PAPERS

RELATING TO THE SETTLEMENT OF THE CENTRAL AND EASTERN DELTAS AND OF THE UPPER TALOOKS OF THE GODAVERY DISTRICT.

Letter from R. E. Master, Esq., Officiating Deputy Director of Revenue Settlement, Godavery District, to H. Newill, Esq., Director of Revenue Settlement, dated Nursapur, 24th April 1861, No. 81.

OPENING REMARKS.—1. In my letter of the 13th October last, No. 87, I submitted a report on the proposed settlement of the six

- | | |
|--|---|
| 1. Nagaram. | talooks composing the Western delta of |
| 2. Amlapur. | the Godavery District. I have now the |
| 3. Rati. | honor, with reference to the instructions |
| 4. Kota Ramachendrapur. | contained in para. 2 of your Proceedings |
| 5. Bikkavol. | of the 14th July last, No. 701, to report |
| 6. Kapavaram. | on the remaining talooks of the District |
| 7. Cocanada. | as noted in the margin. As stated in my |
| 8. Pittapur. | former letter, the talook of Ellore and |
| 9. Peddapur. | the Gundagul Pargana of Pentapad are |
| 10. Lingamparra. | in course of settlement under the Deputy |
| 11. Kottapalli. | Director in the Kistna District, and are |
| 12. Rajahmundry. | therefore not included here. The northern portion of the Pentapad |
| 13. Pentapad Pargana (Northern portion). | Pargana, which was purposely excluded on the former occasion, will |
| 14. Tadimalla. | now be disposed of. The talooks of Cocanada and Pittapur contain |
| 15. Chintalapudi. | only three and two Government villages respectively, all the others |

being Zemindary, and of the three former, only two have now to be settled, the third, *viz.*, Jaganaikpur, having been excluded from demarcation and survey, with reference to the probability of the greater portion of the land which it contains, being ultimately required for building purposes. This is in accordance with the pro-

posul which, at the suggestion of the Collector, I made in para. 4 of my letter of the 10th March 1860, No. 25, and was sanctioned in your Proceedings of the 17th April, No. 346.

2. The remarks made on many of the points treated of in my former letter, apply with equal force to the talooks now reported upon. It will be unnecessary for me to travel again over the same ground, and, therefore, the topics which have already been fully discussed and explained, need only be briefly noticed in the present communication. The accounts and statements now forwarded are based on the uncorrected survey areas for the talooks of Pentapad and Nagaram, and for 68 out of 78 villages in Am'lapur. Survey areas have likewise been furnished for portions of 8 of the other 10 villages of the last named talook, but the survey of the remainder is still incomplete. In all the other talooks, survey operations have either not yet commenced, or have commenced so lately that there has been no time for the calculation of the areas of the measured villages. In these talooks, as well as in the small unsurveyed portion of Amlapur, the areas entered in the statements are estimated, and will therefore only be approximate. The re-arrangement of the talooks, in accordance with the general scheme ordered by Government, has lately been completed, but as the demarcation and classification have been conducted according to the old organization, and as its retention for the present will greatly facilitate the comparison of the new settlement with the former assessment, the statements submitted have been framed without reference to the talooks as newly arranged. The Survey department, however, in preparing the talook maps, will follow the new organization, in accordance with which the final settlement accounts may also be conveniently made out.

GENERAL DESCRIPTION OF THE LOCALITIES.—3. The talooks now reported upon, comprise a large extent of country with very varying features and characteristics. They include all the remaining delta of the Godavery, and the whole of the Government estates in the upper part of the District on both sides of the river. The talooks of Nagaram, Amlapur and Rali compose the central, or delta proper of the Godavery, and were formerly known as the island of Kona Sima. This tract, as is natural from its position, consists for the most part of very rich soil. Indeed the Rali talook and the northern portions of Amlapur and Nagaram may be said to be the most fertile in the District. The island forms a triangle, of which

Rali is the apex. It is bounded on the east and north by the Gowtami branch of the Godavery, on the west by the Vashista branch of the same river, and on the south by the sea. Its greatest length, from north to south, is about 50 miles, and its breadth from east to west about 40 miles. The southern-most talook, *viz.*, Nagaram is separated from the rest of the central delta by the Vainteyam branch of the river, and thus forms an island by itself, bounded by the river on three sides and by the sea on the fourth. The soil of the central delta consists chiefly of alluvial deposit, but in the southern portions of Amlapur and Nagaram, there are extensive sandy tracts lying in ridges, in the same manner as already observed in the Western delta. There are likewise similar barren tracts and jungly swamps along the line of the sea coast. The north-eastern portion of Amlapur forms an island cut off from the rest of the talook by the Vrutha Gowtami branch of the river.

4. The talooks of Kota Ramachendrapur and Bikkavol, with the greater part of Cocanada, and the southern portion of Kapavaram, form the Eastern delta. This is a much more compact and less straggling tract than the Central delta. It extends from north to south about 20 miles, and from east to west about 30 miles. It is bounded on the north by the talooks of Rajahmundry and Peddapur and by the upper portion of Kapavaram; on the east by the Coringa division and by the sea; and on the west and south by the Gowtami branch of the Godavery. It consists almost entirely of black alluvial soil. Both the Eastern and Central deltas were formerly liable to be submerged during the freshes in the Godavery, but this is now prevented by the high river embankments. Both the deltas possess lankas or islands in the bed of the river of great richness and fertility.

5. Proceeding northwards we cross the Samulcota high level canal, and emerge from the delta. The face of the country immediately changes; the black soil disappears for a space, and red soil takes its place. The Kapavaram talook extends for some 20 miles northwards, and is from 12 to 16 miles broad. The country is no longer flat, but undulates, and we meet with extensive tracts of low jungle, the proportion of which to the cultivated land increases, and the jungle also grows more high and dense as we approach the frontier of the talook, and at its extreme north are several rocky hills covered with jungle. The soil of the Kapavaram talook is alter-

nately red and black, the latter being more particularly found in the low lying lands under the influence of tanks. East of Kapavaram are the Peddapur and Pittapur talooks, to the latter of which I only allude in consequence of its containing two Government villages, all the rest being Zemindary. In Peddapur also the Zemindary element predominates, there being only 14 Government villages. The latter form a tract about 8 miles square, which being situated in the valley of the Yeler is, in common with all the rest of the valley, distinguished for the rich quality of its soil, a circumstance attributable to the irrigation and fertilizing deposit it receives from the river above named. Peddapur is celebrated for its sugarcane cultivation, as I shall have to mention when I come to speak of the settlement of that talook.

6. North of Peddapur and Kapavaram, are the two hill talooks of Lingamparru and Kottapalli, extending for some 30 miles to the frontiers of the Vizagapatam District. The southern portions of these talooks contain many well cultivated and fertile villages, although a good deal of jungle is interspersed among them, but to the north the country consists almost entirely of rocky mountains and dense jungle, with only scattered cultivation here and there. Even this cultivation is not permanent, the jungle being cleared and crops grown for a year or two, the ground being then abandoned for a fresh clearing made elsewhere. The climate of these regions is deadly, except during the hottest season of the year, and, as a necessary consequence, the population is scanty, stunted, and sickly, and the revenue very trifling. For these reasons and others more fully detailed in my letter of the 2nd February 1860, No. 11, I proposed that the upper portions of both these talooks should be excluded from demarcation and survey, and this proposal, which was also fully concurred in by Mr. Purvis, received your sanction in Proceedings of the 12th March, No. 213. The principle was also extended to two villages of Kapavaram similarly circumstanced. The soil of that portion of Lingamparru which has been demarcated is chiefly red; a good deal of that of Kottapalli is black, and where it approaches the river, very fertile.

7. The Rajahmundry talook consists of villages on both the east and west banks of the Godavery; those belonging to Government, however, being chiefly situated on the west bank. The talook is about 16 miles long and 12 miles broad, including the space taken up

by the river. The soil is black and entirely under dry cultivation. It is famous for the cholum crops which it produces. On the east, among the Zemindary villages, there is as much jungle as cultivated land. West of Rajamundry lies the talook of Tadinalla, a tract of great extent, partly belonging to the Government and partly to Proprietors. This talook extends from close upon the bank of the river to the frontier of the Nizam's dominions, a distance of nearly 50 miles. With the exception of the two Samuts of Potavaram and Tadinalla, it consists of a wild and jungly country, its characteristics in climate, population, and revenue, being similar to those already described in Lingamparru and Kottapalli. On the principle adopted in those talooks, the upper portion of Tadinalla, comprising the Samuts of Ganapavaram and Taduvoy, has, with the exception of two important villages, been, with your sanction, excluded from survey. The soil of the Government villages in Tadinalla is mostly red, and it is decidedly inferior to that found in the talooks on the opposite side of the river. Adjoining Tadinalla to the south, and lying between it and the Ellore high level canal, is the upper portion of the Pentapad Pargana, which was excluded in the proposal for the settlement of the Western delta. The features of this tract are altogether similar to those of Tadinalla which it adjoins. The soil is red and alike inferior in its productive powers. This tract extends some 12 miles from east to west, and from 6 to 8 miles from north to south.

8. The last remaining talook to be noticed is that of Chintalapudi, forming the portion of the old Tiruvur talook of the late Masulipatam District, transferred, under the recent arrangement, to the Godavery District. It extends from the frontier of Tadinalla on the east to the Tummillar river on the west, and is bounded on the north by the Nizam's dominions, and on the south by the talook of Ellore. It forms a tract some 20 miles long by 16 broad. It contains a large extent of jungle, but not of so dense a character as in the other upland talooks, and it has consequently only been necessary to exclude from survey, a few of the wildest villages. The soil of this talook is very inferior, quite as bad as, even if not worse than that of Tadinalla. It is chiefly red, with small tracts of black, here and there. The following statement shews the number of villages in each talook with the tenure under which they are held.

No.	Talooks.	No. of Government villages.	No. of Zemindary or Proprietary villages.	No. of Surva or Kuttubadi Agrahams.	Total.

PAST REVENUE HISTORY.—9. The different Revenue systems in force in the country, the various changes introduced in the management of the Government estates, and the manner in which the ancient Asarah and Vesabady modes of settlement gave place to the Joint Village Rents as a temporary expedient, pending the general survey and settlement of the District, were described at some length in my first report, and need not be again noticed in this place. It will be sufficient to note the position of the various estates at the beginning of the century; the changes which have since taken place; and their condition at the present day. With the exception of Pentapad and Chintalapudi, of the former of which mention was made in my previous report, all the talooks now treated of belonged to the old Rajahmundry District. In tracing their history, it seems unnecessary to go further back than the Permanent settlement. At that time, the whole of these talooks were in the hands either of the descendants of the ancient Zemindars, or of the Proprietors, who, as already explained, were then established. The boundaries of the estates did not however correspond with those of the talooks. The annexed statement shews the different estates existing at the time of the settlement and the number of villages in each talook which belonged to them respectively.

10. It will be seen that, with the exception of the three great Zemindaries of Peddapur, Pittapur, and Polavaram, and the minor one of Kota Ramachendrapur, the estates or mutahs were individually of no great size, and contained from 1 to 17 villages each. It is true that the estates of Rumpa, Totapalli, and Juddangi contained each a great number of villages and extended over a large tract of country, but as they consisted for the most part of a mass of hill and jungle, with a scanty population and small area of cultivation, the revenue derived from them was trifling and the Zemindars without much influence. The Totapalli and Juddangi estates were formerly appanages of the Zemindary of Peddapur, and were held by Munsubdars, who were bound to provide an armed force to repel the incursions of the hill robbers and to assist the Zemindar whenever disturbances, within or on the frontiers of his estate, rendered it necessary for him to apply for their services. On the fall of the Zemindary, the right to call for the services of the Munsubdars reverted with it to the Government. The Munsubdar of Juddangi rebelled, and his estate was in consequence forfeited and taken possession of by Government in 1846. The estate of Totapalli is still in the hands of the widows of the late Munsubdar. The Rumpa estate, which forms part of the Kottapalli talook, is still held as Mokhassa. It is an especially wild and jungly tract, and though containing as many as 338 villages, yet if half a dozen in the plains be excepted, the revenue derived from them does not average more than 2 or 3 Rupees per village. There are three other talooks or divisions, comprised in the old Rajahmundry District, *viz.*, Toonee or Kottam, Coringa, and Gutala. It is however unnecessary for me to do more than name them here, since the two first are still entirely Zemindary, and although a few villages in the last have lately reverted to Government, they have, from their position, been excluded from survey on the principle sanctioned with respect to the jungle villages in Lingamparru and Kottapalli, &c.

11. In the former report, I described the rapidity with which the Proprietary estates and many of the Zemindaries declined, and, being brought to sale for arrears of revenue, in most cases reverted to Government. I stated that as clearly shewn by Sir Henry Montgomery in his report on the Rajahmundry District, the fall of the Proprietary estates was attributable to original over assessment and the inherent defects of the system, while the latter, rather than the

former cause, accounted for the deterioration of the Zemindaries. After mentioning that the average collections in the District during a period of 32 years, had fallen short of the Permanent assessment by the large sum of Rs. 92,249 per annum, the Commissioner goes on in para. 24 of his report to say,—“The inference to be drawn from “the result would at first sight be, that the permanent assessment “was more than the resources of the country would bear, but there are “many facts to shew that though there are some instances of its “having been too high, it was generally not an over assessment. “The moderation of it in the ancient Zemindary of Polavaram “has already been noticed, but notwithstanding that moderation, “the estate was the first to fall. In Peddapur, in early years, the “effects of the extravagance and misrule of the Zemindar were “remedied under Government management, and the estate relieved “from embarrassment. The peshkush assigned on the Zemindary “of Pittapur was uninterruptedly and without any dismemberment “of the estate, discharged for 34 years, and other estates of minor “importance, unconnected with these, still remain free from arrears. “It is not to the amount of peshkush fixed, but to the system, that “this deficiency must be mainly attributed. For although the “assessment on the Proprietary estates was based on principles which “allowed of no advantage to the purchasers, save what were to be “derived from improvement, the defective realization of the “revenues was not peculiar to them, but is equally discernable in “portions of the more favorably assessed ancient Zemindaries, and “it is also observed that 11 out of the 26 Proprietary estates, were “brought to sale for arrears in Fusly 1220 (1810-11) before they “were liable to the full assessment. Valuable portions of the Ped-
“dapur Zemindary were also sold for arrears as early as Fusly 1222
“(1812-13.) In the management of their estates, few of the Zemin-
“dars themselves interfered. Every thing was left to the care of
“designing Dewans, whose policy it was to make their masters
“dependant on them, and to maintain their own influence by pro-
“viding for their vices and follies, and encouraging their pride.
“The system of management was formed on the sole principle of
“extracting from their ryots the utmost possible amount of present
“revenue. In adverse seasons all that could be taken of the ryots’
“produce was claimed on the part of the Zemindar, whose demand
“purposely exceeded the means of the ryots in ordinary seasons.
“In years of abundant produce the deficiency of bad seasons was

“ made good, so that in either case, the ryot was left but a bare
“ subsistence. The Proprietors of the new estates followed the
“ example set them by the ancient Zemindars, aped their habits and
“ affectation of regal pomp, and after draining their resources, their
“ estates were put up to public sale, to pass into the hands of fresh
“ speculators, and to undergo again a like process. The realization
“ of the Government revenue was for a time secured by these means,
“ as will be seen by reference to the foregoing statement, which shews
“ that in the period of 11 years or from Fusly 1220 (1810-11) to 1230
“ (1820-21) no less a sum than 14 lacs of Rupees was carried to the
“ credit of Government from the sale proceeds of defaulters' estates.
“ But the ultimate impoverishment of the country was thus gradually
“ advancing.”

12. It is not surprising that estates managed under the system above described, should, after repeated changes, and becoming more and more exhausted at each successive transfer, ultimately revert to Government. The following statement shews the mutahs into which the Zemindaries and estates forming the various talooks were eventually subdivided, and the year in which each fell in to Government. It also shews the extent to which the estates still remain in the hands of the Zemindars or Proprietors.

14. The Chintalapudi talook comprises that portion of the Tiruvur talook of the old Masulipatam District, which, under the recent arrangement, was transferred to the Godavery District. It consists of 94 villages, and, with the village of Sanubanda situated on the opposite side of the Tummler in the Kistna District, formed a small Zemindary. It fell into arrears of peshkush, was put up to sale and purchased on account of Government in Fusly 1256 (1846-47) under whose management it has ever since continued. Since the reversion, the villages have been settled partly under joint rents and partly under substantial rents.

15. I forward (Appendices A to O) statements shewing the area

Talooks.	Rate per acre on cultivated land.			Rate per acre on cultivated and waste.

cultivated and waste, distinguishing also, the wet, dry, lanka, and garden land with the assessment and rates per acre, according to the revenue returns for Fusly 1269 (1859-60), for each talook. For the reasons given in para. 25 of the former report, these statements cannot be taken as shewing

with any thing like accuracy, the rates really paid for the several descriptions of land. Dividing the assessment, including teerwajasti for Fusly 1269 (1859-60), by the cultivated area, according to the survey, in the case of the three talooks of Nagaram, Amlapur, and Pentapad, and by the area according to the demarcation rough measurements, in the cases of the other talooks, the average rates are found to be as noted in the 1st column of the marginal statement. Dividing the same assessment by the total Jeroytee land cultivated and waste included in the amarakum, the rates are as entered in the 2nd column.

ALTERATION IN THE NUMBER OF VILLAGES.—16. In the course of the demarcation, it has occasionally been found necessary, to unite in one, the lands of two villages which were so interlaced as to render their separate survey impossible, and to include small bechirak or uninhabited villages, which have hitherto been separate villages in name only, in the large ones which they adjoin, and by the ryots of which they are cultivated; and on the other hand it has also been necessary to separate from the parent villages, and form into distinct villages, hamlets situated at a great distance from the former, and in some cases divided from them by the whole breadth of the river. Such hamlets must of necessity have been separated from the parent villages in the new arrangement of talooks, and they must then have either been formed into distinct villages, or attached to those which

they adjoined. The former course is naturally more agreeable to the ryots, and as the hamlets are of a considerable extent, it has been adopted. The annexed statement shews the number of villages in each talook, according to the former accounts, and according to the present arrangement. It will be observed that though there are several changes in individual talooks, the aggregate result shews three villages less than before. No notice is taken in this statement of villages which have been transferred from one talook to another for survey purposes only. Such transfer does not affect the settlement, as it is only temporary, and when the final settlement accounts are made out, the villages will be placed in the talooks as lately arranged under the orders of Government.

No.	Talooks.	No. of villages as per talook account.	No. of villages as per new settlement.	REMARKS.

STATISTICS.—17. The statistics of the talooks now under report, as taken from the Revenue accounts, may be noticed as follows. The annexed statement shews the population, distinguishing the Hindus, Mahomedans and Christians. The proportion of Mahomedans is $2\frac{1}{2}$ per cent., and of Christians not quite .01 per cent, of the whole.

No.	Talooks.	Hindus.	Mahomedans.	Christians	Total.
1	2	3	4	5	6
1	Nagaram	55,399	1,558	6	56,963

	Total...	6,65,673	14,362	61	6,80,096

18. Comparing the population with the area, the following result is obtained. It will be seen that the Rali, Kota Ramachendrapur and Peddapur talooks are very thickly peopled, and that in Bikkavol and Nagaram there is also a fair population. In the small talook of Rajahmundry, the average is doubtless affected by the large population of the town itself, and in each of the talooks of Pittapur and Cocanada, two villages only, containing numerous inhabitants having been taken into the calculation, the averages have been unduly raised.

No.	Talooks.	Square miles.	Population.	Per square mile.

AGRICULTURE.—24. The methods of cultivating the various crops have been already described in paras. 33 to 39 of the former report and in its Appendix G. The systems in force in the talooks now reported on are similar, and it will only be necessary to mention the particular products which grow in particular localities. The staple crops, with the exception of Peddapur, where sugar is extensively grown, and the lankas where tobacco is cultivated, are the same in all. Amlapur and Nagaram are now for the most part under wet cultivation. In the northern part of the latter talook, sugarcane has been successfully cultivated to some extent, and several villages are celebrated for their plantain gardens. There are also a few cocoanut and chilly gardens. In the dry lands, gingely oil seeds and Bengal gram are grown. The former thrives equally in black and sandy soils, but in the last case requires manure. In some parts of Amlapur, there are extensive cocoanut plantations, and the town is famous for the manufacture of the oil. In a few of the northern villages, sugarcane is grown, and on the borders of the Rali talook, there are betlenut gardens. The southern portion of Rali is to a considerable extent under garden cultivation, and contains fine cocoanut and betlenut plantations, and a few plantain gardens. The staple crop is black paddy, but Bengal gram and oil seeds are also produced. To the north of the talook, the cultivation is chiefly dry, and splendid crops of cholum are raised, alternately with oil seeds and Bengal gram.

25. A great part of Kota Ramachendrapur is under wet cultivation, but in the dry portions, cholum, black paddy, Bengal gram, and oil seeds are grown. In the lankas, tobacco is grown on the best soils, and cholum, varagu, cumboo, and oil seeds on the inferior. Bikkavol is nearly all under wet cultivation, white paddy being universally grown. The same may be said of the delta portion of Kapavaram, which contains also a few sugarcane gardens. Peddapur has always been celebrated for its sugarcane, and the cultivation has been so long established that it has become one of the staple crops of the talook. In all the upland talooks, white paddy is the staple crop in wet cultivation under the tanks, and cholum, cumboo and horse-gram in the dry lands. Cotton and oil seeds are also raised. The following statement has been prepared to show the extent to which the several descriptions of crops were grown in the various

SURVEY.—26. In consequence of the Survey department having but partially extended their operations into the talooks now reported on, I am, for the most part, unable to give the areas by actual measurement. But although, as stated in para. 2, I have only received *field* areas for Nagaram and Pentapad and for the greater portion of Amlapur, I am in possession of the main circuit traverse areas not only for those three talooks, but for that of Rali also. The areas of 17 villages in the Pentapad pargana were given in the former report. I now give the area of the whole Pargana, including numerous Agraharams, as well as Government villages. The following statement exhibits the comparison of the area according to the old Revenue accounts with the Survey traverse. In both Nagaram and Rali, are included several villages hitherto belonging to other talooks, but which, from being geographically situated in the two former, have necessarily been included in the main circuits. The areas of Nagaram, Rali, and Amlapur are exclusive of those of the lankas in the bed of the river, which either have been or will be separately surveyed, but include the areas of the Zemindary and Proprietary villages situated within the talooks.

No.	Talooks.	As per Revenue accounts.		As per Survey traverse.		Per centage of excess.
		Acres	Square miles.	Acres.	Square miles.	
1	2	3	4	5	6	7
1	Pentapad pargana	83,412.35	130.33	1,22,982.86	192.16	47.43
2	Nagaram... ..	57,199.63	89.37	89,801.85	140.31	57.99
3	Amlapur	1,35,842.21	212.25	1,78,663.65	279.16	31.52
4	Rali... ..	73,429.25	114.73	78,219.06	122.20	6.52
	Total...	3,49,883.44	546.68	4,69,667.42	733.83	24.33

27. The excess shown by survey in Nagaram is very large, but I attribute it, in a great measure, to the existence of extensive tracts of sand and swamp in the southern villages, which were not taken into consideration when the Revenue accounts were framed. It is not to be accounted for by the mode in which the pooty has been commuted, *viz.*, at the rate of 8 acres, for in 51 out of the 52 villages included in the circuit, that is found to be the proper com-

mutation rate, the rate in the remaining village being 6·41 acres. The excess found in Amlapur and in the Pentapad pargana is also considerable. Both these talooks contain large tracts of waste. In 107 out of 108 villages included in the Amlapur traverse, the proper commutation rate for the pooty is 8 acres, 6·41 acres being the rate for the remaining village. In Pentapad the areas, according to the revenue accounts, have been obtained by commuting the pooty at the rate which prevails there, *viz.*, 9·68 acres. In Rali, the excess shown by survey is very trifling, but in this talook there is but little waste, and it has always been found that the revenue areas approximate much nearer to the truth in places where the land is all under cultivation, than in others where there are large tracts of waste. Throughout Rali, the proper commutation rate per pooty is 8 acres.

28. The following statement compares the area of the lankas of the Nagaram talook (separately surveyed) as per revenue accounts, with that by survey. It will be seen that the per centage of excess is 39·30. There are no lankas in Pentapad, and those in Rali and Amlapur have not yet been surveyed.

As per Revenue accounts.		As per Survey.		Per centage of excess.

AREAS OF UNSURVEYED TALOOKS.—30. The areas in the unsurveyed talooks whether of whole villages, or of fields, can, of course, be only given approximately. They have been estimated not according to the Revenue accounts only, but according to those accounts corrected by rough measurements made by the demarcation gumastas, and I have every reason to hope that the areas so estimated will not require alteration to any serious extent when the results by actual survey come to be known. My reason for this hope is the degree of accuracy, in making rough measurements, attained by the gumastas, as shown by the comparison which I have been able to make in the case of the talooks already surveyed. In six talooks the demarcation areas were found to be sometimes above, and sometimes below those of the survey: the latter exceeding the former in the aggregate by 13.75 per cent. Out of the six talooks so compared, one should pro-

perly be excluded from the calculation, seeing that it was the first talook taken up, at a time when the Department was inexperienced, and that, in 18 villages of it, no rough measurements were made at all. The per centage of excess of survey over demarcation found in that talook was 37·04. Excluding that talook, the per centage of excess found by survey over the rough measurements in the remaining five was 7·66. This may be considered a tolerably close approximation, but I am aware that it is only so [in the lump. There have been, and no doubt will be, grave discrepancies in the areas of individual villages and fields, and as I have already mentioned in some of the talooks compared, the survey showed an increase and in others a decrease. There is, of course, a great difference in the skill and accuracy with which the several gumastas make their rough measurements, and they are greatly at fault when the areas of large irregularly shaped tracts of waste or jungle have to be approximately calculated. I do not mean for a moment to advance that the measurements of all my gumastas are within 7 per cent. of the real areas, but I think from the extended area over which the comparison has been made, that I am justified in adopting these rough measurements as bases for estimates of the financial results of the new settlement in the lump, with tolerable confidence, that though considerable discrepancies will be discovered in individual villages, in the aggregate they will not be found to be very wide of the mark.

31. The following statement shows the areas of the demarcated Government villages of the several talooks according to the revenue accounts, compared with those according to the demarcation rough measurements. I have included the Rali talook, as the survey areas of the Government villages in it, have not yet been received, though the total traverse of the talook, including Zemindary estates and Agraharam villages is known. It will be observed that, in the aggregate of the 12 talooks, the demarcation area exceeds that, according to the revenue accounts [by 16·51 per cent. Taking the talooks separately, it will be seen that the rate of excess varies greatly in 11, and that in one there is a decrease. In the Peddapur and Tadi-malla talooks the excess is very large, but at this, I am not surprised. In the former, the Revenue areas are notoriously understated, and in the latter there is a large extent of wild jungly country which has never been measured.

No.	Talooks.	As per Revenue accounts.		As per Demarcation returns.		Per centage of increase.	Per centage of decrease.
		Acres.	Square miles.	Acres.	Square miles.

	Total...	5,05,718	793.17	5,91,892	924.40	16.15	...

32. In all these talooks, except Chintalapudi, the areas according to the Revenue returns are obtained by commuting the pooty at the fixed rate of 8 acres, and it is found on reference to the account alluded to at para. 42 of the former report, that throughout the seven talooks noted in the margin, the proper commutation rate is 8 acres, so that so far the revenue returns require no correction. In the Chintalapudi talook, the land measure in use is the katty, the proper commutation rate for which is 14.02 acres, and the revenue areas have been calculated accordingly. In the talooks of Bikkavol, Kapavaram, and Kota Ramachendrapur, the commutation rates vary in the different villages as shown in the marginal statement. Applying these rates to the demarcated area, the result is shown in column 4 of the annexed statement. It will be seen that the per centage of excess of demarcation over Revenue areas, is reduced in the case

No.	Talooks.	No. of villages and the commutation rate per pooty.

33. The following statement shows the total ayacut of the several talooks distributed under the heads of Jeroytee, Inam, and Asalmenha. The areas are those of the survey for the talooks of Nagaram and Pentapad and for the greater portion of Amlapur; for the rest of the last named talook, as well as for all the others, the areas are derived from the demarcation measurements.

ANICUT IRRIGATION.—34. Prior to the commencement of the works, there was comparatively little irrigation in the talooks com-

posing the Central and Eastern deltas. In Rali there was none at all, and in the other talooks the extent of Government land under

wet cultivation, by means of tanks and channels, is shown in the marginal statement. The greater part of the arca entered opposite Kapavaram, must, however, have been in the upper part of the talook, and not in the delta.

