion engines The annual report of Lloyd's Register issued in September drew attention to this development and stated that there were 426 vessels of 1 995 788 gross tons classed in the Register Book as oil burners The percentage of such vessels to the total in the book was 16 3 per cent as compared with 10 5 per cent in the 1919 Register Book The percentage of motorships rose in the same period from 1 5 per cent to 1·7 per cent

The reasons for burning oil fuel even under boilers, are economy of operation because of smaller engine room staff quicker and cleaner bunkering certainty of supplies and lower or at least not higher cost than coal The difficulty in regard to oil fuel is supply The country which controls the petroleum supply will control the trade of the world said the Chairman of Standard Oil at the U S Foreign Trade Convention at San Francisco last April The British were the first to recognise that fundamental fact, and thanks to private initiative British enterprise has opened up and is developing oil fields in Mexico Central America Trinidad Venezuela, India Egypt Burma, the Straits Settlements the F M S in Roumania, in Russia in North and South Persia and in Mesopotamia Just as our home coal gave us commercial power so coal's new rival, oil will maintain that power We still need our coaling stations and in addition we are laying down oil bunkering depôts all over the world The bunker holds of our liners are being converted into oil tanks and two of the most striking conversions during the past year were those of the famous Atlantic liners *Aquitania* and *Olympic* from burning coal to firing with oil fuel In the case of the *Aquitania* the work of conversion was particularly heavy for the coal bunkers not being suitable for cargo purposes it was decided not to carry the oil in the double bottom but to rebuild the bunkers as tanks a matter entailing large expenditure of money and time The fuel is sprayed into the furnaces by the White low pressure system There is a duplicate installation for each group of three boilers which ensures that the feed to the furnaces can only be interfered with in the most exceptional circumstances The oil is carried in bunker tanks cross bunker tanks and double bottom tanks and to ensure free flow in cold weather heating coils are installed. From the storage tanks the oil is pumped to settling tanks and thence through suction strainers to the heaters and discharge filters and so to the burners It will be seen that what ever economies oil fuel may bring in operating vessels the capital expenditure involved in such alterations and installations as we have merely sketched must be very large The conversion of a passenger liner to oil fuel means also a great deal of extraneous work in connection with additional fire prevention and to so perfect a state has this arrived that there is not a case on record of such a converted vessel having had a fire on board Indeed if proper precautions are taken oil burners are safer than coal burners because there is no risk of combustion in the bunkers The result of the conversions on the *Aquitania* was that the engine room staff was reduced by 66 per cent, better speed has been maintained in service because it is no longer necessary to draw fires to clean out furnaces thereby an even steam pressure has been maintained from start to finish of the voyage, bunkering takes twenty four hours for the round trip instead of five days at each terminal The Cunard's *Aquitania* and the White Star's *Olympic* are not the only famous liners converted during the past year The Royal Mail have converted the *Arlanza* and *Almanzora* and with the associated company the Pacific Steam Navigation will eventually convert all their South American liners to oil fuel The P. and O have adopted a similar policy and are also building motorships The Bibby Line already has a motor liner in service whilst Messrs Harland & Wolff are building a fleet of motorships for the Glen Line amongst them being the *Glenogle* *Glenapp* and others which rank among the largest and most powerful motor vessels in the world Side by side with these developments British oil interests are expanding the output by repiping old and opening up new fields They are laying down tank depôts in all parts of the Empire and elsewhere and through their subsidiaries creating large fleets of tankers to carry the oil to their bunkering depots at home and abroad

THE BOILER INDUSTRY.

By THOMAS WALLEY.

SINCE the early days of steam (which Emerson said might almost be termed an Englishman) Great Britain has annually exported a considerable number of boilers, in itself a proof that her practice and prices have been satisfactory. This is a state of affairs which must be maintained, and a short survey of the present organisation, conditions and practice of the industry may be useful in assessing future prospects.

The boiler industry is carried on, broadly speaking, through two systems of organisation. The first is that in which boilers are not the sole product of the manufacturing firm, but are made as an item in a complete unit, thus nearly all the large shipbuilding yards have boiler shops of their own, railway companies generally produce the boilers for their locomotives, as also do makers of agricultural engines, road rollers and the like. This system shows signs of being displaced by the second one in which a firm manufactures boilers and nothing else—in other words, by the modern system of specialisation. A tendency of this kind is all to the good. Modern boilermakers use a much larger proportion of heavy plant than their predecessors, such as hydraulic flanging presses, multiple drills, hydraulic riveters, and it is only a firm able to keep such machines busy by a large turnover that can produce good boilers at a reasonable price. The use of powerful and efficient plant naturally results in a better article with lower manufacturing costs than older methods could, as these involve so much hand work. This is true of most trades, but applies with special force in boilermaking, where, for instance, the use of a flanging press avoids the frequent reheating of heavy plates, which is necessary with hand flanging. But this specialisation goes further. Boilermakers nowadays do not make *all* types of boiler, as a matter of fact, most of the firms of the front rank confine themselves to the manufacture of one, or at most two types. Thus the makers of water tube boilers (in which the fire is *outside* the water and needs a firebrick lined casing to contain it and form the furnace) are almost a race apart from the makers of fire tube boilers (in which the fire is contained *inside* the water holding structure). The latter class, again, handle only, say, "Scotch" or "Lancashire," "Yorkshire," "Cornish" or "Locomotive" boilers, which are all horizontal, or else one of the vertical types. These last, apart from the common "Crosstube" boiler, are generally patented patterns, and further illustrate specialisation. The natural result of specialisation is standardisation, which again helps to make possible a better article at a moderate price. Most of the firms which have adopted the one have adopted the other, greatly to the benefit of the buyer, as he can select a firm whose range of standard sizes, singly or in groups, covers his requirements with, very often, a possibility of getting what he wants from stock, though the whole trade has suffered badly for the last year or so from the extreme shortage of raw material, viz. plates and tubes, which makes for longer deliveries. It may be noted here that specialisation does not mean monopoly, there is sufficient competition amongst boilermakers to keep the trade healthy, whilst there is generally a refreshing absence of "rings" or combinations.

The best modern practice, it may be noted for the benefit of the non technical buyer, requires all the rivet holes to be drilled in place, not punched, all plate edges to be planed or sawn to shape, not sheared, riveting to be done by hydraulic machine wherever possible, and caulking with pneumatic tool. In design development is taking place in the direction of reduction of stays (or gussets), which often make a too rigid structure and interfere with proper cleaning; their absence being compensated for by pressing the plates affected into stronger forms. Steel is now almost invariably used, except sometimes for tubes, and the employment of steel of very high tensile strength is becoming more frequent where weight is a prime consideration, e.g. in Naval work. Welding by the oxy-acetylene flame or by electricity in place of riveting seams is making headway. There is also a tendency to build boilers for higher pressures than formerly.

More scientific design has resulted in economy of material, and standardisation in economy of time and labour. Economy in performance is now being carefully studied. The increasing cost and scarcity of steam coal involves the use of inferior fuels, which to be consumed effectively require special forms of grate. These are being developed, and material formerly classed as waste can quite easily be burned on them. The superheater is being further developed also in the direction of economy. Though the use of heavy oil as fuel is not at present a commercial proposition in Great Britain, owing to its high cost, it has great advantages, and many boilermakers have studied the subject sufficiently well to be able to modify their designs so as to burn it effectively.

A welcome note in progress was sounded in the autumn of 1919 by the publication of a uniform set of rules for boiler construction. This is the production of the big Marine Surveys, viz. Board of Trade, Lloyd's, British Corporation and Bureau Veritas. It will further simplify and standardise business, and possibly lead to regulations for land boilers, for nothing of the kind exists in Great Britain. The intending buyer of a land boiler, then, is well advised to enquire to what rules his boiler will be constructed.

The future of the industry is not so gloomy as some prophets predict. It is quite true that the Diesel engine is apparently driving steam boilers out of large ships—the main boilers, that is—for even on Diesel-engined vessels it is found necessary to carry an auxiliary (or donkey) boiler to provide the motive power for such machinery as winches and steering gear and heat for various purposes. It is further possible that the use of the large internal-combustion engine may become more general on land in such places as the power house, and that water power and tidal action may be more utilised, but there is scarcely an industry which does not make use of steam for other purposes than power, and new processes and extensions are occurring from day to day. The utilisation of waste heat from steel heating furnaces by means of boilers is an illustration. The steam boiler and engine still remain the best independent source of power, and it is this very independence which makes a steam installation the most reliable and flexible power producer in isolated situations and developing countries.

There will be numbers of oil fired steam boilers in Mesopotamia and South America in the future, wood fired in Siberia and Canada, to suggest only a few possibilities, and, as British boilers are undoubtedly the best, the larger portion of them will be British.

OIL MILL MACHINERY.

(THE EXTRACTION OF OILS FROM OLEAGINOUS

By R. A. BELLWOOD.

VEGETABLE oils have always been of enormous value to the human race, used as foods and for medicinal, lighting, lubricating, and a great number of other purposes. More recently an entirely new field has been opened for the use of vegetable oils—in the manufacture of margarine—and the quantities required for this purpose are steadily increasing; *indeed an enormous advance has been made during the past few years.*

The origin of the oil-milling industry would be difficult indeed to place. By more or less crude methods, with native made inefficient plant, oils have been obtained from oil-bearing seeds, one might say, since the world began. It is not proposed here to deal with that part of the subject, but to refer briefly to the methods and processes in use to-day.

Until recent years, nearly all vegetable oils were expressed, that is, the seed after suitable preparation was submitted to pressure and the oil forced out. To-day, an alternative method in the extraction of oils by means of chemical solvents is firmly established and in general use.

Concerning plant for expressing oils from seeds there are different types of presses in use. That which has been most favoured in this country is the Anglo-American system, probably on account of the fact that previous to the War the seeds chiefly treated here were cotton-seed, linseed, and soya beans, which lend themselves more readily to treatment by this system. A standard unit of Anglo-American machinery usually comprises the following:—

A magnetic separator to remove any iron from the seed.

A screen to take out the dirt and foreign matter.

A set of rollers to grind the seed.

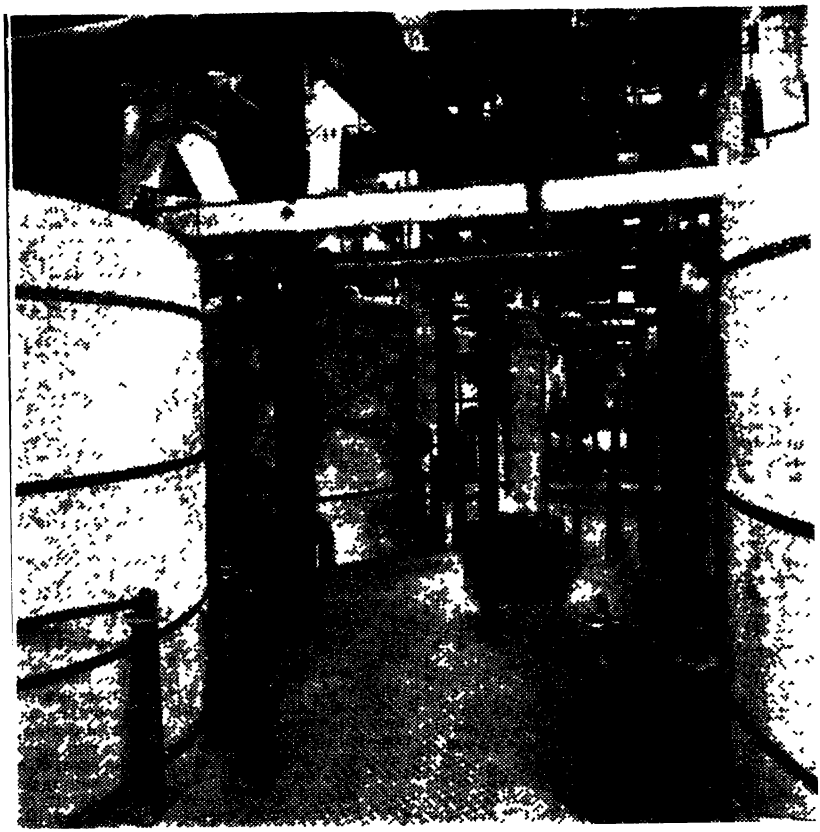
A cooking kettle to heat and temper the seed.

A moulding machine, which takes the heated meal from the kettle and moulds it to cake shape for the press.

Four hydraulic open plate presses, each capable of taking sixteen charges of meal from the moulding machine; these are enclosed in presscloth, which retains the solid material and allows the oil to escape.

A paring machine, which removes the oily edges from the cakes as taken from the presses.

A set of edge runner stones, to grind the parings from the paring machine; these parings *being* returned to the kettle and mixed with the new seed from the rolls.



A set of hydraulic pumps, with the necessary valves *for operating* the presses.

In addition, elevators and conveyors are supplied for taking the seed from one part of the plant to another, so that the whole works almost automatically. The cakes from the presses are chiefly used as cattle food.

Another type of press is the "cage" or "perforated box" press, of which there are at least two distinct types. In what is known as the "tramway system" the extracting boxes of the presses are removable—whereas in the other, the extracting boxes are fixed. These extracting boxes are usually built up of a number thin staves, each stave having one serrated edge, thus forming a box, with innumerable fine perforations, through which the oil escapes under pressure. Another type of box has a number of fine holes drilled through its walls for the same purpose. In the tramway system, the boxes are filled with seed, which is then compressed in a preliminary packing press; more seed is placed in the box, and it is again compressed. The boxes are then taken on a truck to a finishing press, where the oil is expressed. After the seed has been under pressure in the finishing press a given time, the box is taken away to the preliminary press, where the cakes are ejected and the box refilled. Preparatory cleaning, grinding and cooking plant is of course required with these presses; this being substantially the same as for the Anglo-American system. Stationary cage presses are now being made combined with preliminary packing presses, and automatic feeding arrangements.

"Cage" presses are usually employed in working up seeds having a high percentage of oil, such as palm kernels, copra, ground nuts, castor seed, shea, mowrah, etc. If high-class edible or medicinal oils are required, the "cage" presses are generally employed, but the material is treated cold in the presses, no heat being applied to the seed, and this results in a better quality of oil being produced, known as cold-drawn oil. After cold pressing, there is still a considerable percentage of oil remaining in the seed, so that the cakes are ground up again, and may be pressed again hot, or, better still, treated by the solvent extraction process, by which practically all the oil remaining can be extracted.

The solvent extraction process is suitable for treating practically all kinds of seeds, with either a high or low oil content. This process is distinctly useful when the maximum extraction of oil is required, or when the residue is not required in the form of cakes for cattle feeding purposes. These plants are extremely useful for recovering the balance of the oil from materials which have been once pressed, such as castor seed, which has been pressed cold to obtain pharmaceutical oils. The products of the solvent extraction process are oil and meal, the latter being sold as a cattle food, or as a fertiliser, according to the seed being treated. At one time there was a strong prejudice against extracted oils and meals, but that is rapidly dying out. Oil refining processes have been greatly improved, and the oil from solvent extraction plants can readily be used for edible purposes. The solvent used chiefly in this process is benzine. Other solvents may, however, be used, such as trichlorethylene, carbon tetrachloride, carbon disulphide, etc. There are a number of solvent extraction plants already at work in the United Kingdom, of varying capacities dealing with 200 to 2,000 tons of seed per week. As oil manufacturers realise the great possibilities of the solvent process many more plants will be erected.

THE REFRIGERATION, ICE-MAKING AND COLD STORAGE INDUSTRIES.

By LEUIG CHEW, M.I.Mech.E.

MECHANICAL Refrigeration particularly in its application to the preservation and transportation of perishable food stuffs under cold storage has come to be regarded as the one outstanding rational and practical means by which the continuation of the prevailing food shortage and consequent almost prohibitive cost of living can be averted

In all countries where population continues so rapidly to outgrow internal food producing capacity it daily becomes more and more vitally necessary to draw upon the food resources of other food-producing countries for support, and as this can only be accomplished upon the required scale both in regard to transport and distribution by means of mechanical refrigeration the very national existence of some countries may be said to rest upon this master industry.

Apart from the all-important question of food supplies it can be but imperfectly realised by those who are unacquainted with the innumerable contact points of refrigeration with industrial and social economics as a waste preventer and hygiene promoter how greatly health, happiness industrial prosperity and social well being are dependent upon it

Its scientific development and practical application to commerce has hitherto been left entirely to private enterprise and initiative, in which the Cold Storage and Ice Association (the oldest institution of its kind in the world) has played an important part. Recognising the vital necessity of mechanical refrigeration to national welfare forming as it does the foundation of many of the world's most important industries and rendering possible innumerable manufacturing processes embracing the essential factors in the progress of human civilisation, the British Government during the war instituted, under the Ministry of Food, a Cold Storage Department, with authority to organise, finance and facilitate additional cold storage accommodation throughout the United Kingdom and generally encourage scientific research and practical development of the industry

Briefly described in non technical terms refrigeration —or the mechanical production of cold—is the process by which the temperature of any body may be reduced and maintained at a lower temperature than that of the surrounding atmosphere, and this process involves the continuous abstraction of heat from the body being cooled, and the transference of that heat to some other body (such as and generally water) at normal temperature

The theory and practice of machinery used for carrying out this process are based upon the first and second laws of thermodynamics namely—

(1) The equivalence and mutual convertibility of heat and mechanical energy and

(2) The necessity of an external agent for the transference of heat from one body to another at a relatively higher temperature

In the early pioneer days of refrigeration machines of the cold air type employing atmospheric air as the refrigerating medium were used with considerable success, and found wide special commercial application up till about the year 1890 when scientists and engineers commenced experimenting with another system of refrigeration known as the compression system which has since been universally adopted entirely superseding the earlier cold air system

In the compression system a volatile liquid such as ammonia (NH_3) or carbon dioxide (CO_2), is used as the refrigerating medium, the underlying principle being the physical property which is possessed more or less by all substances of absorbing latent heat at constant temperature while passing from the liquid to the gaseous state and of rejecting the same quantity of heat while undergoing the reverse process of condensation This is the principle which is made use of in all modern refrigerating machinery of the compression type for the mechanical production of cold

In practical application the ammonia or other refrigerating medium is caused to evaporate and absorb latent heat in tubular coils around the exterior of which the air of the storage chamber or water to be frozen into ice or whatever other substance is to be cooled, is allowed to circulate while the resulting vapour is drawn off by a compression pump and discharged into a condenser where it is cooled by circulating water to which it rejects the latent heat and is restored to the liquid state to be used over again in the evaporator coils

One of the chief, though by no means most important industrial applications of mechanical refrigeration is the manufacture of ice more durable and—by reason of the known purity of the water congealed—more hygienic and palatable than the natural product. The magnitude of this industry may be gauged by the annual consumption of manufactured ice in the United States which amounts to over 20 000,000 tons, no less than 3 500 odd ice making plants being employed in its manufacture

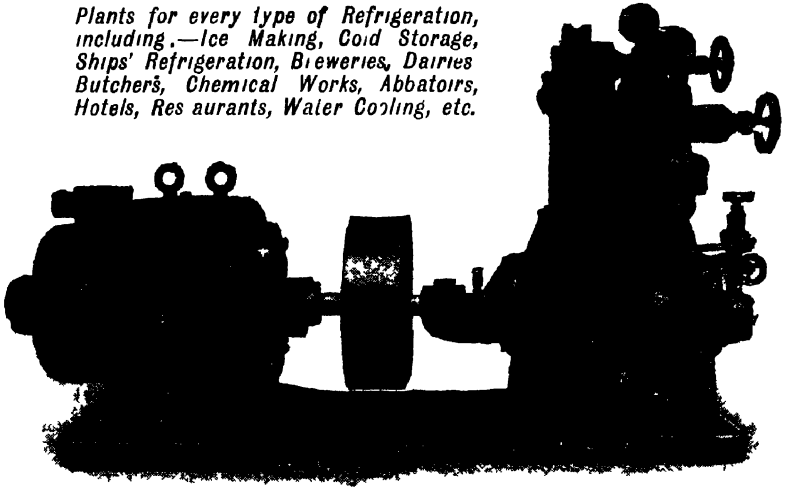
In Great Britain, where climatic conditions are less favourable to the ice industry an annual consumption of over 400 000 tons is recorded

Another application of more vital importance to this country is the cooling of cold storage chambers for the preservation of meat poultry fish, milk, butter cheese fruit vegetables and other provisions of a perishable nature

Including the new cold stores erected under Government control during the war and in addition to several thousand privately owned small cold stores used in the businesses of butchers poulterers fishmongers dairies etc the United Kingdom now possesses public cold stores of a total capacity of 45 000 000 cubic feet of insulated refrigerated space Among the most important centres London comes first with its 18 000 000 cubic feet then Liverpool which has 9 500 000 cubic feet Manchester 3 000 000 cubic feet and Glasgow 2,000 000 cubic feet

This total capacity is sufficient to accommodate some 18 000 000 carcases of mutton weighing 1 pound about 400 000 tons

A large number of vessels are employed in the transportation of meat and other food products from the food producing countries such as Australia New Zealand South America etc both to Great Britain and other lands where food producing capacity is below their consumption These vessels are fitted with insulated cold storage chambers, and refrigerating machinery to maintain them at the requisite low temperature. The number of British refrigerated steamers engaged in this trade is now 250 vessels with a total refrigerated capacity of over 30 000,000 cubic feet.



To illustrate the enormous responsibility which often hangs on the slender piston rod of a refrigerating machine it may be mentioned that the value of the frozen meat carried in the refrigerated holds of some of the largest of these vessels often amounts to £150 000

ICE MAKING, COLD STORAGE AND REFRIGERATING MACHINERY.

(Ammonia and Carbonic Anhydrous Systems.)

Patent automatic-safety and self-lubricating, totally enclosed, vertical, single acting compressors, manufactured by the oldest established firm of Refrigerating Engineers in the world.

Plants for every type of Refrigeration, including,—Ice Making, Cold Storage, Ships' Refrigeration, Breweries, Dairies Butchers, Chemical Works, Abbatoirs, Hotels, Restaurants, Water Cooling, etc.

TWO CYLINDER ELECTRICALLY-DRIVEN "WEST" PATENT AMMONIA COMPRESSOR

The "West" patent compressors are the most economical in power consumption cost of maintenance and housing room, foundations, etc., and give the very maximum of efficiency

Built up of one or more cylinders to suit every possible range of duty and designed for direct-coupling to any suitable power unit, or for belt drive as required

SEND FULL DETAILS OF REQUIREMENTS AND IF POSSIBLE DRAWINGS OF PREMISES.

STEEL.

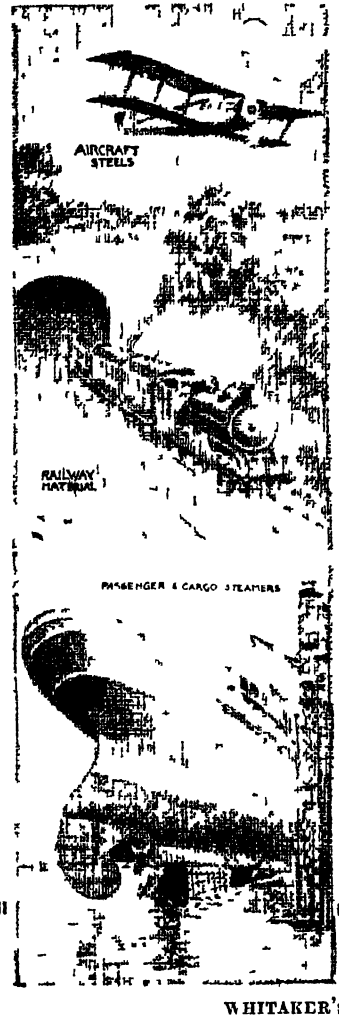
OUR development to the present standard of civilisation may be considered to have occurred in four ages, viz the Stone Age, in which we ceased to live in trees and learned the use of flints, etc.; the Bronze Age, during which period many highly cultured civilisations developed and mostly disappeared the Iron Age which may be considered to be the transition period from the Bronze Age to our present complex civilisation, which we will describe as the Steel Age It is, indeed no misnomer to describe our present age as that of steel since railways modern shipping and aircraft, with their fundamental effect upon the conditions of individual peoples and the relationships of different peoples to each other would have been impossible but for the technical genius of the men who developed the iron and steel industry during the last century

Iron was first obtained in small quantities and was used with more or less skill, either as iron or converted into steel The great impetus to the use of steel however, came when Bessemer conceived the idea of producing large volumes of steel by his pneumatic process, which consisted of blowing out the impurities from liquid pig iron by passing air through it under high pressure Siemens conception of making large quantities of steel in gas furnaces worked on what is called the regenerative principle—meaning that much of the waste heat is used over again—extended the mass production idea which underlaid Bessemers work The genius of the blast furnace engineers kept pace with the steel makers in the production of crude iron. The result is that the steel output of the world per annum is probably 50 000 000 tons

For centuries steel and Sheffield have been synonomous terms We will not here repeat that much quoted reference of Chaucer in his "Canterbury Tales to the Sheffield steel "thwitel" The cutlery produced in Sheffield in the old days was made from irons imported from Sweden and the manufacture settled in Sheffield as a result of the natural facilities in the way of power provided by the numerous streams in the district capable of working water wheels which turned the grindstones upon which the knives were ground Cutlery steel was produced by heating Swedish iron at high temperatures in a carbonaceous mixture and the bars of carbon steel produced were forged together into cutlery shear steel bars. In the middle of the eighteenth century a very important development in steel production was brought about by the discovery by Huntsman that steel might be melted in the crucible and his process is, indeed, still in operation for the production of the highest class of tool steels It will however, be realised that steel produced in small crucibles was not likely to lead to the mass production of rails, bridges and steamships and it was not until the development of the processes of Bessemer and Siemens that the present state of things could be attained

Steel manufacture as conducted both by the Bessemer and the Siemens process may be one of two kinds, either acid or basic The acid processes were the original processes, so called because the furnaces were lined with silica which is recognised by chemists as an acid Unfortunately, some of the largest deposits of iron ore in the world are very rich in the element phosphorus, which has a detrimental influence upon the properties of steel, and it was found that iron produced from such ores contained much phosphorus which was not eliminated during the process of manufacture It is to Thomas and Gilchrist, two famous English metallurgists, that we are indebted for the invention of the basic modification of the processes which enable the phosphorus to be taken out of such irons produced from the phosphoric ores One might observe in passing that the magnificent development of the German iron and steel industries mainly using their own phosphoric ores which made possible their attempt of 1914, would have been impossible had it not been for the distinguished work of those Englishman Thomas and Gilchrist

The large Sheffield steel works, the names of several of which are household words, were the pioneers in some of the most important processes and steels For instance, when Sir Henry Bessemer developed his Bessemer process, Messrs John Brown and Company may be considered to have substantially assisted its success by putting down the first independent plant for producing that type of steel So with the most recent developments of all the electric furnaces The large Sheffield firms such as Browns Vickers, Hadfields and Firths, erected and worked these furnaces long before they became a commercial possibility with the result that to-day the electric process is thoroughly understood Economical features have been introduced and very pure special steels in large quantities are now available for our engineers The influence of our large industries upon the progress of civilisation through the courageous adaptation of new ideas is often lost sight of and many of the good things which humanity is now able to enjoy may be traced to the judgment and courage of individual men in our different industries who have not hesitated to risk large sums in their development



One extremely important development during the last twenty or thirty years has been the direct association of science in the iron and steel industries and in no other industry has the development been so definite Probably this was due to the necessity for having a fleet capable of taking care of our interests in time of trial Science is utilised through research laboratories, and several of our leading steelworks in Sheffield have for many years had excellent and well equipped laboratories Some of these laboratories have contributed to the development of the steel industry by the discovery of new steels For instance in the eighties, the Hadfield laboratory contributed the well known manganese steel, so important for tramway crossings and, indeed for many purposes where hard wear is required Perhaps however the most remarkable development of recent times is the discovery in the Brown Firth laboratory of the rustless steel which is now well known to the public in the form of rustless table and carving knives This steel has now been perfected and Sheffield manufacturers are producing millions of reliable stainless knives every year The uses of such a rustless steel are practically without limit

The manufacture of tool steels is a very important side of steel manufacture The development of the ordinary carbon tool steel through the alloy tool steels up to the present high speed steels is quite a technical romance The present high speed steels, when made into turning tools cut off the steel being machined at such velocities and in such thick turnings, that the nose of the cutting tool becomes red hot through the friction, yet notwithstanding the metal preserves its temper and cutting edge unimpaired

We have said little about armament steels, aircraft steels automobile steels etc but from the foregoing remarks it will be clear that the manufacturing genius of our people has contributed the essential processes which enable irons and steels as metals to be produced in bulk The work of our scientific metallurgists, too, has been sufficiently effective to convert such irons and steels into the different kinds of special alloy steels required for these important purposes In conclusion it may be observed that, whereas the wrought iron of one hundred years ago had a tensile strength of only 20 tons per square inch steels may now be obtained which have a tensile strength well exceeding 100 tons per square inch

THE IRON AND STEEL WIRE INDUSTRY.

By H. D. LLOYD, Assoc.M.Inst.C.E.