In the Central delta,

there were in Rali two old natural channels, *viz.*, the Kouseka and the Gorinkala. The former led off from the Gowtami Godavery, near Palivela, and after a winding course joined the Vinateyem Godavery at Bodasakurru in the Amlapur talook: the latter led off from the Vashista Godavery and running down the western side of Rali joined the Vinateyem Godavery near Ganavaram. Both these channels were, however, lately altogether neglected, and Rali derived no benefit from either. The Kouseka was of some little use to Amlapur, as was also another old channel likewise bearing the name of Kouseka, which leaving the Vinateyem Godavery at Godilanka, ran into the sea between Bendamurlanka and Samantakurru. There were several branches to these old channels, by means of which the villages in the south-western portion of Amlapur were partially irrigated during the continuance of a fresh: other channels led off from the Vrutha Gowtami, and under similar conditions watered the south-eastern villages. Occasionally also, in a high fresh, the water from the Gowtami Godavery would overtop the bank in the neighbourhood of Inavilli, and sweep over the talook. All this irrigation was uncertain and precarious; the lands were alternately flooded and parched. 2,300 acres are stated to have been formerly irrigated in Nagaram. This also was in the season of the freshes only, and was accomplished in the south of the talook by channels that branched off from the Vinateyem Godavery near Pasalapudi, and from the Vashista Godavery at Pedatippa.

35. In the Eastern delta such irrigation as there was, was

derived from several old channels, the chief of which were the Toolyabhaga, the Sopella, the Takee, and the Masakapilli channels. Of these the first was the most important. It led off from the Gowtami Godavery, a mile below Dowlaiswaram, and seems to have been originally one of the main branches of the river. It was the practice to bund it across at various places during the freshes so as to raise the water to the height necessary for the irrigation of the adjoining country. It ran across the Bikkavol talook benefiting it, and part of Kota Ramachendrapur, and terminated at a salt water creek near Cocanada. This channel having been improved, and straightened by a new cut here and there, now forms the main canal from Dowlaiswaram to Cocanada. The other three channels, mentioned above, also led off from the Gowtami Godavery, and irrigated the Kota Ramachendrapur talook. Like that from all the old channels, the irrigation was defective; the channels, not having been excavated to more than 12 or 15 feet above the deep bed of the river, could only receive water during the time the fresh remained at that height, perhaps only 6 or 7 weeks in the year. Before the anicut project was sanctioned, some attempt was made to improve the Toolyabhaga, and in particular, the Samulcotah high level channel, leading off from it, was excavated in the years 1846-47, at a cost of about Rupees 22,000, an outlay which was repaid in increase of Revenue, in less than three years; another instance of the immediate return to be derived from irrigation expenditure.

36. Having described the state of things before the commencement of the works, I will contrast it with the altered circumstances which now prevail. As the Central delta has been only partially surveyed, while the survey of the Eastern delta has only lately commenced, the Department is, of course, unable to furnish me with hydrographic maps of the country. I have, therefore, procured copies of the maps in use in the District Engineer's office, which are forwarded herewith (Appendices P and Q). These maps, on a scale of one inch to the mile, show all the main and the most important of the subsidiary channels, and sufficiently illustrate the system of irrigation and navigation.

37. The main canal for the Central delta leaves the anicut at the head of the Rali talook (Bobbarlanka), and eight miles lower down, divides at Lollah, where there are two locks, into three main

branches. Of these the Ganavaram, or Western bank channel follows the bank of the river, until it reaches the village of Ganavaram, irrigating in its course numerous villages. Here it is carried across the Vinatceym branch of the Godavery into the Nagaram talook by a masonry aqueduct of 49 arches and 800 yards in length. From this point, it is called the Nagaram main channel. It runs a few miles singly along the narrow part of the talook, and then throws out minor channels to the eastward, which permeate the talook in all directions. The main branch keeps along the bank of the Vashista Godavery, and for the present terminates at Sakenatipalli. The most important of the subsidiary channels are the Nagaram, the Kadali, the Appanapalli, and the Pasalapudi channels.

38. The second of the three branches into which the Rali main canal divides at Lollah, is the East bank channel. As its name implies, it skirts the eastern side of the delta, watering a few villages in Rali, but chiefly benefiting Amlapur. It puts out numerous minor channels in its course, which terminates at present near Kandikuppa. The irrigation as well as the navigation of this channel is as yet in its infancy, many important masonry works, having still to be executed, without which the water cannot be controlled. Locks are proposed to be built at Wanepalli, Mookteswaram, Annampalli, and Mokaltippa, and if sanction can be obtained, it is proposed to carry an aqueduct across the Vrutha Gowtani at Annampalli, for the purpose of irrigating the tract beyond it. The chief offshoots from the East bank channel are the Vilasa, the Magaum, the Uppalaguptam and the Kottapalli channels.

39. The third main branch from Lollah, called first the Palivela, and afterwards the Amlapur channel, runs straight down the centre of the Rali talook, as far as Palivela, where there is a lock, and then proceeds to Mukamala, the frontier of Amlapur. Here a lock is to be built, and is already sanctioned, but as yet the calingula only has been constructed; and another lock is proposed a few miles lower down at Nadeputi. The channel passes the town of Amlapur and terminates at Challapalli. A lock is proposed to be built at Samanasa, between Amlapur and Challapalli. At present the lands under the Amlapur channel below that town, receive water from the East bank channel, through the Vilasa subsidiary. When the works are completed, they will receive their supply from the Amlapur main canal. The channel shown in the map, leaving the

Amlapur main canal between the Nadepudi proposed lock, and the Amlapur aqueduct, and terminating at Perur, where it is proposed that it should lock into the Vinateyem, is projected only, and has not yet been excavated. The Bendamurlanka channel is at present supplied with water through the old natural channel, the Kouseka, but the latter will be superseded when the Perur channel is finished. Numerous minor channels lead off from the Amlapur and Bendamurlanka branches, which it is unnecessary for me to notice in detail here. The following table shows the different main and subsidiary channels, and the number of villages watered by each, in the several talooks of the Central delta. As already explained in the case of the Western delta, many villages are irrigated by more than one channel, and consequently the total number of villages irrigated under the several channels, exceeds the total number irrigated in the talook.

40. The irrigation of the Central delta may be summed up as follows: In Nagaram all the villages but two are more or less irrigated. In Rali 8 villages to the extreme north of the talook are unirrigable on account of their high level. The main channel for the first few miles after leaving the anicut, forms a very deep cutting far below the level of the land on either side. 5 other villages are as yet unirrigated, but of these, it is expected that 3 will receive water this year. All the remaining villages are more or less irrigated. In Amlapur, out of a total of 108 villages, 18 only are at present altogether without water. Of these 11 villages are unirrigable owing to their being situated beyond the Vrutha Gowtami, but will be brought under the influence of the channels, in the event of the aqueduct alluded to in para. 38 being built. Of the remaining 7 villages, 2 are from their position unirrigable; 3 are worthless swamp and contain no cultivable land, the inhabitants subsisting by fishing; and the other 2 will probably be irrigated this year.

41. The main canal for the Eastern delta leaves the anicut at Dowlaiswaram, and divides at once into two branches, the most important of which is the Cocanada, or Toolyabhaga canal. It passes through the Kapavaram, Bikkavol and Cocanada talooks, irrigating directly or indirectly numerous villages in each, as well as a portion of Kota Ramachendrapur. It is provided with locks at Medapad, Chintapalli, and Kovur, by means of the last of which it communicates with the salt water creek which runs into the sea at Cocanada, and thus forms an outlet for the export trade. The most important of the minor channels leading off from the Toolyabhaga, are the Mundapet, the Nadurbada, the Kaikavol, and the Sampara channels. The first of these is of a sufficient section to admit of navigation, and when the proposed locks at Thapeswaram, and Pasalapudi shall have been constructed, will form a convenient cross line of communication from the Toolyabhaga to the Coringa main canal.

42. About 4 miles below the head of the Toolyabhaga, the Samulcotah high level canal leads off from it, and runs along the

extreme northern edge of the delta to the town of Samulcotah. The country north of the canal cannot, of course, from its level receive irrigation, but innumerable minor channels spread out on its southern side, irrigating the tract lying between it and the Toolyabhaga. Of these minor channels the Pandalapaka is the most important. At Samulcotah the high level canal, passes over the river Yeler by means of an aqueduct and is thence continued to Cocanada, where it joins the salt water creek already alluded to, as receiving the Toolyabhaga. Although the distance from Samulcotah to Cocanada is barely 8 miles, the difference of level has rendered necessary the construction of three locks, or rather four, as that at Samulcotah is a double one. The other two are situated at Venkatakistnapuram and Cocanada. By means of the above canals a double line of navigation is provided between Dowlaiswaram and Cocanada, so that when the Toolyabhaga is closed for repairs, the Samulcotah canal is available, and *vice versa*.

43. The second branch into which the main canal divides close to the head sluices, is the Bank canal. It skirts the western and southern sides of the delta, and after a somewhat winding course terminates at Yanam. It has a lock at Kadapulanka and two others are proposed to be built at Kota, and Yanam, respectively. The most important of the minor channels are the Chopella, the Mulastanam, the Masara and Pallepalem channels. Leaving the Bank canal about fourteen miles below Dowlaiswaram, the Coringa main canal leads off, and runs through the heart of the Kota Ramachendrapur talook. It is carried over two drainage channels by aqueducts at Nallur and Kaler, and is provided with three locks at Alampur, Vellah and Munjair, respectively, by means of the last of which it communicates with a creek, terminating in the Coringa river, and thus affords access to that important place of export. By far the most important of the minor channels is the Ingeram, which leaves the main canal at Chellur, and terminates at Uppumilli. This canal is navigable to a

certain extent, and is provided with a lock at Yerrapotavaram. The remaining chief subsidiary channels are the Utrumilli, the Yanamadala, the Vellah north high level, and the Vellah south high level channels. Annexed is a table showing the different main and subsidiary channels, in the Eastern delta, and the number of villages watered by each, the talooks being distinguished.

44. The following is a summary of the irrigation. In Kota Ramachendrapur there is not a single unwatered village; 77 villages, viz., 55 Government, and 22 Zemindary are irrigated. In Bikkavol, out of 53 villages, 48 are irrigated and 5 including 3 Agraharams, are from their high level precluded from receiving water. Of Kapavaram, the southern portion only is situated in the delta. The villages composing that portion, 28 in number, are all irrigated. The greater part of the Rajahmundry talook is beyond the influence of the channels; still 6 Zemindary villages on the east bank of the river are supplied with water. 22 villages of Cocanada, only 2 of which, how-

ever, are Government, are already irrigated and more will receive water on the completion of the works. 5 Proprietary villages of the Coringa division also receive water.

45. In addition to the villages irrigated in the central and eastern deltas, there are a few villages in the Pentapad talook of the western delta partially irrigated from the Ellore main canal. These villages were excluded from the former report as explained in para. 1 in consequence of their being situated half to the north and half to the south of the canal, and deriving part of their irrigation from tanks. They are consequently included in the present report together with the villages of the same talook situated wholly north of the canal.

46. I am unable, for the reasons stated in para. 55 of my first report, to give the total area irrigated by each channel. The following statement shows the area irrigated, and irrigable in the present state of the works in all the Government villages of the several delta talooks, the Jeroytee and Inam being distinguished. It must not be forgotten that, with the exception of Nagaram, Amlapur and Pentapad, the areas of all the talooks are estimated and not those of the survey.

IRRIGATION FROM TANKS.—47. The following statement has been prepared to show at one view the extent of tank irrigation in the upper talooks. There are altogether 1,155 tanks irrigating 63,558 acres. As, however, with the single exception of Pentapad, the areas entered in the statement are estimated, it is probable that the figures will require alteration when the true survey areas are known. Nevertheless I believe them to be approximately correct. There are only nine tanks which irrigate a larger area each than 500 acres. Of these the most important is the Lingamparru tank. Advantage has been taken of the natural facilities afforded by the hills, and by closing two small gorges by short, though lofty bunds, a magnificent lake has been obtained, which irrigates upwards of 3,000 acres in five adjoining villages. The tank is fed by jungle streams, which in the monsoon bring down an immense volume of water. The remaining tanks of importance are situated at Tadimalla and Ganapavaram in the Tadimalla talook, at Madhavaram, Jagannadhapuram, and Kadiyedda in Pentapad, at Kapavaram in Kapavaram, at Kottapalli in Kottapalli, and at Chintalapudi in the Chintalapudi talook. None of the other tanks are worthy of separate notice.

IRRIGATION FROM THE RIVER YELERU.—48. The Peddapur talook and the two Government villages of Pittapur, derive their irrigation from the river Yeleru, which rising in the hills beyond the frontier, emerges into the plains at Yeleswaram, and flowing thence in a south-west direction, is divided into many branches, and irrigates not only the Government villages above named, but also the Zemindary and Proprietary estates of Peddapur, Pittapur and Kirlampudi. This river never altogether fails, and except in the season of the freshes, none of its water is allowed to reach the sea, every drop being intercepted and turned to account for irrigation. The deposit which it brings down when in flood, is pure alluvium, and greatly fertilizes and enriches the lands over which it is spread. During the freshes there is, of course, sufficient water for all the villages simultaneously, but as they subside, and the stream diminishes in volume, the water that remains is husbanded with the greatest care; artificial bunds are placed across the heads of the different branch channels; the stream is banked up, and each village on the line receives water for a fixed number of hours according to established custom. When the period expires, the bank is removed, and the water flows on to the village next in succession.

CLASSIFICATION OF SOILS.—49. The classification of soils has been conducted according to the rules prescribed, and in the manner already described in paras. 56 to 59 of the first report. The soils found belong to the three series of which the western delta consisted, *viz.*, the alluvial, the regar, and the arenaceous, with the addition of the red or ferruginous series in the upper talooks, and on the northern borders of the delta. The arenaceous series is found only in the Nagaram and Amlapur talooks, in two villages of Pittapur, and in one of Cocanada. Excepting such villages on the coast as contain large tracts of swamp land, the bulk of the soil in the central and eastern deltas is found to be far more rich and fertile than that of

the western delta, and consequently a much larger proportion of villages will come under the first, or exceptional class, while the fourth class, in which many villages in Undi, Kaikalur and Pentapad were placed, will not be required at all in the eastern and central deltas, though it is still retained for the few villages of Pentapad in the western delta which are now to be settled. In arranging the classification of the upper talooks it has also been found necessary to have four classes of villages. The soils in them are with few exceptions exclusively confined to the regar and ferruginous series. Had we to deal only with the latter, two classes would have sufficed as far as the dry land is concerned, as no great variation is found in the quality of the dry red soils. Black soils, however, and the red soils, under tanks vary greatly in productive power, and on this account the number of classes mentioned cannot be dispensed with.

50. In assigning the classes to villages in the upper talooks a difficulty arises in the fact, that the dry land is occasionally very inferior, while the wet land under the tanks is of good quality. The circumstance may be partly accounted for by the fertilizing deposit which the wet lands receive by means of the tank water impregnated with alluvium brought down by the jungle streams which feed the tank, a benefit in which the dry lands, of course, cannot participate. If a village, so situated, be placed in a low class with reference to the quality of the dry soil, it follows that the wet lands will be unduly depressed, and a loss of revenue result. The only way of adjusting this matter is by assigning, where necessary, a different class to the wet and dry land, although of the same village. It is only occasionally that this course is required, but where requisite, it has been adopted. In consequence of the peculiar nature of the soil of the wet land in the Peddapur talook, lying in the valley of the Yeleru and from its alluvial character, I proposed that it should be placed in the first or exceptional series, and this was approved in your Proceedings of the 23rd March last, No. 268.

51. The number of villages falling under each class in the several

talooks is shown in the marginal statement. The statement is framed so as to show the instances in which, as mentioned in the last para., different classes have been assigned to the dry and wet lands of the same village. Full particulars of the classes and the villages falling under each will be found in Appendix R.

52. In the up-land talooks there is a good deal of cultivation in the jungle clearings or "porlu." This is not of a permanent character. The

jungle is cut down and burnt, and the ground is cleared and cultivated for a season or two, but it is then abandoned, the jungle being allowed to spring up and cover it again, and a fresh clearing is made elsewhere. As the demarcation of these isolated patches would have been very difficult, and their survey still more so, and as the fixing a permanent assessment on fields which will probably have disappeared before the settlement is introduced seemed superfluous, I proposed in my letter of the 16th May 1860, No. 39, to exclude such clearings from demarcation, classification, and survey, and this proposal was approved in your Proceedings of the 26th May 1860, No. 526. Consequently in villages containing the description of cultivation abovementioned, the clearings have been neither demarcated nor classified, those operations being limited to the lands around the village which are under permanent cultivation.

53. The annexed table shows the area classified in each talook, the classes of villages being distinguished, and the Jeroytee and Inam lands being separately shown.

58. In the delta talooks no great vicissitudes are likely to occur as they are provided with irrigation and drainage, and are protected from floods by the high river embankments, but to meet such contingencies as may be expected to arise, and to allow for those portions of fields which are unproductive from being taken up by bunds and pathways, one-sixth will be deducted from the grain values given above. In the upper talooks, cultivation is carried on with more risk, and the ryots are liable to greater vicissitudes of season. In years of drought, their crops may altogether fail, and they are occasionally injured by floods, the bursting of tanks, &c., as well as by the ravages of wild beasts. To meet all these contingencies, it will be fair to deduct one-fourth from the grain values entered in the list. To this general rule for the upper talooks, I propose to make an exception in the case of the rich dry villages of the Rajahmundry talook, which are on the western bank of the Godavery. These villages have no tanks; they are protected by the high river embankments, and are therefore not liable to floods; the crops cultivated in them are such as require but little moisture, and consequently they are not liable to an amount of risk, which will render it necessary for them to be put on the same footing as villages in the other upper talooks: one-sixth, therefore, has been deducted from the full gross produce for these villages. A similar course has been adopted in the case of the two arenaceous villages in Pittapur which although not within the delta, are in no point differently circumstanced from the unirrigated villages of a similar soil which are.

SPECIAL GRAIN VALUES FOR THE PEDDAPUR TALOOK.—59. I have already alluded to the extensive cultivation of sugarcane which has long been established in Peddapur. The valley of the Yeler has always been celebrated for its cane cultivation, and Peddapur sugar is widely known. Sugarcane is in fact the staple produce of the talook, and it is only to give the soil the rest which that species of cultivation requires, that other crops are grown in rotation on the wet lands. This being so, it seems that the order of Government which prescribes that an enhanced assessment is not to be imposed owing to a more valuable description of produce than the staple being grown, will not be infringed, if in assigning grain values to these soils, we take sugarcane into consideration, the more especially, as from time immemorial, a high assessment has been fixed on the talook, and generally paid with ease. While therefore I propose to treat the dry lands of the talook, and the small extent of wet

lands under tanks, in a similar manner to lands similarly situated elsewhere, I beg to recommend special grain values for the wet

Series.	Class.	Sort.	Sugar cane jaggery in pooties of 20 maunds per pooty of 8 acres.	White paddy in pooties of 800 seers per pooty of 8 acres.
1	1	1	100	16
		2	80	13

lands under the Yeler, which have been placed in the 1st or alluvial class, as shewn in the margin. Sometimes the ryots grow a sugarcane crop once in three years, and sometimes once in four, other crops, generally white paddy, being raised in the intermediate years. For our purpose we may assume that the land is

devoted to sugarcane one year in every four, and in the sequel when I come to speak of money rates, the calculations will be made accordingly. The values in cane jaggery assigned to the two sorts of soil have been fixed after several experiments, and very careful enquiry. As the freshes in the Yeler depend a good deal on the local rains in the hills on the frontier of the District, there is a degree of uncertainty in the irrigation from it, and I therefore propose to deduct one-fourth from the gross produce, on account of vicissitudes of seasons, &c.

OTHER ASSETS.—60. As stated in paragraph 68 of the first report, the value of straw has not been included in the assets for assessment, the item being allowed to balance the cost of feeding bullocks which has been excluded in calculating the cultivation expenses.

FORMER PRICES AND COMMUTATION RATES.—61. I have already submitted accounts and statements showing the former prices prevailing in the different talooks of the Western delta, and have made proposals with respect to the rates to be adopted in commutation of the various grains. I now propose to examine the accounts for the remaining talooks; and here, at the very outset, I encounter the same difficulties that beset me in my former investigation of the subject. The accounts forthcoming are most meagre: in no talook are they complete, and in many for a long series of years, they are missing altogether. This will be at once apparent on reference to the general statement which has been compiled, (Appendix S.) in which the blanks are as numerous if not more so than the figures. The deficiency however is not to be remedied and the accounts must be taken for what they are worth. In accordance with former

instructions, the prices entered in the statement as the averages, are not the average prices of the year, but the average prices of the selling months, where these were forthcoming. In cases where the prices in the selling months were wanting, and those in other months forthcoming, the averages for the whole year, or for as many months as there were accounts for, have been entered. In such cases, the entries have been made in red ink to distinguish them from the averages

Articles.	Selling months.

Sugarcane jaggery.....	April and May.

of the selling months. The months taken after enquiry as the selling months for the different grains are the same as those given in my previous report, but for convenience of reference I repeat them in the margin. Horse gram as

well as sugarcane jaggery, has been added, as these products will be taken into consideration in assessing the upper talooks.

62. In my former report, I mentioned that the price lists were framed on different principles in different talooks, the number of seers to the kuntsam, and the number of pooties to the garce varying, though the number of kuntsams to the pooty remained the same. I find that in all the talooks now under report, the principle on which the price lists are framed is the same, *viz.*, 4 seers go to the kuntsam, 200 kuntsams to the pooty, and 6 pooties to the garce. Experience has however shown that the principle on which the price lists are made out, does not always accord with the system of measures in force in the locality, and it is therefore necessary to test these measures, by actual examination to ascertain whether when the returns show that the price of a garce of any grain is a certain sum, that quantity can really be obtained for the money, or more, or less. The annexed statement shows the result of such examination of the kuntsams in use in the different talooks.

63. From the above extensive series of experiments it will be observed that the principles on which the price lists are framed agree in the main with the system of measures in force, and that in the talook of Tadimalla only, is a serious discrepancy to be found. In all the other talooks when the returns show that a garce of paddy costs a particular sum, 6 pooties of 800 seers each, may be purchased for the amount, but in Tadimalla the real price must always be much lower than that entered in the returns, since when the recorded rate is so much for 800 seers, in reality 900 may be obtained for the money. It might be expected that under these circumstances the recorded prices for a series of years for this talook, would be higher than those for the same period in others, but on examination, this is

not found to be the case. The Tadimalla prices, though generally as high as, are not higher than those in some of the other talooks.

64. The detailed lists in Appendix *S*. show the prices of the different grains for the several talooks for as many years as they are forthcoming, and averages are given for every 7 and 10 years. The accounts cannot of course be taken as a complete guide, as the absence of figures for certain years virtually upsets the averages. For instance, the first 7 years' average price of white paddy in the Nagaram talook is Rupees 28 per pooty, a very high average: on reference to the detailed list it is seen that figures are only forthcoming for one out of the seven years, and the price for that year has been taken as the average; but the year happened to be one of scarcity and the average is therefore a false one. On the whole the averages in the different talooks will be found not to vary materially, and when they do vary, a reference to the detailed lists will show that the cause is such as I have mentioned above. Neither do the general averages vary much. In the few talooks where they are much lower than in the others, it will be observed that the figures for the earlier series of years are wanting, a fact which is sufficient to account for the discrepancy.

The following statement shows the general average prices of the different grains in the respective talooks for the whole period comprised by the returns :—

65. It is unnecessary for me to repeat here the reasons adduced in the former report, for excluding from the calculation, the years in which, from famine and other causes, the prices were extraordinarily high, and the different circumstances which enable us pretty confidently to predict, that for the future, while, on the one hand, prices are never likely to rise to an extraordinary height, so, on the other, it is improbable that they will ever fall very low. The following statement shows the effect of excluding, as was done in the former report, those years in which the prices of white and black paddy, cumboo, and raggy, exceeded Rupees 100 per garce, and in which the price of cholum exceeded Rupees 150 per garce. The high priced years have not been excluded in the case of horse gram, as it is an article the price of which does not rise so much in consequence of famine, as from the fluctuations in the demand for exportation :—

66. Taking these returns and averages, not as a blind guide, but as a help only, and looking to the opinions expressed by those

Grain.	Per garce.	Per pooty.
White paddy...	Rs. 72	Rs. 12
Black do.	60	10
Cumboo.....	60	10
Raggy.....	66	11
Horse gram ...	96	16

who are well able to give them, and to the various circumstances which are likely to affect prices hereafter, there seems no reason why we should not adopt a uniform commutation rate for all the talooks, and I beg to recommend that the rates be fixed as noted in the margin. The advantage and the great simplicity of having uniform commutation rates for the whole District are sufficiently obvious, and it is satisfactory that we are able to attain so desirable an end, without unduly forcing the averages for any talook.

67. The price of tobacco need only be taken into consideration in those talooks which have lankas, in which alone it is a staple article of produce. The prices and averages are given in Appendix S., but the figures are missing for so great a number of years, as to render the returns worthless for our purpose. We may, however, fix upon a fair rate on other considerations than a reference to past prices. The demand for tobacco, both for home consumption and for exportation, is large and likely to continue, unless indeed the effect of the proposed tobacco tax be to reduce consumption. At present, the prevailing rate is from Rupees 55 to Rupees 60 per pooty of 20 maunds. As in the former report, I propose Rupees 40 as a fair rate to be adopted.

68. There has been some difficulty in ascertaining the old prices of sugar cane jaggery. On enquiry, I found, to my disappointment, that no official record had been made of them, and the only information I have been able to obtain was from the private accounts kept by the native merchants in Juggampeta and Peddapur. The average prices of cane jaggery per pooty of 20 maunds as ascertained from the merchants for a series of years, is given in the statement in the margin. The figures are, of course, not absolutely to be depended upon, and in some instances, the variation in price between the two towns, only 8 miles apart, is so great as to excite a suspicion of incorrectness, but as it is the only account to be found, we must do our best with it. It will be observed that, of late years, the prices have been much higher than the

former average rates. The establishment of a sugar factory has doubtless been one cause of this. It is also understood that Peddapur sugar, manufactured in the native method, is now exported by sea, a practice which was not formerly in vogue. I think that Rupees 15 per pooty of 20 maunds will be a moderate rate to fix, and I beg to recommend it accordingly.

CULTIVATION EXPENSES.—69. An estimate of the cultivation expenses for the various classes and sorts of soil and for the several crops taken for settlement purposes is herewith forwarded (Appendix *T*). As explained in paragraph 79 of the first report, the cost of the various operations is given in terms of grain, and the total commuted to money at the rates recommended, while to the fractional sum which results from this mode of calculation, a small addition has been made in each case, so as to make the total cultivation expenses a round sum. The cost of some of the operations connected with wet cultivation, varies slightly in the lands under the influence of channels and in those under the influence of tanks, but the total cost of the operations in both descriptions of land so closely approximate, that it will be unnecessary to make any difference in the sums to be deducted from the gross produce to enable us to arrive at the net. As in the former calculations, the cost of feeding bullocks has been excluded from the cultivation expenses, this item being balanced by excluding the value of the straw from the assets of assessment. The following statement abstracted from Appendix *T*, shows the total cost of cultivation per acre for each class and sort of soil for the several grains:—

Class.	Sort.	Dry.										Wet.	
		Cholum.		Cumboo.		Baggy.		Black paddy.		Horse gram.		White paddy.

70. The particulars of the cultivation expenses for tobacco and sugar cane will also be found in Appendix *T*. They amount for the former to Rupees 35, and for the latter to Rupees 95, per acre. It is proper to mention that the estimate for the sugar cane cultivation expenses is applicable to the Poddapur talook alone, in which only that crop has been taken into consideration for settlement purposes. Where sugarcane is grown in other parts of the District, the cultivation is conducted on different principles, and the expenses would be differently calculated. The cost of feeding bullocks has been included in estimating the cultivation expenses for tobacco and sugarcane, since, in the absence of straw, there is nothing left to balance the item.

EXCEPTIONAL CLASSES OF SOILS.—LANKAS.—71. Of the talooks now under report, five have lankas, *viz.*, Nagaram, Amlapur, Rali, Kota Ramachendrapur, and Rajahmundry. It is proposed to deal with them precisely in the manner detailed in paragraphs 83 to 89 of the first report, that is to say, while all lankas situated in the bed of the river, must, from the necessity of the case, be excluded from permanent fieldwar assessment, they have been classified, and will be now assessed with reference to their present state, in order that such assessment may be somewhat of a guide in fixing hereafter the terms on which they are to be, from time to time, rented out. The rates proposed are the same as in the Western delta lankas, *viz.*, Rupees 20 and Rupees 12 for the 1st and 2nd sorts respectively, and Rupees 5 and Rupees 4 for the 3rd sort according to the class of villages. For the reasons given in paragraph 88 of the first report, such lands as, although from being within the river embankments, are liable to be occasionally submerged by the freshes, are nevertheless attached to the main land portions of the talooks, and are on so high a level as to be beyond the reach of any but the highest freshes, will be permanently assessed like the rest of the talooks to which they are attached.

GARDEN LANDS.—72. The subject of the assessment to be imposed on garden lands was discussed in paragraphs 90 to 94 of the first report, and detailed reasons were given for fixing the rates only slightly higher than those for the 3rd or regar class. I stated that the area hitherto assessed as permanent garden was for the whole District very trifling, and in Appendix *Q*, the particulars were given for the several talooks. In the accounts now prepared the assessment on the gardens has been calculated at the rates first recommended. The following statement compares the assessment hitherto paid on the permanent gardens in the several talooks with that to be imposed upon them according to the rates proposed. In Amlapur and Rali, the rates hitherto paid are very low indeed, and the settlement results in an increase. The highest rate hitherto paid has been in Rajahmundry, *viz.*, Rupees 28-10-0, per acre. The area is very small, being little more than 13 acres according to the accounts, or 15 acres by demarcation. The ground is close to the town of Rajahmundry, is very fertile, highly manured, and watered from wells. It is devoted to the cultivation of onions, the profits from which enable the holders to pay with ease the high assessment which it now bears. This

assessment they may doubtless continue without difficulty to pay, and the drop from Rupees 28-10-0 to Rupees 4-8-0 per acre is certainly a great one. It will be for you to consider whether it will be advisable to depart from the principle enunciated in paragraph 90 of the first report, in order to prevent the sacrifice of revenue which will result from carrying it out in this instance, or whether that principle should be maintained. In Chintalapudi and Lingamparru, the lands hitherto classed and taxed as gardens, have not been found deserving of a place in the second or exceptional class, and have been classified like the ordinary black and red soils which adjoin them. The garden land in Chintalapudi, has hitherto paid a nominal average assessment of nearly 10 Rupees, but the area is understated, and the real rate is, therefore, not so high. The produce grown is partly tobacco and partly Indian corn and vegetables.

73. In addition to the lands entered in the accounts as permanent gardens, there are in five talooks, land known as bagayet in which, as explained in paragraph 94 of the first report, chillies,

Talooks.	Extent of land.		Assessment.			Rate per acre.	
	Acres.	C.	Rs.	A.	P.	Rs.	A. P.

Total...	1,221	32	8,478	12	6	6	15 1

turmeric, &c., are grown alternately with ordinary agricultural produce. The extent of such land in the several talooks is shown in the marginal statement.

It will be observed that there are altogether 1,221·32 acres bearing an average assessment of Rupees 6-15-1. This land has been classified and assessed in the ordinary manner as was done in the case of similar land in the Western delta.

MARKETS.—74. If the market towns in these talooks be classed on the principle laid down in your Proceedings of the 1st February 1859, the only ones which will come into the 1st class as affecting whole provinces, will be Cocanada and Coringa. One or two of the others may be put into the 2nd class, but the great bulk are certainly not deserving of a place in any but the 3rd, even if they are fit to be placed in it. As explained already, the greater number of these 3rd class markets are not centres for the disposal of agricultural produce at all, but rather fares at which, cloths, garden produce, fish, and other perishable articles of consumption are bought and sold. The only towns which can be considered as really offering a market for the disposal of grain, exclusive of the great sea ports of Cocanada and Coringa, are Rajahmundry, Juggampeta, and Samulcota. Neellapilli and Ingeram might be included, but they form almost a part of Coringa. In addition to the above markets, it may be mentioned that large quantities of dry grain, especially cholum, are sent by water to Ellore. For Peddapur cane sugar, and jaggery : the town of Peddapur is the chief market. The merchants there buy up the article from the ryots, and send it all over the country. There is no demand in the delta for the surplus produce, and it is conveyed either to the sea ports or to one or other of the inland markets named above. The ryots, as a rule, do not themselves

convey their produce to market. Merchants and Soucars come round, and make their bargains, taking away the grain by land or water, according to the locality. In some cases, the merchant bears the expense of removal from the ryot's granary; in others the price paid includes conveyance to the channel bank and shipment on board the dhoney.

INFLUENCE OF PORTS.—75. In paragraphs 97 to 100 of my former report, I have entered fully into this subject, and have little to add now to the remarks which I then made. The talooks of the Eastern and Central deltas, and the upper talooks on the east bank of the Godavery, benefit by the ports of Cocanada and Coringa, but that of Narsapur is also accessible by the river to Rali and Nagaram. The exports from the District during the official year 1859-60, fell considerably short of those of the previous year. This, however, was not altogether unexpected, and cannot be attributed exclusively to a stagnation of trade. The year 1858-59 was really exceptional, and the exports were from a variety of causes unusually large, and although those of the past year were very much smaller, they were actually within about Rupees 80,000 of the exports of 1857-58, themselves, ten lacs higher than the exports of any former year, the two immediately preceding ones alone excepted. The exports for the current official year promise to be very large. The returns for the first 11 months, or from the 1st May 1860 to the end of March 1861, show the actual value of the exports to be Rupees 36,39,716, and these figures are exclusive of gingely oil seed valued at Rupees 5,53,451 exported by land to the French Settlement of Yanam for shipment. It is to be anticipated that when the value of the goods exported during the current month is added, the total amount will be found to exceed that of the value of goods exported in the exceptional year 1858-59.* This result cannot but be considered as indicative of the increasing prosperity of the District.

MEANS OF TRANSIT, CANALS, ROADS, &c.—76. It is unnecessary for me to repeat here the general observations made in paragraphs 101 to 106 of the former report on the manner in which water has superseded land carriage along the lines of all the great canals, as well as on the rates of freight, supply of boats, &c. The circum-

* Since this was written, the returns for the complete official year ending 30th April 1861, have been received, and show that the actual value of exports during the year was Rupees 42,14,745 to which if Rupees 5,53,490, the value of gingely oil seeds exported, via Yanam, be added, the total amounts to the large sum of Rupees 47,68,235.

stances of the Eastern and Central deltas are in this respect very similar to those of the Western. All the talooks enjoy the advantage of water communication both with the seaports and with the inland markets of Rajahmundry and Ellore. The conclusion already arrived at, *viz.*, that with the present and prospective cheap rates of freight, produce when once on the bank of the main canals leading to the great ports, may be placed on the same footing all over the delta, is applicable to all three deltas alike.

77. In the Central delta, three main canals run right through the Rali talook, and afford first rate navigation to the whole of it, there being only two villages more than three miles from one or other of the canals. The Nagaram talook is not quite so well off; the main canal not being navigable below Sevakodu, but from the insular position of the talook, and from its being situated on a tidal branch of the Godavery, affording communication by means of the new lock at Narsapur, with the main canal of the Western delta, very few villages need suffer from any difficulty in conveying their produce. In Amlapur, owing to the non-completion of masonry works, the canals are only partially available for navigation. The facilities now enjoyed will be increased on the construction of the Mukamala lock, already sanctioned, and as it will in all probability be built before the introduction of the settlement, I have, in adjusting the navigation grades of the talook, considered it as built. Although the talook has, at present, few navigable canals, the northern villages being situated on the Gowtami branch of the Godavery, within tidal influence, and many of the eastern villages on or near the Vrutha Gowtami, also tidal, are furnished with easy access to Ingeram and Coringa, and by means of the lock into the Coringa channel, with Dowlaiswaram and Rajahmundry also.

78. The Eastern delta is amply supplied with navigation facilities, and the communication is constant and first rate. The Kota Ramachendrapur and the Bikkavol talooks, are each intersected by three of the main canals, affording safe communication with the seaports of Cocanada and Coringa, and with the upper parts of the District. In neither talook, is there a village more than three miles from a canal. In Bikkavol, there are four villages on or near the Gowtami Godavery; but in that locality, it is tidal, and affords communication with Coringa. The delta portion of the Kapavaram talook, is intersected by two main canals, and of the villages, 26 in number,

all are within three miles from one or other of the canals with the exception of three villages, which are four miles off. The two Government villages in the Cocanada talook are within two miles from the Coringa main canal.

79. As in the Western, so in the Central and Eastern deltas, there are literally no roads, and the use of bandies is consequently impracticable. Here and there, a line of road has been traced, but that is all. It is unmetalled and unbridged, and differs only in name from the fields on either side. As the bulk of the delta land consists of black soil, the country is generally impassable after the commencement of the monsoon, while the numerous irrigation channels of various widths, which now intersect the country in all directions, add greatly to the obstacles to communication. The village lanes or puntas are often on the lowest level, and if not submerged by rain, are frequently flooded by water which has escaped from the irrigation channels. There can be no doubt that however beneficial, in other respects, the irrigation channels have been and are, their introduction has rendered the system of village communications far worse than it was before, and this state of things is aggravated by the paucity of bridges over the smaller, and ferries over the larger channels. It is true that the absence of bridges over the minor channels, is due in a great measure to the apathy of the people: a couple of palmyra trees, a few leaves, and half a day's labor, would provide the necessary means of crossing, but they go upon the principle, that "what is every body's business is no body's business" and men, women, and children flounder through the mud, without ever thinking of making an effort to remedy the inconvenience. All the talooks, however, are not equally deficient in the matter of bridges, and in this respect Nagaram is honorably distinguished; numerous bridges having been provided for the smaller, as well as for the larger channels, adding greatly to the comfort of both residents and travellers. For this, however, the former have to thank the Public Works Department, and not any exertions of their own.

80. The banks of the main canals are the only real roads in the deltas, and very good ones they would be, if they had been every where levelled and smoothed at the time they were thrown up. In many places, this was not done at the time, and the surface having been thus irregular from the first, has gradually become more so

from the fissures caused by rain, and they now form very rough roads indeed. Still, the banks are in wet weather better than no roads at all, and are generally great thoroughfares for passengers, though not for goods. The bulk of the produce of the delta is naturally conveyed by water, though for short distances the old system of bullock carriage is still adopted. One is occasionally apt to smile on meeting a drove of bullocks travelling slowly along the bank of a main navigation canal, each bearing two small bags of grain, the whole of which might be contained in a small boat, but it by no means follows that the mode of transit adopted, is not the most convenient as well as the cheapest, particularly where the ryot has contracted to deliver the grain. The bullocks, if not employed in conveying it, would probably be doing nothing for their keep, and they must at any rate have been used to transport it from the village to the canal bank, beyond which if the distance to be travelled is comparatively small, it will be found more convenient to take the bullocks on, than to unload them and ship the grain to be perhaps landed and again placed on bullocks at the end of the water journey.

81. In paragraphs 107 to 112 of the Western delta report, I entered at some length into the cost of land carriage, and the disadvantages under which villages distant from the canals labored, and I drew up a proposal for placing them in grades according to the navigation facilities enjoyed, and recommended a scale of reduction in the water rate to be allowed temporarily on this account. I have now made similar calculations for the Central and Eastern deltas. For the Western delta, I proposed five grades, and divided the canals into two classes, *viz.*, perfect and imperfect. In the Central and Eastern deltas, the classification of the canals will be unnecessary, as they all afford constant and safe navigation. In the Western delta, scarcely a village is more than five miles from a canal, and three grades for each class were sufficient. There are, however, in the Amlapur and Nagaram talooks, several villages varying from five to nine miles from a canal, and I propose to place such in a fourth grade. The 1st grade to have no reduction in the water rate, the 2nd to have 4 annas, the 3rd, 8 annas, and the 4th, 12 annas, per acre. Detailed statements showing the navigation facilities for each village are given in Appendix U, and the following abstract shows the number of villages falling under each grade for each talook in the two deltas.

	Nagaram.	Amlapur.	Rali.	Kota Rama- chendrapur.	Bikkavol.	Kapavaram.	Cocanada.	Total.
No. of villages on or within one mile of a perfect canal.	18	29	29	38	32	14	...	160
Do. from 1 to 3 miles.....	15	20	8	21	16	9	2	91
Do. from 3 to 5 miles.....	12	19	2	3	...	36
Do. beyond 5 miles.....	7	9	16
Total...	52	77	39	59	48	26	2	303

82. There are one or two villages in the northern part of the Pentapad Pargana now proposed to be settled, which are partially irrigated and enjoy navigation facilities from the Ellore high level canal. These villages are all situated on that canal, and will therefore not be entitled to any reduction for distance. It will be observed that more than half the total number of villages come under the 1st grade, and will require no allowance, and that of the remaining 142 villages, 91 will only be entitled to a reduction of 4 annas,

Talooks.	On Govt.			On Inam.			Total.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
1 Nagaram ...	4,431	3	0	2,024	13	4	6,456	0	4
2 Amlapur ...	7,309	10	8	2,212	6	1	9,522	0	9
3 Rali ...	195	3	3	291	0	11	486	4	2
4 Kota Rama- chendrapur.	2,155	1	6	1,186	11	8	3,341	13	2
5 Bikkavol ...	2,139	13	4	546	1	11	2,685	15	3
6 Kapavaram ...	202	9	10	15	4	6	217	14	4
7 Cocanada ...	2,839	10	3	1,665	2	3	4,504	12	6
Total...	19,273	3	10	7,941	8	8	27,214	12	6

while 15 only will require the highest rate of reduction of 12 annas. The reductions now proposed will, if granted, cause a diminution of the water rate calculated on the present irrigated area for the respective talooks as shown in the margin.

In the talooks of Amlapur and Nagaram, this amount will be very much reduced on the completion of the canals already sanctioned or proposed.

83. In the upper talooks, there are, of course, for the most part, no means of water carriage. To this, there are a few exceptions. Rajahmundry and Kottapalli have the main Godavery above the anicut, and the Peddapur talook is within easy reach of the Samul-cota high level canal and its branch to Cocanada. The bulk of the

produce of the upper talooks is, however, necessarily transported by land, and this is effected either on bullocks or tattoos, in cavedies on men's shoulders or on bandies. Some of the talooks enjoy tolerable roads, and where that is the case bandies are used. The Northern high road passes through the upper part of the Kapavaram talook, and there is a good branch road from it to Samulcota, and another from Peddapur to Juggampeta. A new road made from Yerravaram on the high northern road through the hills of the Lingamparru talook, as far as Annavaram is a great improvement, and might be continued to Juddangi with advantage. On the Western side of the river, the Southern road passes through the Rajahmundry, Tadimalla, and Pentapad talooks, and there is likewise a decent road from Yernagudem to Borrapalem in the Tadimalla talook, and thence to Chintalapudi. In addition to these regular roads, there are numerous pathways: the upper talooks are generally passable enough in the dry season, and as regards them, there is some truth in Colonel Sykes' statement, that "for nine months in the year all India is a road," though in no month of the year will the remark apply to the delta. Wherever possible bandies or bullocks are used, and the cavedy is only adopted for short distances. In the south of the District, there is also a very large cavedy traffic between Amlapur and Masulipatam, a distance of 65 miles. This uneconomical system will, doubtless, cease on the further development of the coast canal.

सत्यमेव जयते

NET PRODUCE AND MONEY RATES FOR DRY ASSESSMENT OF DELTA TALOOKS.—84. Taking the grain values, commutation prices, and calculations of cultivation expenses, already given, and deducting from the full gross produce one-sixth as proposed in paragraph 58, we ascertain approximately the net produce, and looking at both gross and net, obtain money rates as follows:—The annexed statement taken from Appendix V, shows the value of 30 per cent. of the gross, and of $\frac{2}{3}$ and $\frac{1}{2}$ of the net produce for the different classes and sorts of soil for the different grains taken, with averages and with the proposed rates for the first or exceptional class of villages in the delta. The statement is, in fact, the same as that given at paragraph 113 of the first report, with the addition of the particulars for the red soils, that series not having been found in the Western delta.

85. The next statement taken from Appendix W, gives the value of similar proportions of the gross and net produce with averages and proposed rates for the 2nd class of delta villages. This statement is, with the exception of the figures for the arenaceous series, the same as that given at paragraph 116 of the first report, with the addition also of the particulars for the red soils. It will be observed that the rates for the red soils are the same in both the 1st and 2nd classes of villages. As explained in paragraph 49, red soils not under the influence of tanks, are found to vary but slightly in productive power, and therefore two sets of rates only have been provided, one to be assigned to the 1st and 2nd classes, and the other to the 3rd and 4th classes of villages, the number of classes being required on account of the black soil.

	2	0	4 10	0	0 11	0	2 10	0	8 0		

86. By merging the rates for the above two classes, the following series are obtained :—

Tarams.	Rates.	
	Rs.	A.
1	5	0
2	4	8
3	4	0
4	3	8
5	3	0
6	2	8
7	2	0
8	1	12
9	1	8
10	1	4
11	1	0
12	0	12
13	0	8

87. Separate grain values have been assigned to the 3rd and 4th classes of villages, but instead of going into all the proportions of gross and net produce, the rates have been adjusted by reducing each sort one rate for the 3rd, and two rates for the 4th class, in the combined scale of rates, and in this manner we arrive at the following series of rates for the several classes of villages :—

Series.	Class.	Sort.	1st Class villages.		2nd Class villages.		3rd Class villages.		4th Class villages.		Rates merged.		
			4		5		6		7		8	9

COMPARISON OF DRY ASSESSMENT AND WATER RATE, WITH A CONSOLIDATED WET ASSESSMENT FOR THE DELTA.—88. In order that the dry rates at which we have arrived, with the fixed water rate added to them, may be compared with the rates that would have been arrived at, had a consolidated wet assessment been fixed on the deltas, the following statement has been framed, showing the value of 30 per cent. of the gross, and $\frac{3}{4}$ and $\frac{1}{2}$ of the net produce, as well as the rates which those proportions suggest for the 1st class of villages. This is the same statement that was given at paragraph 119 of the first report with the addition of the particulars for the red soils.

Series.	Class.	Sort.	30 per cent. Gross.		$\frac{3}{4}$ Net.		$\frac{1}{2}$ Net.		Rates.	
			4		5		6		7	
			Rs.	A. P.	Rs.	A. P.	Rs.	A. P.	Rs.	A.

	13	1	3	6 0	5	0 0	3	12 0	4	8 0	
		2	3	0 0	4	5 4	3	4 0	4	0 0	
		1	3	0 0	4	2 8	3	2 0	4	0 0	
	14	1	3	0 0	4	2 8	3	2 0	4	0 0	
		2	2	10 0	3	8 0	2	10 0	3	8 0	

90. The rates merged are as follows :—

Tarams.	Rates.	
	Rs.	A.
1	8	0
2	7	8
3	7	0
4	6	8
5	6	0
6	5	8
7	5	0
8	4	8
9	4	0
10	3	8
11	3	0
12	2	8

By reducing these rates one taram for 3rd class villages, and two tarams for 4th class villages, the following series of rates for the four classes is obtained, and the annexed statement shows in juxtaposition for each, the dry rates with the addition of the fixed water rate of Rupees 3 per acre so as to allow of comparison.

Series.	Class.	Sort.	1ST CLASS VIL- LAGES.				2ND CLASS VIL- LAGES.				3RD CLASS VIL- LAGES.				4TH CLASS VILLAGES.

MONEY RATES FOR THE DRY ASSESSMENT OF THE UPPER TALOOKS.—

91. In the upper talooks as proposed in paragraph 58, one-fourth is to be deducted on account of vicissitudes of season and other contingencies; and the rates will consequently come out lower than in the delta. The annexed statement shows the value of the several proportions of 30 per cent. of the gross, and $\frac{3}{4}$ and $\frac{1}{2}$ of the net produce, with averages and proposed rates for the dry assessment of first class villages.

MONEY RATES FOR WET LANDS IN THE UPPER TALOOKS.—94. For the wet lands under tanks in the upper talooks, a consolidated wet assessment is required. The rates given in paragraphs 88 and 89 for comparison with the delta dry rates added to the water rate will not be suitable, since in framing them, only one-sixth was deducted from the value of the full gross produce to meet vicissitudes of season, &c., whereas on account of the greater fluctuations in the upper talooks, one-fourth must be deducted for our present purpose. Taking the same grain values as before, and the same rates of cultivation expenses, but deducting one-fourth instead of one-sixth from the full gross produce, the following statement has been framed showing the usual proportions of gross and net produce with the rates recommended for 1st class villages :—

Series.	Class.	Sort.	30 per cent. Gross.			½ Net.			¼ Net.			Rates.	
			4			5			6			7	
1	2	3	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.

3	6	1	4	0	10	5	10	8	4	4	0	5	0
		2	3	0	7	3	9	4	2	11	0	4	0
	7	1	4	6	2	7	4	0	5	7	0	6	8
		2	3	6	0	5	2	8	3	14	0	5	0
		3	2	5	10	3	1	4	2	5	0	3	0
	8	1	3	6	0	5	0	0	3	12	0	5	0
		2	2	11	2	3	10	8	2	12	0	3	8
		3	2	0	5	2	5	4	1	12	0	2	8

96. The rates merged are as follows :—

Tarans.	Rates.	
	Rs.	A.
1	7	0
2	6	8
3	6	0
4	5	8
5	5	0
6	4	8
7	4	0
8	3	8
9	3	0
10	2	8

These rates may be reduced one taram in the case of third class villages, and two tarams in the case of fourth class villages, and four sets of rates will then be obtained sufficient to meet the varying circumstances of the different classes of villages. Two additional sets of rates will however be required, as will be shown in the sequel, on account of grades of irrigation, and I therefore postpone giving the table showing all the rates at one view until that point has been noticed.

GRADES OF IRRIGATION FOR THE UPPER TALOOKS.—97. According to the original instructions, all tanks have been divided into two classes, *viz.*, first, such as are usually well supplied with water the whole season, sufficient for the entire area depending on them, and second, such as are indifferently supplied, with reference to the source of supply and also to the extent of ayakut depending on them. The lands under the tanks have also been divided into two grades with reference to their level, favourable or unfavourable situation, &c. As already mentioned in paragraph 49, the villages in the upper talooks containing tanks are divided into four classes. As a reduction in the assessment will be necessary in each class of villages on account of the second class of tanks, and another on account of the second grade of lands under it, each class of villages will require three sets of rates. It will not however be necessary, therefore, to have twelve sets of rates, as the different sets will merge into each other: six sets will be required, and these may be obtained by reducing each sort one rate in the general scale for each set. In this manner, the first set will apply only to the lands of the first grade under a first class tank in a first class village—the second set will apply either to lands of the first grade under a second class tank in a first class village, or to lands of the first grade under a first class tank in a second class village, and in like manner each of the other sets of rates will meet three or four conditions of lands. The six sets of rates are shown at one view in the annexed statement :—

Series.	Class.	Sort.	1st set of rates.		2nd set of rates.		3rd set of rates.		4th set of rates.		5th set of rates.		6th set of rates.		Rates merged.

SPECIAL MONEY RATES FOR THE WET LANDS IN THE PEDDAPUR TALOOK.—98. In paragraph 59, I have recommended special grain values for the wet lands in the Peddapur talook which are irrigated from the river Yeler, in order that the sugar-cane crops may be taken into consideration. The land in question consists entirely of the first and second sorts of class one, and is altogether, including Inams, some 5,700 acres in extent. Assuming, which we may fairly do, that sugar-cane is grown once in four years, and white paddy during the remaining three, the following statement has been prepared showing the several proportions of 30 per cent. of the gross, and $\frac{2}{3}$ and $\frac{1}{2}$ of the net produce, after deducting in the first instance one-fourth from the value of the full gross produce on account of vicissitudes of season and other contingencies, for four years, and the average for one year. The rates proposed are also entered, *viz.*, Rupees 10 and Rupees 8 per acre, for the first and second sorts respectively. These rates I consider moderate and fair. They will also apply to portions of land in one or two villages of the Lingamparru talook which are irrigated from the Yeler.

Class.	Sort.	Years.	Produce.	Produce per		Rate of value	Value of gross		Deduct †		Remaining gross		Cultivation ex-		Remaining net.		30 per cent. of		Net.		Net.		Proposed rates.

* Pooles of 20 Maunds.

GRADES OF DISTANCE FROM VILLAGE SITE.—99. This point was fully noticed in paragraphs 123 to 125 of the first Report. For the reasons there given it is impossible here to state with accuracy the amount of deduction which will have to be made from the land assessment on the principle of granting a reduction of one taram in the general scale to all fields situated beyond a radius of one mile from the village site where there are no compensating circumstances, such as separate hamlets or proximity to a road or channel. As however the estimates of financial results will be exaggerated unless some deduction is made on this account, I have in the talookwar statements, provisionally deducted 2 per cent. from the dry assessment of the talooks now reported upon, that being the proportion of deduction on the two talooks of the Western delta, by an inspection of the maps of which I have had the means of making the necessary calculations. This deduction has also been made from the consolidated wet assessment in the upper talooks. It has only been made talookwar, as any attempt to calculate its amount village by village would be futile.

APPLICATION OF MONEY RATES AND ASSESSMENT RESULTING.—

100. The application of the rates of dry land assessment in the delta talooks is shown in full detail in Appendices *BB* to *JJ*. The following statement gives the particulars in abstract form for the cultivated Jeroytec or Government land in each talook. It includes such portion only of the land coming under class one, as, according to the proposal made in paragraph 71, will be permanently assessed. The results for the actual lankas will be given separately. In framing a similar statement for the Western delta, I included in it the cultivated land only, excluding all waste land whatsoever, notwithstanding that a considerable portion of it was actually in the occupation of the ryots. I adopted this course because, as I explained in paragraph 126 of the first report, under the joint renting system, the whole of the Government lands in the village are at the disposal of the

ryots, and a very large proportion of the waste is actually entered in their names; a much larger proportion than it seemed at all likely they would in many cases retain, when they became obliged, under the ryotwary system, to pay the full assessment for all the lands they held, and though I felt no doubt that in many instances the ryots would prefer paying the assessment to relinquishing their fields, I could not assume that they would invariably do so; and in the absence of data on which to form an estimate of the proportion to be retained or relinquished, I thought it best to exclude all waste lands in the calculation of financial results. It has subsequently occurred to me that although under the circumstances above described, it is not possible to ascertain the proportion of waste likely to be retained in villages containing a large extent of it, there are numerous villages in which the waste bears so small a proportion to the cultivated area, and is consequently of so much importance to the ryots, that there can be no doubt that the whole will be retained in occupation. In such cases, there seems no reason for making any difference between the cultivated and waste, and I have therefore included both in the statements. It will be observed that the average rate per acre for the two deltas is Rupees 3-6-0, and that the rate in individual talooks varies from Rupees 4-8-9 to Rupees 1-4-10. The first occurs in the Rali talook, and is high in consequence of the large proportion of alluvial or lanka soil.

[illegible]

104. The Inam land has been classified with the Government and the assessment, also calculated in the same manner, will be found in detail in Appendices *W W* to *P P P*. As stated in paragraph 128 of the first report, this assessment will, in most cases, not come into operation, since quit-rent has already been imposed on these Inams by the Commissioner on other considerations. Without giving the proportions coming under the several rates, it will suffice here to state that the dry assessment on Inams in the delta talooks, including Inams in the lankas, the dry assessment on dry Inams in the upper talooks, and the wet assessment on those irrigated by tanks including the lands in the Poddapur talook watered by the Yeler, amount respectively to the sums entered in the following statement, which also shows the rate per acre for each description of land :—

ASALMENHA GARDENS.—105. In paragraph 129 of the first report, I explained the nature of the tenure by which lands denominated Asalmenha gardens are held, and I stated that the Inam Commissioner had been authorized by Government to deal with them as Inams, but that in the meantime owing to the questionable nature of their titles they had been classed as Government. I have not yet been informed by the Commissioner of the instances in which he has confirmed such gardens as Inams, and am therefore unable to state the amount by which the total Government assessment will eventually be reduced on this account. The amount, however, is not likely to be very large.

GRADES OF IRRIGATION FOR THE DELTA.—106. The Eastern and Central deltas being as regards irrigation generally, in a precisely similar condition to the Western delta, the proposals as regards grades of irrigation made in paragraphs 130 to 133 of the first report may be briefly repeated as equally applicable to the delta talooks now under report. It having been determined by you after consideration, that the numerous irrigation grades originally proposed are not required, and that it will be sufficient to distinguish between the lands to which the water will flow without being artificially raised, and those in which the use of picottahs or other artificial appliances is necessary, I recommended for reasons detailed that the allowance to be made on account of the necessity of using the picottahs should be 12 annas per acre, the reduction being made in the water rate; that a reduction of one rupee per acre should also be temporarily made in the water rate, to meet the cases of those lands which, from imperfect drainage, suffer from excess of water; and that a similar rate of reduction should be allowed in the case of lands receiving water, only after it has irrigated the high lands. The first two of these recommendations I beg to repeat for the delta talooks now under report; the third will scarcely be necessary in these talooks.

APPLICATION OF WATER RATE.—107. The following statement shows the area of Government cultivated land actually irrigated from the anicut channels in the delta talooks, with the full water rate on the same at Rupees 3 per acre, and also that rate reduced by the sums to be deducted on account of navigation and irrigation grades as proposed in paragraphs 81 and 106. It is right to mention here that the area entered as irrigated in the statement, is for some of the

talooks considerably larger than the area shown to be irrigated in Fusly 1269 (1859-60) according to the Revenue accounts. The reason for the discrepancy is, that my classifiers have entered as irrigated, all lands which have at any time received water since the opening of the channels, notwithstanding that they may not have been irrigated in the year of examination. In the Revenue accounts on the contrary, those lands only have been entered as irrigated, which actually received water in Fusly 1269 (1859-60.) In some parts of the Rali and Kota Ramachendrapur talooks, the ryots irrigated their fields a few years ago, but have latterly abstained from doing so, and during the past season especially, the ryots in many places aware that the settlement was about to be made, and hoping thereby to evade the permanent liability to pay a water rate, have purposely abstained from taking water, being in ignorance of the existence of Clause VI. of the rules for water assessment lately sanctioned by Government.