NEARLY two years have passed since the date of the Armistice and the opportunity now arises to record some of the post-war history of the iron and steel wire trade

It may be noted that in November 1918 large contracts for wire and wire products for war supplies were cancelled at a few days notice without demur on the part of the iron and steel wire manufacturers and the Government were in consequence relieved of a large amount of useless expenditure

The history of the period under review is best given by the Table appended which shows month by month the British imports exports and re exports of wire wire rods and wire products It will be noted that the exports show a steady recovery of trade to practically normal level in the period which the figures cover, the home trade also though exact figures are not available for this has provided a steady demand with the result that the trade has provided employment for a full complement of workers and that all ex service men returning from the colours have been re absorbed without undue difficulty

That the re organisation of the trade during the re construction period may on the whole be regarded as satisfactory is in no small degree due to the active co operation which exists in the Iron and Steel Wire industry between Capital Management and Operatives for the results have been achieved in spite of numerous difficulties. Many anxious moments have been experienced notably when in September 1919 all restriction of imports was removed and it was anticipated that the British home markets would be flooded with imported wire and wire products at prices far below the home cost of production By a combination of circumstances the anticipated flood of imports did not mature the U.S.A. finding themselves too busy at home to compete keenly in exports at that period and later being involved in difficulties through the strike of steel workers at the same time the Continental wire manufacturers found themselves without any appreciable surplus with which to invade the British home market

The figures of imports of wire and wire nails during the last six months of period reviewed are however sufficiently substantial to cause considerable anxiety to British wire and wire nail manufacturers competition is becoming more severe and with their raw material in the form of steel in Great Britain at a much higher price level than that of their foreign competitors the iron and steel wire manufacturers are likely to experience difficult times until such period as the European Exchanges return to a more normal level

It is important to note that the large tonnage of wire rods now being imported is practically all at the expense of the British wire rod rollers who as stated in my last article have now sufficient capacity to take care of the Trade requirements of this country whilst in regard to the large import tonnage of wire nails a portion at any rate of this is at the expense of the British wire nail makers whose plants have been appreciably increased during the war period though the output in Great Britain of wire nails is still insufficient to meet the demand. In both the cases in question therefore large tonnages of material are being imported into the country which might under favourable conditions be made at home and provide employment for a large additional number of workers in the iron and steel wire industry

TUBE MANUFACTURES.

WROUGHT-IRON AND MILD STEEL TUBES OR PIPES.

By H. J. RHODES.

ALTHOUGH the manufacture of tubes from wrought iron and steel is a comparatively new industry, there must be many users of tubes, or pipes as they are just as often called, to whom the industry and the process of manufacture are more or less unknown. It seems very probable that the first tubes manufactured from wrought iron were intended for the barrels of guns, and used only for that purpose. One of the first instances of their application to one of those purposes for which they are now so largely used is reported in 1810, when William Murdoch the pioneer of gas lighting, employed old gun barrels screwed together to convey gas in his works near Birmingham. The end of the war in Europe in that year had probably very greatly reduced the demand for gun barrels and thrown large quantities on the market. In many parts of the country to-day gas pipes are still spoken of as gun barrel. The need of wrought iron pipes grew rapidly, and a quicker and less costly method of manufacture from that of gun barrel making had to be sought for, and this was discovered in 1825 by Cornelius Whitehouse, of Wednesbury, when he invented the process of butt welding by a draw bench and dies.

The principles of his invention have been in use ever since for the manufacture of tubes by the butt welding process, but, naturally, the methods of application have been greatly altered and improved.

The production of tubes by the Whitehouse invention did not for long fulfil all the requirements of the new conditions which were arising, and for which larger and stronger tubes became necessary than could be produced by the butt welding process. The minds of many ingenious men were at work, and it was only after long and costly experimenting that, somewhere about the year 1842 the process known as lap welding was established.

The methods of welding tubes known as butt welding and lap welding were, until comparatively recently, the only processes employed for the manufacture of wrought iron and steel tubes, and probably more than three fourths of the world's requirements are still manufactured by these two original methods.

The butt welding process is usually the process by which tubes from ¼ inch to 2 inch bore are manufactured for gas, water, steam, and like purposes where the pressures are normal.

The strips or hoops are delivered to the tube mill from the iron and steel works of a length, width and thickness suitable for the size of the tube to be made. The flat strips and hoops are brought to a welding heat in a furnace, gripped by tongs, and drawn from the furnace through a bell shaped die. The die is shaped so as to gradually bring the hoop into the shape of a tube, the edges being forced squarely together and welded. The tube after being welded passes immediately from the draw bench through sizing and straightening rolls to give the correct outside diameter and finish to the tubes.

The lap welding process can be applied to all sizes of tube from 1½ inch up to as large as 6 feet.

The strips or plates are first of all planed or scarfed on the edges. The scarfed strips are then heated to a bright red heat in a "turning up" or "bending furnace," from which they are drawn through a die so designed as to bend the plate into a tubular shape with the edges overlapping. The plate, when so shaped, is termed a skelp. The skelp passes into another furnace where it is raised to a welding heat, and is then pushed out at the front of the furnace into the welding rolls, which are set one above the other, each having a semi-circular groove of a diameter equal to the external diameter of the tube. Between these rolls a mandrill is held in position on a long bar, over which the revolving rolls rapidly carry the tube. Thus the weld is made by the pressure exerted on the lapped edges while passing between the roll surfaces and the mandril.

The method described of lap-welding through rolls is generally employed for sizes up to about 12 inch diameter, and diameters larger than 12 inch are usually welded by a different process. The plates are formed into tubular shape in plate bending rolls instead of through dies on a draw bench. The tube in this form is then fed through a welding machine, where instead of heating the whole tube the lapped edges only are heated bit by bit by the application of water gas, or carbon hydrogen flame, followed by hammers or rollers, by which the welding is effected along the whole length of the seam.

When the use of mild steel became general, a great deal of attention was directed to finding a suitable method of producing tubes direct from solid bars by which means of course, there would be no weld. These tubes became known as solid drawn or weldless tubes. A great deal of ingenuity was displayed, but the difficulties to be overcome were so great that it is only within the last few years, and after the expenditure of very large sums of money, that any of these processes proved a commercial success. By far the greater part of the weldless tubes made to-day are produced by what is known as the hot rolled process. As a rule cold drawn tubes are only produced for certain special purposes, the cost of production being very much greater. The first operation in the manufacture of hot rolled weldless steel tubes starts upon a billet of round steel bar, cut to such dimensions as will give the required size and length of tube.

The solid billets are charged into a heating furnace where the highest temperature is conserved at the drawing out end, so that the billet in its progress through the furnace is assured of a uniform heat throughout. A number of methods have been employed for piercing the billet and rolling it after piercing into a tube. The process now generally [illegible] for piercing is either in a hydraulic press [illegible] a piercing machine, where the revolving action of the rolls of this machine cause a displacement of the metal in the centre, while at the same time forcing the billet over the mandril. The pierced billet being still hot is rolled out into a tube, either through grooved rolls over a mandril or by means of a pilger or gap rolling mill. After the tube comes from the hot rolling mills, it goes into a pickling tank to remove scale. Following upon this operation, the tube is finally finished by receiving one or more cold passes through a die on the draw bench. The effect of cold drawing hardens the steel, and after each cold pass the tube is annealed.

The processes of manufacture of wrought iron and steel tubes briefly described in this short article, viz., the welded and the weldless processes, together constitute the methods by which practically the entire requirements of the world are supplied.

The industry of tube making has grown to enormous dimensions. There are large works in most European countries, and in Canada and the United States. Great Britain, the pioneer of the industry, is one of the largest producers.

BRASS FOUNDING INDUSTRY.

THE MANUFACTURE OF STEAM & WATER FITTINGS & ACCESSORIES.

BY GEORGE F. ANDERSON, A.M.I.Mech.E.

WITHOUT the art of the brassfounding industry accumulated in so subtle a way by the masters of the craft from the earliest ages of the human race the modern world would be much the poorer for many ingenious and necessary appliances

Of the various metal industries there is perhaps none more interesting or important than that which is concerned with the manufacture of that large class of engineering appliances and accessories known generally as steam and water fittings and boiler mountings There is none which has to meet such varied conditions and requirements so numerous and diverse as to cover almost every class of mounting or fitting valve cock, gauge trap and connection used in the control of steam air or water, as well as a considerable number of appliances such as pumps engine governors injectors heaters and circulators etc

These fittings although separately appearing unimportant have collectively to perform functioning duties of the highest order when considered in relation to the successful working of modern steam or hydraulic power plants since they have to control and distribute in exact quantities the essential power forces such as steam water or gas upon which the complete installations are entirely dependent

Thus in almost every phase of industrial or domestic activity the products of the brassfounding have become essential features In the domestic sphere all can appreciate the usefulness of the humble brass tap at the end of the domestic water supply, or the multitude of brass fittings such as door handles locks gas and electric lighting fittings ornaments etc whilst on the industrial side it is universally admitted how vital are the duties of the many and varied types of valves cocks gauges lubricators injectors and other engineering accessories used in boiler and engine houses and also in numerous manufacturing processes

The importance of the brassfounding industry to its kindred trades is such that there is no industry in the world to day which could have attained its present high standard of perfection without the assistance of such indispensable engineering auxiliaries as brass bronze and iron valves cocks fittings and steam appliances They are needed in thousands to equip the worlds boilers engines turbines steamships locomotives aeroplanes motor cars and transport vehicles whilst the building and allied trades require large supplies of radiator valves and fittings for heating systems also plumbers fittings for water and sanitary services and semi rotary or domestic pumps

It is permissible here to mention a few examples illustrating how nature's forces are utilised and adapted to the needs of mankind Thus the stop valve governs the starting and stopping of all kinds of power units on land and sea pressure gauges indicate with absolute reliability the pressure inside boilers and engines safety valves protect boilers from bursting by opening automatically at the maximum safe pressure, water gauges tell at a glance the level of water in the boiler under pressure, sirens hoot through the occan fog and so compensate for blindness by sound The lubricator, in its many forms by ensuring a thin film of oil between the working surfaces of bearings makes possible the continuous running of all classes of machinery

The materials used in the manufacture of steam and water fittings and accessories vary according to requirements and although iron and steel play a useful part in their construction a large proportion of fittings are made entirely of brass and bronze owing to its special suitability for the manufacture of clean sound and close grained castings as well as for its general mechanical and physical properties which render it capable of withstanding the high internal pressures to which most valves and fittings are subjected The high steam pressures and superheats now so generally employed make it imperative in the interests of safety that steam appliances shall be of the most scientific design and produced with the highest degree of manufacturing skill and in the best and leading makes of valves the internal design is so arranged that there is little or no restriction to the flow of steam, water or gas for which they are used

The duties of a brass or bronze part or fitting may be said to determine the quality of metal or alloy to be used in its manufacture, and these are probably few departments in a modern brassfounding concern where a wide experience of non ferrous metallurgy counts for more than in the metal melting and casting departments. Hence it is that in the making of brass and bronze castings the greatest care is required in the selection and alloying of the metals used Particular attention must also be given to the conditions of melting and casting Thus the time taken and the atmospheric conditions prevailing inside the furnace during the melting of many alloys have a pronounced influence on the properties of the cast metal Furthermore, the maximum temperature attained whilst the metal is in the furnace and the temperature of the molten mass at the time of casting have an equally marked effect on the strength and quality of the metal

All castings are carefully inspected and tested before distribution to the machine shops, to ensure freedom from blow holes or other defects Specialised products such as valves and cocks are now manufactured in large quantities by means of the latest and most modern types of machinery comprising special automatic and semi automatic machines which are capable of immense outputs of parts accurately machined and interchangeable with other parts Most fittings are made to gauge, and frequent inspection and tests are carried out on all products at various stages during manufacture

Pressure appliances such as valves cocks pressure gauges and general steam and water fittings are in addition thoroughly tested under pressure either by the ordinary hydraulic test or if desired steam pressure up to as high as 400lbs per square inch and, if necessary as much as 600 Fahr superheat

The modern brassfounding and engineering concern usually has facilities for, and regularly carries out chemical analyses of all raw materials as well as tensile and compression tests to destruction on materials under manufacture for it is only by the alliance of industry with science that the highest standard of uniformity and excellence can be maintained at all times In this way improvements in manufacturing methods have run parallel with developments in the designs evolved to meet the exacting conditions of modern service and all classes of fittings can now be obtained in several ranges of strengths and weights to suit any conditions of pressure or service

Standardised quantity production is thus the order of the day and it is generally admitted that production at the maximum rate and minimum cost benefits the whole community

In addition to the steadily increasing demands of home trade the high opinion entertained abroad for British manufactures has resulted in a large and insistent demand for the multifarious products of the British brassfounding industry and the export demand continues to grow apace A comparison showing exports of miscellaneous brass and bronze fittings from the United Kingdom for the pre war year 1913 with that of 1919 and a portion of 1920 is interesting —

Year	Tons	£
1913	13 932	1 653 432
1919	11 116	1 844 734
1920 (9 months ending Sept '20)	38 2 0	5 834 404

The reconstruction of the industry from war to peace conditions although slower than anticipated by some, is steadily assuming a more settled basis and it is to be hoped that the gratifying increase reflected by the 1920 export returns (2'0 higher than 1913 on weight alone) will be experienced in every branch of the industry With nearly every manufacturing plant in the British Isles reorganised for the most modern methods of scientific mass production the demands of both home and overseas industrial requirements can be met on an almost unlimited scale Further developments are always possible as long as science progresses and in this respect the future of the brassfounding industry may be safely left to those large and enterprising specialist organisations who have made a scientific study of the design material and construction of every class of valve and fitting Moreover in the field of industrial endeavour the spirit of individualism is almost entirely superseded by a new spirit of co operative organisation which is giving rise to free and frank co operation between manufacturers in kindred and allied trades In this way exceedingly strong and almost national working combinations are being established which can only make for increased understanding with a corresponding efficiency of production along approved lines And in this way also lies Britain's chance to regain and maintain her lead as the premier brassfounding country in the world

COPPER.

By L. H. QUIN.

COPPER is still feeling the effects of the greatly increased production brought about during the war the cessation of hostilities having thus far entirely failed to bring about the enormously increased general consumption which was so confidently expected by the leading producing interests Various reasons are to be assigned for this state of affairs which however was regarded as inevitable by all unbiassed observers For one thing all the belligerent powers held huge stocks of scrap metal at the end of the war stocks which even yet have not been digested fully and the utilisation of this material has enormously restricted the demand for new copper in all parts of the world Another very important point is the financial position of all the European belligerents Each of these countries has been involved in building up a colossal foreign indebtedness with the result that the exchanges of the world are very seriously against them and this has of course the inevitable result of increasing the prices of all imported commodities by the extent of the fall in the exchange For instance the depreciation in the pound sterling measured in dollars accounts for over £30 a ton in the price of American copper in the United Kingdom to-day a fact which obviously restricts the buying power of this country and it may be that the exchange will fall further yet with a corresponding appreciation in the cost here of all commodities imported from the United States What applies to this country applies in still greater measure to Belgium France Italy and the Central Powers whose purchasing on anything like the pre war scale is utterly out of the question a crude fact which sooner or later will have to be recognised by copper producers

Since the war concerted efforts have been made to reduce production and in individual cases output has been brought down to about 60 per cent of capacity but in spite of this enormous accumulations still exist in the hands of the leading producers and it is a question whether the burden of this weight can be sustained indefinitely more particularly as the accumulation is not being diminished appreciably and the cost of finance is becoming a serious item The leading American producers formed an alliance last year by which their sales for export were concentrated under the control of a single group and this has naturally been a factor in the maintaining of prices

So far as the United Kingdom is concerned consumptive business has been fair but as indicated above a considerable portion of the demand has been satisfied from the scrap which was piled up during the period of hostilities the brass trade in particular being large buyers of this class of material The main demand for new copper has come from the wire drawing and electrical industries generally In these sections of trade considerable activity has been seen and many of the wire drawers have now from eight to nine months work on their books while if only labour permitted many of the general electrical engineering concerns could anticipate the fullest employment for two or three years to come As a result of the activity of the wire trade demands here have again run largely upon the special forms of copper used in this industry which throughout the year have commanded a premium compared with other descriptions of metal a premium which still continues

A great disappointment to America has undoubtedly been very small demand experienced from the Central Powers but it is impossible that either Germany or Austria could form any effective factor in the copper market if only from the aforesaid exchange considerations and it is curious in this connection to note that some shipments have been done by America transferring copper to Germany and having it converted there into various forms of finished material for export practically on the basis of America paying for the labour It is possible that by some such means as these it may be possible for German industry to get on its feet again

American consumption has been decidedly good for better indeed than during the pre war period but is by no means sufficient to absorb current production and it remains to be seen which if any of the export markets can compensate for the shutting off of Germany's buying It is not forgotten that prior to the world upheaval Germany was taking about half of the United States exportable surplus of material the mere fact that a large portion of this was being used in the production of war material in anticipation of the hostilities which she had planned not affecting the situation from this aspect

Producers are dissatisfied with the prices which they are able to obtain for their metal regarding 13 cents which is the stabilised price in America as too low, but being nevertheless unable to raise it in view of present world conditions The cost of producing copper has of course increased more or less in line with other commodities but even so all the larger propositions are working even to-day at a sufficient margin of profit and it may be that the unsatisfactory nature of business may force a dissolution of the centralised selling arrangements as one or other of the parties concerned finds the position becoming too burdensome

The curtailment in production which has so far been seen has about only kept pace with the diminished demand, and although the stocks are smaller than they were it is doubtful whether they have been reduced much during the past few months In many cases output has been cut down to the economic limit and any further curtailment would involve a substantial advance in the cost of the metal produced, so that altogether the situation is one of particular interest although opinions are divided as to how it will resolve itself

According to Quin's Metal Handbook and Statistics production during recent years was as follows in tons —

	1914	1915	1916	1917	1918
Africa	24 000	27 000	35 000	45 000	31 000

LEAD.

THE manufacture of lead is amongst the oldest of British industries, and within recent years it has developed into one of considerable magnitude and importance.

Among the chief uses to which lead is put is its conversion into white lead (hydrated carbonate), which, when ground with oil, forms a pigment of great value in itself, and is the most reliable base for practically all paints.

It is also largely used in glazing pottery and porcelain.

The method of manufacture chiefly adopted in this country is the old stack process, which, though slow, produces white lead of great covering capacity, density and durability.

Red Lead (sesquioxide) is manufactured on a large scale, and is used, after mixing with oil, as a pigment for protecting ironwork, &c., and for jointing purposes; it is also an important ingredient in optical and other glasses, and during the war was in great demand for the electrical storage batteries used in submarines, &c.

Litharge (monoxide), a less known but equally important oxide of lead, is largely used in the rubber, varnish and accumulator industries.

Metallic lead is in universal use in civilized countries in the form of sheet lead for roofing, &c., and pipes for water and gas; and owing to its great acid resisting power, pure lead is extensively utilized in plant for the manufacture of sulphuric acid and other chemical products.

For chemical purposes the presence of slight impurities is sufficient to seriously reduce the life of the sheets and pipe, and ingenious methods have recently been introduced for freeing the lead from all traces of impurities.

Alloyed with tin, lead forms solder, and lead alloyed with antimony is used for shrapnel bullets, type metal, etc.

Lead also is largely used for covering electric cables.

In Nature, lead occurs chiefly as a sulphide ore, which, after being mined and dressed, is calcined for the removal of the sulphur, and the roasted ore is smelted — usually in water-jacketted blast furnaces—to the metallic state.

The metallic lead thus obtained frequently contains silver of considerable value and appreciable quantities of gold and other metals.

Before such lead can be manufactured, the silver and gold must be extracted and the other impurities removed.

Impurities such as copper, antimony, and arsenic are eliminated by liquation and calcination, and the precious metals are usually recovered by stirring zinc into the molten lead: zinc, being lighter than lead and having a greater affinity for gold and silver than lead possesses, on cooling carries the precious metals to the surface, so that they can be removed by skimming.

Lead ore is mined to a small extent in the North of England, Derbyshire, and Wales, but the chief lead-producing countries at the present time are America, Australia and Spain.

The world's production of lead exceeds a million tons per annum.

ESTABLISHED 1797.

LOCKE BLACKETT & CO.

Limited,

NEWCASTLE UPON TYNE.

LEAD SMELTERS AND DESILVERIZERS

AND

MANUFACTURERS OF LEAD COMPOUNDS

WHITE LEAD: Manufactured by the Old Stack Process and supplied either DRY or GROUND in Oil.

RED LEAD: Manufactured in different grades to meet the requirements of GLASSMAKERS, ACCUMULATOR MAKERS, COLOUR MAKERS and POTTERS.

LITHARGE: Flake and Ground. Specially prepared for ACCUMULATOR MAKERS, RUBBER and VARNISH MANUFACTURERS.

ORANGE LEAD: For COLOUR MAKERS.

SHEET LEAD: All sizes and weights supplied up to 8 ft. wide

PIPE LEAD: Supplied in all sizes up to 10 inches diameter.

CHEMICAL LEAD: Specially Refined for use in CHEMICAL WORKS and supplied in SHEETS and PIPE.

PIG LEAD: Refined for White Lead Making, &c.

LEAD ALLOYS: For SHRAPNEL BULLETS, TYPEMAKING, SOLDER, &c.

SHOT: All sizes, hard and soft.

CONTRACTORS to the ADMIRALTY, WAR OFFICE and RAILWAY COMPANIES

SPELTER.

By the Editor of the "Metal Bulletin."

THE war more radically affected spelter (or zinc as it is frequently called) than any other metal, for the reason that Belgium and Germany were the leading countries upon which we relied for supplies our home production being comparatively speaking small The situation indeed was exceedingly grave, for without spelter it would have been impossible for us to manufacture the munitions of war which were required spelter having a particularly important military significance owing to the fact that it is a substantial component of brass, which finds enormous use in cartridges both for rifles and artillery The cutting off of our usual supplies from the Continent proved a boon to the United States whose manufacturers previously practically absorbed the American domestic production the result being that output there was largely increased and indeed formed the mainstay of supplies for the Allies during the period of hostilities With peace concluded Belgium began to get back to work almost immediately and output there has improved remarkably steadily progressing practically every month Before the war Belgian output was about 200 000 tons a year, largely obtained from imported raw material and at the present time the country is producing at the rate of about 90 000 tons a year, assuming that the recent monthly output is maintained, and improved upon as might be expected

It was anticipated in our last review that American production would tend to fall off when peace conditions in Europe were resumed, and this forecast has been fulfilled the output there which in 1916 and 1917 approximated 600,000 tons having fallen by 1919 to a little over 400,000 tons The extravagant prices to which the metal was driven under the stress of military requirements naturally stimulated American production very greatly, and many high cost mines were worked profitably, which when the market assumed a reactionary tendency had to close down with the result that the refining works also found themselves obliged to curtail operations This is still the position there Germany appears to be producing spelter at a fair rate, but no reliable statistics are available although that country is estimated to have produced in the neighbourhood 50 000 tons during 1919, compared with about 280 000 tons during 1912 and 1913

Japan forged ahead after war broke out as a producer of spelter In 1914 the output in that country was only about 8,000 tons, but by 1917 it had risen to 54 000 tons owing partly to the imports of concentrates from Australia, but since then falling prices in the European markets, and the heavy accumulations which had been piled up by the Allies a mist war needs, brought about a sharp reduction in output, the total during 1919 having been only about 22,000 tons Canada has been turning out spelter on a higher scale, but here, too, post war market conditions have constituted an adverse factor and from about 18,000 tons in 1917, her output in 1919 fell to only about 11,000 tons

Australia is a very important factor in the world's spelter situation owing to the enormous supplies of zinc ores and concentrates produced there Soon after the outbreak of war, an association was formed of all the Australian zinc producers to control and dispose of the Colony's output of zinc concentrates and metal An up to date plant is now operating in Tasmania which is intended ultimately to deal with large quantities of the raw material Considerable success has attended the efforts to treat the ore, and regular shipments are being made not only to Europe, but to India South Africa and elsewhere The control of the Australian concentrates is in the hands of the British and Australian Governments and will remain so for a number of years yet Important schemes were formulated to ensure treatment of these concentrates in the United Kingdom on a large scale but the arrangement seems to have been misconceived and muddled with the result that to day the British production of spelter is on a smaller scale than for many years, several important works having been forced to close down during the summer of 1920, partly owing to labour demands but also in part to the fact that they were unable to obtain their raw material on economic terms The principal countries producing zinc ores are the United States and Australia, but substantial quantities are also furnished by Poland, Austria, Spain Italy North Africa Mexico and Japan

Spelter in peace times is used mainly for galvanizing that is to say as a coating to preserve iron and steel from atmospheric corrosion, but it also finds a very large use as indicated above in brass of which it is usually a component to the extent of 40 per cent, the balance being copper Large quantities of spelter are rolled into sheets and plates which find wide application in a large variety of uses British works are interested in this branch of industry, and big quantities of sheets are also produced in Belgium Germany and America

The world's production of spelter is estimated as follows —

	1913	1917	1918	1919	
Australia	3 600	5 550	5 450	6,000	tons
Austria	21 000	—	—	4 000	
Belgium	195 000	6 000	6 000	15 600	
Canada	—	18 000	16 000	11 000	
France	60 000	12 000	12 000	18 000	,,
Germany	280 000	186 000	236 000	50 000	
Great Britain	58 000	50 000	50 000	30 000	
Japan	—	54 000	45 000	22 000	
Norway	—	22 000	10 000	4 000	,,
Spain	10 000	18,000	16,000	2,000	,,
United States	315 000	507 000	446 000	420 000	
Other Countries	50 000	20 000	20 000	20 000	
Total	992 600	990 550	892 450	607 600	,,

Tabulated below are the extreme prices paid here during the last twelve years for good ordinary brands of spelter, as given in *Quin's Metal Handbook and Statistics* —

1908	£18 and	£21½	1914	£31½ and	£40
1909	21 1/8 ,,	23 5/8	1915	28 ,,	115
1910	21⅛ ,,	24¼	1916	44	110
1911	22¾ ,,	27⅞	1917	45½	58
1912	25 ,,	27⅝	1918	50	56
1913	20¼ ,,	26½	1919	34¼	59½

GALVANIZED IRON.

By JAMES WHITBY, Chairman Metal Trades Section, London Chamber of Commerce, and Chairman of the London Iron and Steel Exchange.

THE galvanized iron of commerce consists of steel sheets covered with a coating of spelter or zinc, the process being British, and dating from 1846, when it was patented in this country. The object of the process is to render the steel immune from oxidation. An unprotected sheet of steel exposed to the weather would rust and decay rapidly—covered with spelter it will withstand climatic and atmospheric influences for years without deterioration. The word "galvanized" has no real significance in this connection, for galvanizing plays no part in the deposition of spelter upon the steel, and the term seems to have been applied originally because spelter and iron together form a galvanic couple.

In the earlier days of the industry, the basis of the sheets was iron, and the term has survived, much as the term "charcoal" lingers in the tinplate trade, though its original significance is only a memory. The original iron sheets were mainly produced in Staffordshire, but under pre-war conditions, the steel used was imported partly from Germany, Belgium, France, and United States, in the form of what was termed sheet bars. A number of works, however, made their own steel and sheet bars. Steel has practically superseded iron, for although iron sheets are still made, the quantity is negligible.

Under modern practice, after leaving the rolling mill, the steel sheets (then known as black sheets), are pickled in a mixture of hydrochloric or sulphuric acid and water, to remove any scale which may be adhering to them, and are then passed through a bath of molten spelter, from which they emerge completely coated.

The sheets in merchantable form are either flat or corrugated. The flat sheets find wide employment in the working-up trades, being used for the manufacture of spouting, ridging, flashing baths, cisterns, tanks, sanitary dustbins, wheel-barrows, buckets, and farm apparatus, such as feeding troughs and the like, while the corrugated sheets, which normally constitute the major part of the output, are used for roofing and fencing purposes, and also for making tanks.

The corrugations impart great strength to the sheets, and most sheets have either eight corrugations or ten corrugations, such sheets being known as 8/3" and 10/3" respectively, but other specifications are also made for certain markets, for instance, 7/3", 9/3", 11/3", and 12/3".

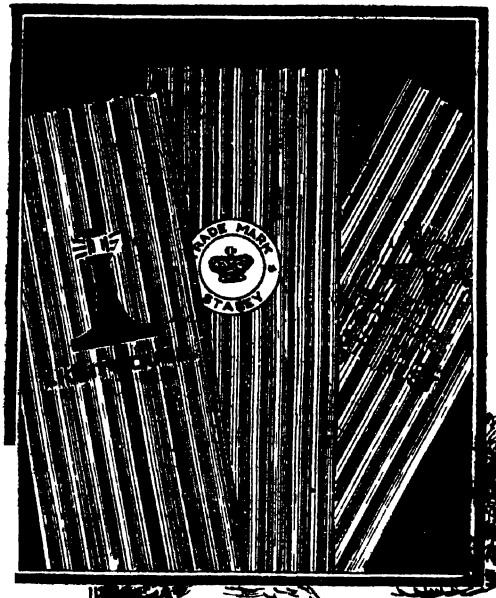
The sheets range in length from four feet upwards, but the usual specifications are from five to ten feet. The basis thickness is always 24 gauge, which is understood to be taken in the black—that is, before the sheet is galvanized, but both thinner and thicker sheets are rolled, say, from 16 to 30 gauge.

The various export markets have their own peculiarities, both in the sizes and gauges of the sheets, and in the method of packing. For instance, Calcutta takes almost invariably 24 gauge sheets, 10/3", which are packed in bundles, while Bombay will have hardly anything but 8/3" × 24 gauge, packed in [illegible]s. Japan, the Straits Settlements, [illegible] both in 24 and 30 gauge, but the latter are in greatest demand.

South America takes in most cases 24 gauge sheets in skeleton cases, but Australia will have nothing but 26 gauge or thinner, packed in close felt-lined cases, to ensure the goods arriving in the very best condition. Australia also pays a higher price than other markets, as importers there only take best quality sheets.

India is, under normal circumstances, by far the largest market overseas, there being an enormous demand for building there, in connection with the tea gardens and estates, and so on, while large quantities are taken by the railway companies for the roofing of sheds, and sheets are used, too, in many other directions.

The "count" is very important in galvanized sheets, retailers' profits being materially affected by the number of sheets to the ton, and the desirability of getting the very utmost number has led to the cutting of the gauge, so that a few extra sheets can be obtained.



In the Eastern markets orders come over in many cases in which the gauge is mentioned, also the number of sheets per ton, but these in most cases do not agree, and the invariable practice is to execute the order in the number of sheets per ton, irrespective of gauge.

The galvanized sheet industry, which is a very important branch of the British Iron and Steel trades, was entirely disorganised during the war, but has since then made wonderful strides towards recovery. In 1914 our exports exceeded 560,000 tons, which figure had fallen by 1918 to less than 9,000 tons. Progressive improvement followed, the total for 1919 being 186,000 tons, while for 1920 indications suggest that, barring unfavourable developments, such as a coal strike, the total should easily exceed 400,000 tons. All markets have been starved for supplies for at least five years, and the reserve buying power is enormous. The principal consuming countries are India, Australia, South America, South Africa, and Japan, all of which have taken large quantities during the year just elapsed.

The following table, taken from "Quin's Metal Handbook and Statistics," shows our total exports during recent years and in 1914:—

	1914. *tons.*	1916. *tons.*	1917. *tons.*	1919 *tons*

CYCLES AND MOTOR CYCLES.

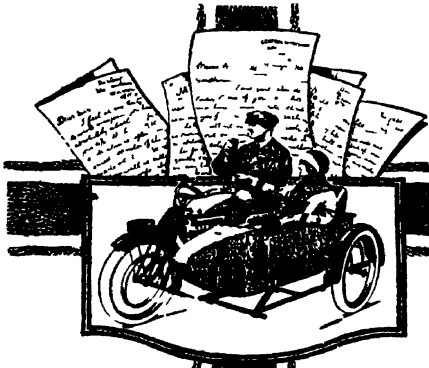
By H. S. BILBÉ, A.M.I.A.E.

DURING the past year the bicycle has regained some of the popularity it enjoyed prior to the introduction of motors. The higher cost of travelling by rail has contributed to this result but on the other hand the increased cost of machines, especially those of the higher grades has limited sales both at home and abroad. This is shown by the export figures which demonstrate that the total value of cycles exported in 1919 was somewhat greater than in 1913 while the number of machines is less than half. The sales by the Government of large numbers of "War Cycles" has also had its effect on the home market, particularly in regard to the cheaper machines and those used for utility purposes. As regards lighter cycles suitable for racing and the sporting type of rider it must be admitted that this demand is not fully catered for. British manufacturers have for some time past concentrated on the "roadster" types, and have undoubtedly brought production to a high pitch of excellence, but the lighter bicycles as used in France and on the Continent generally are the types to which the trade should give attention. There is a large market awaiting suitable machines which must combine the stability that has always been a feature of the British product with the lightness and improved details of the Continental machines and this market is not by any means confined to the home demand.

It must be admitted that the past year has not been a favourable period for embarking upon the manufacture of new models for which reason manufacturers have in the main refrained from drastic changes of pattern. This has resulted in slight over production in a few directions, though on the whole the outlook is a good one.

Much the same may be said of the manufacture of motor cycles, though the production of these has been handicapped by the effect of the disastrous moulders' strike, which was very seriously felt. Faced with many difficulties in connection with materials and labour, with an insistent and possibly magnified home demand, the trade was almost compelled to neglect export business and turn its attention to types which offered the least difficulty to produce. This resulted in the production of a large number of low powered machines, particularly of the two stroke type, the demand for which at the moment has now almost been overtaken. Other types, such as passenger outfits, have been somewhat neglected, as the concerns which attempted to produce them have found it difficult to maintain output. Important factors in the present situation also are the imminence of much increased taxation and the great advance in the price of petrol and other supplies. Notwithstanding all these the position is still a good one. There still exists a good demand for certain types, and heavier costs are likely to further the popularity of the low powered machine. As regards the quality of machines being produced it may be said that despite difficulties this is being well maintained. The latest productions have proved themselves capable of fully meeting all tests of speed, hill climbing, reliability and durability, though these tests have been much more severe than any previously instituted. In connection with these the lighter types including the two stroke models have done exceedingly well.

A certain amount of development has taken place in the motor scooter, which has been demonstrated to be a practicable mount with much to recommend it for certain purposes. Some progress has also been made in the direction of a low priced four wheeled vehicle to accommodate two or more passengers, and designed on motor cycle lines. With the present high taxation and heavy running expenses, such a type has an exceptional opportunity of securing support.



According to reliable estimates there are between 3½ and 4 millions of serviceable cycles in the United Kingdom at present, the capital of cycle manufacturing firms exceeds 30 millions, and 750,000 persons are wholly or in part employed in the manufacture and sale of cycles. Pre war production of cycles probably exceeded 3000 000 machines per annum while these figures have been considerably exceeded during certain previous periods. Immediately pre war the number of motor cycles produced was approximately 130,000 per annum and the export of machines and parts was rapidly increasing. The appended tables show the national importance of these industries —

DECIDING FACTORS in the CHOICE of a MOTOR BICYCLE

Other people's opinions.

THE popularity of the B.S.A. is built up on the good reports of B S.A. owners. The following are typical extracts from two of the many letters constantly being received :—

Mr. W. H. Drew, The Gardens, Harrow writes of a tour on a B.S.A. 4¼ h.p. machine— "we accomplished simply marvels as regards hill climbing and high average speed."

Messrs. Janes & Adams, East Finchley, N. 2. write re the B S.A 6|7 h.p. Twin— "one of the finest sidecar machines yet produced. The steepest hills were negotiated on top gear and the speed left nothing to be desired."

B·S·A Motor Bicycles For Solo or Sidecar.

MOTOR TYRES.

By A. P. AMBLER.

WONDERFUL progress has been made during recent years in the pneumatic tyre industry, which, though now well established, is still comparatively young

With the production of more powerful and heavier motor vehicles, tyre manufacturers have been called upon to solve many difficult problems, since speed and weight mainly determine the life of any kind of tyre

All up to date tyre makers have accordingly developed the scientific or experimental side of their business to a considerable extent

Large chemical and physical laboratories form a very important part of a tyre plant and constant tests are made of the raw rubber cotton and pigments to ensure that these materials conform in every way to specification

Finished tyres are, of course subjected to severe road tests, and nowadays these are supplemented by machine tests in the experimental room approximating as closely as possible to conditions met with in actual running on the road From the records made of the behaviour of the tyres on road track and testing machine, valuable information is obtained and carefully applied to effect improvements on standard designs

There are two kinds of motor tyres one with a foundation of plies of strong woven canvas and the other with rubber insulated cords or cord fabric The former is built up of four or more plies of canvas to which the beads are fitted after which the tread made of high quality rubber is applied In some cases the foundation and tread are vulcanised together, while in others the foundation and tread are built up and partially vulcanised as separate units, being afterwards vulcanised together as a second process in a steam heated hydraulic press At present manufacturers are about equally divided in their adherence to the two methods

The manufacture of the tyre made of insulated cords is a much more elaborate undertaking, involving the use of specially constructed machinery The base units of the cord foundation are strands of fine strong cotton insulated in a coating of pure rubber and multiplied until the cord has been formed The object of insulating the cords is to minimise friction The manufacture of the cord fabric tyre, however, is similar in many respects to that of the canvas tyre, and in all cases the methods of fixing the beads and tread are almost identical It is claimed that the cord tyre construction ensures maximum of resiliency and life, without chafing under driving strains and greater speed, or inversely the same speed for a lesser expenditure of driving energy

Not many years ago the rubber mostly used in the manufacture of motor tyres was the Brazilian variety, commonly called "Para or "wild rubber

About 1909 10 the great expansion of the motor car and motor vehicle industry was largely responsible for a serious shortage in the world s supply of rubber and one of the wildest booms known on the Stock Exchange resulted It had the effect however of stimulating the development of the plantation rubber industry Experiments were carried out by enterprising tyre manufacturers with wholly satisfactory results By the use of plantation rubber in the making of tyres a greater thickness of tread could be afforded, and a larger percentage of rubber could be used in the compounds from which the tyres were made Stringent tests carried out under the supervision of the Royal Automobile Club proved that the service given by plantation rubber tyres was equal in every respect to that given by tyres made of wild rubber

In the design of the tread tyre manufacturers have to take into account the liability of a car to skid It is recommended that the driving wheels at least should be shod with a tyre with non slipping properties

For several years nearly every motorist considered it essential to fit his car with one or more metal studded tyres, but the proved superiority on all kinds of road surface of the all rubber non skid tread has resulted in it superseding the metal studded tyre

There are numerous types of all rubber non skid treads on the market and new patterns are constantly being introduced With many of the it is obvious that appearance and not efficiency has been the first consideration

Among the leading British non skid tyres which are generally accepted as the most effective on all roads may be mentioned the Clincher Cross, the grooved pattern, the rubber studded type, and the ribbed tread

Bigger pneumatic tyres afford greater freedom from road shock, and mechanical strains on the car itself are considerably reduced There is in addition less damage to the road when large pneumatic tyres are used instead of the solid variety on commercial vehicles, and it is worthy of note that Norway is the first country in the world to propose national legislation on this account that will specify the equipment of pneumatic tyres on motor lorries up to two tons capacity Giant pneumatic tyres are made in sizes up to 12 inches diameter

Pressures recommended for giant pneumatic tyres being almost double those used for ordinary motor car tyres has necessitated the introduction of a mechanical pump which will soon become an essential fitment on every industrial chassis running on pneumatic tyres

From the following figures it will be seen that British exports of tyres and tubes show a very satisfactory increase over 1919 —

	Nine months ended 30th September

BRITISH GRANITE QUARRIES.

By H. J. GRACE.

GRANITE primarily consists of quartz and orthoclase, biotite muscovite hornblende, augite and is holocrystalline Other minerals entering into its composition are plagioclase felspar, oxides of iron, apatite zircon, garnet, epidote, cordierite, sphene, topaz and tinstone, calcite, limonite, kaolin and chlorite being among the resultant products of decomposition Commercially, the term "granites' covers products that evade the strictly correct geological definition, such as syenites diorites, granophyres, gabbros, greenstones and in some cases grits

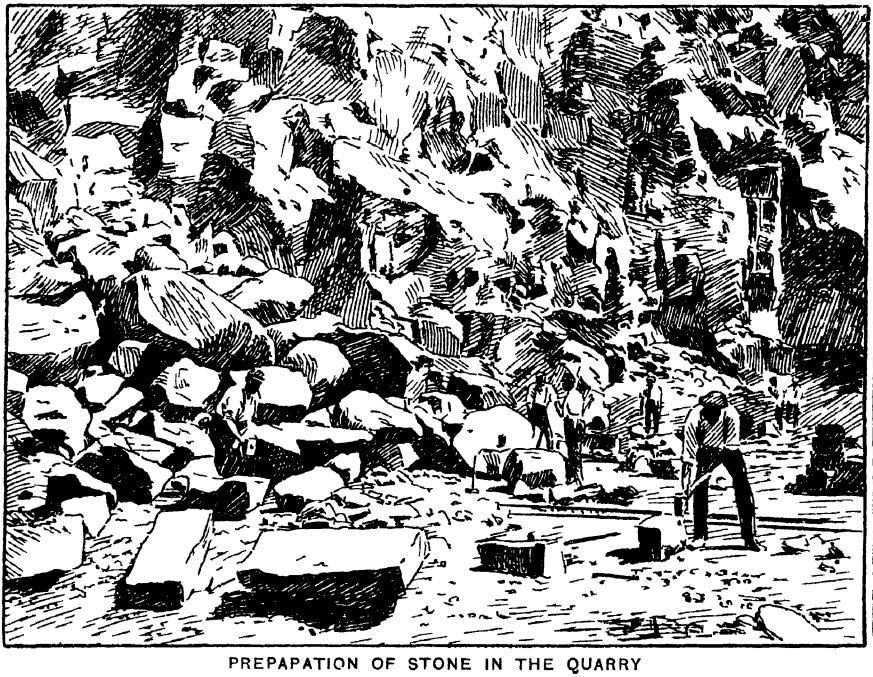
Aberdeen quarries yield a true and distinctive granite, Peterhead, Kemnay Dalbeattie Creetown and Ross of Mull being other deservedly renowned centres of the industry

In England, Leicestershire Cornwall, Cumberland and Westmoreland are rich in areas of supply, Warwickshire also possesses local sources Wales has large areas extensively worked in Carnarvonshire Ireland has a considerable supply in several districts, notably in Newry The Channel Islands produce a large quantity of material and the Isle of Man has an extensive area but difficulties of transport hinder the development of the Manx industry

The first step in the opening of any quarry is the removal of the top soil, or overburden after which lifts or levels are excavated of varying depths The accumulation of spring and surface water during the operation of sinking, and afterwards, necessitates almost continuous pumping where the quarries are worked in excavations or pits The granite having been bored, the faces are divided into motions, averaging usually about 10 yards in width up to about 20 yards, with a set of men to each motion Preparatory to blasting, holes are drilled into the rock by hand or by means of steam drilling machines, the customary depth being from 10 to 12 feet, the deepest about 20 feet with a top diameter of 3½ to 4 in hes As a rule two to four charges are necessary, the first being so regulated as to be only sufficiently powerful to spring the rocks—that is to loosen and open out their joints—the final stronger charge completing the work Stones that remain unworkably large after the explosion are separately bored, charged with blasting powder, and reduced in size Blocks intended for sundry specific purposes are roughly dressed below, prior to their removal to the surface for monumental, building, kerb or sett making purposes and for the crushing or breaking mills The carriage of the deposits to these mills is facilitated by tram lines and effected by horse and mechanical power In some instances the most up to date quarries have successfully adopted for this haulage an aerial power worked cableway of extraordinarily ingenious design, the system being suggestively known as the Blondin Steel skips carried along this cableway have each a loading capacity of 50 cwts and upwards With clock like regularity these receptacles are lowered empty, hauled up full, run swiftly overhead to the crushers, into the hoppers of which their contents are deposited and then return to their starting place, to be again lowered and refilled In the crushing mills the stones pass through breakers into rollers, falling into elevators and then into screens, which sort out the different sizes, rejections or tailings being recrushed

In the dressing of stones for setts kerbs etc, the first or preparatory stage is carried out on the floor of the quarry, where the blockmakers shape them into the rough form in which they reach the settmakers and kerbdressers above These settmakers exercise a wonderfully accurate judgment in deciding at sight how each block will shape best and with least waste under their hands Into this judged shape it is wrought by heavy hammers lighter ones being substituted for the finishing touches For kerbmaking much larger blocks are used, the dressers wielding a variety of tools. For certain purposes, such as "Durax setts, a stone splitting machine of Danish invention, in the working of which a movement of the foot controls the action of steam hammers has proved serviceable The bursting of big stones of a size otherwise unwieldy has also to be accomplished by hand An expert, with a sharp heavy hammer, nicks the line of fracture in about the centre, then draws the great block by striking it smartly at one end After a varying number of blows it severs at the line made by nicking Stones still larger are divided by what is known as the plug and feather process the largest of all are drilled and blasted when the former process would be ineffectual A trade is carried on in block or unbroken granite for breaking, by hand on roads and in workhouses

The latest available returns are those for 1919 in which year the total production of igneous rocks in England Scotland Ireland Wales and the Isle of Man was 4 387 703 tons (made up of 4 377 922 tons under the Quarries Act 9 713 under the Metalliferous Mines Regulation Act and 68 under the Coal Mines Act), against 4,961,524 tons in 1918 Limestone (other than chalk) was produced to the extent of 9 537,495 tons (made up of 9,336 602 tons under the Quarries Act, 198 644 under the Metalliferous Mines Regulation Act and 2 249 under the Coal Mines Act), against 10,156,603 tons in 1918



The last official returns prior to the War accounted for about 11,000 tons of granite exported in the year, about 874 000 tons imported

CLAY INDUSTRIES.

THE uses of prepared clay extend to various manufacturing trades other than clay industries proper. The cotton manufacturer and paper maker, for instance, utilise the substance for purposes for which it would be difficult to find substitutive compositions; while the distinctive properties of clays in the soil are of first importance agriculturally.

Even the purest of natural clays show a considerable range of decomposition and, never being free from foreign ingredients, always consist of more than one mineral. Geologically a rock clay has the variability of all rocks. Crushed to powder, any rock exhibits some of its qualities.

The potter, or worker in clay, serves both art and utility, shaping from the same basic material objects of exquisite beauty and indispensable articles of incalculable convenience. The æsthete is in his debt on one hand and the sanitary expert on the other. His craft is among the oldest in the world. The Mosaic scriptures mention it, the Greeks were skilled practitioners of it and taught it to the Etruscans and the Romans. Even glazed ware, long thought to have been unknown before the ninth century after Christ, and then accredited to the Arabs in Spain, was made by the ancient potters of Egypt, where specimens of it have been found by explorers, the ruins of Babylon have yielded glazed bricks, enamelled tiles and glazed earthern coffins have been discovered in other buried cities of past ages.

Clay industries in Britain do not date far back in our commercial history: up to 1765 we imported much of our earthenware from France and Holland. For discreditably many centuries we neglected, wholly or in large part, the resources we always possessed in our native deposits of clay. There was no reason, so far as nature was responsible, why our ancestors should not have rivalled the Chinese in the manufacture of porcelain unknown in England till specimens were brought here from the Orient, for as a matter of fact our deposits of kaolin (or china clay, as it is commonly called), from which it is made are superior to any to be found in the distant East. The first efforts to manufacture porcelain in this country were made with imported clay, it was not until about the middle of the eighteenth century that we became aware that we had it in abundance in Devonshire and Cornwall. The discovery was made by a Quaker chemist, William Cookworthy, born in 1705 at Kingsbridge, Devon. Although it ultimately led to such great industrial results, its importance was not at once realised. After many experiments to prove that we had to our own hands the actual ingredients of clay and stone used by the Chinese, the discoverer established a pottery at Plymouth about 1760. This china clay, lying in beds of from 50 to 300 feet in thickness, is a hydrated aluminium silicate in the form of an almost impalpable powder of pure white, with other silicates in small proportions. Its chief source is decomposed granite the decomposition being attributed to the action of free acids. With the advent of Josiah Wedgwood, a contemporary of Cookworthy whose fame is universal, a great advance was made in every respect, the value of the national asset which had been brought to light was appreciated, mines began to be systematically and properly worked, the foundations were laid of a great modern British industry, now scarcely second, perhaps, to any in the scope of its usefulness, for irrespective of its unique properties in the creation of porcelain ornamental, decorative and artistic objects china clay is indispensable in the manufacture of present day sanitary ware and earthenware for many general and specialised uses. To-day British kaolin is known, valued and used in all parts of the world. Before the War, its yearly output from the Cornwall and Devonshire pits reached to about 700,000 tons whereas in the early days of the industry—the Wedgwood era—a product of 100 tons was sufficient to cause a glut in the market.

With china clay is found (in very much smaller proportions) china stone. Used to strengthen the body of porcelain and also in glazing, its working is an allied undertaking, the two substances of clay and stone being of similar chemical composition though in different states. Both (with the exception of such of the stone as is exported in its raw or unground condition) are refined and otherwise prepared at their source of origin for the potteries of the British Isles and markets overseas.

The nature of pipe clay and what is technically known as potter's clay resembles that of kaolin in some respects but is less pure. Other chief serviceable varieties include fire clays, always found immediately below coal and very refractory to heat—a characteristic which indicates their principal use. The designation of brick clay is applied to any argillaceous material. Boulder clay is a coarse unstratified deposit. A type of red clay (*terra rosa*) is formed in caves and shale occurs in many formations. Increasingly noteworthy are the multiplication of the forms and extension of the purposes of earthenware manufactures.

THE COAL TAR COLOUR INDUSTRY.

THE coal tar colour industry began with the discovery by the late Sir W. H. Perkin, in 1856 of a mauve colouring matter derived from coal tar. A works was started at Greenford Green, in Middlesex, for the manufacture of this colour, and the manufacture of other colours subsequently discovered was in due course undertaken. Scientifically and commercially, therefore, this important industry is of British origin. The industry continued to grow but for a number of causes, which cannot be adequately treated here, the development took place almost entirely in Germany, and during the two or three decades preceding the outbreak of the war the various important industries in this country which required dyestuffs were dependent on German sources of supply.

Some idea of the general importance of the industry may be gleaned from the following figures. In 1913 we imported £1,700,000 worth of dyestuffs from Germany and £146,000 from Switzerland, and it is generally assumed that dyestuffs to the value of about £100,000 were purchased by British consumers from British makers. These figures indicate a total British consumption of approximately £2,000,000, and the enormous preponderance of Germany will be recognised.

It is not however the actual value of the dyestuffs which makes the industry so important as the much greater value of the outputs of industries dependent on synthetic dyestuffs, notably the great textile industries of this country.

It is impossible here to examine in detail the importance of dyestuffs to the various dye consuming industries, and the example of the cotton industry must suffice. The amount paid by manufacturers of cotton goods in 1913 to dyers, for operations involving the use of dyestuffs, exceeded £20,000,000, or more than four times the value of the total consumption of dyes in the United Kingdom. This is value of work only, and not the value of the dyed and printed articles. These dyed and printed cotton goods are consumed all the world over, and the value of the exports of dyed goods in 1913 (excluding such articles as hosiery, lace, ribbons, etc.) exceeded £70,000,000. These exports were sent very largely to British and other ports in Asia, where an increasing market is to be anticipated. Taking the dye consuming industries together, it has been estimated that the value of the goods made in the United Kingdom in a year, the manufacture of which involves the use of synthetic dyestuffs, exceeds £200,000,000.

The war has shown however that the synthetic dyestuffs industry has much more importance than that of a principal key industry, for it is now realised that it is intimately associated with questions of national defence. Our late enemies, in an attempt to recover the initiative lost at the battle of the Marne, introduced a new element into warfare in 1915 by the use of a poisonous gas on the northern part of the western front. The method achieved a very considerable amount of local success, and there is no doubt that had the Germans waited until they were able to use their new weapon on a larger scale, they would have recaptured the initiative, and the whole course of the war would have been changed. A new arm, however, had been successfully invented, and "chemical warfare" was added to the armouries of nations. The weapon developed as the war proceeded, and from the simple discharge of an elemental gas from cylinders placed actually in the trenches there grew large numbers of complex substances, solid, liquid and gaseous, discharged in shells by the ordinary artillery or in special containers from special projectors. Every military requirement produced its special toxic substance, and in the later stages of the war more than one half the projectile fired were filled with chemical warfare products. This weapon, it is safe to say, will play a predominant and even decisive part in future conflicts.

The question arises, How could the Germans create and rapidly develop this new arm. The answer is because they possessed a fully developed dyestuff industry. The substances used in chemical warfare are intimately related chemically with those produced in peace times in a dyestuff factory. They are made from the same raw materials, in the same plant, by similar processes. It cannot be doubted therefore that the Germans were assisted in coming to a conclusion to use toxic substances by the fact that all the necessary plant and personnel existed in their great colour factories. The great bulk of all the toxic substances used by the Germans throughout the whole course of the war was produced in the dyestuff factories, and there was the most intimate association between the German General Staff and the managers of the factories who were called in to advise on all matters affecting production for chemical warfare.

The Governments of the Allies who were forced to adopt the use of toxic substances found themselves in an extremely difficult position for not one of them had the use of a dyestuff industry at all comparable with that of the Germans. It is true that Messrs. Levinstein, Limited, in England, manufacturers of dyestuffs, rendered yeoman service, but the Allied forces were on the whole supplied from rapidly erected improvised plants. It is a great tribute to the energy of the Allies that they were able in the course of a few years to provide adequate supplies of chemical warfare substances for their armies in the field.

It is important to note that a large scale use of toxic substances in the opening stages of a campaign can have decisive results. It is not likely that any country will establish permanent chemical warfare arsenals, firstly because of the expense, and secondly because such a course is technically unsound. It is clear therefore that only a country with a fully developed dyestuff industry can conduct such large scale operations immediately after the outbreak of hostilities. Germany is the only country to-day in a position to wage chemical warfare on a really gigantic scale, and until Great Britain possesses a dyestuff industry commensurate with its needs, one of the greatest problems of national defence will remain unsolved. Every support must therefore be extended to the new British industry in order that it may be completely developed. Only then will the country be secure from economic aggression in time of peace and from military disaster in time of war.

Manufacturers of Coal-Tar Dyestuffs

THE COTTON INDUSTRY.

A Consideration of its Modern Aspects.

THE history of the cotton industry during the greater part of the present century is a subject to be studied in the light of the synchronous proceedings and concurrent influence of the International Federation of Master Cotton Spinners and Manufacturers Associations, the last Congress of which was held at Zurich in June, 1920. This Federation had its genesis in an act of economic internationalism. In the years just preceding 1904 the great problem was the shortage of raw material which unquestionably will be the great difficulty of the future. At present the position is eased only by the fact that a large proportion of the textile machinery on the Continent of Europe is still idle. Its resumption of full work will inevitably precipitate a raw material crisis unless timely steps are taken to avert it.

The raw material shortage of 1903 and 1904 affected all cotton manufacturing countries and brought the industry in Britain and in Europe generally to the verge of disaster. It was complicated and made more acute by gambling operations on the American cotton market. Lancashire spinning mills and weaving sheds were working 55½ hours per week. It was evident that there was not sufficient American cotton to maintain such a rate of consumption and that in the later months of the season there would be a general stoppage of the mills.

A mass meeting of employers and operatives was held at Manchester, Sir Charles Macara presiding, at which a resolution was unanimously adopted reducing the working hours in the mills from 55½ to 40 per week. This resolution was loyally carried out. The response gave the world a wonderful example of industrial solidarity, both capital and labour submitting willingly to the sacrifices involved. Those sacrifices saved the cotton industry of the world. The call on the raw cotton market was eased, prices on the American market broke, and the speculators were defeated.

The cotton industry of other nations benefited, but had not been organised sufficiently to follow the lead of England. It was felt, however, in Lancashire, that the other cotton manufacturing nations should be in a better position to follow in any emergency the lead thus given. Fortunately the nucleus of an international understanding had been formed during the crisis.

The mass meeting of British employers and operatives had been in telegraphic communication with European and American cotton spinners, and had been attended by a representative of the French cotton industry. So strong a rapport was found to exist that it became obvious that an international cotton trade movement could be formed, and an appeal was made to the British Government to call an assembly of cotton spinners from all countries. No practical response resulting, action was taken without Government aid. The English Federation of Master Cotton Spinners Associations, co-operating with the Swiss Association, summoned an International Congress at Zurich in May, 1904, and there practical shape was given to the conception of international organisation. In 1905, in Manchester, the International Cotton Federation was founded as a definite entity, with headquarters in the city, and with Sir Charles Macara as president, an office in which he remained for eleven years. Apart from the labour question, which in each country had so many special aspects that no international body could satisfactorily cope with it, it has taken action in regard to every problem of the world's cotton trade. Inestimably beneficial have been its researches as to the best and surest methods of increasing the world's cotton harvest. In the tropical colonies of European countries it initiated, encouraged and superintended cotton-growing experiments similar to those carried on in British possessions by the British Cotton Growing Association. It sent out private investigations and missions of experts to cotton-growing areas.

In India a signal success was achieved. The cotton crop there being raised from three million to nearly six million bales in about ten years, and an Indian crop of about ten million bales had been brought well within the range of possibility when the war broke out. There was also an improvement of staple, and this would have been immensely helped by the project for planting American and Egyptian seed on a large tract of irrigated land offered by the Indian Government. This project had already advanced considerably when the war caused a temporary setback.

The international propaganda did much to improve American cotton cultivation, and its delegations to the Southern States, to the Nile Delta, and the Anglo-Egyptian Soudan, under the personal leadership of the president—gathered information of great importance. The foregoing epitomises only some of the accomplishments of the Federation (before the war), its work in full is described in nineteen volumes of reports, the contents of which have been translated into all the principal languages, and laid by the British Government before the governments of every civilised country. Now that it has resumed the activities interrupted by the war, its first concern is to remove the peril already alluded to of another shortage in raw material. A hopeful view is supported by the fact that in experience shows a great yield can be secured by good methods of cultivation wherever the climate is suitable. Inasmuch as suitable lands are available in various parts of the world, an extension of the sources of supply should be a practical proposition. To avoid dependence on the yield in any particular quarter of the globe steps should be taken to bring under cultivation as many widely distributed areas as possible. Next in importance is the question of better methods in growing.