108. A statement follows showing the application of the water rate to the Inam lands actually irrigated in the delta talooks. As, however, by Clause X. of the rules for water assessment sanctioned by Government in their Order of the 22nd September 1860, No. 1,690, the levy of the full water rate will be confined to dry Inams converted into wet; and on those formerly imperfectly irrigated, but now fully supplied, the charge will be limited to Rupees 1-8 per acre. I have, in framing the following statement, adopted the plan described in paragraph 4 of my letter of the 17th January last, No. 24,

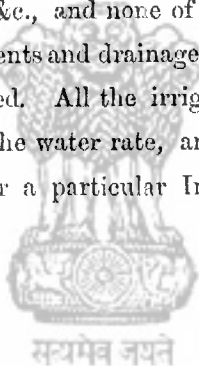

that is, on those Inams which are situated in villages the whole of the irrigated lands of which are dry converted into wet, the water rate has been calculated at Rupees 3 per acre, and the deductions for navigation and irrigation grades have been made; on those which are situated in villages, the whole of the watered lands of which are usual wet, the water rate has been calculated at Rupees 1-8 per acre, and no deductions have been made for navigation and irrigation grades; while on those which are situated in villages containing both descriptions of land, the water rate has been calculated on half the area at Rupees 3, and on the other half at Rupees 1-8 per acre, in all the talooks except Kota Ramachendrapur, Bikkavol and Cocanada, as the proportion of land coming under each description may be in round numbers estimated at one half the watered area. In Kota Ramachendrapur and Bikkavol, the proportion of usual wet land is smaller, and in Cocanada it is larger, and therefore in the two first named talooks, three-fourths of the irrigated Inams have been charged at Rupees 3, and one-fourth at Rupees 1-8 per acre, and in the last, one-fourth has been charged at Rupees 3, and

three-fourths at Rupees 1-8. The number of villages falling under each of the three classes above described is shown in the margin. This arbitrary division of the irrigated Inams in the villages containing both usual wet lands and dry lands, converted into wet, has been necessary to enable me to

frame an estimate of the produce of the water rate, because as already

explained in my letter of the 17th January, the rules for water assessment having only been lately promulgated, no attempt was made during the demarcation or classification, to separate, field by field, the two descriptions of land. Before the rules can be properly carried out, a detailed examination will be necessary, but in the meantime the statement furnished may be considered approximately accurate. It may be safely asserted that in none of the talooks will any Inam land come under the head of "formerly fully irrigated at the Government cost." Such irrigation as the wet lands received was always uncertain and precarious, and depended on various contingencies, such as the nature of the season, the sufficiency and duration of the freshes, &c., and none of the lands were protected from floods by embankments and drainage, nor had they the facilities for transport now enjoyed. All the irrigated Inam lands will consequently be liable to the water rate, and the only question to be decided will be, whether a particular Inam is liable to the full or only to the half rate.

SECOND CROP.—109. The final orders of Government fixing the water rate to be levied on second crop cultivation, have not yet been received, the matter being still under consideration with reference to their Proceedings of the 22nd September 1860, No. 1690. For the present the amount to be derived from this source, has been calculated at the rate originally proposed, *viz.*, Rupees 1-8 per acre, that rate being reduced one half in the case of the usual wet Inams with reference to Clause X. of the rules. While, however, I have made the last named reduction in the estimate in accordance with the letter of the rule, I feel by no means satisfied that it was the intention of Government to extend the indulgence to Inams cultivated with second crops, nor do I think that the Inamdars can fairly lay claim to it. The grounds for reducing their water rate on the first crop are obvious and fair, *viz.*, that they formerly received irrigation, occasional and precarious though it was, and raised wet crops such as they were, but they cannot assert that they ever grew second crops of paddy, except perhaps in a few places along the margins of madugus and lakes, on ground which during the earlier part of the season was too submerged to allow of a first crop being grown at all. In such places, dalwa crops were doubtless occasionally raised, but as pointed out on a former occasion, they ought to be considered first, and not second crops. There can, therefore, I think be no injustice in levying the full second crop rate, whatever that may be, on all Inams irrigated for a second crop, whether they come under the head of dry or usual wet, but as I am not aware that the question has been yet brought to notice, it is desirable that the proper course should be authoritatively declared.

110. The annexed statement shows the area irrigated for second crop in the Government villages of the several talooks in Fusly 1269 (1859-60) according to the Revenue accounts, with the water rate leviable thereon at the rates mentioned above. As the lands irrigated for second crop, do not always correspond with the survey fields, and as in many cases the examination by my Department was made before the second crops were laid down, I am unable to give the exact survey areas in the surveyed talooks, or the rough demarcation areas in the others :—

OPTION TO INAMDARS OF TAKING WATER.—111. In his letter to your address of the 25th January last, No. 4, Mr. Purvis raised the question as to whether Inamdars are to be allowed the option of taking or discontinuing water for irrigation, and in paragraph 58 of your letter to the Board of Revenue of the 27th February last, No. 323, you express an opinion that clause 6 of the water rate rules, lately sanctioned, which declares that lands once classed as wet shall not be transferred to dry unless the means of irrigation permanently fail, should be considered to apply to Inam equally with Government land. Assuming the correctness of this view, all cultivated Inams after being once classed as wet, will be liable to pay the water rate whether they take water or not, but the question still remains, whether Inams left waste, will be liable to the tax. A ryot holding wet Government land will, of course, be liable to both land assessment and water rate, as long as he retains it, and whether he cultivates it or not, but it is not clear that the same principle will apply to Inams, and unless the question is settled by authority, a difficulty may arise hereafter when it becomes necessary to attach a waste Inam (perhaps temporarily abandoned by its owner) in order to the recovery of the water rate upon it.

DIFFICULTY OF ASCERTAINING THE ACTUAL AREA IRRIGATED.—112. There has always been considerable difficulty in ascertaining the true area irrigated for the purpose of levying the water rate. Measurements are made by the karnams, which are afterwards checked by the talook officials, and occasionally again examined by persons deputed from the Huzár, but the extensive area over which these measurements have to be made, the limited time for making them, the inadequacy of the talook and Huzár establishments, and the interest which the villagers have in concealing the truth, all lead to unsatisfactory results. If the necessity for these periodical measurements can be done away with, a great object will have been attained. In the case of the first crop, whether on Government or Inam land, no difficulty will be experienced after the introduction of the settlement, since when once the land has been classed as wet, the water rate will be payable whether the water has been used or not, but in the case of the second crop the difficulty will occur in both Government and Inam land. This difficulty will be obviated if it be made a rule that any person taking water for second crop, shall pay the rate for the whole field and not for the portion actually irrigated

only. At present, the ryots irrigate portions of their fields for second crop, and without due notice, it would, no doubt, be hard upon them to levy the rate on the unirrigated portion. But when once it is thoroughly understood that the rate must, under any circumstances, be paid for the whole field, they will take care not to confine their second crop cultivation to portions of it. The survey fields and the interstitial fields, of which the true areas will be known, are all of moderate size in the irrigated talooks, so that the rule will be no hardship to the people, while its adoption will save not only endless labor to the Government servants, but also an incalculable amount of fraud on their part and on that of the people.

113. In Zemindary and Proprietary estates, it is much to be desired that a permanent arrangement should be made with each Zemindar and Proprietor, to add a fixed amount to the peshkush of the estate on account of the value of the irrigation supplied, leaving him to distribute the amount on the different villages. This course is desirable in order to get rid of the annual measurement of irrigated area, which would otherwise be necessary, for both first and second crops, as the estates will not be surveyed; and it is also to be advocated because the ryots in such estates will thereby be protected from an exorbitant demand to which they are certainly liable under the present system of levying the water rate through the Government officers. The Zemindars greatly enhance the rents of their villages owing to the increase of production caused by irrigation, and in addition, the Government levy a water rate. The ryots thus virtually pay for the water twice over, first to the Zemindar, and secondly to the Government; whereas if the Zemindar's peshkush were raised by a reasonable amount, and he became responsible for the entire collections, he would levy a consolidated rent from the village, and it would be his interest not to raise it higher than they could bear. The same principle might with propriety be applied to Mokhassa and Aghaharam villages. These will not be surveyed, and therefore unless a lump sum be added on account of water rate to their kuttubadi or quit rent, annual measurements will be unavoidable.

COMPARISON OF THE PROPOSED SETTLEMENT WITH PRESENT AND FORMER REVENUE.—114. The following statement compares the proposed settlement for the Government cultivated land, and also for such portion of the uncultivated land as for the reason given in paragraph 100 has been included in the estimates of financial results, with the demand for Fusly 1269 (1859-60,) and shows the per centage of increase and decrease. I have separated the amount of the proposed settlement on the main land which is to be permanently assessed from that on the lankas which cannot be so.

Talooks.	Proposed net dry as- sessment on cultiva- ted land, together with net water rate for 1st crop on ani- kut irrigated land, and consolidated rate on tank irri- gated land. 117. As the statement given at paragraph 114, only compares the proposed settlement with the revenue of Fusly 1269 (1859-60), for each talook, but does not show the extent to which the settlement results in increase or decrease in individual villages, I forward separate statements (Appendices *R R R* to *F F F F*) showing for each village the proposed settlement, consisting in the delta talooks of the dry land assessment plus the net water rate for the first crop, after deducting the allowance to be made for irrigation and navigation grades; and in the upper talooks of the dry assessment on the dry, and the consolidated wet assessment on the wet lands; together with the demand for Fusly 1269 (1859-60). In villages containing lankas which cannot be permanently assessed, the assessment nominally fixed on them, is shown separately from that on the main land. For none of the villages have I been able to deduct the allowance to be eventually made on account of distance from the village site, and consequently, except in the cases of small villages, all the lands of which are within a radius of one mile from the site, the assessment now entered is somewhat in excess of the true amount. In the course of demarcation, lands belonging to one village, and found to be isolated in another, have been transferred to, and included in the village in which they are geographically situated. In such cases, the total assessment of the village to which the land has been transferred, is augmented to a corresponding extent. As however these adjustments, unless the particulars are explained, will lead to an erroneous idea of the extent to which the settlement results in increase or decrease in the villages in which they have occurred, explanation is in such cases given in the column of remarks of the statements. The assessment on individual villages entered in these statements, includes that on such extent of waste as has for the reason given in paragraph 100 been included with the cultivated land, and at the same time in order to show the instances in which this course has been adopted, columns are added containing the area of classified waste, and the assessment thereon, in those villages in which it has not been included with the cultivated. In the villages opposite to which these columns are left blank, it will be understood, that all the Government land, both cultivated and waste, has already been included in the estimates.

118. As in nearly all the talooks there is a decrease in some villages, and an increase in others, the following statement has been framed to show the gross increase, the decrease, and the net increase or decrease :—

120. In the case of Government land, no object will be gained by comparing the amount of water rate now proposed to be levied for the first crop with the *teerwajasti* hitherto collected; because, although latterly *teerwajasti* has been levied and credited separately in the accounts for a long period, large additions were almost annually made to the amount of the joint rents, avowedly on the ground of the increased profit derived from the irrigation. No doubt other circumstances also conduced to the enhancement of the rents, and we are consequently prevented from considering as *teerwajasti*, the entire increase after the first receipt of water. The following statement compares the *teerwajasti* hitherto levied on the second crop in Government land with the water rate to be levied on the same area, as per proposed settlement; but, as already observed, the rates to be levied on second crop, have still to be finally fixed :—

No.	Talooks.	Teerwajasti levied for Fusly 1269.		Water rate as per proposed settlement.		Increase.		Per centage of Increase.

APPLICATION OF WATER RATE TO ZEMINDARY AND PROPRIETARY ESTATES AND AGRAHARAMS.—122. In paragraph 2 of your Proceedings of the 10th December last, No. 1,385, information is desired relative to the increase of revenue likely to be derived from the imposition of the water rate on Zemindary and Proprietary Estates. As neither the detailed enquiries of my department nor the operations of the Survey have extended to these estates, I am unable to furnish exact information on this point. Two statements are appended (Appendices *G G G G* and *H H H H*) showing the extent of land irrigated by the ancient channels in such estates, as well as in Agraharam villages in the Government talooks, according to the Revenue accounts, and the amount of *teerwajasti* levied in Fusly 1269 (1859-60). The particulars are given for both first and second crops, and columns have been added showing the effect of applying to the same area, the rates recently sanctioned in the case of the first crop, and those originally proposed in the case of the second, the rate to be ultimately levied being still undetermined. The land has been divided into "usual wet" and "dry converted into wet" on the principle described in paragraph 108. The annexed statement is an abstract of the Appendices above mentioned and it will be noticed that an increase of 38 per cent. over the amount levied in Fusly 1269 (1859-60) results from applying the proposed rates to the areas given :—

TALOOKS.

GRAZING IN WASTE LANDS.—123. If the rule proposed in paragraph 142 of the former report is approved, the Government waste land in the delta talooks will be allowed to the villagers, in common, for pasturage, free of charge. The grazing lands in the upper talooks will, however, require different treatment. In many villages, the cultivation is of small extent, and the ryots derive considerable profit from their pasturage. They not only feed their own cattle, but take in to graze large herds which are removed from the delta talooks by their owners as soon as the ploughing season is over. There has hitherto been no separate poollery tax, as it is included in the village joint rents. In the order of Government of the 18th July 1856 on the poollery tax of Guntoor, it is declared that “the free use of really waste and unoccupied land for pasture will be preserved to the ryots according to the common custom of the country. But any waste lands applied for as pasture at the full assessment will be so given to the applicant on puttah: ryots of the village will have the preference over strangers in taking land for pasture as they have in taking land for cultivation; and further to prevent evasion, those lands which are especially fitted for pasture, and which have hitherto been rented out for that purpose, will be set apart as ordered in paragraph 14 of the order of the 8th September, and will not come under the rate for unoccupied waste, and any parties using such reserved land will be required to pay the full assessment:” and in the latter part of paragraph 12 of the same order, the following occurs. “In Rajahmundry and Masulipatam, the grazing lands are expressly stated (paragraph 14) to be included in the village joint rent; and this will continue until a field settlement shall be introduced, when the poollery should be settled on the same principles as those applied in the present order to Guntoor.” The order which I have quoted will now, I presume, be carried out in the upper talooks: as, however, the grazing lands for the most part have neither been demarcated in detail, nor classified, nor assessed, the assessment to be imposed upon them, should be in the nature of a rent.

MODE OF TREATING CULTIVATED BACK YARDS.—124. In the talooks, of Nagaram, Amlapur, and Rali, a very considerable extent of land is in numerous villages held by the ryots, free of assessment, under the title of “Pati Parrallu” or back yards. All back yards properly so called, and forming part of the village site, have, under our

demarcation rules, been included in it, and classed as Asalmenha, but the lands to which I now allude are back yards only in name. They are situated for the most part at a distance from the villages, are often many acres in extent, and almost invariably cultivated; some of the best cocoanut gardens in the country being found among them. These lands were originally acquired in various ways; some doubtless by unauthorized encroachment, and others by gift from the former Proprietors of the soil. However acquired, there can be no doubt that in very many cases the present owners or their ancestors have held long and undisputed possession, though no title can be shown in addition to such long enjoyment. Full particulars regarding these yards are given in Appendix *IIII*, and it will be seen that in many villages the area so held is more than 100 acres,

Talook.	Land.		Assessment.		
	A.	C.	Rs.	A.	P.
Nagaram....	1,553	8	4,400	3	4
Amlapur....	3,193	49	10,455	15	7
Rali... ..	632	69	2,716	9	7
Total...	5,379	26	17,572	12	6

and that in one, *viz.*, Amlapur, it amounts to 326 acres. The marginal statement shows the extent of land composing these yards in the three talooks, and the assessment to which they will be liable under the new settlement, if treated as Government. The holders will, doubtless, strongly object to pay

assessment on lands, which they have so long held free, but as the order of Government, dated 3rd January 1860, clearly brings such lands within the scope of the Inam Commissioner's enquiry, I have considered it my duty to classify and assess them all provisionally as Government. It is for the holders to prove their title or their long enjoyment before the officers of the Commission, on the issue of whose puttah they will, of course, be liable to such quit-rent only as may be imposed on them. At the same time, as I believe, that comparatively few holders of back yards have brought their cases before the Deputy Collectors, I deem it right to notice the subject prominently here, in order that should you consider any modification of the course I have adopted to be necessary, I may receive instructions accordingly.

HARASAL MAKTA VILLAGES IN AMLAPUR AND RALI.—125. There

Talook.	Villages.
Amlapur...	Indupalli.
Rali ...	Gangalakurru.
	Mungonda.
	Nandampudi.
	Sakurru.

are five villages in the Amlapur and Rali talooks, as noted in the margin, which have for varying periods been held either entirely or in part on harasal makta or fixed assessment, and it is now necessary to decide whether they have any right to a continuance of the indulgence which they have hitherto enjoyed, or whether they should be disposed of like other Government villages. In Indupalli, 451·80 acres are held

on harasal makta tenure, at the very moderate fixed assessment of Rupees 1,026-4-6, while the remaining land, only 62·42 acres in extent, is treated as ordinary Government, and pays Rupees 270-13-0. There are two orders on record issued by Mr. Bird in 1844, directing the harasal makta principle to be recognized, and that the assessment should not be altered, but forbidding the entry of the lands as Inams in the accounts. In the village of Gangalakurru, 579·60 acres are held on harasal makta tenure, at a fixed assessment of Rupees 1,319-4, while the remaining Government land, 134·80 acres, pay Rupees 622-13-6.

126. The Collector is of opinion that Mungonda should be treated as a Government village. Up to Fusly 1249 (1839-40), only Rupees 70 were entered in the accounts as harasal makta assessment, the ordinary Government shist being Rupees 500 in addition. In Fusly 1250 (1840-41) the whole of the land was fraudulently entered as harasal makta without any authority whatever. Nandampudi is called an Agraharam in the old accounts of Fusly 1208 (1798-99). No order can be found recognizing the right of the holders to enjoy it on an unchanged assessment. Since Fusly 1262 (1852-53), the assessment has remained the same, *viz.*, Rupees 940. For some years previously, it was still lower, having apparently been reduced in consequence of losses sustained by the villagers through floods and storms. There is nothing to show that the former Proprietors ever conferred this village on harasal makta tenure; the administration has been carried on as in other Government villages, and joint rent puttahs have been issued. Sakurru has been held on harasal makta tenure for very many years. An order issued by the late Collector, Mr. Smith, dated 19th February 1843, is extant, directing that the assessment should not be altered, as the favorable tenure had

been conferred by the former Proprietors. For the last 18 years, the assessment has been the same, viz., Rupees 209. In the accounts for Fusly 1215 (1805-6) this village is entered as an Agraharam.

127. It is understood that as regards Gangalakurru, an enquiry is going on before the Inam Commission, and it seems very desirable that the claims of the holders of the harasal makta lands in the other villages, should be also adjudicated on by that Department. In the case of Mungonda, the greater part of the land is undoubtedly Government, and it will be for the holders of the small portion formerly held as harasal makta to establish their rights before the Commission. In the mean time, all the lands in the five villages have been assessed in the usual manner. The annexed brief statement shows the assessment hitherto paid by each village compared with that of the settlement :—

Talooks.	Villages.	Present assessment.		Settlement assessment.		Increase.	
1	2	3		4		5	
		Rs.	A. P.	Rs.	A. P.	Rs.	A. P.

	Total...	652	52	344	0 0	1,871	15 0

lands styled "grant" are held on a favorable assessment, the privilege having been granted to the holders or their ancestors by the former Proprietors. The extent of land

so held in each village, with the assessment hitherto paid, and also that which under ordinary circumstances would be imposed under the new settlement is shown in the marginal statement. It will be observed that the lands in question are held at rather less than one-fifth of the assessment as now proposed. Under the existing orders of Government, the claim to a continuance of the enjoyment of these lands should be decided upon by the Inam Commissioner, and I have therefore provisionally assessed the whole in the usual manner, leaving the holders to procure puttahs from the Commissioner if they are found entitled to them.

GRADUAL IMPOSITION OF THE NEW ASSESSMENT.—129. In paragraph 149 of the first report I proposed that where the increase of assessment resulting from the new settlement exceeds 25 per cent. on the former revenue, such increase should be gradually imposed in the manner therein described. The same course will be necessary in the talooks now under report, but in adopting it I would recommend that in lieu of taking the revenue of Fusly 1269 in all cases as the amount to be gradually increased, the revenue of the Fusly immediately preceding the introduction of the settlement should be taken for this purpose. I mention this because I have reason to believe that in some villages the revenue of Fusly 1270 considerably exceeds that of Fusly 1269, and that though the settlement when compared with the latter shows a considerable increase, when compared with the former it shows so small an increase that there will be no occasion to impose it gradually. The settlement will not be introduced in all the talooks in the same Fusly, and in some, a year or two must still elapse before it can be brought into operation. The following statement divides the villages of each talook into classes, and shows in how many the increase or decrease is under 25 per cent., in how many from 25 to 50 per cent., and so on. :—

AVAILABLE SOURCES FOR EVENTUAL INCREASE OF REVENUE.—130. The following statement shows the extent of dry Government waste land which has been classified and assessed in the several talooks, together with the dry land assessment upon it, and the rate per acre. From this statement is excluded such of the waste lands in the actual occupation of the ryots as have for the reasons given in paragraph 100 been included with the cultivated land in the statements given at paragraphs 100 and 102.

133. There is also in the several delta talooks, Government land, cultivated and waste, capable of being irrigated in the present state of the works, to the extent, and which may bear a water rate to the amount shown in the annexed statement. The deduction on account of irrigation grades is for the cultivated land only, as I am unable to give the particulars for waste. The deduction for navigation grades is for both the cultivated and waste:—

Talooks.		Land.		Full water rate at Rs. 3 per acre.		Deduct on account of navigation grades.		Deduct on account of irrigation grades.		Net water rate.

135. In addition to the classified and assessed waste land, there are in the respective talooks, tracts of Government, which, as not being likely to be brought under cultivation for some time to come, have been neither demarcated, classified, nor assessed. It is possible that this land, or part of it, may eventually be brought under the plough. Its extent for the several talooks is shown in the margin, but no estimate can be now framed of the amount of

revenue to be hereafter derived from it.

136. An ultimate increase of revenue may also be looked for from the water rate to be levied on those lands which, though not now irrigable, will become so hereafter by the improvement and extension of the works, but I cannot now estimate the extent of land which may so become irrigable, or the amount of water rate to be derived therefrom.

ROAD FUND.—137. In paragraph 12 of the order of Government of the 19th October last, No. 1,906, it is directed that in all future settlements, the rates should be formed so as to include two per cent. for the road fund over and above the proper land assessment, and that this cess is to be levied by adding four pice to every Rupee of the demand. In connection with this point, the only doubt which occurs to me is, whether in the case of the delta talooks, the addition is to be made both to the land and water rate or to the land assessment only. In the latter case, the wet lands in the upper talooks will labour under a disadvantage compared with those under the anikut channels, since they will pay a consolidated wet assessment, to the whole of which the addition for the road fund will be made. I request instructions on this point.

REMUNERATION TO VILLAGE SERVANTS.—138. This subject being under the consideration of Mr. Pelly with reference to the order of Government, dated 3rd September 1859, No. 1,187, I need

not dwell upon the general question. Adverting, however, to paragraphs 9 and 10 of the subsequent order of Government, dated the 4th December 1860, No. 2,301, on the subject of that portion of the emoluments of village servants which consists of grain fees, I have caused a statement to be prepared showing the value in money of the grain fees received by the several classes of village servants for the talooks under report. The statement which is now forwarded (Appendix *J J J J*) has only been made out talookwar, but detailed villagewar accounts can be transmitted if required. With reference to paragraph 1 of your Proceedings of the 28th February last, No. 342, in which it is desired that accounts should be forwarded showing the emoluments of village servants, distinguishing the sums which are included in the present beriz for the several classes of officers, I have added to the statement, columns showing the emoluments which consist of land and ready money, in addition to the grain fees. The ready money allowances alone are included in the present beriz.

VILLAGES EXCLUDED FROM SURVEY AND SETTLEMENT.—139. In paragraphs 6, 7 and 8, I mentioned that certain jungly and feverish tracts in the upper talooks, containing but a small population, and a trifling area of cultivation, and bringing in but little revenue, had been with your sanction excluded from survey and settlement. The following statement shows the number of villages so excluded in each talook, the area as per Revenue accounts, the present assessment, and the average for each village. It will be seen that there are 148 villages in all, bringing in a total revenue of Rupees 13,098-13-8, and that the average revenue per village is only 88 Rupees. The total area is set down at 1,10,954 acres or 173-36 square miles, but these figures are far from the truth. The country composing the excluded tracts is excessively wild and jungly, and no attempt has ever been made to measure any part of it. I believe the real area to be at least double that stated:—

Talooks.	No. of villages.	Area as per Revenue Accounts.		Assessment for Fasly 1269.			Average assessment per village.		
1	2	3		4			5		
		Acres.	C.	Rs.	A.	P.	Rs.	A.	P.

EFFECT OF APPLYING TO THE EASTERN AND CENTRAL DELTAS THE AMENDED RATES PROPOSED BY THE DIRECTOR.—140. At paragraph 27 of your letter to the Board of the 27th February last, No. 323, forwarding my report on the Western delta, the rates originally proposed in the latter have been somewhat modified, and in other parts of the same letter, opinions are expressed adverse to some of the recommendations contained in the report, as for instance the reduction proposed to be granted in the water rate on account of distance from navigable canals. If the modified rates are applied to the other deltas also, the assessment will be considerably lower than that shown in the foregoing pages; but as the accounts on which the present report is based, were in an advanced state when your letter above alluded to was received, and as final orders on the various points have not yet been passed, I have not attempted to alter either the report or the statements which accompany it, so as to make them accord with the views expressed in your letter, but have retained throughout the rates originally recommended; nevertheless, as it will be desirable to show the effect of applying the amended rates to the delta talooks, I have caused a talookwar statement to be prepared containing full particulars, which is herewith forwarded (Appendix K K K K). The annexed statement is an abstract from it, and on reference to it you will observe that the application of the amended rates will cause a reduction in the assessment in the delta talooks of Rupees 65,869 or rather more than 10 per cent. :—

CONCLUDING REMARKS.—141. In conclusion, I have to express my regret that I have been unable to submit this report at an earlier date. Various causes have conduced to prevent its completion, among the chief of which have been the necessity of correcting erroneous classification in two talooks, and the time and attention which I have been obliged to devote to the ordinary Revenue duties of the Sub-Collectorate during the Jamabundy season. Since the report has been finished, its despatch has been still further delayed by the crippled state of the English Department of my office.

I have the honor to be,

Sir,

Your most obedient Servant,

(Signed) R. E. MASTER,

Offg. Dy. Director of Rev. Settlement.

Detailed list of classes of villages in the undermentioned talooks of the Godavery District.

I. Nagaram.*First Class.*

- 1 Appanapalli.
- 2 Appanaramunilanka.
- 3 Botlakurrudoddavaram.
- 4 Gudimellanka.
- 5 Kottapallilanka.
- 6 Lutukurru.
- 7 Mamidikuduru.
- 8 Maupalli.
- 9 Mogalikuduru.
- 10 Mondepulanka.
- 11 Nagaram.
- 12 Pedapatnam.
- 13 Podalada.
- 14 Ramarazlanka.
- 15 Razol.
- 16 Sakhinotipalli.
- 17 Sivakodu.
- 18 Sompalli.
- 19 Tatipaka.
- 20 Vadrevupalli.

Second Class.

- 1 Adurru.
- 2 Antaravodi.
- 3 Antaravedipalem.
- 4 Battelanka.
- 5 Betamallepudisavaram.
- 6 Chintalapalli.
- 7 Geddada.
- 8 Gudapalli.
- 9 Idarada.
- 10 Irusumanda.
- 11 Kadali.
- 12 Kattimanda.
- 13 Kesanapalli.
- 14 Komarada.
- 15 Kunavaram.
- 16 Lakkavaram.
- 17 Makanapalem.
- 18 Makatapalli.
- 19 Mulikipalli.
- 20 Malikipuram.
- 21 Mattapurru.

- 22 Mori.
- 23 Palagummi.
- 24 Paserlapudi.
- 25 Pedatippa.
- 26 Ponnamanda.
- 27 Rameswaram.
- 28 Senkaraguptam.
- 29 Viswasarayapuram.

Third Class.

- 1 Goganamallam.
- 2 Katrenipad.