Modern science provides the means, and wherever they have been adopted the plant has been responsive. In the third place the establishment of a cotton reserve, long advocated by the highest authority in the trade, is a measure of elementary prudence.

The difficulties of finance and the relations between capital and labour have been keenly felt in the cotton industry in recent days, and they will not be eased until a settlement on a wider basis than anything yet attempted has been agreed upon. Both are international and illustrate the interdependence of nations and of industries. Like other industries, the cotton trade needs larger financial resources than ever before, to bear the strain of vastly increased costs. That strain on employers is intermittently intensified by the demands of the employed, and it is wisely suggested that any future advance of wages, beyond what may represent increased costs of living, be in the form of a monetary interest in the industry. The adoption of this scheme by any industry must of necessity be taken up throughout that industry, or some must benefit at the expense of others. Herein is the best argument for collective against individual action. If the indicated principle be extended in its application its leads to an international standardisation of wages and conditions, regulated by considerations peculiar to each country.

WOOLLEN INDUSTRIES.

By R. TALBOT OVERTON.

BRITISH woollen industries from a remote period in British history, remained the capital source of national wealth until the development of the cotton trade towards the close of the eighteenth century

The Colonial developments of the seventeenth eighteenth and nineteenth centuries with the invention of the spinning frame and power loom supplied an impetus that carried the trade far and quickly ahead

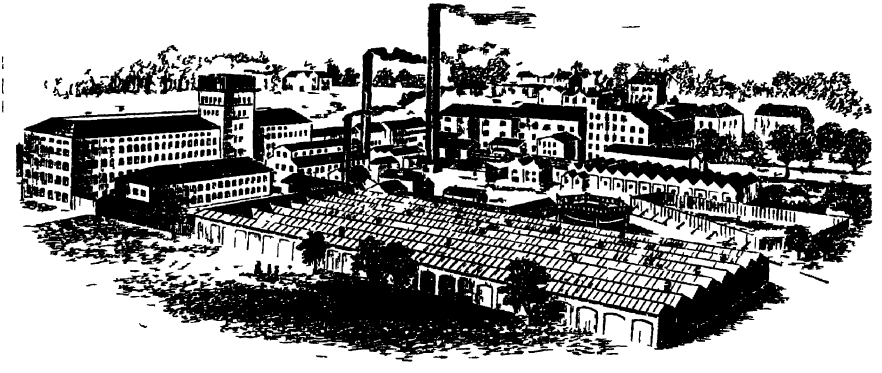
The chief overseas sources of supply of raw wool are Australia New Zealand South America, South Africa and India, China, Persia Russia Turkey, Egypt, North Africa, Spain, Portugal and other countries also figuring on the list even Iceland contributing a quota The supplies from the East and Russia are considerable

Woollen textiles are divided into three general classes of fabric in the manufacture of which three principles are operative—the woollen worsted and stuffs —and to a great extent these principles are localised in practice At one time the famous products of the West of England and parts of Scotland were almost wholly those of the first named principle the output to day being much more varied While re manufactured materials cotton 'sweepings and 'fud and flocks —the wastes in the manufacture of woollens and worsteds—are used in the making of the cheap cloths of Batley, Dewsbury and the Yeadon districts in Yorkshire, nothing but the genuine material at its best enters into the composition of the unsurpassable best cloths of the West Country and certain defined Scottish areas Leeds and its districts adhere in the main to the woollen principle Huddersfield to the worsted, and Bradford to the 'stuffs But both Bradford and Leeds make worsted fabrics in large quantities and Huddersfield working in part on the woollen principle turns out cloths with both woollen and worsted properties The woollen differs from the worsted principle in the construction of the yarn (thread) or the arrangement of the fibres of which the threads are composed In the stuffs trade cotton warps are the rule, though warps of worsted, wool silk and linen are also in use the wefts being usually of Botany (the original Australian variety) and English wool, mohair and silk

A hundred years ago the value of the woollen yarns and piece goods distributed from the manufactories of Great Britain and Ireland was £17,000,000 as against an average of £85,000,000 of late years In 1913 our imports (including 122,000,000 lbs of imported rags) amounted to 1,016 000,000 lbs, and our home product to 1,500,000,000 lbs In 1914 (the first year of the war) these figures fell respectively to 885 000 000 lbs and 1211 000 000 lbs but in 1915 the grand total rose to 1 179 000 000 lbs of which 122 000 000 lbs was produced at home The weight of foreign wool exported in 1913 was 308 000 000 lbs and of domestic 29 000 000 lbs in 1914 297 000 000 lbs of foreign and 98 000 000 lbs of domestic against 146 000 000 lbs and 32 000 000 lbs for 1915 The bulk retained for consumption was thus 804 000 000 lbs for 1913 671 000 000 lbs for 1914, and 1 001 000 000 lbs for 1915 The woollen yarn exported during those three years weighed 55 000 000 lbs (1913) 37,000 000 lbs (1914), and 17,000 000 lbs (1915) woollen piece goods exported measured 185 000 000 yards 167 000 000 yards and 160 000 000 yards In millions of pounds sterling the values of woollen exports of all kinds were 34 0 in 1913 28 3 in 1914 and 31 1 in 1915

Later statistics of the ordinary kind are wanting, and would be valueless and misleading, the trade in all its ramifications having been temporarily revolutionised by the war time action of the Government in becoming first purchaser and controller

In March 1919 Government ceased to control prices, and the following month commenced selling by public auction then action reviving the London wool sales, discontinued since March 1917 The result was an unexpected rise in prices, and as foreign competition increased the rise in fine wools became especially noticeable Difficulties connected with transport and shortage of labour compelled the Government to let other countries have a much larger proportion of wool than had been originally intended The great demand for cloth made of the finest wools doubtless played an important part in the advance of value



Last year prices of the raw material went down very considerably, prices of the manufactured article falling correspondingly This was largely the result of reduced credits at the banks the financial crisis in Japan, and supplementarily the influx of long withheld South American wools, the trade being unable financially to lift the wools marketed This sudden drop was responsible for a loss of confidence between consumer and producer, the consequence being a falling off of new orders and a cancelling of old ones where any excuse could be found A large increase of business is expected to follow on the restoration of confidence (in which connection the helpful action of the colonies is to be noted in starting the public auction of fine wools), as the world's present need of woollen goods is great and urgent

THE LINEN INDUSTRY.

By W. H. WEBB, President Linen Merchants' Association.

THE botanical name of flax is Linum Usitatissimum (the most useful of fibres). The first books of the Sacred Record contain frequent references to flax and linen, and all other textiles with the exception of the products of wool are babes in years as compared with linen.

Before Moses wrote the first books of the Sacred Volume before even the Patriarch Abraham visited Pharaoh the Egyptians had attained great perfection in the fabrication of linen.

The wonderful strength and durability of the mummy linen found to-day in the tombs of Egypt and which must have been made at least 4,000 years ago is striking proof of the outstanding qualities of this fibre.

The earliest record we have of linen being made in Ireland dates back to the thirteenth century and it was probably introduced by the Norman settlers.

In fabrics for military equipment requiring the greatest strength and durability, linen has again strikingly demonstrated its superiority.

After exhaustive experiments, linen was found owing to its great strength and durability, to be the one satisfactory covering for the wings of aeroplanes.

For the paddings or linings of uniforms and for the thread used in the making of boots and uniforms the demand has been unlimited simply because it was found that linen would far outwear that made of any other fibre.

War the great prover has placed the superiority of linen in an unassailable position.

It is difficult to get definite figures for comparison in the linen industry as in almost all available records flax, jute and hemp are grouped together.

Under this grouped heading the power looms in the United Kingdom in 1875 numbered 41,980 as against 41,440 in 1907 the distribution being:—

	Ireland	*England & Wales*	*Scotland*
1875	17,357	624	18,029
1907	35,851	4,424	17,218

but for the reasons given these figures as regards linen are unreliable.

The principal manufacturing centres in Scotland are Dundee and Dunfermline.

Broadly speaking the heavier coarser linens are made in Scotland and the medium and finer varieties around Belfast.

Linen manufacturing can only be said to exist in England a small section of the industry centring around Leeds where about 600 operatives are employed.

Belfast is peculiarly well adapted to be the centre of the linen trade, as the immense shipyards give employment to the men leaving a large surplus of women available for employment in the factories.

The total exports of linen goods, including flax yarns from the United Kingdom in 1913 amounted in value to £9,400,000.

The raw material used in the linen industry is unfortunately not a home production with the exception of the comparatively small amount grown in Ireland. Russia supplies the bulk, and other imports come from Holland and Belgium.

The Belgian or Continental flax is the finest in quality. Irish comes next, then the Dutch, Russia supplying all the coarser fibre.

	Tons
Average tonnage of Flax and Tow from all sources consumed in the United Kingdom for 10 years, 1907–1917, was	95,000
The supply in 1918	45,000
1919–1920. Estimated supply from all sources including stocks in spinners' hands is	24,000

So far this is working out accurately. It is the flax available for linen supply in 1920, and represents approximately half the amount consumed last year.

It is hoped that next year the supply of raw material will begin to increase but owing to the collapse of Russia which country supplied 90% of the world's flax the recovery will of necessity be gradual, and in all probability several years will elapse before a sufficient supply is again on the market.

For some time to come the cost of production is bound to be high. Otherwise it would be impossible to stimulate increased sowing of flax especially when food products are proving so remunerative to farmers.

In the Irish section the linen industry has become strongly associated. Each group spinners, weavers, bleachers and merchants have their own associations through which the trade is controlled and regulated. In addition there is the Research Association which is supported by the whole British industry and the Irish section has an association in the Irish Linen Society, which carries on propaganda and generally looks after the selling end of the trade. It is confidently anticipated that the Research Association will prove efficacious in reducing the cost of production and already the Irish Linen Society has shown that in an associated industry propaganda is an essential.

The Irish Linen Society has established a Service Bureau at No. 1 Bedford Street, Belfast for buyers visiting the Linen Market. There a service of up to date information is available. A large room is placed at the disposal of buyers, a stenographer is provided and hotel accommodation, transportation etc. is looked after for them.

Stabilising Values.—On the conclusion of the Armistice in 1918 the re-establishing of civil trade was very carefully considered by the Irish linen trade, and it was felt that until linen values were on a stable basis buying would not commence. With this in view a policy was evolved whereby on standard goods by costing from the raw material upwards minimum prices were established, which by agreement were binding for the year 1919. The Irish Linen Society carried out the propaganda in connection with this policy, making it known far and near that the price of linen was on a stable basis, with the result that in a short time the boom commenced which has lasted up to the beginning of May, 1920. It is intended that this policy of stabilising values will be continued. When the market eventually commences to drop a periodical basis of values will be established by deliberately lowering the minimum prices step by step. The value of such a policy to every interest concerned is obvious.

"OLD BLEACH"

PURE IRISH LINEN *and* LINEN DAMASKS

"Old Bleach" Pure Irish Linens

are the best in their class. Their fine durable quality and beauty of design are exceptional. They are bleached by the slow gentle method of sun and grass bleaching. All enquiries should be made to an agency or our London Branch.

"Old Bleach" Damasks.

The art and beautiful execution of their designs have rightly made 'Old Bleach' Damasks world famous.

"Old Bleach" Towels

Like the Damasks 'Old Bleach' Towels are noted for their high quality and splendid designs. The silky beauty softness of finish and evenness of texture are the result of many years of specialisation.

"Old Bleach" Embroidery Linens.

These are delightful to work upon and embroiderers know them to be worthy of their best work. The thread are round pull easily and do not break.

"Old Bleach" Sheetings and Plain Linens.

Distinguished for their extraordinary durability and fine texture—the result of pure material and careful weaving.

Made only by **THE "OLD BLEACH" LINEN CO., LTD.**

VELVET AND CORDUROY INDUSTRY.

By J. HERBERT COOKE.

VELVET—probably made from cotton—was produced by the Chinese at a date remote from the Christian Era. From this interesting people the textile arts slowly crossed then civilised Asia encountering the conquering Romans in their Eastern raids.

Later on the great Crusades period distributed the knowledge bringing these arts into touch with the lesser developed Western World.

Velvets peculiar properties appealed successively to the rulers of Imperial Rome to ecclesiastical adornment to the display of the age of chivalry.

Through the Italian Republics its manufacture passed on from Venice and Genoa north through Lyons and France to Flanders, where now desolate, but then thriving cities manufactured as did other cities of the Spanish Netherlands, velvets and fustians. In Moorish Spain weft pile velvets were made at Granada and from Barcelona, always a textile centre craftsmen probably reached the seaport city of Antwerp.

Religious persecution, and the capture of that city by Parma caused weavers to flee to England where settling in Manchester, they assisted the development of velvet and fustian.

This the parent of modern cotton velvet and its family connections—known in England from early times—was originally made from coarse wool or combined with linen warp. Then (as now) employed for rough hard work sumptuary laws settled its place and that of velvet. Chaucer and Shakespeare both refer to it and our national poet quotes velvet for his knights and dames.

By 1641 Manchester had a reputation for its fustians. Cyprus and Smyrna cottons now replacing the one time linen warps from Ireland and being chronicled as exporting them to the Continent and America. The subdivision of production was a feature in those early days—the grey pieces were brought into Manchester and the dyeing and finishing carried out by the merchants even at that distant period.

From this parent fabric were velvet and corduroy evolved but even to day fustian covers the various subdivisions into which cotton pile fabrics may be roughly classed—velvet velveteen cord moleskin beaverteen imperial, diagonal etc.

The industry is a little world within the greater world of the Lancashire cotton trade—subdivided specialised highly technical. The grey material is woven mainly in Oldham Preston Bolton, and points in East Lancashire and subsequently focussed in Manchester where the merchants who place the completed fabric in the markets of the world arrange the numerous operations contributing to the successful production of the finished product as we see it in velvet and corduroy.

High class yarns are required for weaving velvet—fine Egyptian for strength in the warp and soft silky American of long staple for the weft, suitably spun to give the velvety touch.

Cutting the pile of this grey material is a very interesting operation calling for much dexterity. After stiffening and lining preparation, the work consists in opening up the longitudinal tunnels or 'races' into which the cloth is woven by means of a fine steel knife sheathed in a long finely pointed guide which opens up the "race,' enabling the sharp edge of the knife to sever the top of the tunnel leaving the walls in the shape of tufts of pile standing. These tufts form the velvet.

Perfect grade cloth is needed free from imperfections, as these would get to the knife rapidly pushed forward by the walking operator and damages would result. Inventors have long sought to replace the skill of the human hand by mechanical means but only in recent years has an ingenious machine been put to work which performs the cutting well. So fine are the 'races' in the better qualities as to be invisible to the ordinary eye and only discoverable by the trained dexterity of the pile cutter. Once a domestic industry, it is now carried on in well organised mills in the country districts of Cheshire and Staffordshire.

When the pile has been produced, it has to be manipulated with brushes shorn singed and made of smooth surface for dyeing. Careful workmanship is required to produce the 'fast dye' and the kindred operations of obtaining the lustre and high degree of finish to which the silky grades of velvet cotton lend themselves.

Standardisation however desirable hardly suits the velvet business as the world's requirements from the Arctic Circle to the Southern Cross, call for qualities of varying degrees of fineness, weight quality style price etc complicated by economic or fiscal barriers and although the Home Trade is a huge consumer probably 80 per cent of the velvet production is exported.

A brief survey of the various branches includes the corded velvet an excellent fabric eminently suitable for ladies costumes and ideal for children's wear and in white etc washing well, if a few simple instructions are followed.

Beautiful varieties of printed figured striped brocaded velvets, acid printing and shot effects are produced and a growing trade is done in velvet ribbons made from various grades of cotton velvet. Handsome shoes are made from cotton velvet and slippers of all grades.

Juvenile clothing finds nothing equal to velvet, and corduroy gives splendid results in hard wear for the rising generation.

Corduroy may be briefly described as velvet made with coarser cheaper yarns in stripes or ribs of almost infinite variety from the thickset with a dozen ribs to an inch to the cable cord of almost an inch to a single rib. It is a well proved article of great utility and garments made from suitable qualities give endless wear and satisfaction to the user. A few of these would include rural Britain the navvy, the iron worker, the constructional gangs of North America, the South African farmer, the Australian stockman, French and Belgian peasantry—all these workers testify to corduroy fabrics.

In spheres as diverse as Alpine sports and the hunting field their worth is proved. British and Allied War Departments discovered during the War what an unequalled material for hard wear was furnished in good quality corduroy. Furniture manufacturers and upholsterers have found what scope corduroy, in its beautiful colourings and high-class designs, offers for house adornment. The Manchester manufacturer, in the past an individualist now realises that co operation in some departments will help him to place effectively before the world the excellent qualities of the various cotton pile fabrics so well produced in that busy city.

LEATHER INDUSTRY.

By Dr. J. GORDON PARKER,
Principal of the Leathersellers' Company's Technical College.

THE Leather Trade is in magnitude one of the most important of Great Britain's staple industries, and at the same time the manufacture of leather is one of the most ancient crafts.

The origin of tanning is lost in antiquity, but specimens of leather exist in our museums which were taken from the tombs of the Pharaohs, showing that good leather was manufactured, and even excellently dyed and finished, some four thousand years B.C. Probably no important industry has undergone so little change in the essential principles as the "craft" of leather manufacture or ancient art of tanning. Even in this twentieth century the general outline of tanning is almost identical with that used by our forefathers before the Christian era, in that the basis is the hide or skin, and the tannin ingredient is still obtained from the barks and fruits of trees as of old.

In the reign of James I. we read of laws being passed restricting a tanner in the production of leather and rendering him liable to heavy fines and imprisonment if he attempted to accelerate his process under the normal number of years required to produce what was then considered a good sound leather.

One of the earliest forms of tannage was the oil or smoke tannage, which consisted of rubbing the raw skins with soft fat and afterwards exposing them to the smoke of green wood, somewhat similar to the process still used by various Indian tribes. In the production of vegetable tanned leather, the modern leather manufacturer has to thank the explorer and scientist for the great progress which has been made during the last two or three decades. Where oak bark was looked upon as almost the only source of the tannic acids, other barks, fruits and woods much rich in tanning properties, have been discovered and are now in daily use. Their introduction has cut down the period of tannage, which was formerly years, to months and almost weeks, and not only has it been discovered that these newer materials from different parts of the Empire are richer in tannin, and therefore quicker in their action, but that judicious blends of certain of these materials produce even a superior leather to that produced by the use of oak bark alone.

Towards the middle of the nineteenth century the introduction of myrabolams from India and valonea from Asia Minor began to have its effect on our industry. Wattle bark from Australia and Africa, and many other materials, all have tended to build up the reputation of British made leather.

In the early seventies a French patent was taken out for the extraction, concentration and decolorisation of tanning extracts, and there sprang up first in France and Hungary, and afterwards in U.S.A., factories where the oak and chestnut wood was extracted in close proximity to the forests, and under scientific principles concentrated in the form of liquid or solid extract containing 25 to 60 per cent. of tannic acids ready for direct use in tanyards. The introduction of these extracts had a marked effect upon the tanning industry, reducing the period of tannage, and producing a leather of equal quality at lower cost.

Each of the various tanning materials possesses certain characteristics, and the art of tanning high grade leather depends on the knowledge of how to blend these materials, and at what stage in the process each should be used in order to give the best results for the various purposes for which the leather is required.

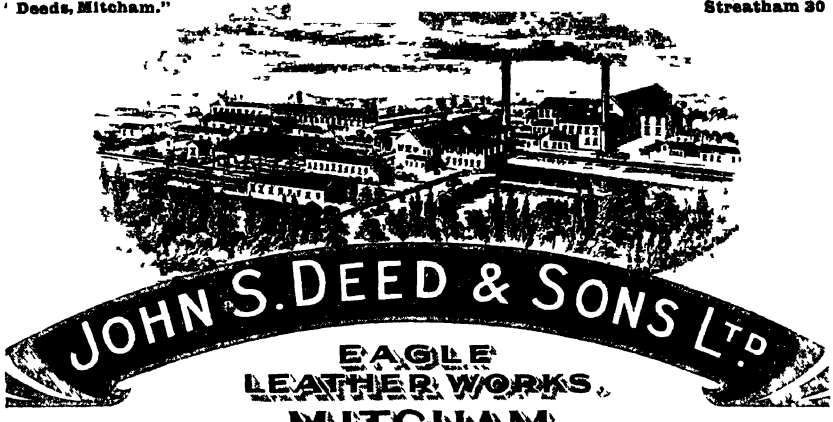
Our tanneries are converting over one hundred and seventy thousand hide per week into heavy leather, of which number only approximately fifty thousand hides come from our own native cattle. In the light leather industry, excepting for our own supply of sheep and calf, some millions of skins have to be imported for the manufacture of upper leathers for boots and fancy leathers for upholstery, bookbinding, purses, pocket books, and other similar articles.

GLOVE LEATHER.—The glove manufacturers of Great Britain have had a reputation for the production of high class glove leather of the heavier grade suitable for the manufacture of men's gloves—this product being made from Cape sheepskins.

In the manufacture of lighter fancy gloving leathers the manufacturers of this country had not up to the commencement of the war, been able to compete with Continental importing houses for these more artistic productions. Great headway has to be reported in this branch of the industry. The production of fancy leather for ladies' gloves, both in glace and suede finishes, has made very considerable headway, and these products now compare favourably with the best quality imported leather, and in many cases, show considerable improvement.

White "washable" glove leather is a British production which has created a great demand owing to its property of being washable which operation can be carried out many times. Gloves made from this leather thus being economical in wear.

LEATHER FOR ARTICLES OF WEAR.—During the last year, leather has been more generally adopted as an article of personal attire. A large number of ladies' hats are now being made of suede leathers and this and other leathers are also being employed to a very considerable extent as trimmings for ladies' dresses. One of the most recent innovations has been the manufacture of ladies' jumpers. It would appear that this material dyed in tasteful shades of colour is likely to become fashionable.



LIGHT AND FANCY LEATHER.—The manufacture of leather from the skins of sheep, goat, calf and seal, as used in the fancy leather goods trade, has long been a specialised branch of the leather industry in which Great Britain excels. The tannage of these goods is in the main, confined to the use of sumac, a tanning material imported from Sicily. This tanning agent is [illegible] prop[illegible]

The British dyer has a reputation for the production of leather which has been coloured in art or fashionable shades, and now that British dyes are available in increasing quantities, the trade is rapidly recovering from the set back which it had during the war period caused by the patriotism of the fancy leather manufacturers employing their energies in the production of boot and equipment leather required by our own and allied armies.

CHROME TANNING.—In 1881 the first patent was taken out for the production of mineral tanned leather by the chrome process. This method, which consists of impregnating the fibres of the raw skin with chromic acid, which is subsequently converted into chromic oxide, results in the production of a leather which when properly manufactured, is superior in wearing properties to that which is vegetable tanned, and possesses the additional property of being waterproof and of lighter weight, and when manufactured into boot upper leather, of smarter appearance. The process of chrome tanning is very rapid, it being possible to convert raw pelt into leather in as short a period of time as three to four hours, although a much longer time than this is given in actual practice. Great progress has been made in the chrome tanning industry. British manufacturers were at first slow in taking full advantage of the newer process, but the development of this industry during the war and since the armistice has been such that when the factories at present under construction are completed, the British shoe manufacturer can be practically independent of foreign supplies whereas six years ago probably 50 per cent. our requirements were imported.

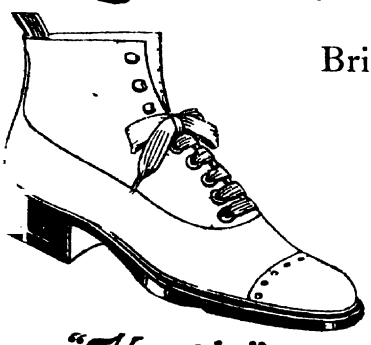
BOOT AND SHOE MANUFACTURE.

THE machine made footwear of to day is in the direct line of succession from the primeval sandal a covering for the sole of the foot made of plaited grass, palm fronds skins of animals and other material—still in common use among Oriental races From this form of pedal protection obviously inadequate in many weathers and colder climates early progression was made to a rudely shaped shoe of a single piece of untanned hide laced with a thong and thus a complete covering From these two forms—a sole without uppers and uppers without a sole—evolved the perfected shoe and boot, combinations of both

Until the last decade of the eighteenth century boot and shoe making was solely a handicraft Their manufacture by machinery originated in the invention of the sewing machine the first patent for which was granted to an American in 1790 The development of the industry under review synchronised with the improvement and development of the sewing machine Although designed for the boot and shoe trade this most ingenious piece of mechanism proved more quickly practicable for other than that trade's uses and special requirements to adapt it for which was the work of time and a number of inventors of whom one was the great English engineer Brunel The chief difficulty was in mechanically fastening together soles and uppers This overcome, the American enterprise of boot and shoe making went ahead and when the Civil War broke out the needs of the armies gave it a great impetus

When some fifty years ago British makers woke to the fact that the day of the hand made article for the general public was over and that they must either adapt the new methods or go under, they found the Americans in control of the necessary plant The English branch of the United Shoe Machinery Company of Boston had a practical monopoly of all the required mechanism the acquisition of which by their British customers was rigidly conditioned The vendors reserved the power to remove the equipments with which they had furnished it from any factory introducing other than their own machinery, mostly imported from across the Atlantic For long the British manufacturer of boots and shoes and the British manufacturer of the machinery he needed, were thus handicapped, but the Patent Act of 1907 prohibited this power of confiscation and brought to both—and to many others the benefit of a clause making revocable the patent rights granted to any invention not used for manufacturing purposes "to an adequate extent in Great Britain When once he had a fair chance the home manufacturer made good with certitude and celerity, demonstrating that on any thing like equal terms he had nothing to fear from his American rival, notwithstanding the latter's long start in advance of him To day the output of the British factories is enormous and as regards quality it is significant that the British armies, marching on British made boots were the best shod of all the combatant forces engaged in the Great War Even in the hey day of American superiority—now irrecoverably lost—there was a grade of leather that the American maker had to buy over here, sending it back to us in a portion of a certain class of his goods



Our principal centres of manufacture are Northampton (at the head of the list) Leicester Stafford Norwich, Bristol Finlithgow and Mayhole At a typical large modern factory in any of these and other places the daily output is to be reckoned by thousands of pairs In the matter of leather supplies from native resources are supplemented by imports of hides from South Africa South America and remoter lands Machinery dominates the operations from first to last Even the surface measurement of the hides always very irregularly shaped is ascertained with mathematical exactitude by means of electrically moved mechanism Clicking—the cutting out and shaping of the material for uppers—was still done by hand until some ten or twelve years ago but the clicking machine is now in general use From the department in which it operates the shaped pieces go to the making up department the principal feature of which—in hundreds is that all important sewing machine which it took so long to perfect for the purpose it here accomplishes Various more or less intricate processes precede the bringing together of the uppers and the soles and heels to which they are to be attached In the case of all welted boots (a term which excludes those for very hard and rough wear) what are called pulling over machines bring the upper over on to the insole and tack it to keep it in its place the heel being drawn over by hand The work at this stage is completed by an implement curiously named a nigger The stitching of the welt and upper to the insole is done by a developed form of the Goodyear welt machine patented in America as long ago as 1862 The outer sole having been shaped and (by a solution of rubber) fixed is stitched on to the welted boot by a lock stitch sewing machine fitted with an awl which pierces the needle holes Like so much of the other plant the

At many other stages both before and after those at which we have glanced modern boot manufacture is richly illustrative of the fact that modern needs are best and only to be satisfied by means of modern applied science It goes without saying that in so far as their shape is similar, shoes are made on similar principles by similar or the same mechanism

Inventiveness is still at work in the industry, and it is claimed for a boot lately put on the market that it is absolutely and unconditionally water and damp proof

Quality Footwear

British Made

"The Marvic"

"Waukeezi"

THE first welted boot that is *really waterproof* without being clumsy. Light, flexible, and smart, like all our other high-quality footwear. *The* sports-wear for ladies and gentlemen.

NEW styles, representing the best values it is possible to obtain in high-quality footwear. Foot-comfort at every step. Endorsed by thousands of satisfied wearers all over the world.

SINCE 1866 we have been making good footwear for ladies and gentlemen. During the whole period, as to-day, our efforts have been bent on producing style-shapeliness, sound construction, and generous wear—points on which Phœnix products yield to none. Yet, these things considered, the prices of our goods are moderate.

THE BELTING INDUSTRY.

THE British belting industry is a good trade barometer, for its activities afford a reliable index of the condition of trade generally, both at home and abroad. Belting plays an increasingly important part in the transmission of power in engineering shops, ship-building yards, textile factories, and power stations, while it is also largely used in collieries, mining and railway works; thus a brisk demand for belting is a sure indication of expanding manufacturing industry. British producers of belting enjoy a reputation which is world wide. This is due not only to the excellence of their belting but also to the fact that they have made an exact science of the problems involved in the economical and effective transmission of power. They are always willing to advise potential users as to the most suitable belts for the work to be done, and also as to their practical application and arrangement. This has resulted in a world wide demand for the British article; for whether the belts be of leather or of cotton or other materials, it is recognised that there is a strength and durability about British belting which much of that manufactured abroad does not possess. Our climatic conditions may have something to do with this superiority, but an equally if not more important factor is the fact that we are an old established manufacturing nation and hence have long been engaged in solving the problems attaching to power transmission. This long experience backed by high reputation, has ensured marked success in the world's markets generally. At present our manufacturers have not overtaken the unmet demands of the war period, when all our output was required for munition, motor aeroplane, or other works, and there was little or nothing for export.

France and Belgium are making strenuous efforts to reconstruct their factories and their industries, and are relying upon British manufacturers for their belting. There are also arrears of orders to be executed for South American States, South Africa, and to a still greater extent, for India. Our Indian dependency is now one of the world's most important cotton-spinning and jute weaving countries, and she relies upon us to supply her with the enormous quantities of belting used in her textile factories, and also throughout the Indian and Ceylon tea plantations. The requirements of the Indian markets are somewhat exacting, and one famous firm of manufacturers who have been close upon ninety years in the business have made a special study of these and maintain big stocks specially manufactured and prepared to meet the exacting climatic and other conditions of India. Of all beltings, the most serviceable efficient, and also the most costly, is leather, and when the enormous amount of leather belting in service is considered, some idea can be formed of the importance of the belting industry. The firm alluded to, whose works are situated in Glasgow, and include no fewer than eighteen departments, have a tannery in the Highlands which deals with 100 000 hides per annum.

Although this may seem a big number it should be remembered that a large motor or other engineering works may easily have 25 or 30 miles of leather belting in operation in their various shops representing if only the prime portion of the hides the butts are used in its manufacture the skins of 4 000 or 5 000 head of oxen. Approximately a first class hide only yields about 16 square feet of leather for the best quality of belting and this is curried under high tension and allowed to dry under stretch. The tensile breaking strain of 1 square inch of British leather belting made from selected hides and specially tanned is over

Such belting is admirably adapted for main driving electric motors and other fast running machinery. Dynamos run with it and feeding incandescent lamps with direct current . as steady a light as when fed with accumulators. Main driving belts can be made up to 12 feet in width and a main driving double belt for 800 horse power has been made. This belt was 140 feet long and 60 inches wide.

Of late years a type of textile belting which has come to the fore is that which is known as Balata belting for this it is claimed that it is the strongest of the textile varieties. It is made of special hard woven, long staple cotton canvas, bound together by an indissoluble mixture of "Chonata, which is composed of guttapercha, balata and other gums, which are so applied that they permeate the fibres of the canvas while in a state of high heat and tension. The result of this treatment is a flexible belt which is impervious to moisture and is almost immune from 'stretch."

"A BELT FOR ANY DRIVE"

86 years' Experience is at your Service!

BELTING SPECIALISTS

Established 1834.

"

IS RELIABLE UNDER EVERY CONDITION AND IN ALL CLIMATES.

We are sole manufacturers of the following well-known brands, which are each suitable for their specific purpose :

"COLUMBIA" Leather Belting. **Special MULE Belting.**
"ORANGE TAN" " " **HAIR BELTING.**
"OAK TAN" " " **"CHONATA" BALATA do.**
"SPECIAL WATERPROOF" **"LAUNDER" Solid Woven do.**
Buffalo Pickers, Picking Bands, Leather Laces, Hydraulic Leathers, Clutch Leathers, Pump Butts, &c., &c.

Information as to the most suitable belt for any particular drive and fully illustrated catalogue can be obtained from any of the undernoted addresses.

LEATHER BELTING

GLASS BOTTLES.

By J. MANDEFIELD.

THE making of glass is not a modern discovery On the contrary, it is one of the most ancient arts and undoubtedly was highly developed in very early ages So far back as 2 500 years before Christ we have evidence that glass making was practised by the Egyptians the knowledge ultimately passing from them to the Romans It is also well known to have been a flourishing art in Venice and district in the Middle Ages Various substances including skins of animals stone ivory, earthenware and porcelain have been used at different times in the production of bottles and containers, in addition to glass although there is no doubt that even in very early days glass bottles and containers of a primitive type were made

The establishment of the industry in Great Britain probably dates from about the year 1220 when it is recorded that factories were working on the borders of Sussex and Surrey timber being used as fuel About the year 1610 the use of coal as fuel was resorted to resulting apparently in an expansion of the industry it being recorded that in 1696 eighty eight glass factories were in existence in the country thirty nine of which were bottle factories In 1746 owing to the prosperous conditions of the industry an excise duty was imposed by the Government on glass manufacture and although it would appear that owing to its exorbitant nature progress was considerably retarded statistics indicate that in 1840 the production of glass bottles in Great Britain amounted to 52 574 cwts of which no less than 292 887 cwts were exported The tax above referred to was repealed in 1845 from which time the glass bottle industry has grown to very large dimensions forming to day probably the chief portion of the British glass industry which it may be stated comprises in all seven distinct sections producing glassware of various types

The production of bottles may be broadly divided into two classes (*a*) the so called flint or white bottles and containers and (*b*) coloured bottles of various types e g green bottles largely used as beverage containers The former are usually made from furnaces containing covered pots in which the glass is melted and the latter from large tank furnaces The production of ' white ' bottles and containers from tank furnaces (which has in the past presented many technical difficulties) is making considerable progress however and there is no doubt important developments in this method of production are likely to take place In view of the extended use of machines for bottle making progress in tank working is of great importance as it ensures the maintenance of a continuous supply of molten glass at the same level in the furnace so long as the tank is in operation, thus

[illegible] materials for the making of glass are [illegible] the tank at the melting end and after fusion the molten glass gradually passes to the working end where bottle making can be carried on without interruption

Bottles are still largely produced by hand methods Usually a gang numbering five workers termed a chair ' or ' hole ' consisting of the following men and boys working together gatherer, blower, wetter off, maker and taker in

The wetter off and taker in are usually boys The process of bottle making is briefly as follows The gatherer collects from the furnace on the end of an iron blow pipe a quantity of molten glass which he rolls and shapes on an iron or stone slab called a ' marver plate The blow pipe with the glass adhering is then passed to the blower who places it in a metal mould closes the mould and then blows down the pipe until the glass has acquired the required shape In better class bottles, where it is necessary that no mould marks should appear on the completed bottle, the blower while carrying out his operation must constantly rotate the glass in the mould by revolving the blow pipe whilst blowing On opening the mould the bottle is detached from the blow pipe by the wetter off who uses an iron tool called a mullet and it is then passed by him to the maker who finishes the neck or the bottle with a thin band of molten glass which he shapes with a hand tool The finished bottle is then picked up by the taker in " on a specially designed iron rod and placed by him in the annealing lehr or oven which is usually in close proximity to the glass furnace The annealing of glass, during which the article is again subjected to considerable heat and then allowed to cool gradually is for the purpose of removing all strain which may exist and is of the greatest importance as an article of glass not properly annealed is subject at the slightest contraction or expansion to the constant risk of fracture

It was realised at an early date that for the bulk production of bottles the use of machinery would be essential and from its introduction may be dated the most important stage in the development of the industry

Commencing with the year 1876 many machines designed in both Europe and America with the object of making bottles have been exploited a number of which have proved more or less efficient These vary to a very considerable extent in the amount of human labour necessary for their operation and may be classified as follows (1) Fully automatic machines (2) Semi automatic machines The machine developed by Owen in the United States about seventeen years ago and which has since been considerably improved is a notable example of an absolutely automatic machine requiring no human labour in its operation with the exception of mechanics to regulate its running On the latest types of this machine bottles are being produced at the rate of thirty per minute the machines running continuously with the exception of breaks necessary to change moulds overhaul working parts etc

A further development in mechanical methods of forming is the recent date quite different in design to the Owen and to which a great future is claimed by many people interested in glass manufacture is what is termed the flow feed system which consists in brief of an automatic feeder forming part of the glass tank, and which shears off and delivers from the furnace gathers of molten glass of predetermined weight (varying according to the type of bottle being produced) at a speed of twenty five to thirty five per minute These gathers are immediately delivered directly into the moulds of automatic forming machines placed alongside the tank which complete the operation of making bottles The design is generally such that one feeder can deliver gathers of glass simultaneously to several forming machines rendering it possible by varying the weight of gathers to make bottles of varying shape at the same time Feeders of several designs are now being exploited and this system undoubtedly marks a further stage in the development of the industry

Other notable machines that may be mentioned are the Lorch Steel Wilson Hartman Horne Miller and O'Neill all of which have proved very efficient in the production of bottles and containers for which they were designed and are being adopted to an increasing extent with great rapidity

During the war the importation of glassware was practically suspended and British manufacturers of glass bottles quickly realised the urgent need for not only greatly improving and modernising but largely increasing their factories and equipment if they were to take advantage of the opportunity offered to supply a larger portion of the enormous demands To achieve this object many extensions to existing works and the erection of new works are taking place new machinery is being installed and methods of production are changing the old hand methods giving place to machine production of those types of bottles required in bulk These changes involve the outlay of very large sums of money and also a considerable period of time for their completion but they will undoubtedly play a supreme part in assuring to this country in the future the supply of a much larger proportion of the almost unlimited world demand for bottles and glass containers

The following statistics show the exports of glass bottles from the United Kingdom to all sources at intervals of ten years from 1853 to 1913 together with figures for the year 1919

YEAR	QUANTITY	VALUE
1853	467 787 cwts	£348 4 8
1863	614 561 ,,	312 686
1873	907,880 ,,	461 918
1883	749 137	376 496
1893	639 202	305 781
1903	898 958 gross	449 782
1913	974 465 ,,	605 847
1919	275 153 ,,	941

Imports at intervals of ten years from 1893 together with the year 1919 were as follows —

YEAR	QUANTITY	VALUE
	821,795 gross	£425 955
	1 831,665	789 065
1913	1 929 371	814 923
1919	922 865	946 492

It will of course be understood that the imports and exports for the year 1919 were largely affected by the shortage of labour raw materials fuel transport facilities etc, and they cannot be regarded as representing the normal situation

ENGLISH ESSENTIAL OILS.

By C. EDWARD SAGE, F.I.C.

VOLATILE OILS or essential oils are the bodies to which so many flowers leaves spices and woods owe their distinctive odours The scent of lavender the flavour of cloves and the odour of sandalwood are all due to the presence of volatile oil in their structures The method of collecting sufficient of the oil to use or handle, consists of heating the requisite flowers leaves or plants in a current of steam then condensing the steam and collecting the oil which separates from the water This process now commonly called steam distillation is almost as ancient as civilisation and like so many useful arts, it was brought from the East to the Moors who crossed to Spain and so spread the knowledge to Southern Europe The art was chiefly applied to the preparation of sweet smelling waters and cordials and as the use of these increased so it became necessary to cultivate the plants which yielded the volatile oils The monasteries were famous for their physic gardens and herb growing and used their products for treating human sickness and the preparation of elixirs and cordials we have reminders of these early times in the form of "Benedictine Chartreuse 'Creme de Menthe and Anise liqueurs but to day the herb gardens are only associated with such things as mint thyme and sage yet they were really the forerunners of the large herb growing farms which are devoted to the cultivation of medicinal and aromatic herbs to day

The apothecaries of a century and more ago, either prepared for themselves or bought from the growers and distillers the essential oils for use in medicine, and as the work of the apothecary became gradually merged into the practice of medicine and pharmacy so the art of preparing essential oils became the prerogative of the drug grower and oil distiller As typically English products we have a world wide reputation for the oils of peppermint lavender rosemary caraway fennel, chamomile and dill for all these are native plants and the two first named are still so famed that they always fetch at least three times the price of any other foreign grown or distilled oils

Surrey was formerly the county where most of the peppermint and lavender were grown and "Mitcham oils still persists as a title although the districts of Mitcham Beddington and Carshalton have long been given over to the hands of the estate agent and house builder The herbs are still cultivated in Surrey Kent, Suffolk Hertfordshire and Lincolnshire and the closest attention is given to the production of the purest products

Although the oil glands in the plants are almost too minute to be perceptible yet the essential oils produced in England amount to many thousands of pounds annually This means organisation on the highest scale and by means of the expensive equipment of a modern distillery tons of herbs are daily handled and the resulting oil is made ready for commerce

The English herb season is very short, and so the large equipment of stills has to be utilised during the greater part of the year for distilling other products

The aromatic spices are chiefly of tropical and subtropical origin and in order to produce the volatile oil from these, they are shipped to this country from the places in which they grow and the English distillers extract the volatile oils in this country

In this way the English factories yield us the oil from almonds, cloves cinnamon nutmeg allspice caraway dill and fennel besides numbers of others employed in medicine

It is not always possible or profitable to produce all these oils in England but they are rectified if necessary on arrival from abroad

For instances the eucalyptus trees are natives of Australia and the leaves are distilled on the spot the oils are shipped to this country and seldom need redistillation

Citronella and lemongrass oils are distilled in Ceylon Burma and the Straits Settlements Star anise and cassia oils are produced in China wintergreen oil in the United States lemon orange and bergamot in Italy and Sicily

Now the shipment of these oils to England and their sale meant until recently that they were distributed by the merchant to the consumer but during the last decade or two it has been found that the volatile oils can serve mankind in many other forms than in their raw or refined state and to day many of the essential oils are simply the raw materials for the manufacture of more complex substances which are used in flavouring foods preparing perfumes or the manufacture of medicinal substances

At the present time the humble clove is the starting point for the manufacture of the artificial vanilla flavouring which is so commonly used in chocolate and foods Some English distillers produce and sell clove oil by the ton from which chemical treatment yields first eugenol and finally vanillin

The lemon grass oil above mentioned yields a substance known as citral from which the body ionone is produced and that with the product distilled in England from iris root gives us the violet perfumes for which our English makers have no equal

Otto of rose is naturally associated with a sunnier climate than our English one but in artificial rose oil is produced by the chemist with the geraniol from citronella oil as a starting point

The distillation of essential oils is an English industry which has stood the test of time nothing but the best has survived the competition of cheaper and inferior products and to day our few factories have a reputation which has only been acquired by long years of painstaking work The industry requires the supervision of highly trained chemists and engineers it requires a small army of workmen and mechanics it gathers its raw materials from every country in the world and many of the ablest business men and merchants are engaged in it

Although their origin is lost in antiquity the processes of manufacture are as up to date as modern science can possibly bring them and if two thousand years have passed since myrrh, aloes and cassia were used to produce sweet smelling garments yet the production of essential oils has only been brought to its present state by conscientious work and research through the centuries by painstaking workers who have had but one ideal, viz, the "PURITY OF ENGLISH ESSENTIAL OILS

BRITISH BRUSH-MAKING.

By T. MARSON TILL, Secretary of the British Brush Manufacturers' Association.

THERE is hardly a household factory, work shop or institution that exists where brushes of some kind or other are not used—yet few people seem to know how or of what brushes are made

It is perhaps little known that the bristle used for brush making throughout the world is grown on the semi wild boar in Russia China and India

Although bristle is the most important material used in the industry brushes are also made from the hair of the horse bear goat, badger squirrel sable, and other animals—from fibre from the Mexican aloe tree—from piassava (bass) kitool cocoa and other fibres from various tropical palms

The manufacture of brushes is divided roughly into five branches —

1 Brushes drawn with wire or thread
2 Painting and shaving brushes
3 Brushes and brooms set with pitch etc
4 Twisted wire brushes for flues and boilers
5 Ivory and bone hair and tooth brushes

WIRE DRAWN BRUSHES

Include toilet, stable and household brushes, such as scrubs and shoe brushes

Tufts or knots of bristle or hair of double the length required are placed under loops of wire which are passed through holes in the back of the brush and then drawn back with the bristle thus bending them double and causing both ends to stand upright together On the back of the stock is now glued and screwed a piece of decorative wood to cover up the wires and bent tufts showing through The brush is then finished and polished

Some of the commoner sorts of "drawn brushes are made by plugging the "knots with staples into the board by machinery, and this process has considerably developed during the war

PAINTING AND SHAVING BRUSHES

There are two classes of *painting brushes*—those for painters and decorators and those for artists

Before painting and other bristle brushes can be made the bristle, which is the most expensive part of the brush has to be sorted and 'dragged into certain lengths from the raw bristle washed, mixed, and tied into knots of required sizes and stiffness, so that the bend of all the bristles faces inwards and the flags form concentric rings The buying of suitable bristles and these operations require much skill and training

The knots of bristles when so finished are concentric at the roots and are bound on to the handle by string or wire, or are driven into a socket A new process under which the roots are set in vulcanised rubber is being developed with success

Artists brushes are made from hair taken from the tail of the sable marten kolinsky and squirrel, and also from bristles They are set in quills of various sizes or in metal The work is chiefly done by girls The firms in England who specialise in artists brushes are few in number

Shaving brushes —The hair from along the middle of the back of the badger is the best hair from which these brushes are made Goat hair and bristles are also used and made to imitate badger and unless the brush is stamped "badger hair ' it may generally be taken that the brush is made of a mixture of hairs The best badger hair is worth to day about 300*s* per lb

BRUSHES AND BROOMS

An entirely different process known as setting, is employed in the manufacture of

A knot of hair fibre, or bristles is taken and the root end dipped into boiling pitch bound with a thrum then dipped again and inserted into a hole already bored in the wooden stock a slight twist being given in the process to splay the hairs

TWISTED WIRE BRUSHES FOR FLUES AND BOILERS

These are chiefly made by special machinery

IVORY AND BONE HAIR AND TOOTH BRUSHES

This is a distinct branch of the trade although most of the brushes come under the heading of 'drawn work

Bone nail brushes are almost now entirely superseded by wooden ones

Although the antiquity of the brush trade itself is not very great the following early references to brushes are on record —In the year 1377 A D, or wyped it (a coat) with a brusshe In the year 1519 'Olde men brusshed theyr dustye clothes with cowe tayles as we do with hear brusshes The painting brush used by artists is probably the oldest type of brush The few hair brushes that were made 120 years ago for the toilet were constructed on the principle upon which the modern broom is made—that is, the hairs were set in with pitch

In the cheaper and commoner kinds of brushes foreign competition made some headway prior to the war but in the better class of goods the British trade has always more than held its own

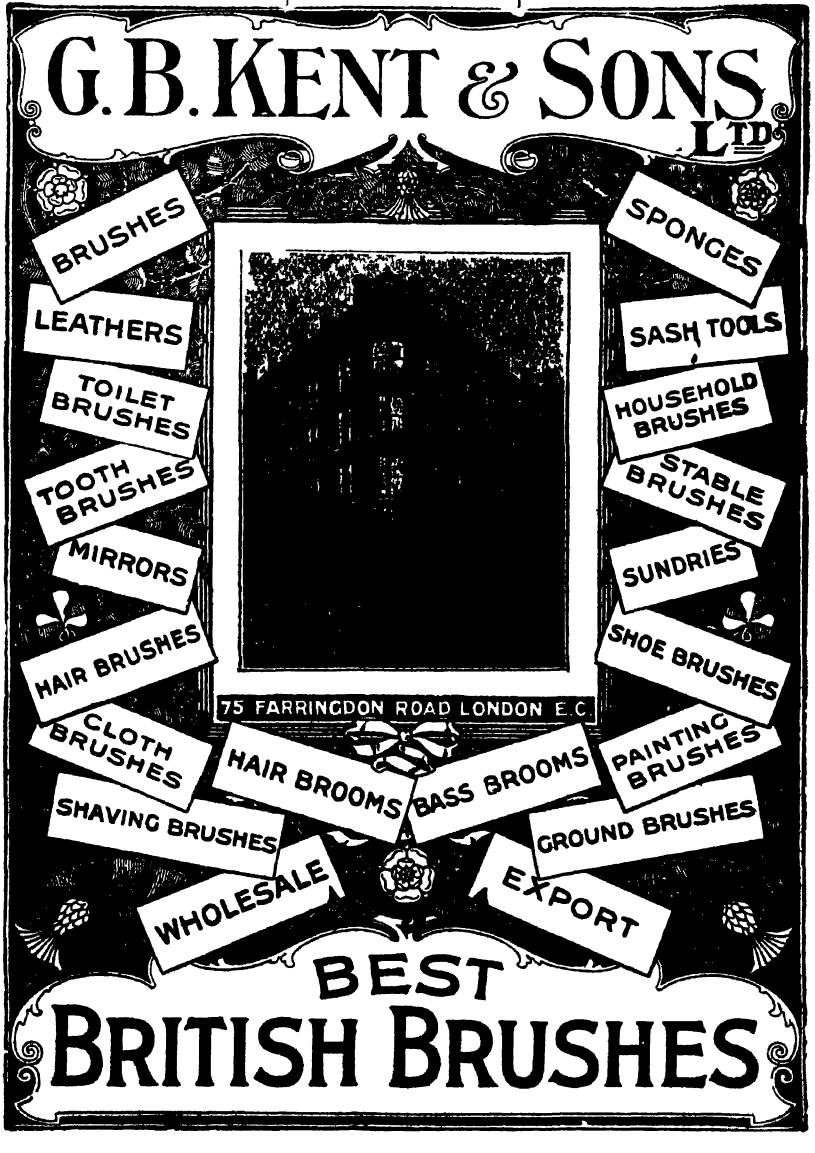
Statistics give the following values of the trade —

	Imports	Exports	Re Exports	Home Trade
	£	£	£	£
1907	—	—	—	1,826,000
1913	456,141	237,812	22 157	—
1914	354,903	216,236	18 605	—
1915	377 578	187 16_	14 107	—
1916	482,043	236 298	10 410	—
1917	90,287	213,88_	8 144	—
1918	407 86_	171 122	4 53_	—
1919	859,633	291,297	5_ 337	—
First 9 months 1920	715,735	399 593	Not yet known	

In the year 1908 the British Brush Manufacturers Association was formed and now has a membership of 135 of the leading manufacturers in the country

The Scottish Irish, and Northern Counties Brush Manufacturers Associations, and Master Bone Brush Makers Association representing 112 manufacturers are affiliated to the B B M A which thus represents 227 brush manufacturers

The Association has standardised the stamping of brushes as to weight and material used and has established the difference between bristles and hair—bristles now being strictly recognised in the trade as only the hair of the hog pig or boar



The Government and Municipal bodies recognise the Association as representing the Trade

A Trade Board consisting of 14 representatives from the B B M A., and 14 representatives from the trades unions concerned, has now been established to settle minimum rates of wages for the trade and other matters appertaining thereto

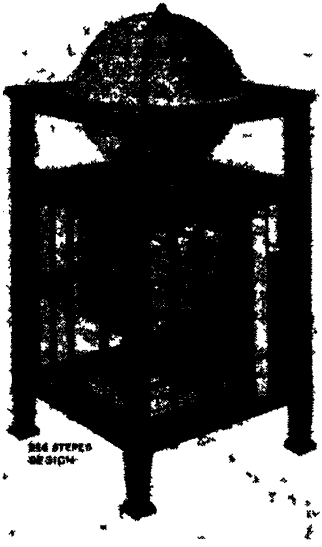
MAP, GLOBE AND CHART PRODUCTION.



THE Egyptians were the first civilised race of antiquity whose geographical knowledge extended beyond the limits of their own country. Their annual survey of the Nile after its periodic inundation laid the foundation for an accurate knowledge of Egypt itself, which was further fostered by the priests among whose sacred books were three devoted to the study of astrology, surveying and geography. Within their geographical horizon were probably the whole of the Mediterranean shores, regions to the east of the Tigris the mountains of Armenia and perhaps to the nearest frontiers of India. It is to the Hebrews, however, that we owe the three oldest of early geographical records. The ethnographical table in the tenth chapter of Genesis is the first known attempt to classify the races of mankind, the description of the march through the wilderness is the first itinerary we possess and it is a safe assumption that some kind of topographical map must have been the basis for the division of the Promised Land. The Phœnicians learnt much on their trading voyages, but many of their discoveries were lost to posterity in the fall of Tyre and the destruction of the Carthaginian records, and to the Greeks of all peoples of antiquity, must be accredited the greatest extension of geographical knowledge. Homer has been described as the father of geography and his conceptions of the universe held ground for hundreds of years, the wider and more philosophical views that eventually succeeded them being the fruit of Grecian commercial enterprise and colonial expansion.

About the beginning of the 6th century (B.C.) we find the geographical knowledge of the time embodied in a map—the first Map of the World that of Anaximander of Miletus (610-547). Of this map the bronze tablet of Aristagoras, on which were engraved "the whole circuit of the earth and every sea and all rivers," the maps of Democrites, Eudoxus of Cnidus, and even of Hecatæus appear to have been but new and revised editions. Passing over much that in anything like an exhaustive review would call for note, we come to the work of Eratosthenes of Cyrene, born B.C. 276. The attempts and achievements of Eratosthenes in the measurement of the earth would by themselves entitle him to be called the founder of scientific geography. His map represents the first application of cartography of scientific principles and is an important landmark in the development of map making. His cartographical labours were completed by Hipparchus the astronomer whose idea of constructing a map of the world in which latitude and longitude should be laid down as determined by astronomical observations was afterwards in part realised by Claudius Ptolemy whose maps and geographical treatises are his monument for all time.

Proceeding somewhat abruptly to the Christian era the lost geographical lore of the ancients was revived by the Arabs, to whom is also to be accredited the adoption of the Chinese invention of the compass, which is first mentioned among European writers by an Englishman, Neckam, at the end of the twelfth century. Chart and map production quickly responded to the immense improvement in navigation effected by its use and the adaptation of the astrolabe to marine requirements. For mediæval cartographers Ptolemy was the great authority his work being copied for centuries, supplemented and brought up to date as the knowledge of the earth's surface widened. The most accurate of the mediæval maps were the Portolani, compiled from compass bearings. As surveys of the earth's surface grew in number and hitherto unknown areas were discovered and delineated, maps gradually became more scientific and accurate. They were formerly drawn for reproduction on copper and steel plates by hand engraving, impressions being pulled on the hand press, and the impressions hand-coloured. To-day maps are reproduced by a number of mechanical processes which vary according to their application. The finest results are obtained from hand engraved intaglio copper plates, transfers from which are taken and printed lithographically from stone or zinc and aluminium plates the latter being used in fast running rotary machines. Another letterpress method is that of engraving the map on wax and preparing electrotypes. All these processes apply to the key map, the colours being obtained by the use of ruled or stippled tints a separate printing is required for each colour. Accurate superimposition of the various workings on the key plate being absolutely essential, high grade paper is required with great skill and care in printing. The production of globes is mostly a hand process the maps or 'gores' being printed in the ordinary way and then cut out and pasted on the globe which in the case of the larger sizes is made by building up composition on a papier maché ball, the utmost care being necessary to ensure accurate joining of the different sections. The globe is then polished and fitted in a glass meridian and mounted on a stand with printed horizon. Smaller sizes are made by embossing cardboard in hemispheres, then joining up to make the complete sphere on which the gores are pasted. The globe of this type is not so heavy, and is largely used in schools. Here it may be pointed out that the educational value of cartography has been greatly increased by the enlargement of its scope. Maps are no longer restricted to a display of surface features, but furnish graphic illustrations of all kinds of distributions—climatic, statistical, political and commercial. As a compendium of information a modern map can be so designed as to surpass any other medium of instruction possessing advantages that are only its own.

British cartography thanks largely to the exertions of the Royal Geographical Society in popularising the study of geography has in recent times made marked progress. Although among the surveys undertaken by various countries those of Great Britain rank very high, until some few years ago the Continent generally and Germany particularly, were ahead of us in the industry of map and atlas production. Now our relative position has distinctly improved. The British large scale maps in use on the Western Front were indisputably better than those issued from the War Office or our enemy practical monopolisation by the Germans of globe construction, formerly uncontested, is being successfully challenged by English makers. The charts and maps of the British Admiralty are universally admitted to be the most accurate in the world. Minute particularisation, clearness of definition and comprehensiveness of range distinguish the maps which represent the specialised labours of the Ordnance Survey experts, who have incalculably enriched our knowledge of district and national topography in all its ramifications.

In the sphere of commerce, as in the sphere of the academic, cartography has a place of vital importance. Trade follows the flag, but where the flag goes the map must show, or the trader remains ignorant of much that it is essential for him to know. The enterprise of English map specialists provides him with the means of acquiring by simple reference and in epitome information that without these means could only be obtained at the impracticable cost of personal experience.

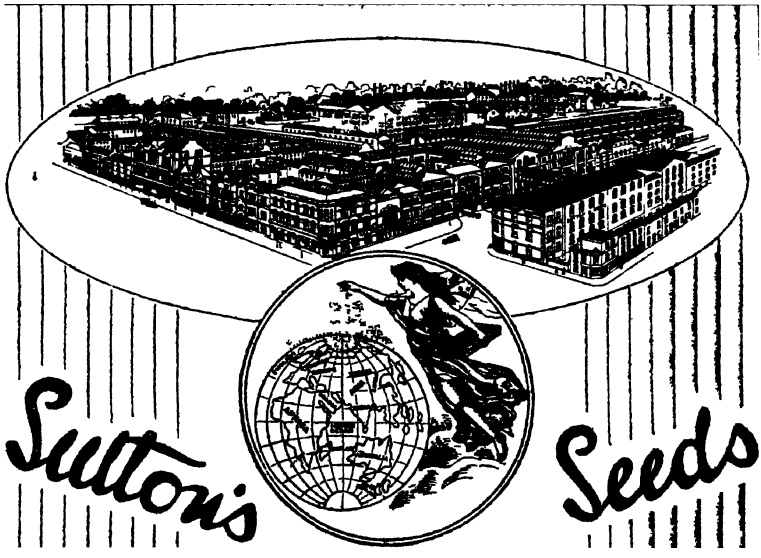
SEEDS INDUSTRY.