51

2. Amlapur.*First Class.*

- 1 Ainavilli.
- 2 Chintapallilanka.
- 3 Godi.
- 4 Irusumanda.
- 5 Jagannadhapuram.
- 6 Kamini.
- 7 Komanapalli.
- 8 Kottalanka.
- 9 Krapachintalapudi.
- 10 Kunchanapalli.
- 11 Kundaleswaram.
- 12 Lutukurtitippa.
- 13 Mogallamori.
- 14 Mundivaram.
- 15 Nadupudi.
- 16 Nallamilli.
- 17 Pallamkurru.
- 18 Paserlapudilanka.
- 19 Sanapallilanka.
- 20 Tanelanka.
- 21 Tottaramudi.
- 22 Velivelapalli.
- 23 Vemavaram.
- 4 Bhatnavilli.
- 5 Bhimanapalli.
- 6 Bodasakurru.
- 7 Cheyer.
- 8 Chirrayanam.
- 9 Devarapalli.
- 10 Dontikurru.
- 11 Geddanapalli.
- 12 Godilanka.
- 13 Gopavaram.
- 14 Gopayalanka.
- 15 Gunneipalli.
- 16 Indupalli.
- 17 Kandicuppa.
- 18 Katrenikona.
- 19 Komaragiripatnam.
- 20 Kunavaram.
- 21 Munupalle.
- 22 Nangavaram.
- 23 Pasuvullanka.
- 24 Penumalle.
- 25 Perur.
- 26 Rellugedda.
- 27 Samanasa.
- 28 Siragatlalappi.
- 29 Siripalli.
- 30 Tandavapalli.
- 31 Vadaparru.
- 32 Vannechintalapudi.
- 33 Yedurilanka.
- 34 Vilasavilli.
- 35 Uppalaguptam.
- 36 Yentrakona.

Third Class.

- 1 Chinagadavalli.
- 2 Devaguptam.
- 3 Gollavilli.
- 4 Goraganamudi.
- 5 Guttinadivivemavaram.
- 6 Irumanda.
- 7 Komaragiri.
- 8 Kottapalli.
- 9 Lakshimivada.
- 10 Nimmakyalakottapalli.
- 11 Pata Injaram.

12 Pedagadavalli.
13 Polavaram.
14 Samantakurru.
15 Sannavilli.
16 Tadikoda.
17 Vuppudi.

76

3. Rali.

First Class.

1 Ankampalem.
2 Baduguvanilanka.
3 Bandarulanka.
4 Gangalakurru.
5 Isukapudi.
6 Katarlanka.
7 Kattunga.
8 Kottapalli.
9 Lakshminipolavaram.
10 Lolla.
11 Matsavaram.
12 Mosalapalli.
13 Mungonda.
14 Nandampudi.
15 Narikedamilli.
16 Palagummi.
17 Peravaram.
18 Potavaram.
19 Pulletikurru.
20 Pulidindi.
21 Razavaram.
22 Rali.
23 Ravulapalem.
24 Sakurru.
25 Tondavaram.
26 Vubalanka.
27 Vnkalagaruvu.
28 Vasantavada.
29 Velecher.
30 Yenugapalli.

Second Class.

1 Atrayapuram.
2 Billakurru.
3 Cadepalli.
4 Modekurru.
5 Munjavaram.
6 Nadupudi.
7 Pasumallie.
8 Pedapudi.
9 Uthchili.
10 Vaddiparru.

40

4. Kota Ramachen- drapur.

First Class.

1 Alamur.
2 Amuzur.
3 Angara.
4 Balantram.

5 Bhatlapalika.
6 Choppella.
7 Gangavaram.
8 Jannada.
9 Kalavacherla.
10 Kaler.
11 Kandulapalem.
12 Khandrika.
13 Korumilli.
14 Kota.
15 Kullamallavaram.
16 Kundur.

17 Kurmapuram.
18 Masakapalli.
19 Modukur.
20 Mutsumilli.
21 Nallur.
22 Panarru.
23 Pedapalla.
24 Pinapalla.
25 Sandipudi.
26 Satyavada.
27 Sivala.
28 Sundarapalli.
29 Tamarapalli.
30 Tatapudi.
31 Teki.
32 Vadlamur.
33 Vakattippa.
34 Vakattippa in the Mutha
of Khandrika.
35 Vallur.
36 Vedurumudi.
37 Undur.
38 Yandagandi.
39 Yerupalli.
40 Yerapotavaram.

Second Class.

1 Addampalli.
2 Bhimakrosupalem.
3 Tshodavaram.
4 Draksharama.
5 Jagannaikulapalem.
6 Matsara.
7 Nadurubada.

GODAVERY DISTRICT, NARSAPUR, }
24th April, 1861.

U.

Statement of Navigation Grades for the Government Villages of the undermentioned talooks.

No.	Villages.	Channel.	Whether on or if distant the No. of miles.	Nature of Navigation.	Grade in which placed.	Rate of proposed reduction in the water rate per acre.	REMARKS.
Nagaram talook.							
1	Mondepulanka ...	Main canal and vashista Godavery ...	on	Perfect.	1st.	None.	These villages are situated on the Main Nagaram canal, and also on the Vashista Godavery. The latter is here tidal, and by means of the lock now building at Narsapur, will afford access to the Palecole Main canal. The villages have therefore two separate lines of first rate navigation.
2	Manepalli ...	Do. ...	on				
3	Vadrevnalli ...	Do. ...	on				
4	Tatipaka ...	Do. ...	on				
5	Sompalli ...	Do. ...	on				
6	Rayalam ...	Do. ...	on				
7	Sivakodu ...	Do. ...	on				
8	Betamallepudi ...	Do. ...	1				
9	Podalada ...	Do. ...	1				
10	Gudimellanka ...	Vashista Godavery ...	on	Perfect.	1st.	None.	These villages though not situated on any canal, by being on the river have access through the Narsapur lock to the Palecole canal, a first rate line of navigation, to Rajahmundry and Cocanada, &c., for navigation to Narsapur the river suffices.
11	Ramrazlanka ...	Do. ...	on				
12	Appanaramuni-lanka ...	Do. ...	on				
13	Pedatippa ...	Do. ...	on

U.—(Continued.)

Statement of Navigation Grades for the Government Villages of the undermentioned talooks.

No.	Villages.	Channel.	Whether on or if distant the No. of miles.	Nature of Navigation.	Grade in which placed.	Rate of proposed reduction in the water rate per acre.	REMARKS.
Nagaram talook.—(Concluded.)							
34	Irusumanda ...	Main canal and vashista Godavery ...	4	Perfect.	3rd.	8 Annas.	These villages are more than 3 miles distant from the main canal and vashista Godavery, and are accordingly placed in the 4th grade. Some of them it is true are much nearer, and some even on the Vainateyem branch of the Godavery, but as this branch does not afford them a ready access to other lines of navigation, I have not taken it into consideration, and have calculated the distance from the main canal and vashista Godavery.
35	Mamidiknduru ...	Do. ...	4				
36	Kunavaram ...	Do. ...	4				
37	Idarada ...	Do. ...	4				
38	Appanapalli ...	Do. ...	4				
39	Botlakurrudodda- varam ...	Do. ...	4

42	Adurru ...	Do. ...	5				
43	Ponnamanda ...	Do. ...	5				
44	Gudapalli ...	Do. ...	5				
45	Lakkavaram ...	Vashista Godavery ...	4	Perfect.	4th.	12 Annas.	These villages being more than 5 miles from a canal are placed in the 4th grade.
46	Lutukurru ...	Main canal and vashista Godavery ...	6				
47	Makanapalem ...	Do. ...	6				
48	Komarada ...	Do. ...	6				
49	Makatapalli ...	Do. ...	6				
50	Goganamarham ...	Do. ...	7				
51	Katrenipad ...	Do. ...	6				
52	Kesanapalli ...	Do. ...	6				
Rali talook.							
1	Peravaram ...	Main ...	on	Perfect.	1st.	None.	Although the Amlapur channel is at present only available as far as Mukunnala in consequence of the want of a lock at that place, there can be little doubt that it will soon be constructed probably before the new settlement is made, and I have not therefore thought it necessary to place the canal under the head of "imperfect." Moreover, in the meantime, either the Gannaram or bank channels are within easy reach of most of the villages. The Bank channel is also susceptible of much improvement which will doubtless be shortly effected.
2	Razawaram ...	Do. ...	on				
3	Velicher ...	Do. ...	on				
4	Pulidindi ...	Do. ...	on

Bikkavol talook.								
1	Konkuduru	Toolayabhaga	on	Perfect.	1st.	None.	This talook has great navigation advantages, being traversed by no less than three Main canals, all leading to the great sea ports of Cocanada and Coringa, not a village in the talook is more than 3 miles from a canal offering constant navigation. 4 Villages are on or near the Godavery, but in that locality the river is tidal; there is always abundance of water and ready access is afforded to Coringa by means of the Neellapilli river.

Memo.—Although 30 per cent. gross of the 7th and 8th classes seems somewhat low compared to the proposed rates which are nearly the same as for the 3rd class, yet, as the cultivation expenses are less, the net profits are greater in the red soils, and so justify the rates.

(Signed) R. E. MASTER,

Offg. Dy. Director of Rev. Settlement.

GODAVERY DISTRICT,
NARSAPUR,
24th April 1861.

BB.

Estimate of the financial results of the new Settlement for the Government lands of the Nagaram talook, Godavery District.

1,469	8	2	85	10	0		

Land to be assessed at Rs. 227 has been included in this village from Vaddiparru.

Classification somewhat doubtful to be re-examined.

The great increase in this village is owing to its having been hitherto held on Harasal Makta tenure at an unduly low assessment. This indulgence should no longer be allowed unless confirmed by the Inam Commissioner.

Land assessed at Rs. 259 included from Munjavaram.

Increase chiefly in the water rate.

Land assessed at Rs. 15 transferred to Vadapalli.

Land assessed at Rs. 92-3 transferred to Potavaram and land assessed at Rs. 18-2 to Yenugapalli. See also remark opposite Gangalakurru.

1269 (1859-60) for every village in the Cocanada talook, Godavery District.

FUSLY 1269.			Percentage of increase.			Percentage of decrease.			AVAILABLE WASTE CLASSIFIED.			REMARKS.			
Total.									Land.				Assessment.		
7			8			9			10			11			12
Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Acs.	C.	Rs.	A.	P.	The increase appears very large, but the rent of Fusly 1269, happens to be very low. That for Fusly 1268 was Rs. 1,658 or nearly Rupees 300 more than the settlement land assessment. The village formerly paid as much as Rs. 4,300. The increase is almost entirely in the water rate.

Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Acres.	G.	Rs.	A.	P.	It is known that the true area of this village is much larger than that shewn in the demarcation returns according to which the settlement is calculated. The demarcation areas are believed to be a good deal overstated the rates of assessment are very low. Demarcation area rather overstated. This village formerly paid Rs. 2,200. The assets are Rs. 2,000. Although the increase is considerable the assessment is still below the permanent settlement. There is a large extent of waste which will probably not all be relinquished by the ryots and the decrease will not be really so large. There is reason to believe that the demarcation areas are overstated. Do. do. do. The assessments are Rs. 6,260. Demarcation areas believed to be overstated. This village formerly paid Rs. 1,800.

GODAVERY DISTRICT, NARSAPUR, }
24th April 1861.

(Signed) R. E. MASTER,
Offg. Dy. Director of Rev. Settlement.

Letter from H. Newill, Esq., Director of Revenue Settlement, to W. Hudleston, Esq., Secretary to the Board of Revenue, dated, 11th December 1861, No. 1606.

1. In continuation of the proposal contained in my letter of the 27th February last, No. 323, reporting on the Settlement of the Revenue of the Western Delta of the Godavery District, which received the sanction of Government in their Proceedings dated the 24th June following, No. 1231, I have now the honor to submit the following report on the proposed Settlement of the remaining por-

tion of the Godavery District, excepting a small portion* originally belonging to Masulipatam, and included in my report† for the Masulipatam portion of the Kistna District. A full report‡ on all particulars of the Settlement drawn up by my Deputy,

* Ellore Talook, Gundugolann Purganah.

† 12th October 1861, No. 1517.

‡ Appendix A, dated the 24th April 1861, No. 81.

Mr. R. E. Master, accompanies this.

2. This tract of country, described by Mr. Master in paras. 3 to 8, comprizes what are known as the Central and Eastern Deltas of the Godavery and the Upland talooks of the District, and contains a total area of about 1,337 square miles, distinguished as follows, according to the old arrangement of talooks :—

Talooks.						Square Miles.
Central Delta	{	Nagaram	135
		Amlapur	191
		Rali	74
Eastern Delta.....	{	Kota Ramachendrapur	101
		Bikkavol	106
		Cocanada	3
		Kapavaram	244
		Pittapur	2
Upland.....	{	Peddapur	39
		Lingamparru	35
		Kottapalli	78
		Rajahmundry	38
		Pentapad	87
		Tadimalla	103
		Chintalapudi	101
Total.....						1,337

The new division of the talooks will be followed in completing the Survey and Settlement records.

3. The Survey traverse areas were obtained for 4 talooks, and the detail field areas only for 3 talooks, and before they had been finally tested, the Survey operations not having proceeded far enough to admit of further details being supplied. These may be taken as sufficiently correct for the calculations for the 3 talooks in question, while those for the remaining talooks based on the Revenue accounts, with such corrections as the Demarcation establishment has been able to make by rough measurements and otherwise in the several localities, may also be considered sufficiently approximate to admit of the proposal being extended to them. Mr. Master shews, in para. 30, that the total of unsurveyed areas he has taken for calculation may be considered within about 7 per cent. of the truth, the difference being generally a deficiency. The corrections in the areas made during the demarcation are partly explained by inaccuracy in the rate of commutation in the Revenue accounts, and also by notorious circumstances of the lands having been hitherto understated or omitted.

4. To have waited till all the areas were available in due course, would have deferred the submission of this proposal for a considerable period, while it is of great importance that the Settlement should be introduced as soon as possible in order to secure adequate returns from the Anicut, and the course now pursued will admit of this being done immediately the Survey details are accomplished.

5. The Survey traverse areas of 4 talooks compared with the gross areas as given in the Revenue accounts, shew a total excess of 34 per cent. over the latter, varying from about 6 to 57 per cent. in the several talooks.

Talooks.					Revenue Accounts.	Survey Traverse.	Per cent- age of excess.
					Sq. Miles.	Sq. Miles.	
Pentapad	130.33	192.16	47.44
Nagaram	89.37	140.31	57.0
Amlapur	212.25	279.16	31.52
Total.....					431.95	611.63	41.60
Rali	114.73	122.22	6.53
Grand Total.....					546.68	733.85	34.24

The excess exists mostly in localities where there are extensive tracts of waste, and arises from their having been either not at all, or only nominally, entered in the Revenue accounts. The discrepancy from the commutation of the local land measure to acres is comparatively small. If the Rali talook, in which the area is almost entirely cultivated and the same causes do not exist for the discrepancy, is omitted, the difference is an excess of about $41\frac{1}{2}$ per cent.

6. A comparison of the detail Survey areas, obtained for nearly 3 talooks, with those of the Revenue accounts, shews an excess of the former over the latter from 30 to 50 per cent. in the several talooks, or about 40 per cent. on the whole, but varying considerably on the different descriptions of the lands, as shewn below in the abstract of Mr. Master's statement in para. 29. This may be explained in part by the extension of cultivation to lands originally entered as Asalmenha or Poramboke and the rectification of their description at the classification.

Talooks.	Description of land.	Revenue Accounts.	Detail Survey Areas.	Difference.	Per-centage.
		Sq. Miles.	Sq. Miles.	Sq. Miles.	
Nagaram	Government.	43.78	82.02	+ 38.24	+ 87.35
	Poramboke..	16.34	12.08	- 4.26	- 26.07
	Inam	28.80	40.07	+ 11.27	+ 39.13
	Total...	88.92	134.17	+ 45.25	+ 50.89
Amlapur (63 villages)	Government.	48.96	76.84	+ 27.88	+ 56.94
	Poramboke..	16.30	16.22	- 0.08	- 0.49
	Inam	39.27	43.09	+ 3.82	+ 9.73
	Total...	104.53	136.15	+ 31.62	+ 30.25
Pentapad (18 villages)	Government.	42.22	65.28	+ 23.06	+ 54.62
	Poramboke..	9.21	9.25	+ 0.04	+ 0.43
	Inam	7.76	10.22	+ 2.46	+ 31.70
	Total...	59.19	84.75	+ 25.56	+ 43.18
Grand Total.		252.64	355.07	+ 102.43	+ 40.54

7. A similar excess of nearly 40 per cent. is found in the portion of the islands surveyed.

8. As described in paras. 6, 52 and 139 of Mr. Master's report, there are extensive hilly and jungly tracts* in which there are patches of land cleared for temporary cultivation, which is abandoned after a year or two for fresh clearings. The climate of these localities is most unhealthy, and it is also impracticable to fix any permanent limits to these grounds for Survey. They have accordingly been treated in the same way as similar lands in the Trichinopoly† District, and left for temporary Settlement from year to year until the cultivation assumes a more permanent character, and some more tangible basis is afforded for fixing a definite assessment on them.

* Kapavaram, Lingamparru, Kottapalli, Tadimalla, Chintalapudi.

† Appendix III, para 16 of Mr. Puckle's report, dated 23rd October 1860.

9. The classification was conducted on the same principles as those described in the report‡ on the Western Delta. The following statement shews the proportions of the different soils. The regar soils are 59 per cent. of the whole, the red nearly 29 per cent., the sandy 4 per cent., while the island and permanently soils are about 6 and 2 per cent. respectively.

Series.		Total Extent.	Per-centage.
		Acre.	
Alluvial	35,490	6
Exceptional	13,031	2
Regar	3,10,137	49
Do Mixed	54,502	9
Do Sandy	9,217	1
Red Soils	1,84,854	29
Arenaceous	22,037	4
Total.....		6,29,268	100

The other processes of the formation of the Assessment were carried out generally in the same manner as for the Western Delta already reported upon, except in some special cases which will be more particularly noticed. The same dry grains were selected for

the calculations of the Poonjah assessment, viz., Cholum (*Sorghum vulgare*), Cambu (*Holcus spicatus*), Raggy (*Eleusine coracana*), Black Paddy (*Oriza sativa*); for the Delta with the addition of Tobacco (*Nicotiana tabacum*) for the best islands. In the arenaceous series of soils, Cholum is omitted, and for the red soils Horse-gram is substituted for Raggy and Black paddy. White paddy has been taken as the produce grown on tank lands in the Upper talooks, except in the case of the Peddapur talook, where Sugar-cane, being the staple produce in rotation with Paddy, this crop also has been taken into account as grown every fourth year. This course is in pursuance of the general principle of forming the Assessment on consideration of the ordinary staple crops grown.

10. One-sixth of the gross produce has been taken as a deduction from the gross produce on account of vicissitudes of season in the Delta, and also for a part of the Rajahmundry talook and 2 villages of Pittapur above it, in consequence of their being under the same favorable circumstances as described by Mr. Master in para. 58. For the Upland talooks one-fourth has been allowed on this account. These deductions accord with those made for the part of the Kistna
* 12th Oct. 1861, No. 1517. District recently reported* upon.

11. In ascertaining the prices of produce for these localities, similar difficulties presented themselves to those described at length in my report† on the Western Delta, but the same course has been followed, and it is found that the same commutation rates may be adopted for the rest of the District as for the Western Delta. They are as follows :—

	Per Garce.	Per Putty.
	Rs.	Rs.
White Paddy (<i>Oriza communis</i>)	72	12
Black do. (<i>Oriza sativa</i>) ...	60	10
Cholum (<i>Sorghum vulgare</i>) ...	84	14
Cambu (<i>Holcus spicatus</i>) ...	60	10
Raggy (<i>Eleusine coracana</i>) ...	66	11
Horse gram (<i>Dolichos uniflorus</i>)	96	16
Sugarcane (<i>Saccharum officinarum</i>)	15
Tobacco (<i>Nicotiana Tabacum</i>	40

} Of 20 Maunds.

A Rajahmundry Putty contains from 1,200 to 1,400 lbs. of paddy, and 6 Putties are reckoned to the Madras garce.

12. The fertile Godavery islands occur in 7 talooks, and they have been dealt with in the same way as those in the Western Delta, the same exceptional rates being provided for them. Garden lands also are treated as in that locality and fall into the higher rates of the general scale, where their productive powers require this.

13. In paras. 21 to 22 of my report on the Western Delta, I dwelt upon the influence of markets and ports upon the resources of the District. The great united port of Cocanada and Coringa, as there stated, forms the great outlet for the produce of the District, and its influence is felt generally throughout the Delta, with the whole of which it is connected by means of water carriage, so that no distinction seems necessary for localities according to their proximity to it. The less favorable position of the Upper talooks in this respect is taken into account in arranging the classes of villages under the scales of money rates for the several localities.

14. The advantages of water transit are so general throughout the Delta, that no distinction is required in the Central and Eastern Deltas on this account, any more than in the Western Delta, in fixing the assessment. This subject was fully entered into in paras. 25 and 26 of my report on the latter. Out of the total number of 303 villages more than one half are either on or within 1 mile of a canal, nearly 100 more are within from 1 to 3 miles, 36 from 3 to 5 miles, and only 16 beyond that distance. As branch channels are extended, these differences in relative advantages will be rapidly equalized. The deductions proposed by Mr. Master in paras. 81 and 82 will not therefore be necessary.

15. As in the case of the Western Delta, a deduction of 12 Annas an acre or one-fourth of the full water rate is required where water is raised by the ryots by piccottahs or other appliances, and likewise a temporary reduction of 1 Rupee per acre, for lands which are, in the present state of the works, only imperfectly supplied or drained.

16. The subject of deductions on account of the distance of fields from the village site was treated of in my report* on the Masulipatam District, and the same conclusion as to there being no necessity practically for allowing these as a rule applies to this, as well as to the Kistna and Trichinopoly Districts.

17. Mr. Master, in paras. 49, 50, and 84 to 87, proposes 4 classes of villages for the Central and Eastern Deltas, with the same scales of money rates as adopted for the Western Delta, and further 4 more classes for the Upper talooks, making altogether 8 classes with as many scales of rates, 2 only of them being similar and merging together. He further proposes for the Upper talooks, 4 classes with 8 grades of irrigation. These appear to be unnecessarily numerous and in modifying the money rates so as to conform the Settlement to that adopted for the Western Delta, I intend to retain only 5 classes for the Poonjah assessment throughout the District and 3 for the Tank irrigation.

18. In paras. 31 to 33 of my report on the Western Delta I pointed out that Mr. Master had been led to propose too high a scale of rates for that locality and modified it accordingly. Dated 27th February 1861, No. 323. The present proposal for the rest of the District, which was drawn up on the same standard of calculation, must also accordingly be modified, so that the Settlement may be carried out in one uniform and consistent plan for the whole District. The figures in Mr. Master's report and statements will therefore be modified in this proposal. In forming the rates, as stated in my first report, 30 per cent. of the gross produce and one half to two-thirds of the net produce have been kept in view, and the result approximates generally more nearly to the standard of half the net produce. As repeatedly shewn, it is impracticable to make such calculations with any minute accuracy, where the elements which enter into them of gross produce, prices, cultivation expenses, &c. are all of a fluctuating character, influenced by numerous circumstances which can never be reduced to mathematical data.

19. The following statements shew the money rates of Poonjah assessment for the several classes of villages, and the consolidated rates for the Tank irrigation in the Upland talooks:—

21. The consolidated Nunjah rates for the Tank irrigation are resolved into a scale of 14 rates, as shewn in the margin, including two exceptional rates for the lands above alluded to in para. 9, of which sugar-cane and rice together are the staple produce, and of which the irrigation from the Yeler river is superior. Leaving the latter out of account, the scale varies from Rs. 7 to Rs. 2. As before explained, although a comprehensive scale for the whole District is required, the rates in each village will be few and the accounts simple.

22. The appended statements shew the result of the application of the Poonjah rates on occupation, waste and Inams in the Delta and Upland talooks; and of the consolidated Nunjah rates on Tank cultivation in the latter. The following abstract gives the amount and averages for the several talooks.

Talooks.		Occupation.			Waste.

23. In the Delta talooks the Poonjah assessment averages per acre Rupees 3-1-6 on occupation, Rs. 1-7-5 on waste, and Rs. 2-14-6 on the whole ; while the Inam lands average Rs. 3-1-8. The averages vary in the different talooks according to the fertility of the locality, ranging from as much as Rupees 4-4-5 on occupation in the superior soil and culture of the Rali talook down to Rs. 1-1-4 in the inferior soil

of Pentapad. In some talooks sandy tracts along the coast make the averages lower than in other places where such do not exist. The high average of Rupees 6-2-9 on 389 acres of waste in Rali is owing to a greater part of it being classed as island under the exceptional series and assessed at the rate of Rupees 12.

24. In the Upland talooks the average of the Poonjah assessment is Rs. 1-1-9 per acre on cultivation, Rs. 0-12-11 on waste, and Rs. 1-0-6 on both together; while on Inams the average is Rs. 1-8-11. The averages here too vary considerably in different talooks, being as high as Rs 3-6-4 on occupation in Rajahmundry on account of the special advantages noticed above in para 10; but ranging otherwise from about Rs. 1-8-0 in Kottapalli to about 10 annas in the poor talook of Pentapad. The averages on the waste vary from Rupees 1-2-0 to 7 annas.

25. The consolidated Nunjah assessment in the Upper talooks averages Rupees 5-1-6 on occupation, Rs. 3-7-9 on waste, and Rs. 4-15-1 on both together; the average on Inams being Rupees 5-3-9. The high average of Rupees 8-9-5 in Poddapur is in the superior culture and irrigation under the Yeler above explained. Omitting this exceptional case the averages range from Rs. 5-14-2 to Rupees 3-8-8 in the Pentapad talook, which thus appears inferior under every aspect.

26. Appendix C. gives particulars of the averages per acre of the land and water assessment combined for the several classes of villages and also the averages of the consolidated Nunjah assessment for the tank lands in the Upper talooks. The average land assessment

	R.	A.	P.

plus the water rate of Rupees 3 an acre, amounts for the whole of the Central and Eastern Deltas to Rupees 5-14-10 per acre on occupation, and Rs. 4-7-3 on waste, or on both together Rs. 5-12-0. This is about 13 annas an acre higher than the average on the Upland Tank cultivation. The averages on occupation vary from nearly Rs. 7½ to Rs. 4-2-0 in the several classes of villages. The averages of the several talooks are noted in the margin together with those of the Western Delta already reported upon.

Upon the whole the averages range somewhat higher in the Central and Eastern Deltas than in the Western Delta.

27. The assessment resulting from the application of the Poonjah and Nunjah rates, as shewn in detail in Appendices D. E., may be here conveniently stated for the whole District including the Western Delta, &c., already reported upon.

	Total	7,23,857	11,00,789	3,76,932	52
Total.	Government	19,04,281	23,31,946	4,27,665	22
	Inams	2,23,037	3,74,284	1,51,247	68
	Zemindary lands	1,23,563	1,79,146	55,578	45
	Total	22,50,886	28,85,376	6,34,490	28

31. The land and water assessment for the whole of the Godavery District, including the Western delta and also the Ellore talook and Gundagolana Purgana comprized in the Kistna settlement report,* amounts to Rupees 28,85,376 or Rupees 6,34,490 in excess of the Joint rent Settlement of Fusly 1269, being an increase of 28 per cent. The increase of the new settlement sanctioned for the Western delta was as much as 52 per cent. inclusive of about 4 per cent. to be allowed as a temporary reduction, but it was explained that this arose from special circumstances connected with that locality and that a proportionate increase could not be expected for the remainder of the District. In the Central and Eastern deltas and the Upper talooks, forming more particularly the subject of the present report, the settlement is Rupees 16,89,375 or Rupees 2,52,547 or 18 per cent., in excess of the Joint rent Settlement for Fusly 1269. It is to be observed, however, that the increase on Government lands is Rs. 1,11,800 or only 9 per cent., while on Inam lands and Zemindaries which have not been hitherto charged for water to the same extent as the Government lands, the increase is as much as 79 and 57 per cent. respectively.

32. It will be observed that the several talooks are affected in a different manner by the new settlement. In Rali the increase is 48 per cent. or not much less than the average for the Western delta and in the other Delta talooks it varies from 32 to 11 per cent. according to circumstances connected with the former mode of administration, such as the extent to which the area of cultivation, and the productive powers of the soil were fully taken into account and also the extent to which the water tax was hitherto levied on Inams and Zemindary lands. About half of the large increase in Rali arises from the latter cause, while a large portion of the land being rich alluvial deposit has been classified under the higher rates.

33. In Peddapur, notwithstanding the exceptional treatment in the adoption of higher rates for reasons above stated, the new settlement results in a small decrease of 3 per cent. In the Rajahmundry talook which has been treated as above explained, as possessing superior advantages in regard to security of crops, there is a decrease of Rs. 16,000 being as much as 30 per cent. below the Joint rent Settlement. Of this about Rs. 10,500 is in the assessment on islands, notwithstanding the adoption of the special rates of Rs. 20 and 12 per acre for the best of these lands. In respect to

the remainder of the decrease, it may be observed that the relief is mostly afforded in the red soils which are comparatively poor. Of Pentapad talook it may be observed that although it has come out the lowest in classing the villages, and also in the average rates of assessment there is still an increase of 21 per cent.