THE culture of seeds is an industry of both vital national concern and of individual interest. In one ramification or another it is a factor in the life of each and the lives of all. On an adequate and well-conditioned supply of agricultural and vegetable seeds depends the adequate and healthy supply of essential foods; thanks alone to the availability of flower seeds any man, however poor, can grow his own little Eden; by grass seeds bare wastes are transformed into green pastures rich with sustenance, lawns that delight the eye are created and maintained, spaces are carpeted that serve the ends of pleasant recreation and beneficial exercise. Royal appreciation of the importance of the subject under brief review has been twice signified in our time, the visit of their Majesties King George and Queen Mary to the Royal Seed Establishment at Reading in 1918 having been preceded by a visit there of his august father when Prince of Wales; the public interest these visits aroused reflecting the interest in seed culture of all classes of the community.



For long the commerce in seeds lacked system and organisation, and many abuses flourished. Adulteration was the rule. Mechanical means were in use for killing the vitality of cheap seeds without affecting their appearance, guarantees being offered by the owners of the mechanisms that not a single seed subjected to the process could by subsequent germination betray the fraud in which it was to be an item. These killed cheap seeds were mixed and sold with dear seeds of a different species but of similar form and colour. For instance, killed rape at threepence a pound was mixed with cabbage, broccoli and other round seeds worth many shillings a pound. In the early years of last century the scandal of this and other malpractices became so great that an agitation was set afoot which resulted in a commission of inquiry, and ultimately to the passing of the Seeds Adulteration Act.

If genius be an infinite capacity for taking pains, seed culturers on a commercial scale are a race of geniuses, for in almost every detail of their work at its every stage meticulous care must be exercised, in conjunction with exhaustive knowledge and experienced judgment, which without painstaking would be wasted. They have to deal with numerous species and innumerable varieties of each. To illustrate the multiplicity of varieties in floriculture alone, of asters there are more than two hundred, of stocks almost as many, and of sweet peas at least one hundred and seventy, other species being equally diversified. This prodigality of variation is by no means confined to flower species. The ordinary person knows of only one sort of blackberry—some few years ago four hundred *new* varieties were discovered in China. It is noteworthy that the tendency of varieties to revert to their original type, which all breeders of live-stock have observed, is equally persistent in the vegetable kingdom. The fertile seed of a variety germinates to species, but not with any degree of certainty to its own variety of that species. The peculiarities of varieties are perpetuated by other means.

In such qualities and characteristics as the longevity of their vitality, the duration of the period of germination, and their hardihood (there are some not injuriously affected by either boiling or freezing) the seeds of different species are in extreme contrast, but the conditions required for germination are in principle the same—exposure to moisture and a certain quantity of heat, communication with the atmosphere being also necessary for the maintenance of a healthy state. A seed, when fully ripe, contains a larger proportion of carbon than any other living part, and so long as it is thus charged with carbon it cannot grow. The only means of ridding itself of this element, essential to its preservation but an impediment to its development, is in the conversion of the carbon into carbonic acid, for which a supply of oxygen is necessary. This it procures from the water absorbed in germination, fixing hydrogen, the other element of water, in its tissue. With the carbonic acid thus formed it parts by means of its respiratory organs, until the proportion of fixed carbon is lowered to the amount suited to its growth.

The typical Seed Establishment of to-day is a colony of experts. Growing on their own lands for the sake and purpose of seed harvesting, the cultivators are sponsors for their produce when it passes into the hands of growers for other purposes. Farm seeds, grass seeds, garden and kitchen garden seeds must all be tested, the unfit and the unlikely be eliminated; means must be taken to preserve pedigree stocks from extinction or decadence. All this entails scientific, costly and elaborate equipments in some departments and an unerring discrimination and ceaseless watchfulness in all.

Since the reform and consolidation of the seed industry more than a hundred years ago, its history has been one of continuous extension and development. It has been, and is, importantly influential in advancing British interests at home and overseas, its export returns running into big figures, even in this age of big figures. British-grown seeds are in preferential demand all over the world. A feature of the trade is that the smallest customer may buy direct from the largest producers.

THE KING'S SEEDSMEN,

READING - - ENGLAND

THE GUN INDUSTRY OF GREAT BRITAIN.

By HENRY W. R. TARRANT.

As in most other industries British firearms manufacturers have since the war had to overcome a great deal of inertia in getting their peace productions thoroughly well going again but the wheels are now moving with regularity, and more British arms than ever before are being distributed in the various markets of the world. Not quite so many skilled hand workers as of old may perhaps have come back into the trade but defection in this direction is fortunately more than compensated by an extended use of machining processes of improved organisation established during the war and by the entrance into some branches of the trade of certain big factories equipped only for the highest class repetition machine work.

In various branches of the industry Britain has always been foremost—particularly in the production of the highest class shot guns and high velocity big game rifles. These however involve the employment of skilled and artistic hand work, for which the British workman in this trade has always been celebrated. In the cheaper—or rather less expensive—grades of arms Britain has hitherto suffered from Continental (particularly Belgian) and American competition. That defect has however been partly righted by our improved methods and we are now in a fair way as has been predicted in past issues of 'WHITAKER' to leading the world in trade in firearms once again.

The centre of the firearms industry as judged by quantities produced is Birmingham. The Birmingham manufacturers—big and little—have very wisely formed the Birmingham Registered Gunmakers Company Limited the main object of which is co operative buying and selling Contracts particularly for sporting gun parts and barrels have been made with manufacturers having extensive machine tool plant. These gun parts will be made in large numbers of carefully selected material to a standard pattern, and will be distributed to the various gunmakers for finishing in styles peculiar to each and as may be dictated by the desires of ultimate purchasers. The basis cost of guns produced so largely in such a way must necessarily be comparatively low and, consequently, the finished arm built on this high grade machining will be marketed at a price that must eventually place even the cheap Continental productions at a disadvantage. These guns should be available early in 1921 and buyers may safely be advised to send their inquiries to Birmingham before deciding to buy elsewhere, notwithstanding that they may have had satisfactory supplies hitherto from foreign sources. From Birmingham also may be obtained high class machine made air rifles, smallbore and high velocity single shot and repeating rifles, all kinds of revolvers and automatic pistols, and, of course the better grades of double-barrelled guns and rifles of various calibres.

The gun trade of London, like that of Birmingham, dates back some hundreds of years. In later days the London makers have been famous principally for the best types of guns and rifles—best in the sense that hand work and beautiful finish enter into these really artistic productions. The names of Purdy Holland Lang Westley Richards Greener Lan aster and others are still associated, as they have been for so many years with weapons of beauty whose shooting qualities are seldom equalled and cannot be beaten and which practically refuse to wear out. Such guns and heavy game rifles are necessarily high priced but they work out cheaply since they are more often than not handed down from father to son. This type of double barrelled drop down breech loading ejector gun has not been modified in principle for years past and there is little likelihood that it will be for years to come.

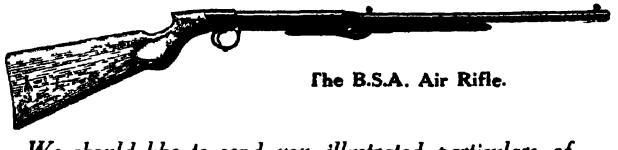
The war has naturally created a desire on the parts of the Allied and sympathetic Nations to control the sale of arms. This has been put into the form of a Convention in which the various Powers agree to control the movement of arms particularly of a military character. In England machinery is now in existence whereby manufacturers have little trouble in securing permits to export arms which are intended for sale abroad for sporting use or for target practice. For operation in Great Britain a new Firearms Act came into operation towards the end of 1920. It imposes no restriction on the sale of shot guns and air rifles or ammunition therefor but purchasers of other rifle revolvers and pistols must secure from the police authorities a licence to purchase and possess such weapons. In view of the unsettled state of affairs such regulations must be regarded as just. Little difficulty is experienced in securing licences which cost merely five shillings.

Trade in military arms has practically disappeared. Wars will no doubt occur in the future notwithstanding the fervent hope that they shall be no more. The great plants and organisations with which such a mass of munitions was turned out during the war are however, still in the main available so that in case of need the British manufacturer is still in a position to supply the most up to date military weapons always providing the British Government hall marks the business by allowing manufacture and sale.

Side by side with the gun industry proceeds the manufacture of ammunition. All British ammunition and explosives factories are now controlled by one great central body. This organisation is working with great success particularly in the direction of economising and improving manufacture. Overlapping of various manufacturers has been cut away, and Britain has become almost if not quite the greatest ammunition and explosive producing country in the world.

B.S.A.
GUNS AND RIFLES

ALL the traditions of fine craftsmanship associated with rifle and gun-making are to be found in B.S.A. Shot Guns and Rifles. All the modern improvements in steel processes and manufacture are incorporated in our new models.



B.S.A. Guns and Rifles have an established reputation among sportsmen the world over. Their excellence and superiority for small and big game shooting, long and short range target work have been fully demonstrated under all conditions.

The B.S.A. Air Rifle is the greatest small game and target rifle on the market, amply powerful up to 50 yards, and as accurate and scientifically made as the most expensive target rifle in existence. Its noiselessness and absence of smoke and smell commend it to those who delight in indoor target practice, and others for killing small fur and feathered game and vermin. The B.S.A. Air Rifle entails no messy cleaning trouble, will last a lifetime, and cost of ammunition is practically negligible.

The new B.S.A twelve-bore Shot Gun is undoubtedly the finest value ever offered. It carries no elaborate decoration, but it is equal in all that conduces to good shooting—perfect balance, crispness of trigger pull, wear resisting power, sweet functioning and beautiful lines, to the best hand-made gun ever produced. It is nitro proved, and like all B.S.A. Guns and Rifles fully guaranteed.

The B.S.A. Double Barrelled Hammerless Shot Gun.

The B.S.A. Air Rifle.

We should like to send you illustrated particulars of B.S.A. Air and Miniature and high velocity Sporting weapons and Hammerless Shot Guns post free on request.

BILLIARD-TABLE MANUFACTURE.

THE great game for which the maker of the Billiard table, with its appointments and equipments provides the requisite and necessary means is of uncertain origin Its name is probably derived from the old French *billard*—a stick with a curved end—and by some writers the invention of the game itself is accredited to a French artist in the latter half of the 16th century It was certainly brought into fashion by Louis XIV in the middle of the 17th century, that monarch's physicians having enjoined him to take exercise after meals Others assert that this recreative exercise is a development and an adaptation of the ancient English sport of bowls Spenser mentions it in Mother Hubbard's Tale (1591) and Shakespeare alludes to it in Antony and Cleopatra (about 1607), while in Cotton's "Compleat Gamester (1674) is a description of the game as played in his time—differing essentially from the adopted French billiards described sixty years afterwards in Seymour's "Court Game ster It is clear that at various periods the forms of play varied and it was not until the beginning of last century that the principles of the game as played to day were standardised in Great Britain to the exclusion of all others

The modern billiard table *de luxe* is the product of craftsmanship and artistry in combination and co operation Its purpose is utilitarian into the service and accomplishment of that purpose enter beauty of design and elegance of form The materials employed are of the best and costliest and some of them are brought from afar To begin with for legs and frame work the choicest mahoganies are imported, walnut, oak, and pine being also used In no industry in which woods are employed is their perfect seasoning of greater importance than in that under review, in which from three to ten years and even longer are allowed for their conditioning To be 'dry' for billiard table making timber must retain nothing over 15 per cent of moisture and when any doubt exists as to this limit being exceeded small cubes are tested by a special process and the bulk is judged by the result

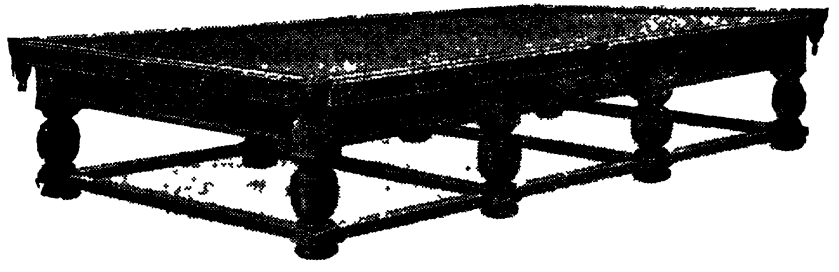
Where considerations of cost are not prohibitive the relief of necessary massiveness and solidity by ornate elaboration is a feature of the designs planned by artists for execution by highly trained artificers These designs and those of accompanying cabinets are some of them in "school and 'period styles—the Adam, Chippendale, Sheraton Jacobean Georgian, Louis XIV, Stuart others of them are of new origination each with characteristics in keeping with modern fashions of furniture and other surroundings The beds of tables were formerly made of oak, and sometimes of marble Both were superseded by slate less than a hundred years ago, nothing else being now used To allude to other constructional variations cushions were at first stuffed with flock and later with hair India rubber cushions only date back to about 1835 The first pockets —or hazards, as they were originally called— were wooden boxes but nets soon took their place

The slates for beds are hewn in British quarries and on reaching the manufacturing premises in the rough are sawn, planed and otherwise prepared, being reduced to a mathematical water level by electrical machinery of the most recent type Both the upper and under surfaces are wrought into the same exact level The slightest inequality having to be obviated the tendency of slate to depress has to be taken into account The bed of a full sized table is formed of five slates and to ensure the even distribution of the weight of the whole bed, and to maintain a table's dead level even on an uneven floor, and in all circumstances a special frame was devised some few years ago which has proved entirely successful It provides a separate support for each slate joint

A little later an innovation in the making of billiard table cushions also proved successful rigidity being increased by the insertion of a block of tempered steel between the rubber and the wooden frieze or cushion of the table So much depending on the faultlessness of cushions they are twice tested by makers before being fitted round—first with regard to the run of the balls and then with regard to the size and shape of the pockets

The shaping and the balancing of cues (made of ash and hornbeam maple) require dexterity of hand and precision of judgment For the splices various woods are serviceable ebony being a favourite The cue is in the line of succession from the mace, the original implement, and was untipped until early in the eighteen hundreds

That the fine West of England cloth covering of the billiard table is always green is to be associated, claim the supporters of the bowls theory of the origin of billiards with the green grass on which the older game has always been played



The cost of balls of real ivory has encouraged the manufacture of synthetic and composite substitutes but the superiority of the former remains incontestable

Making so many accessories as well as the table itself and extending his activities to the provision of pendants, electric and gas shades and other fittings and embellishments the billiard table maker is in his own sphere a universal provider' That this export trade is of considerable dimensions is an acknowledgement and a proof that the British made table is as good as any and better than most.

BURROUGHES & WATTS, Ltd.

By Special Appointment to *His Majesty King George V.*

BILLIARD TABLE MANUFACTURERS and suppliers of all goods appertaining to the Equipment and Decoration of Billiard Rooms for Private Mansions.

THE BRITISH PIANO TRADE IN THE PAST YEAR.

AMONGST the various British industries which, prior to the war, had suffered from German competition and consequently had much to gain by the interruption to that country's commercial activities, was the piano industry; indeed, few trades were left in so favourable a position when the war concluded. A heavy tariff, imposed during the war in order to restrict foreign made luxuries, still shielded it from any form of dumping; many of the larger factories enjoyed increased facilities as a result of having been engaged upon war contracts; and, no less important, the British piano buyer's long seated preference for German instruments had been, for obvious reasons, rudely shaken. However, the future that then looked so full of promise, has found only partial realisation. The tariff remains, but the prejudice against German instruments is already on the wane, whilst the great output that was expected has been seriously retarded by a disastrous strike, lasting three months, with which the trade was faced in the early summer of 1920. The fight between workers and employers was a bitter one, none the less so because it involved a principle which the employers could not in safety concede—the right to induce an increased output by the payment of a bonus over and above the normal flat rate of remuneration.

Few things more paradoxical can be conceived than workers resisting an attempt to increase their earning capacity, yet this actually occurred. The result left things much as they were originally- that the bonus system would continue in all those factories where it had formerly existed—and it was agreed that the whole question should be put to a ballot, the result of which is not yet known. Although negative in its benefits so far as both sides were concerned, the strike severely affected the trade and assisted foreign competition.

Fortunately, Germany also had her labour troubles; it was estimated in the middle of 1920 that the rate of pay to workers in the German piano industry had risen to six times the pre-war rate, whilst production per worker had fallen to such an extent that the total increase in labour costs was no less than eleven times that of 1914. These facts and the tariff militate against any bitter competition in the British market, and whilst German pianos are undoubtedly reaching us in increasing numbers, there is no question that it is at present an impossibility for the Germans, even with the advantage of a low rate of exchange, to offer a piano of equivalent quality to the British at a lower or even the same price.

Therefore, setting aside all sentimental considerations, it is clearly to the interest of us to buy British pianos, whilst in point of both workmanship and tone they have no equal.

Foremost amongst the Great Pianos

Of all the pianos that the world produces those which possess such outstanding qualities as to make them internationally famous number less than a dozen.

THE WEBER PIANO

takes a prominent place amongst these.

Recognised for half a century as a notable instrument amongst this select class, the Weber Piano has gained in popularity amongst the leading professional pianists, while the public has shown unmistakably its growing appreciation.

THE GRAMOPHONE'S PLACE IN THE MUSICAL WORLD.

By G. IVY SANDERS.

"The gramophone is a marvellous instrument. It secures for Music a complete and minute immortality."—DEBUSSY.

ALTHOUGH the gramophone is, strictly speaking, a reproducing machine, its enormous value to the musical world has been so widely established that "the talking machine" has now become universally accepted as a musical instrument.

* * *

How high and honoured a place the gramophone holds in the exclusive world of music may well be appraised by the remarkable interest which was displayed by all the leading professional musicians in last year's debut at the Queen's Hall of Heifetz, then—in this country—a quite unknown young violinsit. The young Master came from the United States to fulfil that momentous engagement, introduced solely by the exquisite gramophone records of his flawless art, which had a short while before been issued. His reception was stupendous. The whole Press was unanimous in proclaiming him "a great artist." The crowning tribute of the *Daily Telegraph* was:—

"He plays exactly like his records."

* * *

The wondrous growth of the gramophone is a study of intense interest. For the first ten years it remained almost in its original stage of development, and was regarded solely as an ingenious toy. *The machines were let out on hire, and no records were on sale.* A recording instrument formed part of the crude machine by means of which fragile records were made in the home, played over *once*, and then were useless.

It was not until 1900 that the idea of recording famous voices and musicians, and selling permanent "copies" of them, was conceived.

* * *

Since then the advance has been so rapid that, to-day, there is no limitation to the recording possibilities. Every famous artist, every great production of the musical world and of the human voice, can be heard in the privacy of home—and to perfection.

For, *not only must the record be a faithful reproduction, but the artist must be at his, or her, best before the record is considered suitable for issue to the public.*

One may possibly hear Caruso, Cortot, Tetrazzini, Melba, or any other of the great artists a trifle "out of form" on the stage or platform, but on the gramophone one is assured of their own approved and perfect performance.

It is this high standard which has raised the gramophone, with its large and steadily increasing library of records of real musical value, to its present honoured place in every musical home, in numerous schools and colleges, music societies and conservatoires. At the Royal College of Music it has proved to be not only an important aid to executive musical ability, but it is deemed to be an invaluable means of developing general critical and appreciative faculties.

Composers and artists alike agree that the erstwhile plaything has become an inestimable boon to them as a faithful—some say the only reliable and impersonal—guide to the quality of their performance. Many, now, finished artists owe a great measure of success to the gramophone. By frequent visits to the recording theatre they have been enabled to watch their own progress, and so discover, and correct, any weakness of which otherwise they would have been unaware.

The eminent composer, Josef Holbrooke, once confided to me that he considered the gramophone almost inhuman in its relentless reproduction of the slightest flaw. While Scotti, the world-famous baritone, recently declared that—

> "The improvement in recording during the past years has been so great that a singer is compelled to give the matter of making records the most serious and conscientious consideration."

Look for the world-famous "His Master's Voice" Trade-mark, it is the mark of quality and is placed on our Instruments and Records for your protection.

ELECTRIC LIGHTING, HEATING & COOKING

By J. W. ELLIOTT and A. F. CAINE.

THE progress in the development of electric lighting has been very marked during the last eleven years not only in regard to the higher candle power and efficiency of the lamps which have been produced by the manufacturer but also by the illuminating engineer who has made a close and scientific study of the adaptation of suitable fittings in the distribution and diffusion of the light for general use or its concentration on objects or situations where the highest illumination is of due necessity to the worker

In the early days when the Carbon Filament Lamp (the only electric lamp) was in use its average candle power approximated 16 and then very little attention was given to the use of scientifically designed reflectors for light distribution or diffusion in fact it was often sufficient for the lamps merely to be dropped from the suspension cords and used without shades of any kind

The Drawn Wire Tungsten Filament Lamp, of the vacuum type was placed on the market as a lamp of considerably improved candle power and of a higher efficiency Then followed the Gasfilled Lamp with still greater candle power, thus placing at the disposal of the illuminating engineer considerably increased light of higher intrinsic brilliancy to be manipulated and distributed in the most useful and economical manner

Such developments in electric lighting have increased its popularity and in all schemes of construction and even those in connexion with the provision of dwellings for the working classes this artificial means of lighting is advocated as the light which consumes no oxygen and does not vitiate the air

The tables below, of the sizes of the Drawn Wire Tungsten (vacuum type) and the Gas filled lamps are those in use to day —

TUNGSTEN DRAWN WIRE LAMPS.
(Vacuum Type)

Voltage	25	50/65	100 130	200 260
Wattage	10	10	10	
	20	20	20	20
	30	30	30	30
,,		40	40	40
		60	60	60
,,			100	100

TUNGSTEN DRAWN WIRE LAMPS.
Gasfilled

Voltage	25	50/65	100/130	200 260
Wattage	15			
,,	30	30	40*	
,,	60	60	60	60*
,,	100	100	100	100
,,		150	150	150
,,		200	200	200
,,		300	300	300
,,		500	500	500
,,			1 000	1 000
,,			1 500	1,500

* It will be observed that during the year two new sizes of Gasfilled Lamps have been placed upon the market viz
100 to 130 v 40 Watt
200 to 260 v 60 ,,

ELECTRIC heating and cooking is steadily coming to the front for all purposes where health, economy, cleanliness convenience and efficiency are of paramount importance

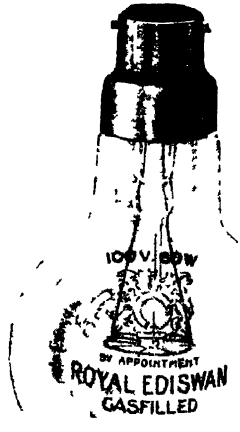
There are no poisonous fumes given off therefore the air is not vitiated No coal or ashes to carry, with its attendant dirt and dust, soiling decorations and furniture

Articles, such as bed warmers food warmers boiling jugs, radiators, kettles, etc, are easily carried into any room in which they are required Hot the nursery or sick room they are invaluable

The heating quality of the electrical unit never varies ke coal or gas every unit purchased is converted into the same number of heat units by the heating or cooking apparatus

By the use of the electric oven a saving of at least 10 per cent over any other method of cooking meat is effected

During the last five or six years great strides have been made in this country in the construction of large kitchen equipment National and general kitchens have been fitted up exclusively with electrical cooking apparatus, single pieces of which consume as much as forty units per hour Large and small cooking ranges are made for hotel and domestic use Pastry ovens of large capacity for confectioners and bakers grills, boiling pans, hot cupboards steamers, fish fryers, etc, are now in general use In fact, electricity can be used for any and every heating or cooking operation



The ECONOMY, CLEANLINESS, CONVENIENCE and EFFICIENCY of ELECTRIC HEATING and COOKING APPLIANCES is causing the use of ELECTRICITY to gain steadily in popularity.

The EDISWAN way of cooking is the best and most up-to-date.

EDISWAN

'Royal Ediswan' Gasfilled Lamps are now permanently established as the most economical form of artificial illuminant. Owing to the immediate success of these lamps, improvements were made which have resulted in greater efficiency and at the same time opened up a larger field for their use.

SIZES:

From 1,500 watts down to
100–130 volts - - 40 watts.
200 260 volts - - 60 watts.

THE MINERAL WATER INDUSTRY.

By the Editor of "The Mineral Water Trade Journal."

THE British and Irish Mineral Water Industry has of recent years been the victim of a series of untoward circumstances It is all the more remarkable that despite this the industry has unquestionably heightened its commercial status and industrial dignity, has enlarged the repute of its products and has secured for itself a more definite esteem in the view of the State and the Commonwealth Certain of those untoward circumstances were the direct result of the war—others had another origin Three illustrations will serve to reveal the nature of these unmerited afflictions—so the industry itself regards them. In the first place in 1916 a definite and explicit tax was imposed on the products of the industry, and this tax still continues The tax amounts to 4d per gallon on sweetened beverages and to 2d per gallon on unsweetened beverages The reason of the discrimination will be at once understood when it is explained that the sweetened goods pay a supplemental tax through the sugar duty As a fact these sweetened beverages are both taxed upon the raw material and upon the finished product—a fiscal procedure against which the industry has been in active revolt in the House of Commons The second illustration is of even more moment The basic ingredient of all sweetened table waters is sugar A definite tax of 2os 8d per cwt is levied on sugar but apart from this tax infliction the State has fixed a price upon sugar for manufacturers which at the moment of writing is £145 per ton (In 1914 the price of sugar was £15 per ton) This second and more serious penalty is deepened in its character by the fact that taxation is further imposed upon the industry by means of the spirit duty The fruit essences and essential oils used in the industry for flavouring are rendered soluble by treatment with spirit and the tax on spirit is an ever ascending quantity It will be thus at once appreciated that the contention that the taxation ... a dozen of half pint bottles of sweetened waters that is the table water duty the sugar duty and the spirit duty—amounts to 6d per dozen is no exaggeration The third illustration is the price and shortage of bottles The individual bottle today costs the manufacturer something like 4l, but even its cost is subordinate to the difficulty of securing it Fortunately the trade has revealed a unity a capacity of organisation and a cohesion which—absent in years when it knew no direct taxation when sugar was cheap when the sugar duty was but a mild reflection of the present infliction and when bottles were plentiful and the individual vessel cost possibly less than a penny—have served to deprive these aggravated difficulties and penalties of something of their inherent menace and prejudice

The Mineral Water Industry of Britain and Ireland includes over 3 000 manufacturers The capital invested in it has been put by the trade itself at roughly £10 000 000 Its annual wage bill has been held to exceed £8 000 000—and this too before the wage board appointed under the Trade Boards Act had taken upon itself the duty of legally bringing the wages of the employees more into harmony with the enhanced cost of living It will thus be seen to be an appreciable factor in the national economy How far it enters into the social and domestic life of the community to what degree it ministers to its enjoyment under healthful conditions, what part it plays in the ordinary dietary of vast bodies of the population is revealed by one simple fact The table water duties are paid upon gallonage In one recent quarter—and that an unfavourable quarter from the atmospheric point of view inasmuch as it included winter months when parched throats exist not and aerated beverages are not so gravely in demand—taxation was paid in the United Kingdom on nearly 8 million gallons of unsweetened beverages on nearly 9½ million gallons of sweetened beverages and on something like three quarters of a million gallons of herb and botanic beverages Herein we have an evidence of how the heightened cost of sweetened beverages, due to the aggravated price of sugar has a discouraging effect Whilst the consumption of unsweetened beverages shows an unquestioned increase as compared with the same quarter in the preceding year—an increase indeed, of nearly three quarters of a million gallons—and even the herb and botanic drinks show an increase—the consumption of sweetened goods has seriously declined As a fact the consumption in the United Kingdom shows in the three months a reduction of something like a quarter of a million gallons

This picture of the extent of the industry would not be quite complete if we did not refer to the export trade This trade is [illegible] to the Irish industry and a comparatively [illegible] Of course, during the war this export trade largely disappeared owing to the restrictions upon it and the cost and difficulty of freightage However, it has shown an unquestioned capacity of revival It has not yet attained the position of the pre-war years—say of 1913 In that year considerably over a million and a half dozen bottles—and in the first six months 851 228 dozen—were exported to over sea customers However, the trade is certainly alert to the profitable possibilities of this business and is preparing to cultivate it with intelligent assiduity It may be added that the inviting character of the prospect does not induce the British and Irish industry to in any sense neglect the home market—or to leave any sector of that market to the foreign rival whose beverages had such a vogue in Great Britain in pre war days How effective a competitor that rival was then is revealed in the fact that during the first six months of 1913 he imported into the British Islands 833 653 dozen bottles He has not the same significance to day In the first six months of 1920 this foreign competition only amounted to 166 646 gallons The British industry is now avowedly seeking an overseas business which shall have an annual value of at least a million pounds

The mineral water industry has had to adopt a very definite trade protection organisation in its own interest In England and Wales this organisation takes the form of the National Union of Mineral Water Manufacturers Associations in Scotland the organisation assumes the character of the Scottish Federation of Mineral Water Manufacturers Associations in Ireland the same activity has expression in individual Associations in the greater centres like Dublin Belfast and Cork The original protective purpose of those bodies has been greatly extended That purpose was to safeguard and recover the vessels in which the beverages were sold. The bottles were in those days worth infinitely more than was contained for the entire beverage from the retailing customer and the fact that no property concept was associated by the man in the street with the bottle—that it was when its beverage had been consumed regarded as a mere derelict—meant a great loss to the industry Hence local bottle exchanges for the recovery of these bottles were established under the control of local associations The process was completed by exacting a deposit on the bottles and the Court of Appeal of the High Court has since held that this deposit is a definite means of returning the property in the bottle after it has left the factory

However these associations have now become a much more important factor in the life and governance of the industry They have not yet established a standard of production though even this has been suggested They are the authority for the amount of deposit exacted on the bottles syphons and cases They are the authority which regulates the prices exacted by the manufacturers from the retailers—prices which are affected by the varying cost of production and distribution They are the authority which seeks to evolve a common principle of trading and, during the war acted through the National Union in association with the State in securing the economical use of horses vans sugar tin and coal The purpose of these bodies is likely to be still further enlarged An anxiety is being revealed in the industry that it should be able to give the community an authoritative scientific assurance of the manufacture of these beverages under complete hygienic conditions In at least one very important instance—that of Birmingham—each manufacturer is compelled to periodically submit his products to an exact analysis and a scrupulous test Should the result be satisfactory a certificate of purity by certain analysts of distinction is granted him It is in harmony with this anxiety that recently a movement has been initiated within the industry whose object is to establish a national research laboratory Of course all the greater manufacturers possess their own well equipped laboratories and their own chemical staff However the idea in this movement is that the industry should possess a laboratory to which every maker however small or unimportant should have access in order to solve the problems which beset him, or to enable him to produce a more agreeable beverage or to submit to practical experiment any new idea with which he may be possessed

The British and Irish Mineral Water Industry is thus not discouraged or disheartened by the affliction and penalties against which it has to contend Its internal organisation is becoming more practical and cohesive, its commercial anxiety is possessed by an earnest desire, not merely to retain the British market but to regain its pre-war position in the overseas markets, it is revealing an increasing resolve that its beverages shall in themselves convey an assurance that they are manufactured under the best and most complete hygienic conditions. As a fact, this anxiety is as keen and insistent as is the desire to be relieved of certain at least of its fiscal penalties And that desire is revealed with each recurring Budget

THE BISCUIT INDUSTRY.

"BISCUIT" being, lexicographically, dough twice baked, the making of biscuits is—in the indicated sense—probably older than civilisation, but as applied to the modern commodity with which we feed ourselves and the world the word itself is by way of being a misnomer for only one of the article's very numerous varieties—the rusk—goes a second time into the oven. The cracknel, however, is twice "cooked," being boiled before it is baked, and the cracknel is the oldest biscuit known by a distinctive name. It is mentioned in 1 Kings xiv. 3 "and take with thee ten loaves and cracknels." Biscuits have always been made, but it was only their comparatively recent manufacture by machinery that elevated biscuit making to the status of a great industry. It is an industry in which British supremacy is undisputed and indisputable. We make far more, and incomparably better, than any other country. The British biscuit is ubiquitous. A curious instance of its "peaceful penetration" into the least likely regions was mentioned by the commander of the British troops who entered Lhasa in 1904. In this sealed city of Tibet (in which, it is said, only one white man had ever been before) he was offered a biscuit made in Reading—where is situated the first built and largest biscuit factory in the world—this ancient English town having been selected as its location partly because of its nearness to the finest and most suitable wheat growing areas.

The magnitude of the modern British Industry of biscuit manufacture represents as already implied, an instance of rapid development, for its beginning synchronised with the cheapening in price and increase in quantity of flour and sugar that resulted from legislative action and other causes not longer ago than some eighty years, the invention and adoption of scientific mechanism being co-incident. The primitive methods thus mechanism superseded would generations ago have proved hopelessly inadequate, and to reflect on what a comparatively biscuitless England would now mean to us is to realise that of a truth the pioneer of the new system did "the State some service" to draw imaginary lines from the site of the works he established to the overseas sources from which they are to-day supplied with rice, maize, currants, sultanas and other fruits, almonds nuts, spices, gingers not to enumerate other ingredients of utility and luxury which enter into the composition of some of the products of any typical biscuit factory to-day, the making of cakes usually being combined with the making of biscuits—is to realise that the trade has played an important part in the promotion and consolidation of British commercial interests in our colonies and protectorates and in every civilised country; while at home it has permanently and expansively enlarged the market for British flour, British dairy produce and British eggs, increasing in addition the demand for timber and metal for the construction of packing cases and tins, and of other goods for divers purposes.

Detailed statistical particulars would be bewildering rather than enlightening where so many items are involved, but the following facts will be sufficiently suggestive. The returns of the Great Western, London and South-Western, and South Eastern Railways show that the output of biscuits and cakes from one factory alone, and the delivery of materials for their manufacture, require annually more than 62,000 railway trucks.

In the beginning the export trade in biscuits owed much to the great Crystal Palace Exhibition of 1851, which was a means of spreading the knowledge of the proved superiority of the British comestible. Similar results followed other International Exhibitions—notably the Great Paris Exhibition of 1878.

To witness the process of manufacture in an English factory of the first class is to discern why the British biscuit has won the reputation it can never lose while those processes are conducted as they always have been and are to-day. In themselves, accomplished by the operation of the most ingenious machinery, supplemented by the labour of thousands of skilled hands, they are simple, but at every stage of each the most meticulous care is exercised, the most elaborate pains are taken to ensure that each finished article is individually flawless and faultless. The absence of any adulterant is not enough—every ingredient, separately examined, scrupulously tested, must be not only good but the best, not only pure but the purest, and free from acquired as well as native defect. As illustrative of the precautions taken, two examples will serve. The scrutiny of currants is so close that each currant out of millions of currants comes under it, and the methods by which they are cleansed and freed from even the tiniest of stalks, and the smallest specks of dirt and dust occupy 36 hours. Each egg out of millions of eggs is twice tested—first by electric light, unbroken, and then after it is broken. In composition, taste, size, shape and price the differences are many and great, but in the preparation of all descriptions, and in every department, the same rigidity of principle is strictly observed.

This high standard was originally set by the first firm to transform biscuit making from a casual occupation into an organised manufacturing enterprise of national and international service and importance. Consistently adhered to, it has become the accepted standard, and helped to put a reality of meaning into the familiar phrase 'British and best.'

It remains to refer to the dietetic value of the biscuit, which is greatly enhanced by the variety of its classifications. It is at once a food and a delicacy, a meal and a tit-bit, and in at least one form has medicinal virtues. It satisfies the hunger of the robust and tempts the appetite of the sick and convalescent. From the commissariat of no expedition is it ever omitted—it helped to sustain life in Arctic cold and Tropic heat. During the Great War vast quantities were especially made for our soldiers on all fronts and our sailors on all the seas. It is nourishment in the handiest and most portable of forms, and differs from many concentrated foods in that each one of its constituents has a dietetic value of its own, besides the value of them all in combination.

Although the ship or cabin biscuit is no longer the necessity that it used to be, no vessel ever sets sail biscuitless. It is a truism that trade follows the flag: the British biscuit goes with it.

By Special Appointment to His Majesty the King

The true worth of all things depends first, last, and always upon their Quality

In the cupboard of the English housewife, on Continental tables, in the traveller's satchel, wherever the foot of civilised man has trod, there Huntley & Palmers Biscuits are.

For eighty long years their reputation has steadily increased. From small beginnings Huntley & Palmers manufactory has become a landmark of industrial England.

The history of this success is the history of Quality. Consistent with their quality, Huntley & Palmers Biscuits are the cheapest on the market.

Next time you buy Biscuits—remember this.

Huntley & Palmers Ltd.

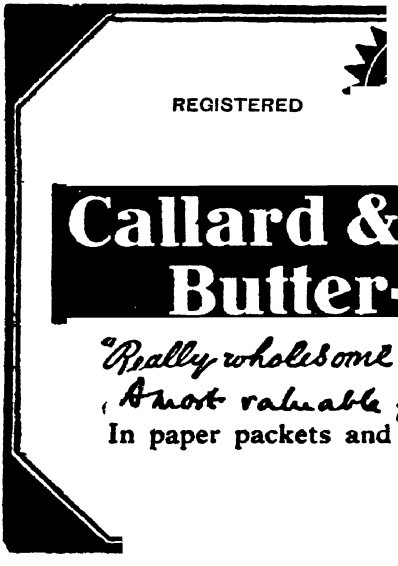
NATIONAL SCHEME FOR DISABLED MEN

CONFECTIONERY.

EVEN when restricted in its application to "sweets," or sweetmeats, the term confectionery covers a great multitude of varieties, many of them of very recent origination. The fact that a taste for sweetness, in an alimentary sense, is primitive and universal, predicates a need and uses for it in the nourishment of the human physical system and the maintenance of health, apart from the mere gratification of an appetite: in her provision of elements of sweetness in many natural comestibles Nature herself is a confectioner. As a means for the preparation of sweetmeats or the sweetening of foods and drinks, honey was the only substance available until West Indian discoveries revealed the existence of the sugar-cane, the derivatives of which, with beet sugar, are now the basis of all the products of the confectionery manufacturer. It is of some significance that the constituents of sugar—carbon, hydrogen and oxygen—are three principal constituents of the human body. It was in consequence of obtained results that the special sugar ration issued on occasions to German troops in training that what had been an experiment became a practice.

The processes by which raw sugar is cleansed and refined antedate its arrival at the sweetmeat manufactory, where it is boiled, melted or sieved according to the species of confectionery to be made from it. In boiling, the methods and mechanism in use have been devised with particular regard to economy and expedition. As in almost all manufactures, expedition connotes economy, and to save both time and coal the pressure of air in the boiling pans is first reduced by means of air pumps to the diminished atmospheric pressure at great altitudes, in which the boiling stage is reached much quicker than on a lower plane. A temperature of 240 degrees Fahrenheit in the vacuum pans employed is equivalent, for the purpose in view, to a temperature 80 degrees higher without vacuum. A spiral steam-pipe fitted inside the pans carries the heat to the sugar. Of boiled sugar are made divers kinds of "balls," "drops" and "rocks," and all varieties of toffee—itself probably the oldest of all British sweetmeats. In one form or another, the taste for toffee is ubiquitous and enduring, enormous quantities being in regular consumption. So far at least as one variety of toffee is concerned—known for many generations as butterscotch—this is all to the good, for pure butterscotch is unquestionably as wholesome as it is toothsome. It is, in fact, the nutrient properties of pure sugar and pure butter in palatable presentation. Made in London, it is eaten by the world. The conjecture has been hazarded that the objectionable American habit of gum-chewing is a perversion of the unobjectionable practice of toffee-eating.



Sweets made with melted sugar—sugar melted to the consistency of syrup—are known as pan-made, a measure of the syrup being poured into capacious revolving pans, heated by steam jackets. To almonds, for example, in these revolving receptacles—the heat expelling the water from the syrup—a coating of sugar adheres, the layers multiplying (without altering the original shape of the treated articles) as more syrup is introduced. For some sorts of pan-made confections custom calls for an overcoating of gloss or polish; this is supplied by the use of the residuum of the honeycomb, again in revolving pans.

In the third process of treatment to which reference has been made, crystallised sugar is broken up by mechanical disintegration into a thin powder, which is placed in a revolving reel covered with a sieve of silk so fine in texture that there are no fewer than 25,000 minute meshes to every square inch through which the already powdered sugar passes. The resultant of this exquisitely close screening, to which gum arabic is added as an agency of adhesiveness, is wrought into a dough-like substance, from which, by means of machinery of strikingly ingenious construction, are made all sweets of the lozenge class—an output of two tons representing a fair day's work of a single machine.

Equally ingenious machinery is employed in the manufacture of other varieties, of which, especially since the introduction of new flavourings, singly and in combination, there are so many that enumeration would give this page the appearance of a catalogue. In the case of "gums"—as jujubes are now more popularly called—the process is a differentiated one, necessitating the use of special plant, and occupying, as a rule, a full week.

In the preparation of few edibles is adulteration more harmful, particularly to children, and at the same time easier and more difficult of detection, than in the manufacture of confectionery. Against it the purchaser of British-made confections has the all-sufficient guarantee. It is the name and reputation of the maker. The names of our leading manufacturers are even more "familiar in our mouths" than are their own toffees, butterscotch and other dainties, and it is to the credit of an important British industry—with a place of its own in the national life—that the reputation attached to those names is as high above reproach or suspicion as the reputation of Cæsar's wife was—or ought to have been.

"A Sweetmeat which has been before the Public for nearly three quarters of a century and can be obtained wherever sweets are sold."

Sole Address:

DUKES ROAD,

LONDON, W.C. 1.

ENGLAND.

COCOA AND CHOCOLATE MANUFACTURE.

ALTHOUGH mentioned among the discoveries of Columbus, the introduction of cocoa from the New World into the Old was a beneficent later result of the invasion by Cortez and Pizarro of Mexico and Peru, the peoples of which had enjoyed an immemorial familiarity with its uses and delectations as a food, a beverage, and a non-intoxicating stimulant. It was first brought into this country about 1656—a costly importation for the rich, who alone could afford it. One or two of the oldest and most exclusive establishments in the clubland of to-day were originally resorts in favour with the fashionable for the consumption of chocolata, as the new drink was at first called. The plant from which it was the derivative was hailed by Linnæus as Theobroma—the Food of the Gods—and in botany it still retains the name he gave it.

In view of its nutrient and therapeutic properties, it is in keeping with "the eternal fitness of things" that a doctor was a foremost pioneer of cocoa making in Great Britain from the raw bean or nut; a British industry that now puts on the market more than 60,000,000 lbs. annually. This gentleman was Dr. Joseph Fry, of Bristol, where, in 1728, he initiated operations the development of which has made that city a seat and centre of cocoa and chocolate manufacture. Improved resultants from improved means and processes for the conversion at home of the unprepared to the prepared encouraged the cocoa habit, which, without becoming less fashionable, became more popular, spreading from the classes to the masses.

The cocoa (or cacao) tree itself is an evergreen, growing to a height of from 15 to 20 feet, flowering and bearing fruit at all seasons of the year, and yielding from 50 pods to, in some circumstances, several hundreds per annum. The seeds contained in each pod vary in number from 20 to 40, embedded in an acid pulp. The pods, not ripening seasonally but irregularly, are stripped off at the discretion of an expert, piled in heaps and opened; the rind is removed, and the closely-packed, almond-shaped brown beans or nuts extracted and laid out to dry before being are packed in sacks for exportation.

The original home of the tree was undoubtedly the valley of the Amazon, where it grew in wild profusion. At the present time our sources of supply include Guayaquil, Para and Bahia, the West Indies, Ceylon, and some parts of Africa. The finest qualities are grown in Central America, Trinidad and Ceylon. The Ceylon product, of comparatively recent cultivation, commands the market on account of its [illegible] and aroma.

The mechanical and manual processes by which, in a typical British factory of the first class, from the brown berries imported are obtained the cocoa extract and the various daintily forms of chocolate are an object lesson in applied science and human ingenuity and dexterity—and a guarantee to the consumer that what is consumed is wholly pure and superlatively wholesome. In the first place, the beans are emptied into sieves and sifted, all imperfect specimens being thrown out. This preliminary is followed by the process of roasting, and roasting is followed by winnowing. Broken and stripped of husk or shell, the berries at this stage are known technically as nibs. These nibs being ground and melted into a paste, differentiation of treatment begins. In the production of the dry cocoa powder of commerce hydraulic pressure is employed for the elimination of superfluous oil or butter—50 per cent.: in the making of chocolate and chocolate creams in all their "infinite variety" the paste is mixed with fine-ground sugar of pure quality, the subsequently added flavourings being sufficient in number to meet all tastes. It is safe to assert of every form of the one substance that from beginning to end of the process of manufacture, as conducted by leading British firms, the possibility of contamination or adulteration is non-existent. The great and increasing export trade, as well as the home trade, in British cocoa products has been built up on the enduring foundation of a deserved reputation.

Following up our reference to their health-values, Dr. Andrew Wilson described the cocoa bean as a kind of vegetable egg containing the essentials of a living body, and analysis elucidates his meaning, for it reveals first tissue-forming nitrogenous matter or gluten; then energetic force or working power in the form of digestible fat: starch and sugar: minerals; and lastly theobromine, a spirit and a stimulant. Nearly one-fifth of the full bulk of cocoa is pure albumen, on which the white corpuscles of the blood are dependent. Concentrated cocoa is proved to be richer in proteids than even veal, lean mutton or eggs.

Royal esteem of British cocoa and chocolate has been signalised by continental monarchs as well as by our own Royal house, for to the makers who held warrants as purveyors to their late majesties Queen Victoria and King Edward, and who hold the warrants of King George, Queen Mary and Queen Alexandra, were also granted those of Queen Margherita of Italy, the King and Queen of Spain and the Royal House of Greece. A similar mark of Royal favour came to the same firm from France in 1867, when the late Emperor Napoleon by a special brevet appointed them manufacturers of chocolate and cocoa to the Imperial house, and the late lamented Empress Eugénie continued their patronage as long as she lived.

"Just one word to you on Cocoa

and the Cocoa it is on is the finest the world produces

Fry's see to that!

YOU SEE THAT YOU GET FRY'S!

THE BRITISH PENCIL INDUSTRY.

By G. H. MEADMORE.

THE manufacture of lead pencils in similar form to the familiar article of to-day dates from a period immediately following the discovery of the once famous Borrowdale mine, situated a few miles from Keswick in Cumberland, in the year 1564. At a much earlier period metallic lead was used for marking on parchment, paper or other material and it is doubtless owing to the earlier use of this substance that the erroneous term "black lead" has been applied to plumbago or graphite.

The history of the lead pencil for nearly three centuries is closely associated with the fortunes of this mine and it is probable that in no other part of the world has similar graphite been found equal to that found there. Analyses, however which have been taken of the Borrowdale graphite show that it was not of exceptional purity but it was the physical condition in which it occurred that gave it its value for pencils. The product was in such great demand and was so closely maintained as a monopoly that in pursuance of an Act of Parliament the mouth of the mine was guarded by an armed force and to maintain the monopoly and conserve the supply the mine was only worked during six weeks in each year. To prevent pilfering the mine was closed by flooding. The graphite was sold by public auction in London and for many years the Cumberland mines were probably the only source of supply for pencil making. The graphite was used in its natural state, being cut or sawn into rectangular sticks and enclosed in them wooden casing. This method was not economic, and towards the close of the 18th century when the deposits began to show signs of exhaustion and also during the early part of the 19th century, efforts were made to discover a means by which the waste which had accumulated in the factories and the residue from the mine could be utilised. Pulverisation with the addition of a binding medium such as glue, isinglass or gum was tried, but without marked success and was eventually abandoned in favour of the process originated by Conté a French chemist in 1795. By this process finely ground graphite is mixed with clay formed into strips and baked. This invention marks the most important step in the manufacture of the modern pencil, and is the process now in universal use.

Graphite, of which there are two distinct types, viz. foliate or crystalline, and compact or amorphous, has since been found in many parts of the world, but that mostly used by the pencil manufacturer comes from Mexico. Foliate graphite is difficult to grind to the required fineness, and is less brilliant in colour than the amorphous, which on the other hand can be ground to a gritless fineness, and is of a nature which combines readily with other materials.

The manufacture of modern pencils requires great technical knowledge, combined with practical experience, and involves a large number of operations. The graphite, which has already been prepared at the mines, is mixed with clay in a dry state, then moistened and milled to the requisite fineness. Filter presses free the "batch" from an excess of moisture, and it then passes through a series of compressors, from the last of which it is exruded through a hole or holes slightly larger than the actual thickness required, to allow for shrinkage, and the 'strip' is thus formed. At this stage it is in plastic form. It is laid out in trays in lengths of about 22 inches, and after drying is ready for baking. The degrees of hardness are primarily obtained by varying the proportions of clay and graphite.

Nearly all high grade pencils are made of cedar wood which owing to its softness, straight grain, and freedom from knots, make it peculiarly adapted for this purpose. The red cedar, or pencil cedar, belongs to the juniper family, being the *Juniperus virginiana* which is found at its best in the south eastern States of the U.S.A. The wood is usually imported in the form of 'slats' i.e., strips about 7½ ins. long, ¼ in. thick and from 2 ply to 6 ply in width 6 ply being the width of 6 pencils. The slats are grooved coated with glue, and the lead strips inserted. Two slats one of which contains the strips are glued together and the blocks thus formed are fed into the shaping machine. This machine cuts a series of semicircular grooves on each side of the blocks converting them into shaped pencils. The pencils have then to be sand papered coloured and polished the ends cleaned and finally stamped and bronzed.

The raw materials employed in the manufacture of coloured pencils are clay wax and a colouring agent but the clay is of a softer nature than that used for black pencils. Bohemian clay having this requisite property, has in the past been greatly favoured for this purpose but clay eminently suitable for the purpose exists however in the United Kingdom and British aniline dye suitable for the production of copying ink pencils is now obtainable. As a result of careful research work the technical difficulties in regard to the manufacture of coloured "strip" have been surmounted, and to day British copying ink and coloured pencils, of high grade including dermatograph pencils for surgical purposes, and pencils for marking on china and glass, are being produced.

The Pencil and Colour Industries are closely allied, the pencil manufacturer being dependent on the colour manufacturer for colours often specially produced, and it is this connexion which has largely contributed towards the pencil industry being so successful in Germany. It is obvious that with this handicap the British pencil manufacturer was well equipped in other respects, and a comparison between British and Austro German products would show that where any difference existed in favour of the foreign production it was primarily the finish due to colour.

During the period of the war United Kingdom production of pencils was intensified in an endeavour to meet the increased demand. New companies commenced to manufacture, and established manufacturers installed additional plant realising a considerable increase in output.

This development continues and reconstruction and amalgamation is taking place in the industry. Two important and old established manufacturers have recently joined forces and their combined resources, experience of manufacture and technical research work forshadows an even higher standard of production in the future than was attained in the past.

The demand for British pencils is still insistent, but as the world-wide dearth of goods which seemed insatiable at the period immediately following the Armistice, has in part been satisfied United Kingdom manufacturers are now in an improved position to cope with the requirements of overseas buyers.

WHY BUY FOREIGN PENCILS?

TWO FAMOUS BRITISH PENCIL FIRMS

E. WOLFF & SON, LTD., FALCON PENCIL WORKS & ARTHUR JOHNSON, LTD., BRITANNIA PENCIL WORKS

ARE NOW AMALGAMATED AS

THE ROYAL SOVEREIGN PENCIL COMPANY, LTD.,

82, ST. THOMAS ST., LONDON, S E.1.

FOR more than a hundred years both Firms have enjoyed an unsurpassed reputation for the excellence of the pencils that their splendidly equipped Factories have produced. In combination they will supply, with the maximum of effectiveness and at the lowest possible prices, the bulk of the demand for British-made pencils, manufactured solely by them—such as Wolff's "Royal Sovereign," "Bank of England," and "Selected Spanish Graphite," or Johnson's "Imperial," "Hexagon Coloured," and "Alexandra"—will continue to be sold under their old names without any alteration in style or quality.

24 PRIZE MEDALS AWARDED

WRITING INKS.

THE need of a writing fluid in even the very earliest stage of civilisation is so obvious that probably the invention and use of an ink long ante dates its first mention in the history of any period A papyrus of Ancient Egypt 2500 B C, was discovered by Flinders Petrie bearing ink written characters and the invention of an ink in China is accredited to Tien Tchen 2697 2597 B C The scribes of Old Rome used sepia the black pigment secreted by the cuttle fish the employment of a purple red ink being restricted to the signatures of their Emperors

Iron gall ink prepared from a iron salt and tannin appears to have been first described by Theophilus the Monk in the eleventh century A D, but Pliny in the first century refers to a means of blackening paper containing green vitriol by immersing it in an infusion of nut galls Iron gall inks prepared by the admixture of extracts of galls barks and other materials with green vitriol came subsequently into general use, and instructions for their making were among the household recipes of the sixteenth century These earlier iron gall inks were essentially a solution of pigment in water Scientific investigations made in the year 1748 led to some alterations of the formula and some improvements as the result, but it was not until *circa* 1830 that the secret of a radically superior writing fluid was discovered, and a few years afterwards made known by a young medical man who brought to bear on his study of atramental liquids his professionally acquired knowledge of chemistry His successful researches and experiments produced writing inks (solutions of green vitriol and tannin, coloured by indigo and logwood) the blue tint of which in writing blackened on exposure as the consequence of the production of the pigment within the pores of the paper The perfect fluidity, as well as penetration and permanence, of the new ink had never been attained before, and it was presently proved that this distinguishing advantage was unaffected by extremes of climate

Of more or less imitative composition but with the addition of a small quantity of madder, were some inks patented by another experimenter in 1856 The sulphuric or acetic acids in these inks maintaining in solution the iron gallate or tannate, their preparation—like that of the blue black writing fluids that ante dated them—required much less gum than is used in ordinary (black) writing ink, the encyclopædic description of which is ' a ferroso ferric gallate, "suspended in a solution of gum in water "obtained by adding a decoction of substances "containing tannin (usually nut-galls) to a solu "tion of copperas Galls contain gallot annic ' and gallic acids which, with ferric salts, form "a black precipitate with ferrous salts the ' precipitate is white A proportion of gum is added for the purpose of suspending the "precipitate equally throughout the solution "and preventing its deposit

The many uses served by aniline colours extend to some extent to the manufacture of coloured inks in the preparation of which they are both substitutive and supplementary Their adoption by British ink manufacturers dates from a patent taken out in 1862

An analysis, made as recently as 1908, of samples of a large number of British inks proved the existence of wide differences in the inks of different makers For instance, it was shown that the total solid matter in the output from various sources ranged from 1 89 to 7 94 per cent, ash from 0 42 to 2 52 and iron from 0 18 to 1 09

The most striking proof of the superiority of the best British over the best foreign writing inks is to be seen in the fact that although there is nothing to prevent the manufacture of the best anywhere the former have long been in favour and use literally all over the world Even as regards overseas markets not closed by the war, export statistics for the last few years would obviously be valueless and misleading and one difficulty and obstacle that affected the home as well as the export trade was not removed by the conclusion of peace Within some eighteen months of the outbreak of 1914, the scarcity of glass and stone receptacles became a hindrance that grew greater the longer the war lasted It was impracticable to substitute any other materials for glass and stone, metals being barred by reason of corrosiveness Ink powders would have relieved the situation, the real and intrinsic objections to them not being very considerable, but popular prejudice was a factor not to be overlooked, while there was a further reasonable objection to the substitution from the manufacturers point of view, in that their products might have suffered in reputation through carelessness or negligence in the conversion or re conversion of powder to fluid.

The difficulty as regards stone and glass bottles has proved persistent It has now, however been mitigated, and expectations are justified that by the end of the present year it will have been practically overcome

All over the world discriminating writers use

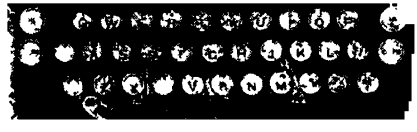
Stephens' Ink

THE TYPEWRITER.