34. In carrying into effect so large an increase of assessment the same discretion must be allowed to the Collector in its gradual imposition as was accorded in the case of the Western delta Settlement.

35. The sources available for the further increase of revenue in the present state of the Irrigation works are considerable, particularly in the delta, as shown by the following abstract of Appendix F.

<i>Central and Eastern deltas.</i>		Aeres.	Rupees.
Waste available and land assessment ..	23,260	31,000	
Portion of the same irrigable and water assessment 15,008	45,024	
Waste islands	2,598	9,390	
Occupied dry land convertible into wet and water assessment Govt...	33,185	99,555	
..... Inam...	33,451	87,879	
Total ...	92,494	2,75,848	
Available resources in the delta portions of the Ellore talook and Gundagolana Purgana ...	41,640	1,68,012	
Add available resources in the Western delta already reported upon...	70,546	2,32,290	
Total for the whole delta...	2,04,680	6,76,150	
<i>Upland talooks.</i>			
Dry land waste	39,322	31,718	
Wet land do.	4,303	14,774	
Islands	453	2,072	
Total ...	44,078	48,564	
Available resources in the upland portions of the Ellore talook and Gundagolana Purgana included in the report on the Masulipatam portion of the Kistna District	14,037	22,858	
Total upland ...	58,115	71,422	
Grand total for the whole District...	2,62,795	7,47,572	

In addition to the revenue to be more immediately realized under the new settlement amounting to Rs. 28,85,376, there are thus resources for its increase to the extent of about Rs. 7,47,500.

36. Further tracts of land not likely to be taken up for some years to come, have not been demarcated or classified for survey and settlement. These contain about 1,33,000 acres which may eventually yield a further assessment.

Revenue of Fusly 1269, para. 30...	22,50,000	already observed, relates to the Anicut works
New Settlement, para. 30 ...	28,85,000	delta in round numbers at 12,00,000 acres
Available resources para. 35. ...	6,76,000	and deducting one-sixth for village sites and
Further resources para. 37 ...	10,00,000	other unproductive parts and assuming that
	45,61,000	the whole will eventually be brought under
Difference ...	<u>23,00,000</u>	irrigation, we may roughly take about

3,00,000 acres not accounted for above for water assessment, and about 1,20,000 acres for land assessment, and assign a further revenue of about Rupees 10,00,000 to this extent, making the available resources of increase beyond the amount of the present revenue about 23 lacs of Rupees.

38. The following table shews the great increase that has taken place in the irrigation since the construction of the Anicut works :—

Talooks.	Area irrigated prior to the construction of the Ancient works.				Area irrigated subsequent to the construction of the Ancient works.				Increase.
	Government.	Inam.	Zemindary.	Total.	Government.	Inam.	Zemindary.	Total.	
	2	3	4	5	6	7	8	9	
1	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

Undi	20,080	11,185	...	31,265	64,383	20,406	2,007	86,796	55,531
Ellore	3,168	...	546	3,714	7,676	...	1	7,677	3,963
Total.	62,818	31,132	546	94,496	621,918	1,39,279	46,257	4,46,484	3,51,988

The area formerly irrigated is taken from returns furnished by the Collectors of the two Districts under which it was formerly distributed and comprizes about 63,000 acres of Government land, 31,000 acres of Inam to which are added 500 acres of Zemindary and Proprietary land, making a total of about 94,500 acres. The extent of present irrigation is about 2,62,000 acres of Government, 13,900 acres of Inam and 45,000 acres of Zemindary land, or altogether about 4,46,000 acres. It is impracticable to pursue the comparison as to the former revenue from irrigation with that under the new settlement on the present extended area, as the Joint rent Settlement does not properly distinguish the particulars of this item in the general beriz fixed on the entire villages : but taking the increase on the area of irrigation, viz., 3,50,000 acres, at the full water rate alone under the new settlement without considering the portion newly brought under cultivation by the stimulus of the Anicut works, and chargeable with additional land assessment also, it may be safely concluded that the annual increase of revenue from the irrigation is now above 10 lacs of Rupees.

39. The indirect as well as direct returns from the Anicut works may be best gathered from a comparison of the revenue of the District and value of exports before and after their construction, for although other circumstances may have in a measure contributed to the increased prosperity, it seems unquestionable that the increase of land revenue and of the export and import trade has resulted in a very large degree from the development of the revenues of the District under the stimulus given by the important hydraulic works, and the advantages which have indirectly as well as directly followed from their construction.

40. I have detained this report for several weeks for the purpose of obtaining the requisite statements for the comparison above alluded to, but regret that I have not yet been able to obtain correct accounts for the whole of the Godavery District as now constituted. The following figures relating to the old Rajahmundry District will, however, in a great measure, illustrate the comparison.

	Before the Ancient Fusly 1256 A. D. 1846-7	At present 1269 1859-60	Increase.
	Rs.	Rs.	Rs.
Collections of Land revenue in the Delta talooks.....	9,98,011	16,34,569	6,36,558
Collections for the whole of the Rajahmundry District.....	12,30,665	19,37,519	7,06,854
Sundry sources of Revenue in the old Rajahmundry District..	4,07,748	Fusly 1270 A. D. 1860,61 7,31,493	3,23,745
Value of Exports.....	*13,56,336	42,14,745	28,58,409
Value of Imports.....	4,11,365	6,41,509	2,30,144

41. Some idea may be formed of the extent of the works from the following figures :—

	Main channels.	Subsidiary channels.	Number of villages watered.
Western Delta.....	4	30	421
Central „	4	28	218
Eastern „	4	55	360
Total...	12	113	999

42. A few other points connected with the Settlement remain to be noticed.

The mode of dealing with the pasturage of waste lands (as noticed in my report on the Masulipatam District) has already been disposed of in the orders of Government, dated the 18th July 1856, No. 747, which direct that the principles therein laid down for Guntoor should be applicable to this District on the introduction of the new settlement.

* This year was considerably above the average.

43. Patches of ground entered in the Revenue accounts as "yards" but which are not back yards of houses, they being situated out of the village site and generally cultivated, have been classified and assessed, although they have hitherto been exempted from assessment. The extent of these is considerable and often 100 acres or more in a village. In 3 talooks* they aggregate 5,400 acres with an assessment of Rupees 17,500. Many of these are doubtless encroachments on Government lands without any title beyond long possession. They were brought under the enquiry of the Inam Commission in the Order of Government, dated 3rd January 1860, but it would seem that few of the occupants have brought their claims to exemption from assessment before the Commissioner, and it seems desirable that that Officer should take up the subject generally from the information and accounts prepared by this Department during the settlement.

44. The "Asalmenha" gardens and the lands held on "Hara-sal Mucta" tenure and described as "grant lands" alluded to in paras. 105 and 125 to 128 of Mr. Master's report also fall within the scope of the Inam Commission.

45. In para. 109, Mr. Master raises the question as to whether the full water rate is to be charged for the second crop on Nunjah Inams, which under Section 10 of the Rules for levying the water assessment, sanctioned under date 22nd September 1860, No. 1690, are chargeable with half the water rate for the first crop in consideration of the former imperfect and precarious supply being superseded by a regular and full supply under the Anicut works. As no second crop was formerly practicable on these lands, the Inamdars cannot lay claim to any indulgence in levying the water rate on the second crop they may now be able to raise upon them, and are fairly chargeable with the full rate.

46. The difficulty pointed out by Mr. Master in para. 112 in ascertaining the area of lands irrigated for the second crop, arises from the practice which exists of Ryots being allowed to take second crop water for *portions* of fields. This is clearly an irregularity and should be put a stop to. The Revenue fields as now perpetuated are of moderate size, and no hardship will arise, provided due notice is given of the course to be adopted in future of charging the second crop on entire fields only.

Proceedings of Government,
dated 19th October, 1860,
No. 1906.

47. The road fund has been incorporated in the money rates and, as directed in the case of South Arcot, it will be formed by setting aside 2 per cent. of the revenue for the purpose.

48. The fees and other remuneration of village servants will require separate consideration as directed in the case of the settlement of the Western delta.

49. I have to request sanction for the advance of the sum of Rupees 6,700 for writing the English and Vernacular Registers out of the funds provided for that purpose in the Budget. This Estimate is framed at about Rs. 5 a square mile, which in the absence of further experience, has been adopted in the case of the Trichinopoly and Kistna Districts.

50. I cannot draw this report to a close without noticing the very able and indefatigable services of my Deputy, Mr. R. E. Master, in the conduct of the settlement operations in this District, which from many peculiar circumstances have required matured consideration, and the exercise of discretion and judgment of no ordinary character.

51. The results arrived at will, I trust, commend themselves generally to the approval of the Board and of Government as securing, along with a considerable accession to the public Revenue, a fixity of tenure and certainty of the taxation upon it, which, under the blessing of God, will contribute largely to the material prosperity and indirectly also to the social welfare of this important province.

I have the honor to be,

Sir,

Your most obedient servant,

(Signed) H. NEWILL,

Director of Revenue Settlement.

Appendices to the foregoing Report.

A.

Report of R. E. Master, Esq., Deputy Director of Revenue Settlement,
dated 24th April 1861, No. 81.
(*Printed ante page 1.*)

B.

Statement shewing the area and assessment under the several money
rates with an enclosure.
(*Not printed in this collection.*)

C.

Statement of the average rates for the several classes of villages in the
Central and Eastern Delta, and Upland talooks in the Godavery District.
(*Not printed in this collection.*)

D.

Statement of the particulars of the new Settlement in the Central and
Eastern Delta and Upland talooks in the Godavery District.
(*Not printed in this collection.*)

E.

Statement shewing the available sources of increase of revenue in the
Central, Eastern, and Western Delta, and Upland talooks in the
Godavery District.
(*Not printed in this collection.*)

F.

Statement comparing the new Settlement with the Joint rents of
Fusly 1269 in the Godavery District.
(*Not printed in this collection.*)

Letter from R. E. Master, Esq., Officiating Director of
Revenue Settlement, to W. Hudleston, Esq., Secre-
tary to the Board of Revenue, dated Madras, 30th
September 1864, No. 1,153.

1. Referring to paragraph 12 of the Board's Proceedings of
the 23rd July 1863, No. 4,541* and in continuation of Mr. Newill's
letter of the 11th December 1861, No. 1,606, I have the honor to

* Not printed in this collection.

submit a Supplemental report on the settlement of the Central and Eastern Deltas and Upland talooks of the Godavery District, with statements shewing the financial results of applying the proposed rates to the true survey areas.

2. The Statements submitted with the former Report were prepared according to the old arrangement of talooks, and the new Statements based on survey areas, were, in the first instance, drawn up by the Office establishment on the spot according to the same arrangement; but, as on consideration, it has appeared to me that the report will be much more intelligible to the local Officers, and that the introduction of the new assessment will be greatly facilitated if the new organization of talooks is followed on the present occasion, I have drawn up a revised set of statements in lieu of those first prepared. Though, by adopting this course, the completion of the report has been somewhat delayed, the loss of time will be fully compensated for by the more convenient form in which the statements are now submitted. The talook of Pittapur, which, as containing two Government villages, figured in the former report, finds no place in this—the two villages in question having been recently made over under orders of Government to the Zemindar of Pittapur, in exchange for the village of Dowlaiswaram, in the talook of Rajahmundry. The latter village has not yet been surveyed; but the rates which may be sanctioned for similar lands can be applied to it at the time of the introduction of the settlement.

3. It will be remembered that the original report embraced the whole remaining portion of the Godavery District, with the exception of the old Ellore talook and the Gundagol purganah of Pentapad. These tracts, comprising forty-two villages, which now form portions of the new talooks of Ellore and Yernagudem, were demarcated and classified by the Kistna settlement party, and included in the first report on the Masulipatam portion of that District, based on estimated areas, sent in by the late Mr. Morris, but were excluded from his second report, as at the time it was submitted, their survey areas had not been furnished. In order that the settlement of the whole District may be completed, it seems desirable that these forty-two villages should be disposed of with the talooks which formed the subject of the former Godavery Report, especially as the papers connected with the Masulipatam portion of the Kistna District have already passed through the Board's Office,

and are now before Government. I have been prevented from including, as was my wish, the particulars for these villages in the general statements for the rest of the District, as the preparation of the latter was very far advanced before I became aware that the survey areas for the villages in question had been furnished and were available; but had it been otherwise, I could not have submitted definite proposals for the settlement of twenty-two out of the forty-two villages, owing to the incomplete state of the accounts at my disposal. Twenty of the villages are Upland and the remainder partly Delta and partly Upland, containing land irrigated from tanks and land watered by the Anicut channels. I myself have no personal knowledge of the locality and the late Deputy Director instead of distinguishing the tank irrigation, to which the Upland consolidated wet assessment will be applied, from that under the Anicut, has lumped the whole together, applying indiscriminately the water rate. Before the effect of applying the proposed rates to the survey areas can be seen, it is absolutely necessary to separate these two descriptions of land; but the detailed accounts requisite for this purpose are not in my office; and it is undesirable to delay this report for the time that would be taken up in procuring them. If permission is given, the rates sanctioned for the rest of the District may be adopted in these villages also, or, should the Board desire it, a Supplemental statement regarding them can be hereafter submitted. There is not the same difficulty with respect to the twenty Upland villages; a proposal for settling which will be made in the sequel.

4. The Appendices to the present report are printed with it as was done in the case of that on Kurnool. The Appendices to the former report were sent in manuscript: the greater number of them having been prepared on the basis of estimated areas are now useless; but a few, such as the statement of cultivation expenses, price lists, &c., will be useful for reference and have now been printed with the statements subsequently prepared.

5. It seems unnecessary for me on the present occasion to touch on the mode of classification, the grain values, commutation rates, cultivation expenses and the processes by which the rates first proposed were arrived at. All these points were fully discussed in my own original report as Deputy Director and in Mr. Newill's

review of it. I will, therefore, at once proceed to a comparison of the estimated with the true results and will then suggest such modifications of the former proposals as seem to me advisable.

6. The subjoined brief statement gives the areas ascertained by survey for the several talooks as newly arranged. It will be observed that only two talooks are complete. The larger portions of Narsapur and Tanuku were disposed of in the Western Delta report. In Peddapur, Rajamundry and Yernagudem, extensive jungle tracts were omitted from survey, while the last named talook and Ellore contain the villages excluded from the former report and alluded to above in paragraph 3.

Number.	Talooks.	Government.	Inam.	Poramboke.	Total.
1	2	3	4	5	6
		Acres.	Acres.	Acres.	Acres.
1	Narsapur (52 villages)	51,503	25,492	5,609	82,604
2	Tanuku (4 villages)	15,994	2,078	1,799	19,871
3	Amlapur... ..	99,671	58,765	21,245	1,79,681

	Total...	6,37,479	2,36,997	1,36,033	10,10,509

7. The annexed statement compares for the Government villages, the areas according to the revenue accounts with the estimated areas given in the former report and with the detail survey areas now furnished—the Government, Inam and Poramboke land being separately shewn. The survey exhibits an excess over the estimated areas in every talook and in each description of land, with the exception of the portion of the Narsapur talook where there is an aggregate decrease of 5 per cent., and in the Inams of four villages in Tanuku where there is a decrease of 2 per cent. The aggregate increase in the whole is 20 per cent., the percentage of excess in the Government, Inam and Poramboke lands being 20, 10 and 43 respectively. In the Government land, the highest rate of increase is found in the Peddapur talook where the percentage is 35. In the other talooks, the rate varies between the above percentage of excess and 3 per cent. decrease.

8. The following statement shows the survey areas of the classified Government land in each talook, compared with the estimates given in the previous report, the cultivated land being distinguished from the waste. It will be seen that there is an average increase of 17 per cent. in the cultivated land and of 21 per cent. in the waste; the net increase on the whole being 17 per cent. In the different talooks, however, the proportions vary greatly; in the cultivated, from an increase of 40 per cent. to a decrease of 1 per cent. and in the waste from an increase of 45 per cent. to a decrease of 7 per cent.

9. The next statement shews the area by survey coming under each class and sort of soil in the several classes of villages, Government and Inam lands being included. Nearly three-fifths of the lands classified belong to the Regar series, and nearly one-third to the Red series, the Alluvial, Exceptional and Arenaceous forming the remainder. Full details of the classification will be found in Appendices A, B and C.

	Total...	4,71,871	2,36,997	7,08,868

12. The effect of applying the rates formerly proposed by Mr. Newill, to the survey areas of the cultivated land in the Government delta villages is shewn in detail in Appendices A, B, and C, the area and assessment falling under each rate being given. The following Abstract gives the totals for the several talooks, and compares the assessment according to the estimated areas with that according to the survey. I should here remark that for the reasons explained in paragraph 100 of my former report as Deputy Director, the waste land, when small in proportion to the cultivated and actually under occupation of the ryots, in accordance with the joint rent system, has been included under the head of "Cultivated." The lankas in the bed of the river have been altogether excluded from the present statement, for as, previously explained, they cannot be permanently assessed. Nevertheless, as stated in paragraph 71 of the former report, lands which, although from being within the river embankments are liable to be occasionally submerged by the freshes, are yet attached to the main land portions of the talooks, and are on so high a level as to be beyond the reach of any but the highest freshes, have been permanently assessed like the rest of the talooks to which they are attached. To these lands, the rates adopted in the Western Delta, viz., Rupees 20 and Rupees 12 have been applied.

Talooks.		ESTIMATED.		SURVEY.		Difference of Columns 3 and 5.	Per centage.

14. I now proceed to compare the assessment according to Mr. Newill's rates on the survey areas of the Government villages with the joint rents for Fusly 1269, the comparison being made separately for the Delta (including water rate), the Upland dry and the Upland wet land. The average increase over the joint rents is 12 per cent. in the Delta, 4 per cent. in the Upland dry, and 49 per cent. in the Upland wet, the average increase on the whole being 17 per cent. The very large percentage of increase in the Delta and upland wet portions and the corresponding decrease in the Upland dry portions of the four villages in Tanuku, as well as the large decrease in the Upland dry portion of Ramachendrapur, I am inclined to attribute to errors in the information received from the talooks as to the proportions of the joint rents on the several descriptions of land; for it will be observed that the aggregate increase in the villages in question is only 36 per cent. in Tanuku, and 11 per cent. in Ramachendrapur. It is well known that the ryots are careless of the manner in which the cist is apportioned on the several fields composing their holdings, so long as the aggregate amount payable is correctly allotted.

15. The total dry assessment on the cultivated Government land in the delta is Rupees 5,99,346, the water rate on the irrigated portion, Rupees 2,91,504, total Rupees 8,90,850, an increase of Rupees 98,944, or 12 per cent. The real increase, however, will not be so great. The Board are aware that throughout the District the area properly chargeable with water-rate has been over-estimated, in consequence of the Deputy Director having, in accordance with the orders then in force, and as explained in paragraph 107 of his report, classed as irrigated, all lands which had at any time received water since the opening of the channels, notwithstanding that they might subsequently have discontinued to take it. In the Western delta, the necessary corrections are now being made by a small special establishment employed for the purpose. Similar corrections in the entries for certain villages in the Eastern and Central Deltas will be required, and I hope to get them made before the settlement is introduced. Meanwhile, I have been able in many instances to anticipate the correction and have altogether struck out of my present estimate the water-rate previously calculated on villages, which though formerly more or less irrigated, I have ascertained to be now entirely under dry cultivation. I have also reduced the water-rate calculated for villages, the joint rent land assessment on which, exclusive of *teerwajasti*, is purely a dry assessment, the *teerwajasti* being charged on a limited portion converted from dry to wet. It is only in villages in which the *teerwajasti* now levied does not represent the total sum paid for water, the joint-rent land assessment being partly a wet assessment that I am unable to correct the estimate in anticipation of the local inquiry. It may be roughly estimated that these corrections when made, will further reduce the water-rate by Rupees 26,000. Again, the land assessment given above, includes also the assessment on *Asalminha* gardens and backyards, alluded to in paragraphs 105 and 124 of the first report, and which, for the reasons there given, have been provisionally assessed as Government land. If, as seems probable, the greater portion of these gardens and yards are eventually transferred to the head of *Inam*, the actual increase of the land and water assessment of the Delta villages over the joint-rents for *Fusly* 1269 will be reduced from 12 to about 7 per cent. The following statement shows the irrigated area and the water-rate chargeable on the Government land in the several talooks after the preliminary reduction above alluded to has been made. The gross amount charged has been reduced on account of imperfect irrigation, *picottah* expenses, &c., in the manner sanctioned in the Western Delta.

16. As regards the Delta portion of the District, I do not propose to make any change in the rates adopted by Mr. Newill. These rates have already been introduced throughout the Western Delta, where it is believed that they have been found moderate and fair. It is obviously undesirable to have different scales of rates for villages in the same District, similarly circumstanced, and only separated from each

other by one or more branches of the Godavary. Moreover, the scale hitherto adopted, meets the views of the Secretary of State in Council, who, in his Despatch on the Trinchinopoly Settlement, directs that the assessment be based on half the net produce. The marginal Statement compares the rates as proposed by Mr. Newill with half the net value of the produce, the latter figures being taken from the statements given at pages 61 and 63 of the Deputy Director's first

report. It will be seen that they generally bear out the rates adopted, the exceptions being in a few of the inferior sorts. In the case of the Delta lands, the 10 per cent. deduction allowed in Trichinopoly is unnecessary, looking at the generally favourable circumstances under which they are placed.

17. The circumstances of the Upland dry villages are different. Considering their generally remote situation, the entire absence of roads adapted to wheeled carriage, their distance from the navigable canals, and generally the unfavorable conditions under which the cultivation in them is carried on, I think that the deduction of 10 per cent. from the half value of the net produce, which was granted in Trichinopoly, may fairly be allowed in their case also. The annexed table shows the value of half the net and that proportion minus 10 per cent. with Mr. Newill's rates and the proposed revised rates for the several classes of villages. In many instances the rates first proposed remain unaltered. The rates where modified are entered in red ink. The application of the rates first proposed resulted in an increase over the joint rents of Fusly 1269 of 4 per cent., the application of the revised rates converts the increase into a decrease of 7 per cent. To the rich dry villages of the old Rajahmundry talook, described in paragraph 58 of the first report, the Delta rates have been applied, as was from the first intended and this circumstance will account for the presence of two distinct rates opposite several of the classes and sorts of soil in Appendix B.

18. For the wet lands under tanks I propose to make a still larger deduction from the value of half the net produce. The areas by survey are so much in excess of the estimate, that the application of the rates first proposed results in an increase over the joint rents of Fusly 1269 of 49 per cent. The calculations originally made are not necessarily erroneous, but the fact remains that for the land now cultivated, the ryots will, in the event of the rates first proposed being adopted, be called upon to pay, in the aggregate, half a Rupee in addition to each Rupee that they now pay. Knowing the general condition of the ryots of these talooks, I am satisfied that they could not bear this increase of assessment. The disadvantages alluded to above in the case of the dry lands, exist even to a greater degree in the wet. I beg therefore to recommend that a deduction of 15 per cent. be made from half the net produce. The annexed table shows the effect of making that deduction and the rates arrived at. It will be observed that no deduction is made in the rates for the first and second sorts of Class I. in the first class villages. These rates are special and apply exclusively to the Alluvial wet lands in the fertile valley of the Velairoo alluded to in paragraphs 48, 59 and 98 of the first report, and which labor under none of the disadvantages incurred by the other wet lands. They have a fertile soil, good irrigation, ample facilities for the transport of produce, and at a time when the price of jaggery was one-third of the present rate, and when it never figured as an article of export, as it now does to a very large extent, paid with ease an assessment equal to that now proposed to be levied. For these reasons no deduction has been made from half the value of the net, though, with reference to the principle laid down by the Secretary of State, the rate for the second sort has been reduced from Rupees 8 to Rupees 6. By the application of the revised rates to the wet lands generally, the increase over the joint rents of Fusly 1269 is reduced from 49 to 11 per cent.

Class.	Sort.	1st Class Villages.				2nd Class Villages.				3rd Class Villages.				Rates merged.

21. From the statement given at paragraph 20, no idea can be formed of the incidence of the new settlement on individual villages, or of the extent to which it results in increase or decrease in them. It is very important to note this, and I have therefore prepared villagewar statements for the several talooks (Appendices G. 1 to S). These statements shew the class of each village, its joint-rent for Fusly 1269, its assessment according to the rates first proposed, and according to those rates modified. The comparison is made with the joint-rents of Fusly 1269, because the new assessment is calculated on the area which was under cultivation in that Fusly, but the joint-rents for the two last Fuslies, viz., 1272 and 1273, are given in separate columns, and two columns also have been added shewing the area of waste land which has been classified and assessed with the assessment thereon. It will be understood that in the

villages opposite to which these two columns are left blank, there is no available classified waste, the whole area being under occupation, and, therefore, in such villages, except in the rare instances in which unclassified waste may have, in the meantime, been brought under cultivation, the joint-rents of Fuslies 1272 and 1273 are on the same area as the new assessment, and may fitly be compared with it. Explanation is given in the column of remarks of any large increase or decrease occurring in particular villages, and also of the cases in which the correct comparison of the new with the old assessment is disturbed in consequence of lands belonging to one village, and found to be isolated in another, having been transferred to, and included in the village in which they are geographically situated. Without such explanation, an erroneous idea would be formed of the extent to which the settlement results in increase or decrease in the villages in which the transfers have occurred. I will make a few observations separately on the statement for each talook.

22. *Nursapur talook* (52 villages) (*Appendix G. 1.*)—The land assessment is Rupees 93,348, the water rate Rupees 51,664, total Rupees 1,45,012. In Fusly 1269 the joint-rents were, including water rate, Rupees 1,42,006; in Fusly 1272 Rupees 1,48,475, and in Fusly 1273, Rupees 1,44,818. The water rate levied in Fusly 1269 was 24,482, and in Fusly 1273 Rupees 31,374. My present estimate, Rupees 51,664, will be reduced, as proposed in paragraph 15, on account of the land which has erroneously been classed as wet, but even after this reduction is made, I anticipate that the water rate will stand at a much higher figure than it did in Fusly 1273. As already explained, the *teerwajastl* hitherto levied, does not in all cases represent the total sum paid for water, the joint-rents having been previously raised with express reference to the irrigation received, and it was to be expected therefore that under the new settlement the land assessment, as purely dry, would be reduced. Again, the "usual wet" lands have been hitherto charged only 2 Rupees per acre, whereas in future such lands will pay 3 Rupees. The water rate, as first estimated, has only been reduced, in anticipation of the local inquiry alluded to in paragraph 15, by the small sum of Rupees 868. Supposing it to be hereafter further reduced by Rupees 10,000, the aggregate new assessment will be Rupees 1,35,012, *i. e.*, Rupees 7,000, or 5 per cent. below the joint-rents for Fusly 1269, and Rupees 9,800 or $6\frac{3}{4}$ per cent. below those

of 1273, but to it will have to be added the assessment on waste land newly taken up, and the water rate on land newly watered. I do not think that, on the whole, this result can be deemed unsatisfactory. In many instances a large reduction has been unavoidable. The rates hitherto paid in some villages have been far higher than the highest rates provided for ordinary lands in the present scheme. For instance, in Tatepaka and Vadrevupalli the whole cultivated area has hitherto been assessed at an average dry rate of Rupees 8 per acre. This has now been reduced to Rupees 4. Again, garden rates have hitherto been levied on the poor sandy soils on the coast devoted to cocoanut plantations. These lands have now been rated according to their ordinary productive powers. The average dry assessment on the cultivated land will still be Rupees 2-13-9 per acre. There are 8,737 acres of classified waste, assessed at Rupees 11,578, available for extension of cultivation, besides 10,122 acres of undemarcated and unclassified waste. The apparent large increase in many villages will disappear when the water rate estimate is finally corrected.

23. *Tanuku talook* (4 villages) (*Appendix G. 2*).—We have only to deal with four villages in this talook, all of which being situated on the Ellore high level canal, have portions of their area south of the canal, or in the Delta, and portions north of it, and therefore Upland. The land assessment is Rupees 5,222, the Upland wet assessment Rupees 1,318, and the water rate on the portion of the Delta land, which has been classed as irrigated, Rupees 6,157 total Rupees 12,697. In Fusly 1269, the joint-rents, including dry and wet assessment and *teerwajasti*, were Rupees 10,266, in Fusly 1272 Rupees 10,656, and in Fusly 1273 Rupees 10,667. The water rate levied in Fusly 1269 was Rupees 1,226, and in Fusly 1273 Rupees 2,309. My present estimate of Rupees 6,157 will be reduced on account of land erroneously classed as wet, but as the present land assessment on the Delta portion includes an item for irrigation, to be hereafter represented in the water rate, I do not anticipate that the aggregate new assessment will be less than the present joint-rents. There is available classified waste to the extent of 3,491 acres bearing an assessment of Rupees 2,659, and there are besides, 6,011 acres of unclassified waste.

24. *Amlapur talook* (*Appendix G. 3*).—The assessment is Rupees 2,09,178, the water rate Rupees 68,550, total Rupees 2,77,728

In Fusly 1269 the joint-rents were, including *teerwajasti*, Rupees 2,31,205, in Fusly 1272 Rupees 2,50,431, and in Fusly 1273 Rupees 2,50,080. The water rate levied in Fusly 1269 was Rupees 28,926, and in Fusly 1273 Rupees 42,168. My estimate of Rupees 68,550 will be reduced to some extent on account of the land erroneously classed as wet, in addition to the reduction which I have already made in anticipation of the local inquiry, but as the full water rate has not been in all cases hitherto charged, and as the old land assessment contains a proportion which is properly a charge for water, the sum to be hereafter levied in the shape of water rate ought to be considerably higher than that paid at present. The explanatory remarks entered opposite the villages shew that though in many cases the new settlement results in a large increase when compared with the joint-rents of Fusly 1269, that increase becomes very small, if indeed it does not disappear altogether, when the comparison is made with the rents of the last Fusly. In those villages in which there is a large decrease it is also shewn that the average rate per acre is high, and that the decrease is a necessary consequence of, and in accordance with, the general scheme of assessment. Supposing that the water rate be hereafter further reduced by Rupees 8,000, the amount remaining to be charged under that head will be Rupees 60,550. Again, assuming that the back-yards alluded to in paragraph 15 of this, and in paragraph 124 of the first report, the assessment on which, in this talook alone, amounts to upwards of Rupees 13,000, are all eventually transferred to the head of Inam the new assessment including water rate, will amount to Rupees 2,56,555, *i. e.*, Rupees 25,350, or 11 per cent. above the joint rents for Fusly 1269 and Rupees 6,475 on 2 per cent. above those for Fusly 1273. To this a slight addition will have to be made on account of the assessment on land newly brought under cultivation. The high average dry rate on the cultivation in this talook, *viz.*, Rupees 3-4-8 is owing to the presence in it of a proportion of Alluvial soil bearing the *lanka* rates of assessment. There are in the talook 7,704 acres of classified waste, assessed at Rupees 12,423 available for increase of cultivation, besides 28,454 acres of unclassified waste.

25. *Ramachendrapur talook (Appendix G.4).*—The land assessment is Rupees 2,95,162, the consolidated wet assessment on the small Upland portion Rupees 10,984, and the water rate Rupees

1,64,127, total Rupees 4,70,273. In Fusly 1269 the joint rents, including dry and wet assessment and *teerwajasti*, were Rupees 4,29,451, in Fusly 1272 Rupees 4,59,402, and in Fusly 1273, Rupees 4,72,037. The water rate levied in Fusly 1269 was Rupees 86,766, in Fusly 1273 Rupees 1,23,969. My present estimate of Rupees 1,64,127 will be slightly reduced on account of the land erroneously classed as wet, but to no great extent, as I have already struck out a large amount of water rate in anticipation of the local inquiry. The full water rate of Rupees 3 per acre has not been hitherto levied on the usual wet lands, and, as in the other Delta talooks, the land assessment includes a proportion paid for improved irrigation, besides the water rate separately entered. In future the dry assessment will be purely a dry assessment, and the full water rate will be charged on the fully irrigated land. The explanatory remarks opposite the several villages show that, as in Amlapur, the apparently large increase over the joint rents of Fusly 1269 in many cases dwindles almost to nothing when compared with the rents of Fusly 1273. A very large decrease is observable in some villages. These are chiefly under dry cultivation, and it will be seen from the remark column that they are generally assessed at the highest rates in the scale, and that the decrease is unavoidable. It is worthy of remark that numerous villages are now paying less *teerwajasti* than they did in Fusly 1269, and that several villages which in that year paid a considerable amount, now pay none at all. Assuming that the water rate estimated for this talook will be further reduced by Rupees 8,000, the new assessment, including water rate, will be Rupees 4,62,273, *i. e.*, Rupees 32,822, or 7 per cent. above the joint rents for Fusly 1269, and Rupees 9,764, or 2 per cent. below the joint rents for Fusly 1273. If, however, the assessment of the area since brought under cultivation be added, there will probably be no actual decrease. The average dry rate on the cultivation in this talook is Rupees 3-0-7 per acre. There are 9,136 acres of classified waste, assessed at Rupees 13,994, besides 5,183 acres of unclassified waste.

26. *Peddapur talook (62 Villages) (Appendix G 5).*—The dry assessment is Rupees 30,329, the consolidated wet assessment Rupees 93,583, total Rupees 1,23,912. In Fusly 1269, the joint rents were, dry, Rupees 33,267, wet, Rupees 85,155; total Rupees 1,18,422. In Fusly 1272 the joint rents were Rupees 1,30,273, and in Fusly 1273
aa50

Rupees 1,30,031. The result is an increase over the rents of Fusly 1269 of 5 per cent., and a decrease below those of Fuslies 1272 and 1273 of between 4 and 5 per cent., but this decrease will be diminished by the addition of the assessment of the waste land newly taken up. The greater part of this talook is Upland, but it includes eleven villages situated in the valley of the Yeler, which have been specially assessed. The average dry assessment in the talook is 13 Annas 1 Pie, the average wet assessment Rupees 4-9-10, but this last rate is forced up by the high assessment paid by the eleven villages above mentioned. Excluding them, the average wet assessment is Rupees 3-2-9. Explanatory remarks have, as in the other talooks, been made opposite villages in which a large increase or decrease is observable, and it will be seen how the large apparent increase diminishes when compared with the rents for Fusly 1273, and that too in villages containing little or no available waste. The eleven specially assessed villages are distinguished in the statement by an asterisk. The available classified waste amounts to 12,799 acres, assessed at Rupees 13,310, and there are besides in the talook, 15,931 acres of unclassified and unassessed waste.

27. *Rajahmundry talook (78 Villages) (Appendix G. 6).*—This talook is entirely Upland. The dry assessment is Rupees 45,997, the consolidated wet assessment Rupees 68,136, total 1,14,133. In Fusly 1269 the joint rents were, dry, Rupees 42,016, wet, Rupees 58,229; total Rupees 1,00,245. In Fusly 1272 the joint rents were Rupees 1,12,791, in Fusly 1273 Rupees 1,16,802. The result is an increase of 14 per cent. over the rents of Fusly 1269, an increase of 1 per cent. over those of Fusly 1272, and a decrease of 2 per cent. below those of Fusly 1273. If, however, the assessment on land newly taken up be added, it is improbable that there will be a real decrease. The average dry rate per acre is Rupees 1-1-7, and the average consolidated wet rate Rupees 3-14-3. There are 17,185 acres of classified waste, assessed at Rupees 21,800, besides 24,318 acres of unclassified waste.

28. *Ellore talook (42 Villages) (Appendix G. 7).*—The portion of this talook under consideration is entirely Upland. The dry assessment is Rupees 6,900, the consolidated wet assessment Rupees 11,230, total Rupees 18,130. In Fusly 1269, the joint rents were, dry, Rupees 9,237; wet, Rupees 10,918; total Rupees 20,155. In Fusly 1272 the joint rents were Rupees 19,390, and in Fusly 1273

Rupees 19,244. The result is a decrease of 10 per cent. below the rents of Fusly 1269, and of between 5 and 6 per cent. below the rents of Fuslies 1272 and 1273. The average rates of assessment, viz., 10 Annas 5 Pies on the dry, and Rupees 2-9-0 on the wet land, sufficiently indicate the poverty of the soil. The tract under notice comprises the Chintalapudi purganah of the old Tiruvur talook of Masulipatam, and is, in a great measure, overrun with jungle. A considerable decrease is observable in particular villages, chiefly in those which have hitherto paid garden rates on land quite unworthy of being exceptionally classed. In other villages, a considerable increase will be noticed in the wet assessment, the irrigated lands having hitherto paid almost a nominal rate. There are 4,976 acres of classified waste, assessed at Rupees 5,993, besides 39,380 acres of unclassified waste.

29. *Yernagudam talook (51 Villages) (Appendix G. 8).*—This is for the most part an Upland talook, but as the Ellore high level canal runs through four of its villages, the respective portions of them lying south of the canal require to be treated as the other Delta lands, and, where irrigated, are charged with water rate. The dry assessment is Rupees 59,587, the water rate Rupees 1,006, and the consolidated wet assessment Rupees 21,100, total Rupees 81,693. In Fusly 1269 the joint rents were, dry, Rupees 61,847; wet, Rupees 21,581; and *teerwajasti*, Rupees 81, total Rupees 83,509. In Fusly 1272 the joint rents were Rupees 86,315, and in Fusly 1273 Rupees 85,791. The result is a decrease of two per cent. below the joint rents of Fusly 1269, and of 4 per cent. below those of Fusly 1273, but as the assessment of land newly taken up has to be added, the actual decrease, if any, will be very small. The water rate may be slightly reduced on account of land erroneously classed as wet, but to no great extent. The irrigated area is increasing, as evidenced by the fact of Rupees 500, having been paid as water rate in Fusly 1273. The villages in this talook vary considerably in their character. Those lying along the bank of the Godavery, belonging to the old Rajahmundry talook, and all under dry cultivation, are very rich and fertile, while the inland villages, like those of Ellore, have, for the most part, a poor soil, and contain much jungle and unprofitable land. In a few villages there is a very large decrease without any apparent reason, and I am inclined to think that an erroneous class may have been assigned to them. These

cases will be especially inquired into at the time of the settlement, and, if necessary, the class assigned will be altered. The average dry rate for the whole is Rupees 1-3-8, and the average consolidated wet rate Rupees 2-12-0 per acre. There are 17,133 acres of classified waste, assessed at Rupees 15,673, besides 36,209 acres of unclassified waste.

30. The following Statement shows the extent of dry waste land which has been demarcated, classified and assessed in the several talooks, with the assessment thereon, calculated both at Mr. Newill's rates, and at the modified rates now proposed.

Talooks.	Extent.	Dry Assessment according to Mr. Newill's rates.	Dry Assessment as per revised rates.	Average Assessment per acre as per Mr. Newill's rates.			Average Assessment as per revised rates.

tivation within a reasonable period, have been neither demarcated nor surveyed in detail, nor assessed. The extent of this land in the different talooks is shewn in the margin. No estimate can, of course, be made of the revenue which may ultimately be derived from it.

33. In paragraph 3, I have explained why I am unable to make definite proposals for the settlement of twenty-two, out of the forty-two villages in the Ellore and Yernagudem talooks, which were classified by the Kistna settlement party. The particulars for the remaining twenty villages are given in Appendices H and I. The effect of applying to the survey areas the revised rates approved by the Board for the Kistna District, as well as the rates proposed in the foregoing pages for the 3rd class Godavery villages, is shewn, the results in both cases being compared with the joint rents of Fusly 1269. On the whole I am disposed to recommend the adoption of the 3rd class Godavery rates for these villages generally, reserving a discretion to raise or lower the class of an individual village here and there, should such a course appear desirable at the time of the introduction of the settlement. The result of applying the 3rd class Godavery rates to all the 20 villages is an aggregate decrease below the joint rents of Fusly 1269 of 6 per cent. The effect of applying the revised Kistna rates would be a decrease of 11 per cent. The following is an Abstract of Appendix I. It will be seen that the joint rents of Fusly 1272 and Fusly 1273 were somewhat higher than those of Fusly 1269, which is, no doubt, in part owing to increase of cultivation. There are in these villages 16,312 acres of classified waste, assessed at Rupees 18,394, besides 16,667 acres of unclassified waste.

34. I have not alluded to the subject of second crop. The extent to which it can be grown must vary each season, as it depends not only on the state of the river and the supply of water available in the channels during the dry season, but also on the arrangements made by the Engineer Department for the repairs of the channels. Such repairs are necessarily effected in the dry season and during their execution the channels must be closed. The water rate to be charged for second crop has been fixed by Government Order, 9th April 1861, No. 795, at the same sum as for first crop, viz., Rupees 3 per acre, sugar-cane, plantain gardens, betel and other products, which are on the ground for the time of two crops, paying a double rate or Rupees 6 per acre.

35. There are one or two points on which orders are required. In the Western delta the Road Fund has been deducted from the gross assessment. A similar course may, with the approval of Government, be adopted in the remainder of the District. In accordance with Government Order of the 15th January 1864, No. 90, the cess will be deducted in the case of the Delta lands from the dry assessment only, and not from the water rate.

36. I presume that the pasturage of waste lands in the upper talooks will, as supposed by Mr. Newill in paragraph 42 of his report, be dealt with in accordance with the Order of Government of the 18th July 1856, quoted in paragraph 123 of my Report as Deputy Director.

37. I request instructions as to the mode in which the back-yards, alluded to in paragraph 124 of my former report, and which may not have been adjudicated upon by the Inam Commission, should be treated in the settlement, as well as on the course to be adopted in the cases of the Harasal Mucta villages and grant lands described in paragraphs 125 to 128 of the same report. I am in communication with the Acting Inam Commissioner with the view

of ascertaining the extent to which these two latter classes of lands have been settled by his Department, and it will only be on the cases which have not been so settled that orders will be needed.

38. I have added to the other Appendices two statements, (J and K) containing information, which if not directly, is certainly indirectly connected with the settlement, and may be found interesting. The first shows the value of the exports from the Godavery District for the past twenty-nine years, and the second the value of the traffic on the navigable canals, as registered at the locks at the heads of the three Deltas for the past six years. From the statement of exports it will be seen that but for the large item of cotton, there would have been a serious falling of in the past official year.

I have the honor to be,

Sir,

Your most obedient servant.

(Signed) R. E. MASTER,

Offg. Director of Rev. Settlement.

15	16	17	18	19	20	21	22	23	24
Acs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Acs.	Rs.	
165	761	761	+32	...	776	703	11	21	Less than joint rents for 1272 and only 8 per cent. in excess of those for 1273.
194	808	808	+ 6	...	828	783	
1,182	4,314	4,314	- 1	...	5,010	4,915	
789	2,988	2,988	-25	...	3,800	3,798	New assessment averages Rs. 3-12 per acre. No wet cultivation.
1,993	8,950	8,453	+12	+ 6	9,375	10,584	438	1,027	Less than joint rents for 1272, and only 2 per cent. in excess of those for 1273.
688	2,525	2,525	+87	...	2,817	2,475	Land assessed at Rs. 57 included from Khandrika.
783	2,980	2,980	- 5	...	2,908	2,908	Only 8 per cent. above joint rents for 1273.
1,429	7,368	7,368	+45	...	6,331	6,778	
418	2,165	2,165	-20	...	3,061	3,083	
983	4,418	4,418	+11	...	4,780	4,761	Less than joint rents for Fuslies 1272 and 1273.
318	2,610	2,610	+120	...	1,263	1,263	162	443	Land assessed at Rs. 220 included from Vaddiparru. Nominal increase about 100 per cent. which is unobjectionable. The village contains much lanka land in the bed of the river, and the Ryots in apportioning their total cist allot an unduly small proportion to the main land portion, and an unduly large proportion to that in the bed of the river.
1,509	7,030	6,769	+10	+ 6	6,816	7,650	202	304	Less than joint rents for Fuslies 1272 and 1273.
301	2,015	2,015	+25	...	1,925	1,923	Only 4 per cent. above joint rents for 1272 and 1273.
316	1,880	1,880	+13	...	1,656	1,876	
154	844	844	+ 1	...	933	926	
621	3,362	3,362	+20	...	3,186	3,155	115	240	Only 6 per cent. above joint rents for 1273.
3,141	12,082	11,209	+ 7	...	11,709	12,755	
135	597	597	+19	...	640	640	Less than joint rents for 1272 and 1273.
272	1,447	1,447	+77	...	1,124	1,102	31 per cent. above joint rents for 1273.
199	830	830	+66	...	947	1,047	87	117	
359	1,612	1,612	- 2	...	1,811	1,991	
1,097	5,775	5,775	+98	...	3,689	3,689	Only 56 per cent. above rent for 1273. Land assessed at Rs. 43 transferred to Narsipudi, and land assessed at Rs. 59 included from Vadupalli.

REVENUE SETTLEMENT OFFICE, }
MADRAS, 30th Sept. 1864. }

(Signed) R. E. MASTER,
Offg Director of Rev. Settlement.

**Proceedings of the Board of Revenue, dated 4th April
1865, No. 1,839.**

Read again the following reports on the proposed Settlement of the Central and Eastern Deltas and the Upland talooks of the Godavery District, dated 11th December 1861, No. 1606, and 30th September 1864, No. 1153.

(Printed on pages 745 and 769.)

1. Ordered that the foregoing papers be submitted for the consideration and orders of Government with the following remarks.

2. The Government are aware of the cause which has led to the delay in the submission of these reports, but it may be well here to mention that the first set of proposals was based on estimated areas derived from the Revenue accounts of the Kurnum's measurement, with an arbitrary addition for excess to be discovered by survey. Meanwhile, however, it came to notice in the case of the Kistna District that this kind of estimate was calculated to lead to most fallacious conclusions, and the imperative necessity was recognized of waiting for the survey field areas as an indispensable test and check in judging of the suitableness of the rates and of the financial results, both as regards the Government revenue, and the burden of taxation on the Ryot.

3. The recent report furnishes the necessary information, and the Board now proceed to review the whole as briefly as will admit of their placing the subject clearly before Government.

4. The proposals for the Settlement of the Western Delta of the Godavery were disposed of by Government in their Proceedings, dated 24th June 1861, No. 1,231, Revenue Department. Those now to be discussed will apply to the whole remaining portion of the District (excluding Zemindaries) comprising the following talooks and parts of talooks :—

Nursapur, part	(52 villages)	Delta.
Tanuku, part	(4 „)	„ and Upland.
Amlapur, the whole	(114 „)	„
Ramachendrapur „	(132 „)	„
Peddapur, part	(62 „)	Upland.
Rajahmundry, part	(78 „)	„
Ellore, „	(42 „)	„
Yernagudem „	(51 „)	„

5. These last two talooks also include forty-two villages transferred from the whole Masulipatam District, and which were demarcated and classified by the Kistna Settlement party, but not included in the ultimate proposals for the Kistna District which have been disposed of by Government. Mr. Master is unable at present to give the particulars for twenty-two of these forty-two villages, they being partly Delta, and partly Upland, but the rates sanctioned for the rest of the District can be adopted in them.

6. The Central Delta of the Godavery river includes the Amlapur talook, and part of the talook of Nursapur, and consists in great measure of very rich alluvial soil, but towards the coast there are extensive sandy tracts lying in ridges and similar to what exists in the Western Delta. Its greatest length from north to south is about fifty miles, and its greatest breadth from east to west about forty miles.

7. The Eastern Delta of the river consists of the Ramachendrapur talook, and is composed almost entirely of black alluvial soil. Its greatest length is about thirty miles from east to west, and its greatest breadth about twenty miles from north to south. Both the Deltas possess *lunkas* or islands in the bed of the river of great richness and fertility where they consist of alluvial deposits, but from their frequently shifting proportions they are incapable of being permanently assessed.

8. The Samulcotta high level channel is the limit of the Delta on its north border, and on crossing it, the character of the country changes and becomes more undulating. Red soil takes the place of black soil in great measure, though the latter is still found in the low lying lands, and the proportion of jungle to cultivation increases more and more as the Vizagapatam frontier is approached.

9. The valley of the Yeler river in the Peddapur talook, which occupies this portion of the District, is distinguished for the rich quality of its soil, and Peddapur is celebrated for its sugar-cane cultivation. In the northern parts of this tract the jungle is extensive, the climate deadly except in the hottest season of the year, the population sparse, stunted, and sickly; cultivation rare and seldom permanent, and the revenue trifling.

10. West of this tract lies the Rajahmundry talook on the

east bank of the Godavery river but above the Delta, and mostly under dry cultivation. Its *cholum* crops are famous.

11. On the west bank of the Godavery, and mainly above the Delta formation, lies the new talook of Yernagudem, and west and south of Yernagudem lies the Ellore talook intersected by the high level channel bearing that name.

12. In Peddapur, Rajahmundry, and Yernagudem, extensive jungly tracts have, from their extremely unhealthy character and partial cultivation, been excluded from Demarcation, Survey, and Settlement, and will be left for temporary Settlement from year to year by the Collector until the cultivation acquires a more permanent character, as was done in the case of similar tracts in the Trichinopoly District.

13. The whole of the tract of country above described was settled on the Zemindary system at the beginning of the century, but the greater part has since reverted to Government, the inherent defects of the system having been aggravated by over-assessment of Peishcush, more seriously in the case of the newly created proprietary estates formed from the Havelly lands, than in the ancient Zemindaries.

14. The old Asara and Visabady systems of Settlement with the Ryots formerly prevailed in wet and dry cultivation respectively. These were succeeded by the village joint rents which still exist, as a temporary expedient.

15. The impossibility of ascertaining the actual incidence of taxation in individual cases or on individual fields under the renting system, has been explained by Mr. Master in paragraph 25 of his report on the Western Delta; but by dividing the amount of the Settlement for Fusly 1269, by the uncorrected survey or demarcation areas of cultivation, and by the Amarakum returns of the total of the Jeroytee land cultivated and waste, the following averages were obtained :—

Rate per acre on cultivation.	Rate on cultivation and waste.
Rupees 3-13-3	Rupees 2-15-5

16. There are 555 villages in the tract under consideration, as demarcated for the new Settlement. The population is estimated at 6,80,096 souls, the proportion of Mahomedans being $2\frac{1}{2}$ per cent. and of Christians not quite .01 per cent. of the whole.

17. The area in acres, as per the old Revenue accounts and the Survey returns, is shewn below :—

	By Revenue accounts.	By Survey returns.	Difference per cent.
	Aeres.	Aeres.	
Government	3,41,217	6,37,479	+ 87
Inam... ..	1,82,933	2,36,997	+ 30
Poramboke	1,61,082	1,36,033	— 16
Total...	6,85,232	10,10,509	— 47

18. The classified area of Government land according to the Survey returns is divided as follows :—

	Aeres.	
Cultivated	3,90,709	
Waste... ..	81,162	
Total...	4,71,871	or
Including Inam	2,36,997	
Total...	7,08,868	

19. This last total area is thus distributed among the several classes of soil :—

	Alluvial	4 per cent.
	Exceptional	1 "
Regar clay ...	Pure	49
	Loamy	9
	Sandy	1
		59 "
Red clay.....	Pure	1
	Loamy	8
	Sandy	24
		33 "
Arenaceous....	Loamy	2
	Sandy	1
	Heavy sand—a fraction ...	0
		3 "
		100

20. The bulk of the soil in the Central and Eastern Deltas was found to be far more rich and fertile than that of the Western Delta.

21. The rent roll for Fusly 1269 gave the following particulars:—

Total number of holdings	25,630	Asst. Rs. 10,41,920
Of which joint Puttahs and single holdings.	2,194	1,14,217
Above Rupees 1,000	17	26,194
From Rupees 500 to 1,000	57	37,890
250 to 500	300	99,159
100 to 250	1,633	2,38,337
50 to 100	3,135	2,17,142
30 to 50	3,364	1,30,694
10 to 30	7,696	1,42,735
Not exceeding 10	7,234	35,547

22. The principal crops grown are White and Black Paddy, Cholum, Gingelly seeds, Oil seeds, Aruga, Cotton, Gram, and Raggy.

White Paddy is the staple irrigated crop everywhere, excepting a part of Poddapur where Sugarcane replaces it.

The best soils in the Lunkas are devoted to tobacco.

Cotton constituted 3·64 per cent. of the whole in Fusly 1269.

23. The state of the irrigation in the Central and Eastern Deltas in April 1861 was as follows, according to the old arrangement of talooks:—

Nagaram, all but 2 villages irrigated out of total...	—
Rali, do. 13 do. ...	—
Amlapur, do. 18 do. ...	108
Kota Ramachendrapur, all do. ...	77
Bikkavol, all but 5 do. ...	53
Kappavaram (Delta), all do. ...	28
Cocanada, 22 villages do. ...	—

24. The works were still being extended.

25. The total area commanded by the works was estimated from imperfect returns at 2,71,180 acres.

26. The tank irrigated area in the Upland talooks was estimated at 63,558 acres, including Inam land, and the river Yeler affords a valuable supply to an extensive area including much Zemindary land, the whole of which is turned to the best account.

27. Of the Upland tank irrigated area the extent of Government land affected by the present proposals was estimated at 42,479 acres. By Survey it is found to be 53,761 acres.

28. Mr. Master originally proposed to have four classes of villages in the Delta and four in the Upland talooks for the Punjab assessment, and four more classes for the consolidated Nunjah assessment in the Uplands. Mr. Newill modified these proposals merging the four classes for dry land in each of the Delta and Upland portions into five classes for the whole, of which classes one to four were made applicable to the Delta, and classes two to five to the Uplands, and reducing the Upland wet classes to three.

29. In his final proposals, Mr. Master follows Mr. Newill's amendments as regards the three Upland wet classes, but is unable to limit the dry classes to five, owing to reductions which he recom-

mends in the Upland dry rates. This alteration apparently increases the dry classes from five to eight, but it does not add to the aggregate number of dry rates for the whole District, which continues as proposed by Mr. Master, eighteen, ranging from Rupees 20 to Annas 4.

30. For calculating the Punjah assessment in the Delta, the grains selected were Cholum, Cumboo, Raggy, and Black Paddy adding Tobacco for the islands, and omitting Cholum in the arenaceous series of soils.

31. In the Upland red soils, Horse gram was substituted for Raggy and Black Paddy in the dry lands.

32. For the consolidated Nunjah assessment in the tank irrigated lands of the Upland talooks, White Paddy was adopted as the staple, with the addition of Sugarcane in a part of the Peddapur talook where it is substituted for Paddy once in four years.

33. White Paddy has also been adopted for purposes of comparison, as the staple under irrigation in the Delta.

34. In the Delta talooks and the more favoured parts of the old Rajahmundry talook, a deduction of one-sixth has been made from the estimated gross produce on account of vicissitudes of season and unproductive portions of fields.

35. In the Upland talooks generally, where cultivation is exposed to much greater risks, a deduction of one-fourth has been allowed on the same account.

36. The same commutation prices have been adopted as in the case of the Western Delta, and the Board are glad to be able to express their opinion that much judgment and discretion have been shown in this most important part of the process, except perhaps in the case of Sugarcane Jaggery. The prices are shewn below :—

Produce.	Per Garce.	Per Pooty.
	Rs.	Rs.
White Paddy...	... 72	... 12
Black do. 60	... 10
Cholum 84	... 14
Cumboo 60	... 10
Raggy 66	... 11
Horse Gram 96	... 16
Tobacco 40
Sugarcane 15

} of 20 Maunds.

37. Mr. Master gives a detailed statement of cultivation expenses for the several kinds of produce, which exhibits the same extraordinary variations as the Board have noticed on previous occasions.

38. It may probably be accepted as indicating the maximum and minimum of cost, but the Board cannot suppose that the particulars are reliable.

39. The value of the straw is set off against the keep of ploughing, &c., cattle for the grain crops, but in estimating the cultivation expenses for Tobacco and Sugarcane allowance is made for this item of cost.

40. For the exceptional island soils the same special rates of Rupees 20 and Rupees 12 per acre as in the Western Delta have been adopted, and the same allowances fixed and temporary have been made as in that tract out of the water rate for the cost of picottah, &c., irrigation, and on account of imperfect irrigation and drainage in the present state of the works.

41. The consideration of distance from ports has influenced the classification of villages in the Upper talooks, but Mr. Newill considered that no distinctions were necessary on this account in the Delta, and he similarly disallowed deductions on account of the greater or less facilities of water carriage and the more or less remote position of fields in relation to the village site.

42. Mr. Newill modified Mr. Master's originally proposed rates of assessment per acre, and prepared a scale in which, to use his own words, "thirty per cent. of the *gross* produce and one-half to "two-thirds of the *net* produce were kept in view, the result "approximating generally more nearly to the standard of half the "net produce." That portion of this scale which applies to the Delta lands is shewn below in comparison with one-half of the estimated net produce.

43. Mr. Master proposes no change in these rates which correspond with those introduced throughout the Western Delta, "where it is believed they have been found moderate and fair." He considers the deduction of 10 per cent. from the net, which was allowed in Trichinopoly to be unnecessary in the case of these Delta lands.

Proposed rates for the 1st and 2nd Classes of Delta lands assessed as dry.

SOILS.	Sort.	1ST CLASS VILLAGES.						2ND CLASS VILLAGES.					
		Mr. Newill's rates.			Half net.			Mr. Newill's rates.			Half net.