THE thought of the Typewriting machine long preceded the creation of the first practical Typewriter As long ago as 1714 a patent was granted to an Englishman named Henry Mill for a design embodying the idea and the principle of a typewriting instrument, and although the specification of this invention gave no mechanical details as to the construction of its component parts from the invention itself crude as it was, has evolved in successive stages the typewriter of every variation in use to day, thus, and in the indicated sense its manufacture, wherever conducted is an industry of British origin

No efforts to improve on Henry Mill's primitive attempt seem to have been made till 1784 but from that year onwards numerous experiments for the construction of a more practical machine are on record The most notable achievements were the following

In 1840 two British inventors Bain and Wright patented a typewriter telegraph in which the vital principle of the typebar circle was first used In 1843 an American, Thurber constructed the first machine embodying the step by step lateral movement of the paper platen In 1867 the *Scientific American* described a writing machine recently invented by John Pratt an American living at Camden Town (London) and this description arrested the attention of two American printers Sholes and Soule who were busy with the invention of a machine for serially numbering book pages From it they got the idea of extending the scope of their own apparatus so as to cover the alphabet as well as the figure range For six years Sholes persevered and eventually succeeded in making a model good enough to interest a well known firm of gun makers in its commercial possibilities In 1874, the first imperfect but capable machines were marketed That was the beginning of the typewriter industry proper It was not however until after 1880 that its success was assured The world's annual output of typewriters is now roughly estimated at 500 000 the United States with its population of nearly 100,000,000 absorbing about 250,000 Later Board of Trade returns than those for 1919 are not available the number of typewriting machines imported into Great Britain in that year was 55 864 The multifarious work caused by the war created an enormous demand for typewriters The war changed the conditions of nearly every office in the kingdom All managers were confronted with a large amount of clerical labour, with a sadly depleted and often inexperienced staff to do it Many resorted to typewriters who ought to have used them before, and were willing to pay double pre war prices In 1917 (till the end of 1918) importation of typewriters was prohibited and demand forced up the value of second hand re built machines to fancy prices In addition to the typewriter, every device that would save time labour and expense was tried consequently British offices are better equipped than ever they were, though even yet it is far from fully realised to what an extent mechanism can replace or expedite clerical work Hitherto the manufacture of typewriters in England has not been on the scale that it should have reached This applies, unfortunately, to many other trades As a result of the war, the British public are awake at last to the necessity of supporting home manufactures Probably the high cost of typing machines has prevented their use in larger numbers The great American concerns run their businesses in such a costly manner that about 50 per cent of the price has to be set aside for selling expenses. The high prices thus charged are therefore out of all proportion to the manufacturing cost; one of the largest corporations altered its methods, and brought out a machine at half the price of its standard one which course is stated to have yielded satisfactory results This shows that a good machine can be produced at a popular price, and encourages a much larger output of home made machines Manufacturers generally, whatever the commodity they manufacture are called on to produce more after the war than they did before If this can be done by working at harder pressure for a shortened day so much the better, especially from a national health standpoint, but it can only thus be done by the increased use of mechanical facilities As a labour saving instrument which lessens fatigue and eye strain the modern typewriter should be regarded as indispensable in every well found office At first it was difficult to sell because the enormous value of the legibility uniformity and speed of its work was not recognised To day these points are appreciated Even now however the demand for the typewriter has not nearly reached its limits In their own interests many more people ought to use it and many business firms ought to use more machines Many professional and commercial documents are still unjustifiably pen written The typewriter has recently been developed in a new direction mechanism having been adapted to it which makes it an adding and subtracting machine while it remains also a writing machine The convenience of having at hand in the counting house an instrument that will perform all these functions is invaluable



The Great War having brought us into closer touch with a number of foreign countries it is opportune to note another special feature Typewriters equipped with a plain type carrier for general correspondence can also be fitted with separate type carriers for the language of any nationality (or for medical, astronomical, or other technical symbols), the change being effected in a few seconds There are about ninety different kinds of typewriters made in the world "Made in Germany" must for years be a term of reproach, reminiscent of cut throat competition and "peaceful penetration leading up to a pre arranged war "Made in England must be the hall mark demanded whenever possible by every patriotic purchaser The extension of existing British industries synchronising with the establishment of new ones, is a vital national duty, then protection and support will be the Empire's best thanksgiving for a victorious peace and the best means of ensuring to every man and every woman ample work and adequate remuneration in the homelands so many died to save

The tools required for the manufacture of typewriters are multitudinous, and the necessary plant throughout is very costly, but it is gratifying to conclude by announcing that at the time of writing new factories for the manufacture of British machines are in progress in at least three different parts of England one of them being on the point of opening

IMPERIAL

BRITISH-MADE
IMPERIAL TYPEWRITER

Model D

Model D

In addition to the world famed qualities of this Typewriter already known, this Model D Machine brings a straight Keyboard, very Light Touch, shallow equal dip on ALL KEYS and also Dead Keys for writing accents over letters without using the Backspacer. It also has VISIBLE writing on both ribbon colours, Marginal Stops on both sides, a Fool-proof Tabulator and its immediately interchangeable Type *and* Keyboard

Special Keyboards for Engineers, Architects, Builders, Chemists, or any other staple Trade can be supplied.

Special feature for 1921 is the new Pin Point type unit enabling the user to write "protected ' cheques without the use of a second machine or operation.

PRINTING.

By J. R. RIDDELL, Principal, Saint Bride Foundation Printing School, London.

THE inception and development of the Printing Craft coincide with the growth of civilization and the development of the Arts Whether, in 1440 Gutenberg of Germany or Costei of Holland was the inventor of printing from movable types—still a debatable point—does not come within the province of this article

The progress of the printing craft since its introduction into England in 1476 by William Caxton reads like a romance It has always attracted to its ranks men of high ideals with artistic and scholarly attainments noted for perseverance in overcoming seemingly overwhelming difficulties with the result that to day the industry ranks seventh in the great industries of the country with an estimated capital of over £30 000 000 invested by some 8 000 firms employing approximately 300 000 workers The work of a printer to day is quite a different matter from what it was in the days of Caxton who had to undertake many of the operations which are now performed by twenty two different branches of the industry each with its own trade union

Printing from movable types was first employed for the production of books and then substitutes and although this branch does not represent more than one tenth of the volume of printing to day it is probable that by this section of the craft printing is best known to lovers of good typography There is an undefinable charm and restfulness in a well printed book, irrespective of the literary merits of the volume

Printers like to think that their art is the art preservative of all arts and that their craft has educated the world further that it is the power behind all other industries Whatever value the public may place on these claims it is acknowledged that the printing industry is an important one London being the original home of English printing it is appropriate that printing should be looked upon as London's staple industry and that this city should be the most important printing and publishing centre in the world

The trend of the times is towards specialization therefore it is customary for firms to specialize in some particular class of printing such as book commercial newspaper colour, poster, or polyglot productions each branch demanding skilled workers with educational and artistic requirements above the average

Printers, along with other industries find that this is a mechanical age and if success is to be achieved plant must be kept in a high state of efficiency to cope with the ever expanding calls made upon it At one time all printed matter had to be 'set up' by hand a single letter at a time by the compositor This is still done in ordinary commercial job printing which is the largest section of the industry, but composing machines are now extensively employed for setting up books newspapers and similar classes of work It is by this means that editions can be obtained expeditiously and produced at a low cost In the newspaper section remarkable progress has to be recorded, particularly during the last 100 years In the beginning of the 19th century newspapers were printed on hand presses at the rate of about 300 single impressions an hour In 1814 the first steam press was made for *The Times* By this means 1 100 sheets were printed per hour which was then considered a great achievement but the mammoth printing presses of to day are capable of not only printing but also folding and delivering something like 200 000 completed newspapers in an hour

There are two methods by which reproductions of colour subjects can be obtained One is the relief method as used in letterpress printing for which three relief blocks are required Each of these has to be printed separately in one of the three primary pigmentary colours and when printed over each other they give colour rendering approximating those of the original picture The bulk of the commercial colour work of to day is done by this means and is known as three colour process

The other method is that of chromo lithography, for which a design is made usually by hand on a calcareous stone or other suitable printing surface from which an impression can be obtained on a sheet of paper For this process separate stones are required for the various colours each of which has to be printed separately, frequently as many as twenty colours being required The pictorial posters seen on the hoardings are printed by lithography

Within the last few years photography has taken a very active part in all reproductive processes, reducing the number of printings and eliminating much of the hand work of the lithographic artist Photo lithography coupled with the planographic process of offset printing by which the impression is obtained from an intermediate cylinder covered with a sheet of rubber and not direct from the plate bearing the design has the advantage that rough or uncoated paper can be used successfully There are great opportunities for development in this branch of the industry

Polyglot printing means the production of books etc in different languages Firms undertaking this highly specialized work require extensive founts of type which are only occasionally used and also incur considerable expense in obtaining a staff possessing, exceptional linguistic qualifications so that accuracy may be ensured

Comparatively recently the principle of one of the earliest means of obtaining prints has been adapted to suit mechanical requirements By the application of intaglio methods the design is etched or engraved below the surface This is covered with ink which is then cleaned off except for the ink in the interstices, which vary in depth according to the density of the tones This process is an ideal method for reproducing pictures, and will create a field of its own It is generally known as "gravure

Although Germany can claim to be the home of printing—and it has to be admitted that much excellent work is turned out there—it is generally acknowledged that when British firms are equipped to cope with a particular class of work they have nothing to fear In the past the workmen of other countries may have been more favourably circumstanced to obtain high-grade productions, but it is seldom that the technically trained British printer craftsman is unable to hold his own when competing under similar conditions

PAPER TRADE INDUSTRY.

By H. P. STEVENS, M.A., F.I.C.

RAW MATERIALS.—The raw materials used in the manufacture of paper consist of (1) vegetable fibres, derived chiefly from wood, esparto, rags and straw; recently even sawdust has been utilised, (2) soda, lime and bleaching powder for the purification of the fibres, (3) resin, glue, gelatine and starch for sizing and giving a finish to the paper, (4) loading materials such as china clay, chalk, gypsum, etc., to cheapen and render the paper opaque, (5) colours such as ultramarine, coal tar dyes, the former being used chiefly to counteract the natural yellow tinge in the manufacture of white papers, and (6) waste papers. The manufacture of paper also requires coal for steam raising and a very ample supply of good water.

Rags, which once supplied the bulk of the paper makers raw material, are now used for high grade papers only and Great Britain is dependent on its Colonies and on foreign countries for the supply of the great bulk of vegetable fibres. Of these wood pulp is the most important. In normal times this comprises four fifths of the amount of our imports of fibrous materials.

Wood pulp is of two varieties—"mechanical" wood pulp and "chemical" wood pulp. The former predominates and consists of wood ground to pulp in a stream of water, the latter consists of wood disintegrated by chemical processes and fetches two or three times as much as the mechanical pulp. The wood used is mostly coniferous (spruce fir) and therefore derived from countries with temperate or cold climates. Norway and Sweden supplied the bulk of our requirements, next in importance were Russia (Finland), Canada, Newfoundland and Germany. The cutting off of supplies from the last named country has not appreciably affected the position, and until the restrictive measures came into operation, the British imports of wood pulp had increased rather than diminished. There are ample reserves of wood in Canada and Newfoundland to supply all British requirements.

Esparto is imported in the raw state and converted into pulp in English mills. It is mostly derived from Algeria, the remainder from Spain and parts of the North Coast of Africa. Imports have shown a considerable increase, but even at the end of 1919 had not regained pre-war figures.

Rags are largely imported. The present figures look high compared with the almost negligible amount imported during 1918.

The following figures give the imports of fibrous raw materials for the three years 1917, 1918 and 1919 —

Description	1917 Tons	1918 Tons	1919 Tons	1917 £	1918 £	1919 £
Mechanical Wood Pulp	415 750	82 007	523 022	2 671 959	3 593 812	4 918 790
Chemical Wood Pulp	171 151	7 535	409 898	6 846,491	9 138 893	10 484 237
Esparto	56 976	18 720	70 624	787,591	356 457	946 164
Rags	2 72	115	6 525	49 423	3 961	188 74
Other Materials	189	354	1 242	1,791	6 778	28 659
Totals	446 138	438 731	1 010 311	10 337 193	13 099 931	16 566,503

IMPORTS AND EXPORTS OF PAPER.—For our purpose the term paper must be held to include not only printing, writing and wrapping papers, but also paste board cardboard, mill board, straw boards, and many specialities.

As regards imports Norway and Sweden supply us with the greater part of the cheaper kinds, such as news and wrapping papers, while Germany's exports of paper to this country were of equal importance, for, although cheap printings, such as newspaper, did not bulk so largely, this was much diluted by the larger quantities of almost every other type. The cutting off of the German supplies has not caused us much inconvenience except in the case of some special types, such as vegetable parchment, photographic, grease-proof, and filter papers. Steps were taken to increase the home supply, which in most cases is now adequate.

The following figures give the quantity and value of the British imports of paper and boards during the last three years —

IMPORTS					
1917 Tons	1918 Tons	1919 Tons	1917 £	1918 £	1919 £
140 000	104 000	781 676	4 190,512	5 131 810	13 019 708

Over one quarter of these quantities is accounted for by strawboards manufactured in countries where straw is plentiful. The feature of the current year's imports is the large increase in printings. Great Britain is estimated to produce about 11 per cent. of the world's output of paper and Canada 3 per cent. The United States is by far the largest producer, manufacturing over one third, and was followed in order by Germany, England, France, Austria, Canada, Italy, Russia, Finland, etc. The British exports of paper for the last three years are given in the following table —

EXPORTS					
1917 Tons	1918 Tons	1919 Tons	1917 £	1918 £	1919 £
45 850	28 144	46 780	3 193 014	2 16 995	4 33 93

MANUFACTURE OF PAPER IN THE BRITISH ISLES.—There are 231 paper and cardboard mills in England, sixty one in Scotland and seven in Ireland. Wood pulp is only manufactured at two mills. There are thirty seven paper mills in Canada and a large number of wood pulp mills. Some Canadian mills combine the manufacture of both wood pulp and paper. In Newfoundland there are two large establishments, one producing wood pulp and paper and the other wood pulp only. There are seven paper mills in Australia, three in New Zealand and eight in India. Official statistics of the paper output in Great Britain and Ireland were furnished in 1907 for the Census of Production —

Paper —	United Kingdom Quantity Tons	Value £
Paper for Writing and Drawing and for Envelopes	124 250	3 083 000
Paper for Printing and for Posters etc.	436 050	7 590 000
Packing and Wrapping Paper, Bags Cups etc.	181 850	1 943 000
Printing and Coated Papers (not Hangings)	34 0 0	846 000
Pasteboard Cardboard and Millboard	44 6)	565 000
Other Sorts	28 200	700 000
Paper Bags	35 500	487 000
	894 570	

All other Products — Recorded by Value only

A more recent but unofficial estimate has been kindly supplied me by the Paper Makers' Association. The following figures give the annual pre-war production of paper manufactured in the British Isles —

	Tons
News all grades	77 000
Printing and Writing Paper from Wood Pulp	254 800
Printing mostly from Grass (Esparto)	148,200
Brown Papers and Specialities	228 800
Best Writings and Blottings, mostly from Rags	20 800
	1,029 600
Mill Boards Leather Boards, etc.	62 400
Total quantity

EVOLUTION OF THE STEAMSHIP ON NORTH ATLANTIC.

See WHITAKER'S ALMANACK, 1920, page 792.

LARGEST STEAMERS FITTED WITH REFRIGERATING APPLIANCES.

Baroneasa, 475,000 cubic feet; *Princessa*, 473,689 cubic feet; *Duquesa*, 470,157 cubic feet (Furness Houlder Argentine Lines); *Nictheroy*, 467,500 cubic feet; *Nebraska*, 467,500 cubic feet (Royal Mail S.P. Co.); *Northumberland*, 466,000 cubic feet (Federal S. Nav. Co.); *Armagh*, 466,000 cubic feet (Union S.S. Co. of N. Zealand); *Navasota*, 465,500 cubic feet (Royal Mail S.P. Co.); *Cornwall*, 464,930 cubic feet (Hasham Foundry & Eng. Co., Ld); *Marquesa*, 464,622 cubic feet (Furness Houlder Argentine Lines). There were on June 30, 1920, 734 vessels fitted with refrigerating apparatus: of these, 93 had each insulated chambers, with a capacity of not less than 300,000 cubic feet; 32 had each not less than 250,000 cubic feet; and 149 had each not less than 80,000 cubic feet.

LARGEST STEAMERS FITTED FOR LIQUID FUEL.

Olympic, 46,359 tons (White Star); *Aquitania*, 45,647 tons (Cunard); *Minnesota*, 20,602 tons (Atlantic Trans. Co. of W. Virginia); *Tyrrhenia*, 16,000 tons (Anchor); *Golden State*, 14,500 tons (U.S. Shipping Board); *Manchuria*, 13 639 tons; *Mongolia*, 13,639 (Atlantic Trans. Co. of W. Virginia); *Niagara*, 13,415 tons (Union S.S. Co., of N. Zealand); *Tenyo Maru*, 13,398 tons (Toyo Kisen); *Bendigo*, 13,000 tons; *Ballarat*, 13,000 tons; *Balronald*, 13,000 tons (P. & O.). There were on June 30, 1920, 1891 vessels fitted for liquid fuel, of which 1,087 were over 5,000 tons, and 112 under 1,000 tons each. Those with a gross tonnage exceeding 13,000 tons each are given above.

Carriage of Petroleum in Bulk.—701 steamers and 82 sailing ships were engaged in carrying petroleum in bulk; the largest of these not fitted for liquid fuel were the *Cadillac*, 12,074 tons (Anglo-American Oil Co.); *James McGee*, 10,678 tons; *W. C. Teagle*, 10,678 tons; *Fred. W. Weller*, 10,627 tons; *F. Q. Barstow*, 10,290 tons; *William G. Warden*, 10,289 tons (Standard Oil Co. of New Jersey).

FASTEST OCEAN-GOING STEAMERS IN THE WORLD NOT UNDER 20 KNOTS.

In order of Speed.—Mauretania, Aquitania, France, Leviathan, Mount Vernon, Imperator, Agamemnon, Olympic, Princess Margaret, Oranje Nassau, Wahine, Empress of Asia, Empress of Russia, La Lorraine, La Savoie, Princess Patricia, Ausonia, Esperia, Empress of France, Maori, Loongana, Prins Hendrik, Lutetia, Massilia, Charles Roux.

FASTEST SHORT-TRIP STEAMERS.

You'll find it in "Whitaker."

Every "well found" Passenger Ship carries a Library.

"It is a commonplace to say that no reference library is complete without "Whitaker." One can go much further and remark that a great many people find the Almanack a reference library in itself. There is nothing to equal it, either in conception or in the completeness and care with which it is put together and kept up-to-date.—*The Times.*

"Whitaker" is a Library in itself.

There are two editions :

Paper Cover : 578 pages, **3s.**

Cloth Cover : 970 pages, **7s. 6d.**

WHITAKER'S ALMANACK, 1921.

HEALTHY STORY and PICTURE BOOKS for BOYS and GIRLS of all ages.

A RECENT DEVELOPMENT in the Publishing business. We have recently formed a Department, under an Expert, to provide information about books of all kinds for all classes of readers.

Inquiries will be gladly answered by letter or personally at the Society's head depôt (temporary address—64, New Bond Street, London W.)

All who are interested in the problem of getting people to read Religious Literature are invited to apply for a copy of the new S.P.C.K. rules for the establishment of depôts and branches. Much thought has been given to the matter, and various interesting possibilities are outlined.

*STANFORD'S NEW LIBRARY CHART OF THE WORLD.

NEW AND REVISED EDITION.

On Mercator's projection. A clear, readable map, beautifully printed, and indispensable to the proper study of the general and commercial geography of the World. The true significance of "The Great War" can be realized only by the study of a map of the World such as this. Four Coloured sheets, complete, 78 × 54 inches.

The above maps can be supplied Mounted on Rollers and Varnished, Mounted to fold in Cloth or Leather Case, or Mounted on Spring Roller to meet customers' requirements. Prices will be furnished on application.

For Durability we strongly recommend intending purchasers to have the maps mounted in either of the above ways.

* New editions of these maps embodying the decisions of the Peace Conference will be published as soon as the new boundaries are definitely fixed.

EDWARD STANFORD, Ltd., are London Agents for the maps issued by the Ordnance Survey, the War Office, India Office, and for the charts issued by the Admiralty.

PUBLIC SCHOOLS' SCHOLARSHIPS.

BRIGHTON COLLEGE.

The Entrance Scholarship Examination will be held on the 7th and 8th of June. Scholarships of £60, £50, and £45, and Exhibitions of from £30 to £15, will be awarded. Candidates must be under 14½ years of age on the 1st of June. For particulars apply SECRETARY, THE COLLEGE, BRIGHTON.

KING'S SCHOOL, CANTERBURY.

Some fourteen Scholarships are offered for competition twice annually, in June and November. A King's Scholarship is tenable with an Entrance Scholarship, so that a boy may at entrance win scholarships to the value of £55 15*s.* a year for five years. Full information from HEADMASTER, KING'S SCHOOL, CANTERBURY.

DOVER COLLEGE.

Three Entrance Scholarships for Boarders are awarded every Term value £40, £30, and £20, one of each. The Common Entrance Examination is used as a Preliminary Test and selected Candidates are asked to do higher papers. The examination can be taken at the Preparatory School.

EXETER SCHOOL, EXETER.

Entrance Scholarship Examination June 29th and 30th, 1921. Four Scholarships, £40–10, may be offered, and one Honour Scholarship of £40 for the Sons of Officers who have fallen in the War. University Endowment, £600 a year. Apply to THE HEADMASTER, EXETER SCHOOL, EXETER.

MALVERN COLLEGE.

Entrance Scholarship Examination early in June. One or two £87 (£99 for the first year), Five of £50, and Five or more of £30 per annum. Exhibitions, value £12 to £25 per annum, may be awarded boys who do well but fail to obtain scholarships. Apply to THE HEADMASTER, or BURSAR, THE COLLEGE, MALVERN.

SEDBERGH SCHOOL.

Entrance Scholarship Examination in May or June in London and Sedbergh. Ten Scholarships (£90 to £30) are offered. House Exhibitions may be awarded to deserving candidates. Other Exhibitions are offered for entry in January term. Apply to the BURSAR, SEDBERGH SCHOOL, YORKS.

BLUNDELL'S SCHOOL, TIVERTON.

Six Foundation Scholarships, including two of £60 a year, will be offered for competition at the end of May. Candidates must be between 13 and 14 years of age on May 1st. Particulars can be obtained from the Headmaster.

UPPINGHAM.

An Examination will be held in May or June, 1921, for about Eight Open Scholarships, varying from £85 to £30 per annum. Special Scholarships and Grants are available for Sons of Officers killed in the War. Allowance is made for age, which must not exceed 15 on Sept. 20th, 1920. Apply to THE HEADMASTER, UPPINGHAM.

KING'S COLLEGE SCHOOL, WIMBLEDON COMMON, S.W.

An examination is held each Summer Term Candidates for Senior Scholarships must be under 16 and for Junior Scholarships under 14, on May 1st The value of the Scholarships depends upon the Standard attained, but will never exceed the amount of Tuition Fees (£30 per annum) See "Public Schools Year Book"

ST. PETER'S SCHOOL, YORK.

An Examination for Scholarships and Exhibitions varying from £50 to £15 will be held in May, 1921 General knowledge is required in preference to specialisation in one subject Exhibitions also awarded Two reserved for sons of Officers and Clergymen Further details from S M TOYNL, M A, F R Hist S, HEADMASTER

SOUTHPORT.

The Medical Officer of Health writes — 'Southport is, by its character as a modern 'Garden City,' eminently suited as a place for schools. All its houses, detached or semi-detached, have their own gardens. Its soil is sandy, clean and dry. The streets are broad, well kept and planted on each side with trees. The air, generally from the sea, is clean, pure, and of even temperature. The water supply is a public one, excellent in quality and quantity. The air of Southport is very mild, dry, and also equable. In the height of summer it is not unduly hot, but it is pre-eminently a winter resort, and has almost a mode atmosphere for kidney complaints and bronchial affections.' Sunshine (1919) 1,523 hours. Pop. 51,643.

Chairman SIR RICHARD STEPHENS TAYLOR
Deputy-Chairman. LEONARD WILLIAM NORTH HICKLEY, Esq.

PURCHASES.—The Society purchases Reversions and Remainders, whether absolute or contingent, Life Interests, whether in possession or deferred, and generally all Interests (in approved property) that depend upon the duration of human life.

LOANS.—The Society also grants Loans on the security of such Interests, either on Ordinary Mortgage or by way of Reversionary Charge. The latter mode meets the convenience of borrowers who do not wish to make any payment for either principal or interest until their Reversionary Property falls into possession. The amount to which the Society will then be entitled is fixed at the outset, and does not depend on the time elapsing between the grant of the Loan and its repayment.

Forms of Proposal and full information can be obtained at the Society's Offices.

G. H. MAYNE, *Secretary*. [254

PROVISION FOR EDUCATION

The annual cost of keeping a boy or girl at a public school ranges from about £100 to £200 for a period of fully 5 years, and the soundest method of preparing for this is by means of a series of Policies as issued by this Society.

EXAMPLE:

Child aged 3 months; Father's age, 35 next birthday.

£100	with profits	payable	at	end	of	15	years.	Annual Premiums	29	17	4
£100	,,	,,	,,	,,	,,	16	,,	Income Tax Saving assumed			
£100	,,	,,	,,	,,	,,	17	,,	3/- per £	4	9	7
£100	,,	,,	,,	,,	,,	18	,,	Present Outlay ...	25	7	9
£100	,,	,,	,,	,,	,,	19	,,				

If the Father dies the sums assured are payable at once and the Premiums cease. The Premiums diminish each year after 15 years.

Write for full particulars, stating dates of birth of Father and Child, to

"*I give and bequeath unto the Treasurer for the time being of* THE CANCER HOSPITAL (FREE), *situate in the Fulham Road, Brompton, London, Middlesex, the sum of* (*free of Legacy Duty*), *to be applied towards carrying on the charitable design of the said Institution.*" [328

CHURCH MISSIONARY SOCIETY

SALISBURY SQUARE, LONDON, E.C. 4.

VICE-PATRON .. .. THE ARCHBISHOP OF CANTERBURY.
PRESIDENT .. .. COL. SIR ROBERT WILLIAMS, BT., M.P.
HONORARY SECRETARY .. .. THE REV. CYRIL C. B. BARDSLEY, M.A.

"The largest contribution that any man or woman can make to the Cause is that which is made by loving, faithful, and persevering prayer, he who truly gives this will not long keep back anything that he has" – *Lambeth Conference Report.*

The Society's work of teaching, healing and preaching is mainly carried on within the British Empire—in India and Ceylon, East and West Africa, in Egypt, the Sudan and Mesopotamia—as well as in Palestine, China, Japan and Persia. It is responsible for half the missionary work of the Anglican Communion in India and Africa, and holds many important strategic positions in nearly every mission field, in some of which no other society is at work.

FIGURES THAT SPEAK.

In 1910 there were **1360** European missionaries on the staff and **9196** native Christian workers.
In 1920 there are **1338** European missionaries and **13,325** native Christian workers.
63 C.M.S. European missionaries and 6 native clergy have been made bishops.
74 doctors (60 men and 14 women) were at work in **42** hospitals during 1919–20.
292 educational missionaries and **9077** native teachers were at work in **4232** institutions, colleges and schools.
Over **200** men and women are required to supply urgent needs alone.

ESTIMATED NEEDED INCOME THIS YEAR £700,000.

Contributions may be sent to the Lay Secretary at above address or to local secretaries. Bequests, which may be to the General Fund or in trust for any special section of the work, should be made "to the Church Missionary Society." Cheques and postal orders should be made payable to the Society and crossed "Williams Deacon's Bank."

DR. BARNARDO'S HOMES

CHARTER:

"No Destitute Child Ever Refused Admission."

Motto: "*For God and Country.*"

NO RED TAPE.

NO VOTES REQUIRED.

A FEW FIGURES.

90,004 Children have passed through the Rescue Doors.

15,515 dealt with last year.

7,335 is the average number of children in residence.

460 are Crippled, Incurable, Deaf and Dumb, physically afflicted, or sick.

964 Boys and Girls are under Industrial Training.

26,633 Young People have been migrated to Canada and the Overseas Dominions. 95 per cent. do well.

10,715 Barnardo Boys fought for you on land and sea in the Great War.

300 Boys are constantly in training for the Navy and Mercantile Marine.

*** *Cheques and Orders, payable "Dr. Barnardo's Homes," and crossed (Notes should be Registered) and Parcels of Blankets, Clothing and Toys may be sent to the Honorary Treasurer,*

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. 1. ESTABLISHED 1765.

Patrons—H.M. The Queen and H.M. Queen Alexandra.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable

Subscriptions and Donations thankfully received by the Treasurer, or MISS ROSE E WHYTE, *the Secretary, at the Hospital* [146

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron—THE KING *Vice Patrons*—H M THE QUEEN and H M QUEEN ALEXANDRA

THE HOME IS SITUATED AT WEST END WOKING, NEAR BROOKWOOD

OFFICES—5 YORK STREET, ST JAMES'S, S W

The Home is constructed to accommodate 250 Boys chosen from the homeless and destitute between the ages of about 14 and 15½ and give them a training up to the age of 19 or thereabouts which will fit them alike for civil life in this country or its Colonies and for service in the Army Navy or Mercantile Marine

CONDITIONS OF ADMISSION.—1 The age for admission is from about 14 to 15½ years 2 A boy must in the opinion of the Committee be really necessitous 3 He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy or for civil employment in the Colonies or elsewhere which would require active bodily exertion 4 Boys of known bad character are ineligible

Free admission is given to such number of boys as above as can be provided for out of the general income of the Home A guaranteed payment of £20 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained

Subscriptions are received by THE LONDON COUNTY WESTMINSTER AND PARR'S BANK 1 St James's Square S W , by the Treasurer General the Right Hon. SIR DUNCAN PROSSER V C G C B Marlborough House S W and by the Secretary, at the Office 5 York Street St James's S W , from whom any further information can be obtained

Society for the Abolition of Vivisection

22, NORTHUMBERLAND AVENUE, LONDON.

According to the latest Parliamentary Return, the number of experiments made in 1919 was 62,877. A large number of these were inoculation experiments, and, as the report says, "are attended by no considerable, if appreciable, pain."

The pain does not lie in the operation itself, but in the after effects.

The animal so innocently operated on may have to live days, weeks or months with no anæsthetics to assuage its sufferings, and nothing but death to relieve.

The following is an example of what may ensue in the dog after the "little needle prick":—

"A dog was inoculated on January 23rd. In a few days it began to show signs of wasting, then the head became swelled and dropsical, and also the fore-legs and paws; later on this swelling disappeared, but the dog seemed very ill and weak, and there was a thickening of the membrane of both eyes. Two days before its death it refused food and seemed very thirsty. On February 20th it died."—Abridged from the *Journal of Pathology and Bacteriology*, March, 1906.

The Society offers to send a Lecturer, free of charge, to Literary Societies, League Meetings, &c.

CONTRIBUTIONS TO THE SOCIETY GRATEFULLY ACKNOWLEDGED