		2	1	4	1	4	3	1	4	1	4	3	
		3	0	12	0	8	4	0	12	0	8	4	
	Sandy... ..	1	1	0	0	11	0	1	0	0	11	0	
		2	0	12	0	6	2	0	12	0	6	2	
		3	0	8	0	8	
	Loamy... ..	1	2	0	2	3	5	
		2	1	0	1	11	7	
	Sandy	1	1	0	1	6	9	
		2	0	8	1	0	2	
Arenaceous.. ...	Heavy sand	1	0	12	0	14	2	
		2	0	6	0	2	16	

44. It will be observed that in many instances the rates proposed for the inferior sorts of soil exceed the estimated value of half the net produce, but the Board believe that they will be found moderate in practice, and they fully recognize the force of the argument as to the expediency of maintaining the same rates throughout the Delta for similar kinds of land.

45. The result of applying these rates to the former estimated area and to the survey area, with the estimated amount of water

rate on the irrigated portion and the joint rents of Fusly 1269, including Teerwajasti, are shown below :—

ESTIMATED.		SURVEY.		Water rates.	Total of Columns 4 & 5.	Joint rents of Fusly 1269.	Increase.
Area.	Assessment.	Area.	Assessment.				
1	2	3	4	5	6	7	8
Acres.	Rs.	Acres.	Rs.	Rs.	Rs.	Rs.	
1,81,357	5,60,720	1,94,612	5,99,346	2,91,504	8,90,850	7,91,906	12 per cent.

46. According to the above Statement the probable increase of assessment beyond the joint rents of Fusly 1269, on this portion of the Delta, would be Rupees 98,944, or 12 per cent., but Mr. Master points out that it will not really be so great; partly because the estimated water rate must probably be reduced by some Rupees 26,000 on account of the adjustment of the registers of the irrigated area, and partly because in the land assessment is included the revenue derivable at the full rates from the Asalminha gardens and backyards, the greater part of which, however, may probably have to be transferred to the head of Inam. Allowing for these items, Mr. Master estimates the ultimate increase above the joint rents of Fusly 1269 at 7 per cent.

47. In the case of the dry Upland villages, Mr. Master is of opinion that, considering their remote position, want of roads and distance from navigable canals, the deduction of 10 per cent., from the half value of the net produce which was allowed in Trichinopoly, should be conceded; and he, accordingly, submits a Statement of rates for four classes of villages, of which the first would correspond with that for the second class villages in the Delta, but for this allowance of 10 per cent. An extract from this Statement is given below :—

Proposed rates for Upland Dry Cultivation.

Class.	Sort.	1ST CLASS VILLAGES.				2ND CLASS VILLAGES.				3RD CLASS VILLAGES.		4TH CLASS VILLAGES.	
		Half net minus 10 per cent.		Proposed rates.		Half net minus 10 per cent.		Proposed rates.		Proposed rates.		Proposed rates.	
		Rs.	A. P.	Rs.	A.	Rs.	A. P.	R.	A.	Rs.	A.	Rs.	A.
1	3	4	1 7	4	8	2	15 0	3	0

	2	1	8 4	1	12	1	8 4	1	12	1	4	1	0
7	1	1	13 1	2	0	1	13 1	2	0	1	8	1	4
	2	0	14 8	1	0	0	14 8	1	0	0	12	0	8
	3	0	5 3	0	8	0	5 3	0	6	0	4	0	4
8	1	0	7 1	1	0	0	7 1	0	12	0	8	0	8
	2	0	3 4	0	8	0	3 5	0	6	0	6	0	6
	3	0	6	0	4	0	4	0	4

43. The detailed statement given after paragraph 17 of Mr. Master's letter shows how far Mr. Newill's rates have been modified to bring them within the adjusted half value of the net.

49. The following figures show the estimated result of Mr. Newill's rates, and the actual result of those now proposed, in comparison with the joint rents of Fusly 1269 :—

Joint rents.	Estimated area.	Estimated assessment at Mr. Newill's rates.	Survey area.	Assessment at Mr. Master's rates.	Difference of Columns 1 and 3 per cent.	Difference of Columns 1 and 5 per cent.
1	2	3	4	5	6	7
Rs. 1,56,989	Acros. 1,11,105	Rs. 1,23,282	Acros. 1,42,306	Rs. 1,46,377	— 21	— 7

50. Mr. Master's rates it will be seen give far less relief to the land in these villages than was contemplated by Mr. Newill, although the application of Mr. Newill's rates to the survey areas would have given a very different result from what he anticipated. At the same time it will be observed that Mr. Master's rates in several instances exceed the adjusted half value of the net produce, and in some cases are drawn in excess of the unadjusted half value.

51. The scale of merged rates for dry land is shewn below :—

No.				Rate.		
				RS.	A.	
1	20	0	} Island soils.
2	12	0	
3	4	8	
4	4	0	
5	3	0	
6	2	8	
7	2	4	
8	2	0	
9	1	12	
10	1	8	
11	1	4	
12	1	0	
13	0	12	
14	0	8	
15	0	6	
16	0	4	

52. In the case of the Upland wet cultivation, Mr. Master has found it necessary to make still greater modifications in Mr. Newill's rates, the application of which to the Survey areas would have resulted in an increase of 49 per cent., above the rents of Fusly 1269 for the same area, which additional burden of taxation Mr. Master can testify from personal knowledge that the Ryots are altogether unable to bear.

53. He also considers that in consideration of the disadvantageous position of these lands, an allowance of 15 per cent. out of the half value of the net produce is necessary to obtain a reliable basis for the assessment except in the case of the alluvial wet lands in the valley of the Yeler.

54. His proposed rates are shewn below in comparison with the adjusted half value of the net produce.

Proposed rates for Upland Wet Cultivation.

} Exceptional soils in the
Yeler valley.

57. The result of Mr. Master's proposal will be an increase of 11 per cent. over the joint rent of Fusly 1269 for the same area.

58. The general result of Mr. Master's proposals is shown below in comparison with the joint rents for Fusly 1269 for the same area. It must be borne in mind that in making this comparison the waste land when small in extent in proportion to the cultivated, and actually in the occupation of the Ryots in accordance with the joint-rent system, is viewed as cultivated, it being assumed that it will be retained in occupation.

	Assess- ment.	Joint rents of Fusly 1264.	
	Rupees.	Rupees.	
Delta	5,99,346	
Add water rate	2,91,564	
Total ..	8,90,850	7,91,906 including Teerwajasti.	
Upland Dry	1,46,377	1,56,989	
Do. Wet	2,06,349	1,86,364	
Grand Total...	12,43,576	11,35,259	

59. In regard to the particulars for the Delta, it must be borne in mind that, as already pointed out, both the assessment and the water rate will have to be adjusted with reference to the ultimate disposal of the Asalmihha lands, and the correction of the registers of the area actually irrigated from the anikut works.

60. To allow of comparison between the two sets of proposals according to the estimate which guided Mr. Newill, and the Survey results which were available for Mr. Master, it was necessary to retain the figures for the joint rents of Fusly 1269, which were used in the first Report. But to elucidate the results of his proposals more accurately in comparison with later Fuslies, Mr. Master, has given in his Appendices G. 1 to 8 H. and I. elaborate Statements to show more nearly the bearing of the proposed rates, and has remarked at length on these Statements in paragraphs 22 to 29 of his report.

61. The following abstract exhibits much of this information in a convenient form. The joint rents include Teerwajasti, and the new Settlement includes the water rate :—

Talook.	Joint-rents of Fusly 1269.	Joint-rents of Fusly 1272.	Joint-rents of Fusly 1273.	New Settle- ment.	Assessment or classified available waste.	REMARKS.
	Rupees.	Rupees.	Rupees.	Rupees.	Rupees.	
Nursapur (52 villages.)	1,42,005	1,48,475	1,44,818	1,45,012	11,578	Increase in water rate expected as compared with Teerwajasti of Fusly 1273
Tanuku (4 villages.)	10,266	10,656	10,667	12,697	2,659	No decrease on revenue of Fusly 1273 expected from adjustment of Asalmihha and water rate.
Amalpur (114 villages.)	2,31,205	2,50,431	2,50,080	2,77,720	12,423	Increase on do. expected after do.
Ramachendrapur (132 villages.)	4,29,451	4,59,402	4,72,037	4,70,273	13,994	No actual decrease expected when assessment is applied to existing occupation.
Peddapur (62 villages.)	1,16,422	1,30,273	1,30,031	1,23,912	13,310	Do. do.
Rajahmundry (78 villages.)	1,00,245	1,12,791	1,16,802	1,14,133	21,800	Do. do.
Ellore (42 villages.)	20,155	19,390	19,244	18,130	5,993	Decrease expected as shown. Much jungle
Yernagudem (51 villages.)	83,509	86,315	85,791	81,693	15,673	No actual decrease expected on existing occupation.
Total...	11,35,259	12,17,733	12,29,470	12,43,578	97,430	

Transferred villages.

Talook.	Joint-rents of Fusly 1269.	Joint-rents of Fusly 1272.	Joint-rents of Fusly 1273.	New Settlement.	New Settlement of classified available waste.
	Rupees.	Rupees.	Rupees.	Rupees.	Rupees.
Ellore (14 villages)	11,970	12,229	12,245	11,378	13,616
Yornagudem (6 villages)...	7,562	7,957	7,956	6,929	4,778
Total...	19,532	20,186	20,201	18,307	18,394

62. There are twenty-two more transferred villages for which the detailed particulars were not available when the report was prepared.

63. The classified available waste is shown below exclusive of the above transferred villages :—

	Extent.	Assess- ment.
	Acres.	Rupees.
Dry (Delta and Upland)...	75,548	71,438
Upland Irrigable...	5,614	12,930
Total...	81,162	84,368

64. From this area an increase of revenue may fairly be anticipated.

65. A further area of 1,65,608 acres is available, and has been demarcated and surveyed in large blocks, but not in detail, nor has it been assessed, as it is not likely to be taken up within a reasonable period.

66. The estimated revenue from the water rate does not include any charge on second crops, the extent of which cultivation must always be very variable.

67. The Land assessment includes the Road Cess which will be deducted from it in gross as in the Western Delta.

68. The question of the pasture lands in the Upper talooks has in fact been disposed of by Government in their Order of 18th July 1856, No. 747, R. D., on the Poollery tax of Guntoor, which order maintains the common rights of the Ryots in the unoccupied waste, but charges full assessment on lands held for grazing in the Ryot's puttah, and sets apart tracts specially suited and hitherto rented for grazing purposes, which will be dealt with as hitherto.

69. The "Harasal Mucta" or quit-rent villages, and the "Patiperrallu," or so called "Back-yards," but which are situated at a distance from the villages, and have hitherto paid no assessment, must be disposed of by the Inam Commissioner, and according as claims to the continuance of the former tenure are admitted or rejected by him, the lands will be included under the new Settlement or excluded from it.

70. This review of Mr. Master's proposals may be closed by the following statement of the average of his rates for the cultivated area in the several talooks :—

		Average dry rate per acre.			Average consolidated wet rate		
		Rs.	A.	P.	Rs.	A.	P.
Nursapur...	Delta ...	2	13	9
Tanuku ...	Delta and Upland
Amlapur ...	Delta ...	3	4	9
Ramachendrapur ...	Do. and Upland ..	3	0	7
Peddapur...	Upland ...	0	13	1	3	2	9
Rajahmaundry...	Do. ...	1	1	7	3	14	3
Ellore ...	Do. ...	0	10	5	2	9	0
Yernagudem...	Do. ...	1	3	8	2	2	0

71. The water rate of Rupees 3 per acre for a single crop has to be added to the dry rate in the Delta to form the wet assessment.

72. The portion of Tanuku to which the present proposals apply is so small (four villages) no average has been struck for it.

73. The area of Upland included in Ramachendrapur talcook is very small.

74. The following statement of the average rates, adopted for the new Settlement of the Districts, is given for comparison sake:—

DISTRICTS.	DRY.						WET.					
	Cultivation.			Waste.			Cultivation.			Waste.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.

Do. { Eastern and Central Del-tas. } Now proposed.	3	1	3	1	7	0	6	1	3	4	7	0
{ Upland. }	1	0	6	0	11	2	3	13	5	2	4	10

75. Having thus reviewed, as briefly as possible, Mr. Master's proposals, the Board will, in a few words, state their opinion on them.

76. The Secretary of State's decision as to the proportion that is to form the basis of the Government demand, viz., one-half of the average net produce, has been expressed in the case of the Trichinopoly District, and according to this standard, the Board observe that Mr. Master's proposals for several of the inferior sorts of soils come out too high. At the same time they believe that, although the details of the process by which he arrives at his estimate of net produce cannot be deemed trustworthy, the general results may be accepted as not illiberal, and the same opinion may be expressed as to the commutation rates.

77. The Board fully recognize the great danger of over-assessment involved in the method of proceeding from the assessment on an acre of land to settle to the Government demand on the land of a whole District, and the additional difficulty which is experienced in a District hitherto under joint-rents from the absence of any standard of comparison for the field assessments.

78. They also object to the change made in the staples for dry cultivation in the Upland talooks as compared with the Delta under which Horse-gram was substituted for Raggy and Black Paddy; but they consider that, as observed by Government in their order on the

proposed settlement of the Western Delta, the assessment must be regarded as, to a certain extent, experimental and open to modification as may be found necessary after careful observation of its actual working.

79. The Board, therefore, recommend that on this understanding the revised Settlement be introduced.

80. They desire in conclusion to record their sense of Mr. Master's exertions to place the fullest amount of information on the District and the subject generally before Government, and to observe that his labours have resulted in accumulating a mass of facts which cannot fail to be of the highest value to all concerned in carrying out the new Settlement and in administering the District hereafter.

81. The Officiating Director informs the Board that it is desirable that the new Settlement should be introduced simultaneously with the Jumma bundy of the coming Fusly, and to this end he requests that the final orders of Government on the proposals now submitted may be placed in his hands as early as practicable.

(A true Extract.)

(Signed) R. A. DALYELL,

Acting Secretary.

Proceedings of the Madras Government, Revenue Department, 23rd May 1865, No. 1,096.

Read the following Proceedings of the Board of Revenue :—

Submitting, with remarks, reports from Messrs. Newill and Master on the proposed settlement of the Central and Eastern Deltas, and the Upland talooks of the Godavery District.	}	(Here enter 4th April 1865, No. 1,839.)*
--	---	---

(Printed on page 958.)

ORDER THEREON, 23rd May 1865, No. 1,096.

1. The papers above recorded relate to the revised Settlement of the Central and Eastern Deltas and the Upland talooks of the Godavery District, the remaining portion of which, viz., the Western Delta, was settled in 1861.

2. CLASSIFICATION, &c.—The classification and other processes of the Settlement were conducted on the same principles as in the Kistna and other Districts.

3. **SURVEY RESULTS.**—The survey has brought to light an increase of 87 per cent. in the reputed area of the Government lands, and of 30 per cent. in that of Inams, while in Poramboke there is a decrease of 16 per cent., the total area being 10,10,509 acres, and the net increase by survey 47 per cent.

4. **CHARACTER OF SOILS.**—The soils are chiefly Regar and Red Clay, 49 per cent. being pure Regar, and 24 per cent. Sandy Red Clay.

5. **MODE OF ASSESSMENT.**—The Deltas have been assessed on the principle ordered by the Secretary of State, and adopted in the Western Delta, of a dry assessment on the land and a separate water-cess, while in the Upland talooks, which are beyond the influence of the Anicut, and dependent on tanks, the consolidated Nunjah assessment system is continued, as in the similar parts of the Kistna District.

6. **STAPLE CROPS.**—The staple crops selected are Cholum, Cumboo, Raggy, and Black Paddy in the Delta. Tobacco being added for the rich alluvial island, and Cholum omitted in the sandy soils.

7. In the Upland talooks, Cholum, Cumboo, and Horse Gram are taken for the dry, and White Paddy within one talook, Peddapur; Sugarcane for the wet lands.

8. **CULTIVATION EXPENSES.**—The cultivation expenses have been estimated in the usual manner, and range from $4\frac{1}{4}$ to 2 Rupees per acre for the dry grains, and from $5\frac{1}{2}$ to $3\frac{1}{4}$ for white Paddy, the straw being set off against the keep of cattle.

9. A deduction is made from the gross produce of one-sixth in the Delta for unproductive portions of fields and vicissitudes of season, in the Upland talooks which are more unfavorably situated, one-fourth is the rate.

10. The commutation prices adopted are given in the margin, in

	PER GARB.	
	Proposed	Average.
White Paddy...	72	86
Black do. ...	60	69
Cholum ...	84	96
Cumboo ...	60	75
Raggy ...	66	86
Horse Gram...	96	103

comparison with the average of the last 25 years ending 1863-64.

11. The villages have been grouped in three classes for wet, and eight for dry, the large number of the latter is owing to the different character of the Delta and Upland talooks.

12. In the Delta villages, Mr. Master considers it unnecessary to give the 10 per cent. of the net produce which was granted in Trichinopoly. The rates proposed approximate closely to half the net, calculated as above explained, but in some classes, and these the inferior they somewhat exceed that proportion.

13. In the Upland dry villages, Mr. Master proposes to make the allowance abovementioned in consideration of their remote position, distance from canals, want of roads, and generally unfavorable incidents.

14. In the wet lands of the Upland talooks, excepting the rich valley of the Yeler, Mr. Master considers it absolutely necessary to grant 15 per cent. The areas by survey have proved so greatly in excess of the supposed areas that the rates as calculated would add 49 per cent. to the present rents; the wet lands are subject in a higher degree to the disadvantages which the dry lands labor under, and Mr. Master from his knowledge of the general condition of the landholders, declares that the Ryots cannot bear this addition to the assessment.

15. The rich Lunka lands which produce very fine Tobacco are assessed as in the Western Delta, with special rates, viz., Rupees 20, 12, 10, and 6 per acre. Owing to the joint renting system and other circumstances, a correct comparison cannot be instituted between the present and proposed assessments. As far as can be ascertained, the charge for land and water, at the new rates, would have been Rupees 12,61,885 in Fusly 1273, while the joint-rents in that year were Rupees 12,49,671, the increase by the new rates being thus Rupees 12,214. In this calculation only 20 of 42 villages transferred from the Kistna are included, as details for the other 22 were not available when the report was prepared.

16. The following table shews the area under each rate of assessment :—

18. The Board point out that in some of the inferior soils Mr. Master's rates exceed the proportion of the net produce prescribed by the Secretary of State, but they believe, that though the details of the process by which he arrives at his net produce "cannot be deemed trustworthy, the general results may be accepted as not illiberal and the same opinion may be expressed as to the commutation rates." They object to the selection of Horse Gram as one of the standard crops in the Upland talooks, but recommend that the new Settlement be introduced on the same understanding as that of the Western Delta, as to a certain extent experimental.

19. The Governor-in-Council is willing to admit the deductions of 16 and 25 per cent. made respectively in the Delta and Upland talooks from the gross produce to cover vicissitudes of season, &c. He also will not object to accept the proposed commutation rates. These are certainly very much in favor of the Ryot as already shewn, but they were adopted in the portion of the District already Settled, and the adoption of another and higher rate in these talooks might be deemed a hardship by the Ryots.

20. Beyond this, however, the Government cannot go. With such liberal deductions from the gross produce, and so favorable a commutation rate, the further deduction of 10 and 15 per cent. from the net proposed in the Upland talooks would be an unnecessary sacrifice of revenue. It may be that the Ryots in these talooks suffer from want of roads, and are in poorer circumstances, and it is also true that the large increase in area discovered by the survey will cause an addition of nearly 50 per cent. to their present payments. But these are not reasons for a permanent reduction in the rates of assessment. In every District hitherto settled the imposition of the assessment, when involving a large increase, has, as a matter of consideration, been gradual, and this clearly is the correct mode of action. To reduce the rates, as Mr. Master proposes, is to provide permanently for a temporary disability. Nor are Mr. Master's arguments such as the Government can admit, for their admission would lead to reductions of assessments, carefully computed, on mere personal opinions. It indeed *may* be, that the Ryots cannot pay the full moiety of the net produce, but this should be proved, not asserted.

21. The Government must, therefore, decline to sanction, on the information before them, the reductions of 10 and 15 per cent.

from the not proposed by Mr. Master, and supported by the Board of Revenue, but authorize the introduction of the proposed Settlement subject to the necessary modification in this respect. The Settlement Officer will have the usual discretion in gradually imposing the new rates where they greatly exceed the present rates, but a permanent reduction of the former cannot be allowed until its necessity is proved. It will be the duty of the Collector and Board of Revenue to watch the working of the new Settlement, and keep the Government apprised of its result, in order that such measures as actual experience of it may dictate, may be promptly adopted.

Instances of rates in excess of half net.

Della.

Class.	Sort.	$\frac{1}{2}$ net. Rs. A. P.	Proposed. Rs. A. P.
3	2	2 10 8	3 0 0
3	3	1 2 5	1 8 0
5	2	1 2 11	1 12 0
8	1	0 11 0	1 0 0
	2	0 6 2	0 12 0

Upland Dry Villages.

	2	3 14 0	2 8 0
	3	2 14 0	2 0 0
4	1	7 10 0	6 0 0
	3	4 8 0	3 8 0
7	1	7 2 0	5 8 0

these cases are found by adjustment not of the half net, but of the half net *minus* the proposed percentage allowances which the Government have now refused to admit. Thus the disproportion in Mr. Master's proposals is not so excessive as would appear from the above figures.

22. The Government observe

that in several instances the proposed rates especially on the inferior soils greatly exceed the computed moiety of the net. The values of the classes of land in which this occurs should be re-tested, and rates approximating more closely to the moiety thus determined be adopted. In some cases also, a large percentage has been struck off in adjusting the rates so as to avoid inconvenient fraction. This arrangement is proper enough within reasonable limits, but these limits have been exceeded in a good many instances, and this must be corrected. Examples of both the above errors are given in the margin. It is, however, observed that the rates in

23. The assessment, it is observed, includes a road-cess. The points noted by the Board in the paragraphs marginally quoted do not need special notice.

24. Mr. Master will report the arrangements he proposes for carrying out the settlement of the Godavery and Kistna Districts.

(True Extract.)

(Signed) W. HUDLESTON,

Acting Secretary to Government.

Letter from R. E. Master, Esq., Officiating Director of Revenue Settlement, to W. Hudleston, Esq., Acting Secretary to Government, Revenue Department, Fort Saint George, dated Madras, 6th July 1865, No. 747-26.

1. Referring to paragraphs 20, 21, and 22 of the Proceedings of Government, dated 23rd May last, No. 1,096, passing orders on the Settlement of the Central and Eastern Deltas and of the Upland talook of the Godavery District, I have the honor to submit two Statements A. and B., shewing the mode in which I have endeavoured to meet the wishes of Government, and the rates which I propose to apply to the dry and wet lands in the Upland talooks. It will be observed that the proportion laid down by Government, viz., half the net produce, has been steadily kept in view, in forming the rates, and though, in some instances, they are slightly higher, and in others slightly lower than that proportion, the variations are justified by the necessity of maintaining some degree of uniformity in apportioning the rates to the scale of classification, as well as by a reference to the proportion of 30 per cent. of the gross produce, which the Government long ago declared should be the maximum of demand. The Government are aware that though every effort has been made to obtain correct information on the subject of cultivation expenses, the results arrived at cannot be relied on as mathematically accurate, and that to take those results as a rigid guide in every case, without any reference to the gross produce, the true amount of which is much more easily ascertained, would lead in some cases to a needless sacrifice of revenue, and in others to the imposition of an assessment that would prove burdensome. To exhibit, therefore, clearly the grounds on which the several rates are now recommended, I have inserted columns to shew the proportion of 30 per cent. of the gross and of half the net, the

rates proposed in the Report, and the rates as now altered in accordance with the Government Order above quoted, the area of occupied land affected by the alteration, and their financial effects, and I trust that the scale adopted will meet the approval of Government.

2. In the margin of paragraph 22, the Government point out five instances in which the rates proposed for the Delta exceed the prescribed proportion of half the net produce, and direct me to re-test the values of the classes of land in which this occurs, and to adopt rates approximating more closely to the moiety thus determined. I would submit that, judged by the test above given, these rates are not excessive, as will be seen from the annexed Statement C., in which the several proportions are shewn. Considering, further, that these rates have been introduced throughout the Western Delta talooks, in which they have been in force three years, and that during that period no complaint has been received of their being excessive, I would respectfully deprecate any alteration being made in them at the present time, preparatory to their introduction in the remaining portions of what is, in fact, the same Delta.

3. Adverting to paragraph 24, in which the Government call for a report on the arrangements proposed for carrying out the Settlement of the Kistna and Godavery Districts, I beg to state that in the former District the preliminary operations, consisting of the calculation of the assessment at the sanctioned rates on the fields, and the preparation of the Asamiwar accounts, are already in active progress on the spot under the superintendence of a superior Native Settlement Officer, whom I can safely trust with this portion of the work. The Settlement itself should be introduced simultaneously with the Jumma bundy of the current Fusly, by which time the necessary accounts will be ready. For this work, as I have no Settlement Officer of sufficient experience available (Mr. Melville being fully engaged in Kurnool) I propose, when the proper time arrives, which will be about November next, to apply for the services of a Covenanted Officer of the grade of Head Assistant. Perhaps the Government may be able to spare temporarily for this duty, the present Head Assistant in the Kistna District, Mr. Wilson. In that case it would not be necessary that he should be relieved of the whole of his ordinary duty, as it is most convenient that the Officer introducing the Settlement should do so in the combined capacity

of Revenue and Settlement Officer ; but it might be found advisable to lighten his work by relieving him, for the time, of his Magisterial duties, and any other Departments under his charge.

4. The introduction of the new Settlement in the Godavery, I will myself undertake, in accordance with the wishes of Government already expressed. As, however, the work will altogether occupy a somewhat longer period than I can consistently with the general duties of the Department, and the requirements of the other parties, devote to a single District, it is my intention, with the approval of Government, to leave the District after settling the main portion of it, and to entrust the Settlement of the remainder to Mr. J. H. Cox, First Assistant Director of Revenue Settlement, whose services will, I hope, be available for this duty by the time they are required. The Settlement, whether carried out by myself or by my Assistant, will, of course, be introduced in immediate communication with the Revenue Officers of the District.

5. As it is of importance that I should be in possession of the views of Government on the points alluded to in paragraphs 1 and 2 of this letter, at as early a date as possible, I forward this letter direct, furnishing a copy to the Board.

(Signed) R. E. MASTER,
Offg. Director of Rev. Settlement.

Proceedings of the Madras Government, Revenue Department, dated 28th August 1865, No. 2013.

Read the following letter from R. E. Master, Esq., Officiating Director of Revenue Settlement to W. Hudleston, Esq., Acting Secretary to Government, Revenue Department, Fort Saint George, dated Madras, 6th July 1865, No. 747-226.

Printed on page 981:

ORDER THEREON, 28th August 1865, No. 2,013.

1. The Government accept the revised rates now proposed by Mr. Master for the Upland talooks of the Godavery District; and on consideration of the facts stated in paragraph 2 of his letter, and also of the expediency of maintaining uniformity throughout the Delta, they will not require him to modify his scale for the Central and Eastern portions, but sanction the adoption of the same scale as is already in force in the Western portion.

2. The arrangements proposed for introducing the revised Settlement in the Godavery and Kistna Districts are approved; and Mr. Master will, at the proper time, apply to Government for Mr. Wilson's services, should they then be available.

(True Extract.)

(Signed) W. HUDLESTON,

Acting Secretary to Government.

Despatch from the Right Hon'ble Sir C. Wood, Bart., Secretary of State for India, dated 9th June 1866, No. 18.

1. I have had under my consideration in Council the Despatch from your Government in the Revenue (Land) Department, dated the 11th September last, (No. 15), forwarding the Proceedings of your Government in regard to the revised Settlement of the whole of the Godavery District.

2. The rates proposed appear to me to be moderate, and to have been ultimately Settled with a due regard to the principles laid down in my predecessor's Despatch of the 24th February, (No. 7), 1864, in regard to the revised Settlement of the Trichinopoly District. I have especially to note my approval of your having returned the papers to the Director of Revenue Settlement for revision, in consequence of the rates originally proposed, particularly for the inferior soils, being in many instances considerably in excess

of the authorized proportion of one-half of the estimated net produce. It is with regard to this class of soils that the imposition of excessive assessments should be especially guarded against, as, where the net produce is small, any encroachment on the Ryot's share will be felt as a greater burden than where the profits are larger.

3. I observe that, wherever the new rates considerably exceed those previously levied, they are to be gradually introduced at the discretion of the Settlement Officer, and that the Collector and the Board of Revenue have been instructed to watch the working of the new Settlement and to keep your Government apprised of its result, so that such measures, as actual experience may dictate, may be promptly adopted. I desire that the information thus furnished to you may, from time to time, be communicated to me.

Proceedings of the Madras Government.

Read the following Despatch from the Right Hon'ble the Secretary of State for India, dated 9th June 1866, No. 18.

Printed on page 291.

ORDER THEREON, 16th July 1866, No. 1,757.

Communicated to the Board of Revenue and the Director of Revenue Settlement, for their information and guidance.

(True Extract.)

(Signed) W. HUDLESTON,

Acting Secretary to Government.
